Mr. KIRKPATRICK. Ninety-two million dollars' worth of hogs died last year from hog cholera, instead of fifty millions as the gentleman said.

Mr. MAGUIRE of Nebraska. I may have been too conservative in my estimate, but one thing certain the loss is very heavy. The Committee on Agriculture, of which I have the honor to be a member, reported this bill and recommend favorable action by the House at once. It comes almost in the form of an emergency, which is fully recognized by the committee and justified in the conditions which prevail among the farmers of the whole country. The bill provides $500,000 for the purpose of investigation, treatment, and eradication of hog cholera. It could have waited and been included as an item in the Agricultural appropriation bill, but the money would not, under the ordinary course of legislative procedure, become available till July 1 of this year.

Last year I had occasion to introduce an amendment to the Agricultural appropriation bill, and when it was finally enacted carried $75,000 for the purpose of "demonstrating the best methods of preventing and eradicating hog cholera." Four separate areas were located in the States of Indiana, Iowa, Missouri, and Nebraska, and the Department of Agriculture instituted the necessary machinery to demonstrate in these areas that the disease could be stamped out under proper regulations by the use of serum. One of these areas is located in my own district and it is expected that the results and benefits will soon extend even to surrounding counties.

The appropriation which the committee now presents is not alone to carry on and continue the work begun last summer and fall but to extend the field of demonstration and broaden the scope of inspection and cooperation with the States.

The purpose of the appropriation is to look immediately to the reduction of the appalling loss of hogs due to the widely contagious disease of hog cholera and to project a program whereby the farmer, with the aid of the Department of Agriculture, can ultimately stamp out the disease.

Hog cholera is prevalent in every State in the Union, and no locality has any assurance that it will not occur and recur each year. In fact, it is quite likely to occur each year in the great hog-producing States. It is therefore a nation-wide animal disease, and affects not alone the farmer and producer of hogs but likewise indirectly affects every consumer. The economic loss is national and touches the welfare of every home. Pork is the meat food of the average individual, and is in more common use than all other meat products. It probably furnishes the largest article of necessary food which makes up the food supply of the average individual. The disease is not an epidemic which appears and reappears only through long intervals of years, but makes a drain on the food supply of fifty to eighty million dollars each year, bringing great loss and often disaster to the individual producer of hogs.

Mr. Speaker, the committee believes this is a question for national action and a proper subject for legislative relief by this Congress. It is a problem not of the Government doing the work, but, rather, of bringing the results of careful investigation and research of the Department of Agriculture actually to the farmer, demonstrating the efficacy of the treatment and furnishing a program to be followed. It is useless for the Government to carry on the investigations and scientific research and then let the results of the discoveries lie dormant in a Government laboratory or remain a monopoly in the heads of investigators, when its application on the farm and among the herds would save millions annually to the people. If $500,000 can be used to put forth an effective program of extermination and prevent this great drain on the Nation's wealth, I think there is nothing to which we, as legislators, can better turn our efforts in working out the economy of our national welfare.

For the purpose of getting our proper bearing, let us look a little into the history of the disease and the investigations made. The disease began to take on serious form and permanent annual loss as long back as 40 years ago. For many years, through one agency and another, the disease had been investigated, but not until 1889 did the Department of Agriculture begin systematic study. From that time even the actual expenditures were small, often amounting only to eight or nine thousand dollars a year, but the department was making some progress and reaching some conclusions as to the causes, character, and treatment of the disease. In 1906 the Department of Agriculture discovered and formulated a serum remedy. The hog is inoculated by the application of serum through hypodermic injection and made immune from the disease.

The department does not claim that the serum treatment is an actual remedy for sick animals, but rather an effective preventive when properly applied. Since 1906, when the formula was patented in behalf of the public, but little investigation along new lines has been carried on, except to further perfect the soundness of the formula and encourage its application.

For several years the department conducted experiments with the serum formula among selected herds under different conditions and stages of the disease. However, the loss over

the country seemed not alone to continue, but yearly increase. The Department of Agriculture continued to have full confidence in the serum application as a preventive when properly applied; but the hog raiser knew little about the treatment, and even when brought to his attention felt little confidence in its success. The department ascribed the failures to several reasons. Often impotent serum was placed on the market or the best serum sent out was not properly applied or perhaps administered to hogs already sick which had no chance of recovery. These and many other reasons were given by the department for failure of the public to accept it. The result of it all was that the public failed to accept the claims made for it, and the loss due to the disease continued or even increased.

With an available remedy for the prevention of the disease and the failure still of relief to the hog raisers it seemed that some program ought to be inaugurated to bring about an effective application. The most feasible plan seemed to be to allow the Department of Agriculture full power to effectually demonstrate on the farms or over given areas under its own regulation the efficacy and practicability of its discovery.

The appropriation, however, was not available for use till July 1, 1913, and the season was well advanced or nearly over when the organization work was perfected in all four of the areas selected, as many obstacles had to be encountered in instituting a completely new line of work. The department at the outset found the small plant which it had used for the manufacturing of its serum for earlier experiments entirely inadequate to supply the serum necessary. Preliminary surveys, history of infected areas, and cooperation with farmers all had to be worked out.

At the beginning of this session of Congress the Committee on Agriculture held quite exhaustive hearings on the subject with two men from the department, Dr. A. D. Melvin, Chief of the Bureau of Animal Industry, and Dr. M. Dorset, of the same bureau, before the committee. I call your attention to pages 21 and 22 of the hearings before the Committee on Agriculture of the House for December 9 and 10:

Mr. LEE. What per cent of the animals die that are not treated?
Dr. DORSET. Of hog cholera?
Mr. LEE. Yes.
Dr. DORSET. I should say from 75 to 100 per cent of hogs in an affected herd would die.
Mr. JACOWAY. What is the cause of hog cholera?
Dr. DORSET. Hog cholera is caused by a germ that exists in the blood of the infected hog. It is an organism that is apparently so small that the most powerful microscopes do not show it; though it is easy to demonstrate its presence by inoculating a small part of the blood from a sick hog into a well one, thus producing hog cholera.
Mr. HAWLEY. And you think the serum you now have is the best remedy?
Dr DORSET. So far as we know there is nothing else that will prevent the disease; I do not know of anything else.
Mr. MAGUIRE. What per cent of those hogs you treat are finally cured or recover?
Dr. DORSET. I have some figures made up from the results of the work this summer. Of hogs actually sick we lost 25 per cent. Of well hogs in diseased herds, 2.8 per cent died, and of hogs in exposed herds only about 0.7 per cent died. In an infected herd there are always a certain proportion of hogs that are well when the inspector gets there. The inspectors examine the hogs and take the temperature of all hogs in the herd, and thus separate the sick from the well.
* * * * * * *
Mr. JACOWAY. What does it cost to treat the average hog?
Dr. DORSET. For a 100-pound hog, around 30 cents, probably. I think 30 cents would be a liberal estimate.
Mr. HAWLEY. The treatment is by hypodermic injection?
Dr. DORSET. Yes, sir.
* * * * * * *
Mr. TAYLOR. You said it would not be your idea to distribute this serum free. What is your idea about that?
Dr. DORSET. My idea has been that we ought to look forward to a control of hog cholera and to its elimination from the country, not to repeated treatments of hogs every year with the serum, because the serum costs a good deal of money, and it costs a good deal to apply it. The object we have is to get rid of the disease.

Also to page 28:

Mr. MAGUIRE. You are confident that this is an absolute preventive, are you?
Dr. MELVIN. Yes, sir; I am.
Mr. CANDLER. Is this serum manufactured from a formula furnished by the Bureau of Animal Industry?
Dr. MELVIN. You could hardly call it a formula. It is a serum produced from what are termed hyperimmunized hogs.

I think sufficient reference is here made to the hearings to give you some idea of the work of the department. A program is offered which looks to the ultimate extermination of hog cholera in the United States. The country is suffering from a heavy loss from the disease, and the committee believes that the public wants the work of extermination carried on. I believe that we are guided well in our wisdom when we commend this Government to the program of assistance in this large field of work. The resulting benefits to the farmer are certainly assured. More than all this, the actual demonstration areas thus far seem to fully confirm the claims of the department that hog cholera can be stamped out, or at least the loss reduced to a minimum.

This Government is appropriating liberally for public activities along practically every line. The great fundamental industry of agriculture and its development should at no point be neglected. It is the industry to which every citizen must look, either directly or remotely, for individual subsistence, while the whole population is inseparably coupled with its welfare. Its encouragement seems to me to be of first consideration. The products of the soil furnish us the largest element of our national resources and our national strength. If we, as a people, should neglect our opportunity and fail to keep our constant attention turned to the farm and its production, we would then begin to find our industrial dependence asserting itself. I believe that this House fully recognizes the importance of this subject and the need of favorable action on the bill now.

Memorials from the Legislature of the State of Mississippi.

EXTENSION OF REMARKS

OF

HON. PERCY E. QUIN,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES.

Monday, March 9, 1914.

Mr. QUIN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following memorials from the Legislature of the State of Mississippi:

House resolution.

Whereas there is now pending in the Congress of the United States of America a bill known as the Shackleford bill, providing for the aid of the States and the civil subdivisions thereof, in certain cases, in the construction and maintenance of rural post roads; and
Whereas this measure has passed the House of Representatives and is now pending in the Senate, and in the event such a measure becomes a law the State of Mississippi will be benefited to a great extent; and
Whereas we realize that good roads in this State is one of the most important projects for the prosperity and welfare of the people of our great State: Therefore be it

Resolved, That the house of representatives hereby heartily indorses and approves of House bill No. 11686, known as the Shackleford bill, now pending in the Senate of the United States of America.

STATE OF MISSISSIPPI,
HOUSE OF REPRESENTATIVES.

I, Stokes V. Robertson, the undersigned clerk of the house of representatives in and for said State, do hereby certify that the above and foregoing is a true and correct copy of a resolution introduced in the said house of representatives by the Hon. Robert L. Genin, chairman of the house special committee on good roads, and unanimously adopted by the house on March 2, A. D. 1914, as shown by the house journal for said date.

In witness whereof I have hereunto set my hand on this March 2, A. D. 1914.

STOKES V. ROBERTSON,
Clerk of the House of Representatives of Mississippi.

House concurrent resolution No. 27. A concurrent resolution memorializing Congress to return to the State of Mississippi cotton-tax money erroneously collected in 1866 and 1867 as a war-debt claim from the cotton raisers of the cotton-growing States, and providing for its distribution.

Whereas the Supreme Court of the United States has, in its wisdom, decreed said assessment and collection of the cotton tax above referred to was unconstitutional, and therefore null and void, it therefore follows that said tax should be returned to those who paid it; and
Whereas it appears that it would be utterly impossible for those who paid this tax to make the necessary proof of their claims; and
Whereas it appears that the old Confederate veterans are the only class of people now living in this country who were old enough to have paid the cotton tax referred to: Therefore be it

Resolved by the house of representatives (the senate concurring), That the Members of the United States Senate from this State and the Representatives in Congress of the United States from this State be requested to use every effort in their power to have returned to the State of Mississippi her pro rata share of said cotton tax thus erroneously assessed and collected by the United States, said sum of money, if returned as above requested, to be used by the State of Mississippi, under the proper legislative enactment, as a permanent pension fund for the support and maintenance of the old Confederate veterans and their widows of the State of Mississippi.

STATE OF MISSISSIPPI,
HOUSE OF REPRESENTATIVES.

I, Stokes V. Robertson, the undersigned, clerk of the house of representatives, hereby certify that the foregoing is a true and correct copy of house concurrent resolution No. 27, as the same passed the house on January 28, 1914, and the senate February 17, 1914, as shown by the journals of the two houses and by the original copy of said resolution on file in my office and the enrolled copy thereof on file in the office of the secretary of state.

In witness whereof I have hereunto set my hand on this February 28, 1914.

STOKES V. ROBERTSON,
Clerk of the House of Representatives.

Mississippi Choctaws under treaty of Dancing Rabbit Creek.

SPEECH

OF

HON. WILLIAM H. MURRAY,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 20, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 12579) making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1915.

Mr. MURRAY of Oklahoma. Mr. Chairman, these gentlemen make this claim for the Mississippi Choctaws on the basis of the fourteenth article of the Dancing Rabbit Creek treaty of 1830. I am going to argue, for the most part, the legal and equitable phases of this claim. On October 18, 1820, a treaty was made between the Government, represented by Gen. Jackson, and the Indians, represented by Apush-ma-ta-ha. This was a treaty in which the grant for the lands west was made, and was the first instance of a fee-simple title given to Indians. The treaty of 1830 was but to provide settlement of their interests east of the Mississippi and to effectuate their removal. Both of those treaties outlined the boundaries of the land.

It will be found in the treaties of 1820, 1825, and 1830 that the Government was mistaken about the boundary. Apush-ma-ta-ha at the time stated that he had been over this country from 1812 to 1815; that he "had sometime chased the Comanche and the Comanche had sometime chased him"; and that Gen. Jackson did not know the country. You will notice in the third article of the treaty of 1820 a provision to prevent dispute upon "the subject of boundaries." I have had occasion to read both Gen. Jackson's report and the history of this transaction from a splendid work written by Cushman, and I refer to that report of Gen. Jackson as to what was intended by the several clauses in the grant of the lands west and for the removal of these Indians from Mississippi. The central object in all these treaties, in the mind of the Indian, was to enable him to go somewhere where he could frame a government of his own choosing, independent of any State or Territorial law, and running through all of these treaties you will find in unmistakable terms these objects. You will find granted to them in the Atoka agreement of 1897, which provided for the allotment of their lands in severalty, further stipulation of the formation for State government of the Five Civilized Tribes. It was for these benefits that they went into that western country, then surrounded by hostile Indians, into unhealthy swamps, and which caused them to take up that irksome march from their homes in Mississippi, through the uninhabited swamps in Arkansas, to their homes in the West. The 4,000 graves along the roadside—the last resting place of those who died on the march—are but silent witnesses to this solemn promise of the Government, and to guarantee to them, or that number of them who would move and in good faith reside upon the land deeded to them. Some of the mixed-blood Indians of power and wealth did not desire to remove west, as did the great body of the most ignorant and helpless element of the tribe. It was essential, therefore, to place in the treaty the stipulation of the fourteenth article, which I shall later analyze in the light of its text and the history surrounding its making. It was realized by all that those who went west—since its date was prior to the Texas revolution—would be surrounded by many difficulties, and it was also known that many desired to remain. I call attention especially to the fact that all of the lands west of the Mississippi in the Choctaw and Chickasaw Nations, the portions open to allotment, consist of but 11,000,000 acres; but they left in Mississippi almost an equal amount of land—to wit, 10,000,000 acres—for homes for those who desired to remain. Then it was thought at the time that if the great body of the tribe went west it might have a disastrous effect in the matter of protection of those who remained in Mississippi, hence the stipulation in the fourteenth article under which the Mississippi Choctaws claim.

So the Government provided in the fourteenth article that of those who remained the head of the family might get one section of land, each child over 10 years of ago a half section, and those under 10 years of age a quarter section; but, mark you, in that article it says that these "persons" shall not lose their "privilege" to become citizens if later they remove west. Why this stipulation? Because in the treaty of 1820, as well as in that of 1830, the grant of this land was to the "nation, their heirs and successors." In every other place in the Dancing Rabbit Creek treaty, as was the case in 1820, the expression was "heirs and successors," while in the fourteenth article the word "persons" was used. Those who did not want to be included were permitted to put in the word "persons," and it certainly did not mean "heirs and successors." You never saw a deed written to a "person" only.

Before going into the rights under the treaty let us quote its provisions to determine whether this grant was made to the individual Indians or whether to the "nation," and why was the "nation" named in the preamble of the treaty of 1830, which was signed by 104 members in their full council. We find this language:

James Monroe, President of the United States of America, by Andrew Jackson, of the State of Tennessee, major general in the Army of the United States, and Gen. Thomas Hines, of the State of Mississippi, commissioner plenipotentiary of the United States, on the one part, and the mingoes, headmen, and warriors of the Choctaw Nation, in full council assembled, on the other part, have freely and voluntarily entered into the following article:

ARTICLE I. To enable the President of the United States to carry into effect the above grand and humane objects, the mingoes, headmen, and warriors of the Choctaw Nation, in full council assembled, in behalf of themselves and said nation—

Note the word—

do, by these presents, cede to the United States of America all the land lying and being within the boundaries following, to wit: * * *

ART. II. For and in consideration of the foregoing cession on the part of the Choctaw Nation and in part satisfaction for the same, the commissioners of the United States, in behalf of said States, do hereby cede to said nation—

Mark the word "nation"—

a tract of country west of the Mississippi River situate * * *.

Under the above stipulation, it must be granted that this title was granted to the "nation." I now recite from the Dancing Rabbit Creek treaty of 1830, which was signed by a full council composed of 173 persons, as follows:

ART. 2. The United States, under a grant specially to be made by the President of the United States, shall cause to be conveyed to the Choctaw Nation a tract of country west of the Mississippi River, in fee simple to them and their descendants, to inure to them while they shall exist as a nation and live on it, beginning near Fort Smith, where the Arkansas boundary crosses the Arkansas River, running thence to the source of the Canadian Fork, if in the limits of the United States, or to those limits; thence due south to Red River, and down Red River to the west boundary of the Territory of Arkansas; thence north along that line to the beginning, the boundary of the same to be agreeably to the treaty made and concluded at Washington City in the year 1825, the grant to be executed so soon as the present treaty shall be ratified.

Mark you, there was doubt as expressed in this treaty as to the boundaries. The history and report of its making shows that Apush-ma-ta-ha told Andrew Jackson that the Canadian Fork rose in Colorado, and therefore he was trying to sell them the Panhandle of Texas, then undisputed Mexican territory; hence they used the language "if in the limits of the United States, or to those limits," and which carried them westward to its "limits," which was the Panhandle of Texas. You will also note in this section that it was a grant "in fee simple to them and their descendants, to inure to them while they shall exist as a nation and live on it." Article 3 then provides for speedy removal; article 4 for self-government; article 5 for the protection of the Indians against the Plains Indians; article 6 provided for extradition for crime; article 7 for delivery up of criminals; and article 12 for removal of intruders. I submit to the House that under this language the grant was made to the "nation," their descendants and successors, so long as they "exist a nation and lived on" the land, and the converse of this is that those "who do not live on it" are not to be beneficiary of it. Neither in law nor in the construction of the English language can any other interpretation be placed upon this treaty.

Now, let us see what the "nation" consists of, because it is evident that the grant of the entire lands west was to the "nation," and the intent of the treaty shows that the "nation" went West, and no element of the "nation" remained in the State of Mississippi. What is the "nation"? The Choctaw Nation to-day consists of 17,396 Indians, some full bloods, most of them mixed bloods, some few Cherokees, Chickasaws, Alabama Creeks, and Kansas Indians, but are "living and residing on the land." The "nation" further contains 1,634 Mississippi Choctaws, granted by the "nation" having a sympathy for them in consequence of the treatment the State of Mississippi had given to full-blood Mississippi Choctaws. It also includes 10 white persons, who had been their friends and "lived on the land," adopted by legislative act. The "nation" also consists of 1,650 persons who have married Indians by blood—the "nation's" method of naturalization—and, last, it consists of 5,900 freedmen—ex-slaves and their descendants. So the "nation" comprehends not only Indians by blood but all classes

that may be adopted by the tribe in council under their constitution and law—Indians by blood, including various tribes, white people, and negroes, with the limitation that they must "live on it." On the other hand, any of these classes who moved away and did not "live on it," but moved to another State "expatriated" (changed their citizenship), losing every right, including the right of property, just as surely as an American citizen would lose his right to homestead the American public domain by expatriating and becoming a British subject. Now, as to the equity. Is it fair to compel these Indians to take care of all the Indians of other tribes who have moved among them, and 1,660 white persons and 5,900 negroes, keeping faith with the treaty, the stipulation of grant which inures to those who "live on it," and at the same time compel them to take care of those who have not moved to and "lived on" the land? In view of the further fact that they left in Mississippi 10,000,000 acres of land, almost equal to their land west, to provide homes for those who remained, and the Government, after making that provision, only paid them $2,000,000 for the residue over and above the amount taken for homes.

I submit as a matter of equity it is all in favor of the members of the "nation" that moved west. They went into a barren country, carved their homes out of the forest, built improvements, just as the American homesteaders on public domain. It is manifestly unjust to force them now to divide their property with those who did not share with them their burdens in observing the old Indian treaty. They have this land by the right of settlement, if nothing more. Who would think now of introducing and supporting a bill in Congress to enable the people who did not go west and homestead the public domain now to step into Kansas or Nebraska or Minnesota or Iowa or any other of the Western States and divide with them their property just because it was originally common property of the whole Republic and because these new claimants, like the settlers, have the blood of American citizenship? Likewise, what right have Indians by blood who would not go with the immigration and would not bear the hardships to step in now and divide with those who did go west their rights to their homes?

I will grant you that these people—these Mississippi Choctaws—are entitled to our sympathy; they are entitled to the correction of the wrong perpetrated upon them by the Government of the United States when they permitted them to be robbed both by the governing power and the individual grafter in the State of Mississippi. But should the Indian members of the "nation" now residing in Oklahoma be compelled to correct the wrong done by the Government and permitted by the Government, after showing that the title in them is to the "nation"? Now, let us determine what rights and privileges any of the other individual members possess under the treaty. The "fourteenth article," under which the Mississippi Choctaws claim, is in these words:

ART. 14. Each Choctaw head of a family being desirous to remain and become a citizen of the States shall be permitted to do so by signifying his intention to the agent within six months from the ratification of this treaty, and he or she shall thereupon be entitled to a reservation of 1 section of 640 acres of land, to be bounded by sectional lines of survey; in like manner shall be entitled to one-half that quantity for each unmarried child which is living with him over 10 years of age; and a quarter section to such child as may be under 10 years of age, to adjoin the location of the parent. If they reside upon said lands, intending to become citizens of the United States, for five years after the ratification of this treaty, in that case a grant in fee simple. Said reservation shall include the present improvement of the head of the family or a portion of it. Persons who claim under this article shall not lose the privilege of a Choctaw citizen, but if they ever remove are not to be entitled to any portion of the Choctaw annuity.

I have quoted the entire section in full, but mark the last paragraph by the use of the word "persons" and the word "privilege." This word "privilege" is not synonymous with right. They have lost their right to citizenship. In other words, they had expatriated by remaining, because they did not "live on it." The word "person," as stated before, unlike the grant, was not to these persons and "their heirs," but to the "persons" only. I submit that it is significant that in every other case in the three treaties of 1820, 1825, and 1830 the words "they and their heirs" were used. The report of the United States commissioners who executed this treaty, together with Cushman's history, shows that this was put here with absolute design and understood by the members of the "nation" as well as those who remained in Mississippi to constitute a limitation excluding their heirs. Let me call your attention to the fact that many years subsequent to the treaty of 1830 the Chickasaw Nation bought an equal undivided interest in the whole landed property of the "nation" west of Mississippi River, paying therefor $530,000 in gold when they bought it. Could they be held to give up any portion of the property in which they owned an equal undivided individual interest to any person who did not come within the legal terms of the grant under which they purchased? But the admission of the Mississippi Choctaws would take proportionately from the Chickasaws a portion of the property of which they are innocent purchasers, and they are entitled to all of the reasonable construction of the obligations on that property, and in addition thereto they are entitled to all of the limitations in their favor against all persons having a "privilege" as those "persons" contemplated in article 14, since they are all dead and the terms of the treaty did not include "their heirs." So it may be safely said that there was no grant either of citizenship, property rights, or of "privilege" to any Indian remaining in Mississippi except such of those "persons" now living.

Let us consider which of the "persons" granted this "privilege" under the fourteenth article of the treaty of Dancing Rabbit Creek can now claim. Manifestly none, except those that may now be alive. Such "persons" who sought to remain in Mississippi would now be 105 years of age, if 21 years old in 1830, and such "person" if 1 year old at that time now must needs be 85 years old, so we can assume they are all dead. I admit, however, if any of these "persons" to whom only this "privilege" granted in the "fourteenth article" are yet living, they should be entitled. It is true that some of their descendants have since been admitted, but this because of the generosity of the "nation" west and not because they had either a legal or equitable right.

Four thousand court claimants, some calling themselves Mississippi Choctaws, but not from Mississippi, and some calling themselves Chickasaws, nearly all of whom then resided in Oklahoma, were eliminated by the citizenship court, composed of Judges Adams, of North Carolina; Weaver, of Ohio; and Foote, of California, and that judgment upheld by the Supreme Court of the United States.

Reference is sometimes made that a subcommittee of the House Committee on Indian Affairs in a former Congress unanimously reported in favor of these Mississippi Choctaws. I had an occasion to look up the brief of those claimants filed at the time, and I unhesitatingly say that under the "statement of fact" the committee could not have done otherwise. The brief was a bundle of falsehoods. I observe that they said the Indians removed the Mississippi Choctaws from Oklahoma as intruders. On the contrary, they were invited to come west. This statement is a falsehood of the whole cloth. Not a witness could be had that would swear to that statement in a court where impeachment could under the law legally be lodged against him, because the court claimants lived in Oklahoma at the time. The most of them still remain there, and they are not part of those living in Mississippi. While on the brief of the Mississippi Choctaws, permit me to review it further. I read a brief filed this winter where they set up that under the laws in the State of Mississippi a contract made between an Indian or any other laborer could not be broken without subjecting the laborer and his new employer to a criminal prosecution. In other words, if A hired B and C in turn offers to hire B away, C has committed a crime in making the offer and B has committed a crime if he breaks the first contract. They boldly recite this system of peonage legislation as an argument to admit the Mississippi Choctaws.

Very few of the 1,634 Mississippi Choctaws would have been enabled to go to Oklahoma but for the land agents—sometimes called grafters—of Oklahoma, who went to Mississippi, bought off their contracts and paid off their debts and their way to Oklahoma. Notwithstanding this, many of them have returned to Mississippi. Mr. J. W. Gillette, one of the most prominent Oklahoma land agents, stated that when he went to Mississippi he was compelled, upon account of the peonage system I here recited, to pay off all their debts and buy off their labor contracts, in addition to paying for their transportation. These people were afraid to go without this being done, rightly fearing prosecution under the Mississippi peonage laws. Of course, Mr. Gillette was recouped for their expenses by a lease upon their allotments in Oklahoma.

They further state in that brief that the State of Mississippi has never provided them with schools, a thing that Oklahoma has provided for all the Indian children in our State, and we have more than one-third of all the Indians of the United States. I submit this detestable policy in the State of Mississippi, together with the recitation of the criminal graft in that State, does not constitute an argument authorizing Congress to rob the Indians of Oklahoma or to overcome the laws that inure only to the Choctaw Nation. The advocates of the Choctaw claimants, not only Members of Congress but Webster Ballinger, Crews, and

Cantwell, and other attorneys, who are going over this Republic securing letters to be written to the Congress urging their Congressmen to reopen the rolls, plant themselves on the word "privilege" in the fourteenth article and seek to give it validity without compelling the "person" holding the "privilege" to comply with other performances. Admitting, for the sake of argument, that the benefits inured to the "descendants" without compelling that "person" to move on and "live on" the land, let us see where it will lead to.

If the contention of the Mississippi Choctaws be correct, we never could close the rolls and there would be an "endless chain" of this Indian difficulty. I might also cite that since the rolls were closed in 1902, 12 years ago, nearly all of the members of the tribe have from one to five children born since that date, and there are more of these "newborn" who are not on the rolls than there are Mississippi Choctaws. On account of the evils that would flow from the reopening of the rolls, as much as the Indians desire to enroll their children, they are willing to close the rolls against these children if it would mean speedy settlement; and yet under the Harrison amendment you would enroll ultimately not only the 2,000 full bloods in Mississippi, Louisiana, and Alabama, but 20,000 claimants from all the Southern States, most of whom would have no Indian blood. In whatever light you consider this Mississippi Choctaw claim, it leads to disaster. There is only one solution for the full bloods of Mississippi, and that is to buy that class homes in Mississippi, congregate them in one settlement where they would remain—for they will not live in Oklahoma—and the Government furnish them a school, which the State of Mississippi has never done. To give them money would be but to permit them to live in luxury and intemperance for 6 or 12 months and then to return to penury and want. They have had the experience before of having more land than we get in Oklahoma, but the Mississippi grafters have long ago robbed them of it. The only service for them is to give them a home and "tie it down at both ends" so this fraud can not be repeated.

In the Civil War, moreover, both the Chickasaws and Choctaws, the owners of the "nation" west, joined the Confederacy. The Government treated that act as an act of forfeiture of their property, and when they came to make the treaty known as the "treaty of 1866," between the Chickasaws and the Choctaws and the United States Government, you will find the Government compelling, in article 30, a stipulation on behalf of 10,000 Kansas Indians identical with the "fourteenth article" of the treaty of 1830, which is as follows:

ARTICLE 30. The Choctaw and Chickasaw Nations will receive into their respective districts east of the 98° of west longitude, in the proportion of one-fourth in the Chickasaw and three-fourths in the Choctaw Nations, civilized Indians from the tribes known by the general name of the Kansas Indians, being Indians to the north of Indian Territory, not exceeding 10,000 in number, who shall have in the Choctaw and Chickasaw Nations, respectively, the same rights as the Choctaws and Chickasaws, of whom they shall be the fellow citizens, governed by the same laws, and enjoying the same privileges, with the exception of the right to participate in the Chickasaw and Choctaw annuities and other moneys, and in the public domain, should the same, or the proceeds thereof, be divided per capita among the Choctaws and Chickasaws, and among others the right to select land as herein provided for Choctaws and Chickasaws, after the expiration of the 90 days during which the selection of lands are to be made, as aforesaid, by said Choctaws and Chickasaws; and the Choctaw and Chickasaw Nations pledge themselves to treat the said Kansas Indians in all respects with kindness and forbearance, aiding them in good faith to establish themselves in their new homes, and to respect all their customs and usages not inconsistent with the constitution and laws of the Choctaw and Chickasaw Nations, respectively. In making selections after the advent of the Indians and actual occupancy of land in said nation, such occupancy shall have the same effect in their behalf as the occupancies of Choctaws and Chickasaws; and after the said Choctaws and Chickasaws have made their selections as aforesaid the said persons of African descent mentioned in the third article of the treaty shall make their selections as therein provided, in the event of the making of the laws, rules, and regulations aforesaid, after the expiration of 90 days from the date at which the Kansas Indians are to make their selections as therein provided, and the actual occupancy of such persons of African descent shall have the same effect in their behalf as the occupancies of the Choctaws and Chickasaws.

It will be observed that it gave these Kansas Indians the right to go anywhere in either of the two nations which composed their habitable territory east of the ninety-eighth meridian, and did not use the weaker term "privilege" as used in the "fourteenth article of the treaty at Dancing Rabbit Creek," but used the words "right of citizenship," "the same rights as the Choctaws and Chickasaws, of whom they shall be fellow citizens," the same condition of removing to the tribe, giving only preference to the Choctaws and Chickasaws of making the first selections, and some of them moved into this section and are now a part of the "nation," and by the same process of reasoning in favor of the Mississippi Choctaws the law would yet compel the Choctaw and Chickasaw "Nation" to divide their property with the remaining 10,000 Kansas Indians.

Judge CLAYTON, who was senior in service at the time of the passage of the enabling act for statehood, and recognized as the ablest jurist ever sent to the Territory, has ruled in every decision in line with my contention. His only error, in my opinion, was that he maintained that any Mississippi Choctaw who would come to the Choctaw Nation and "live on it" up until allotment was entitled to enrollment, and everyone who has complied with this provision has been provided for, but this was a liberal construction in favor of those who had expatriated, and could have been made only on the theory that the Choctaw Nation was not a "sovereignty," and therefore not entitled to be relieved of laches limitation and estoppel because, as Blackstone lays down the rule, "laches and estoppel never run against the sovereign." He based his ruling upon the fact that the Nation had invited the Mississippi Choctaws to come out as late as the seventies and early eighties. In this I think Judge CLAYTON erred, because the Choctaw Nation was a sovereign in a greater sense than the States. None of their laws between themselves, however harsh and exacting and however confiscatory, could be questions in the Federal courts. The Federal nationality only existed over those Indian nations so far as the general Federal law, and in no sense, as long as the tribal nation remained, could there be a question raised in any Federal court on the question of constitutionality or confiscation of property by legislation as could and has been raised in the States; and if the Choctaw Nation was a sovereign, then it was not bound by the doctrine of estoppel or laches or limitation; but the tribe has agreed to and even accepted the liberal construction placed upon the treaty laid down by Judge CLAYTON, and this doctrine is held to in the higher courts in the Jack Amos case as being sound. Considering the Chickasaw purchase, I submit that if you pass this law in favor of the Mississippi Choctaws, the Chickasaws can by injunction prevent the Interior Department from paying out a cent of this fund, which will only go to a delay of final settlement. I repeat that so far as the claim goes against the Choctaw and Chickasaw Nations, there is neither law nor equity of claim against them; and I repeat again that whatever obligation or sympathy may be due the Mississippi Choctaws is against the United States Government for its neglect, particularly in permitting the State of Mississippi and its long, lank criminal grafters to rob these people and strip them of their patrimony. The question only remains, Will you attempt to enact this legislation and thus delay the final settlement, and thus destroy business in the east half of our State, and thus rob those Indian tribes of property guaranteed to them and to which they hold a fee-simple title? I repeat what I repeated before: To reopen these rolls would mean a delay of settlement and a beclouding of Indian titles and a disturbance of business in the east half of our State beyond the imagination of man. It would be no less than a crime.

Agricultural Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. SAM R. SELLS.

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 5, 1914.

On the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. SELLS. Mr. Speaker, it is a matter of regret to me that the time allotted by the House for general debate on this bill, vitally affecting so large a class of our citizenship, should have been largely consumed by Members on both sides in the discussion of matters purely political and having no relationship whatever to the merits of the bill. Personally, I entertain no sort of doubt that the farmers of this country were grossly discriminated against in the enactment of the Underwood tariff, and that as time passes its effects upon our agricultural interests will prove more and more disastrous. But it is certain, no matter what the effect, that no relief can or will be given by the present Congress, and any discussion of its defects now will be useless. Rather it seems to me that we should for the moment lay aside our political prejudices and all hope of partisan advantage and address ourselves to the serious consideration of legislation designed for the protection and welfare of the American farmer.

I think I am justified in saying that the situation, as it relates to the agricultural interests of this country, is a serious one, and one which bespeaks the careful and painstaking con-

sideration of Congress. No legislation of greater importance, nor so vitally affecting the whole body of our citizenship, will be presented for our consideration than this bill making appropriations for the maintenance of our Department of Agriculture in its efforts to improve conditions under which our farmers live and labor. No department of our Government so closely touches and affects our national life; no department is treated with such miserly and niggardly consideration. The amount of the appropriation as carried in this bill for the maintenance of this great work for the next fiscal year is, in round numbers, about $18,000,000, or about 18 cents for each man, woman, and child in the Nation. The naval appropriation bill, which I am informed is to be introduced within the next few days, will appropriate $140,000,000 for the upbuilding of a Navy whose chief function is to appear on dress parade and prepare for wars that will never come. Here alone is an expenditure of $1.40 per capita. The military bill will carry an amount approximating $100,000,000, or $1 per capita; the pension bill, $180,000,000, or $1.80 per capita. We propose to spend, as a nation, during the next year a sum far in excess of $1,000,000,000, and of this nearly $700,000,000, or about 72 per cent, is in payment of debts of our wars of the past and in preparation for imaginary wars of the future. President Wilson never delivered a wiser or more patriotic utterance than that recently in which he said that this country would never again seek territorial expansion, or the extension of its authority beyond its present domains. And as long as we adhere to that policy no serious complications can arise to justify our enormous expenditures for the maintenance of our Army and Navy.

We spend millions every year dredging creeks and rivers that can never be made navigable, and which make those responsible for the expenditures ridiculous in the eyes of the people. I have in mind now a river in the South which every year receives an appropriation of hundreds of thousands of dollars, and I am in a position to know that the total value of the cargoes which it has carried during the last 10 years would not equal one of our annual appropriations for its improvement, and the river is no more navigable now than when the first appropriation was made.

But to return, our national extravagances have reached a per capita expenditure of nearly $11, or a tax of about $55 on each family in the Nation. The census for 1910 shows that 53.7 per cent of our population is rural, the remaining 46.3 per cent urban. It is fair to assume that the farmer bears his proportionate share of this tax burden, and, as the head of the family, pays directly or indirectly into the Federal Treasury nearly $55 each year. And then, when we have exhausted our ingenuity in the contrivance of schemes to waste and misuse the public funds, we pass him back annually the princely sum of about 90 cents and tell him what a faithful friend he has in us and how sacredly and conscientiously we are safeguarding his interests. With the money annually wasted by Congress we could give to every farmer boy between the ages of 15 and 20 years in this country a thorough and practical agricultural education that would fit him to take up his life work intelligently and understandingly, with added pleasure and profit to himself and to the betterment of society generally.

I have recently made a study of agricultural statistics as revealed by the census of the three last decades. They reveal a situation anything but inspiring. They show a steady migration from the farm to the city. In 1900 there were living on the farms of the country 45,197,390 people, whose number had increased to 49,348,883 in 1910, or a net gain of 11.2 per cent. During the same period the population of our cities had increased from 30,797,185 in 1900 to 42,623,383 in 1910, or a net gain of 34.8 per cent. Out of an addition to our population during this decade of 15,977,691, more than 11,000,000 had been added to our consuming and less than 4,000,000 to our producing classes.

But while our rural population increased during this period 11.2 per cent, our cereal crop, including wheat, corn, oats, rye, and barley, increased in bulk but 1.7 per cent, while the per capita production actually declined. The acreage devoted to the production of these crops had risen from 184,982,220 in 1900 to 191,395,963 in 1910, an increase of 6,413,743 acres, or 3.5 per cent. So that when we compare the total production in bushels with the total acreage, we find that our acreage yield has decreased from 24 bushels in 1900 to 23 bushels in 1910.

This, then, is the situation: A rural population failing to increase in a ratio with our total population, a decreased per capita production, and a decreased acreage production. I think I shall not be branded as an alarmist if I say that the situation is alarming and should appeal to every thoughtful man whose actions to-day are regulated in part by a realization of the needs of the future and who desires to correct a condition already acute and bound in the very nature of events to become steadily and rapidly worse, except by the discovery and application of a proper remedy.

We are accustomed to speak of the United States as the greatest agricultural country on earth, and if we consider it from a standpoint of its potentialities and possibilities the assumption is correct. But in some respects we are far behind European countries less favored by climatic conditions and natural soil fertility than ours. Against an average yield of wheat in the United States of 14 bushels per acre, Canada produces nearly 30, Austria 20, the United Kingdom 33, and Germany 35 bushels. We grow potatoes at a rate of 96 bushels, while the average yield of foreign countries reaches as high as 200 bushels per acre. In crop production of every kind we are trailing far in the rear.

One of the main sources from which our national wealth has been derived has been our farms, producing through a century a surplus which has been exchanged for European gold for the enrichment of every class of our people. I desire briefly to present for your consideration statistics concerning our exports and which reveal our decadence as an agricultural Nation. Let us take corn for an example. Our exports of this cereal reached high-water mark in 1906 with a total of more than 117,000,000 bushels. In 1912, the last year for which figures are available, the total had fallen to 40,000,000 bushels. On a basis of the present market price here was a net loss to the Nation of more than $60,000,000 on this one item alone.

In 1902 we exported 154,800,000 bushels of wheat, for which we received the enormous sum of $112,875,000; but in 1912 we shipped abroad but 30,100,000 bushels, for which we received $28,400,000, a net loss of nearly $85,000,000. In 1906 we exported 46,000,000 bushels of oats, of the value of $16,000,000, and in 1912 our surplus had dropped to 2,100,000 bushels, for which we were paid $1,135,000. On these three crops alone there was a loss in exports in 1912 of $160,000,000 as compared to those of less than 10 years ago.

In 1906 we sent abroad 567,000 cattle, for which we were paid $42,000,000. In 1912 we shipped but 105,000, and the amount received was $8,800,000. The value of our exports of all live stock amounted to $49,139,568 in 1906 and to but $15,447,987 in 1912. Nor is this all. Whereas the figures show a steady decrease in volume and value of agricultural exports, they likewise show a similar steady increase of our imports. The excess of exports over imports, constituting a balance of trade in our favor, is not only steadily decreasing but has practically reached the vanishing point. Our imports of corn alone during the last four months have been more than 7,000,000 bushels. At the present rate of decrease another five years will witness the balance of trade in agricultural products not only entirely wiped out but, great as we are and rich as we are in agricultural possibilities, we shall be forced to import farm products from abroad for the support of our population.

Not only have our exports decreased, but our production has failed to keep pace with the increase of our population. The average yearly production of corn during the five-year period from 1903 to 1907, inclusive, was practically the same as during the period from 1908 to 1912. The same is true of wheat, the crop of 1912 being the smallest, with one exception, in the last 10 years. The number of beef cattle had declined from 69,335,832 in 1900 to 63,682,648 in 1910, a net loss of 5,653,184. The same decrease was had in the number of hogs, the decline being 5,212,000, and of sheep, 8,896,000. With an increase in our population of 21 per cent, our meat supply decreased on an average of a little more than 10 per cent; or, to state it differently, in 1900 we had in this country 195,000,000 cattle, sheep, and hogs, with a population of a little less than 76,000,000, or an average of nearly 2¾ meat-producing animals for each inhabitant. In 1910 the same animals had decreased in number to 175,000,000 and our population had increased to 92,000,000, or about 1⅞ animals per capita. Here was a net loss of nearly 1 animal per capita in 10 years, a decrease in our meat supply of nearly one-half.

The foregoing statement is a correct analysis of agricultural conditions, and it might be amplified and extended indefinitely. It is a condition affecting not only the American farmer but every man, woman, and child of this Republic. It not only interests but appals. Low tariffs or high tariffs may depress or stimulate, as the case may be; the money supply, as it is scarce or plentiful, may make business good or bad; but the problem of our meat and bread supply is vital and absolutely essential to civilization.

How much the Federal Government can or may do toward a solution of these problems is a question, but one thing is certain, it can do far more than it is doing or has ever done, and in no other way will the expenditure of a dollar bring so great

return. For experiment work and investigations we have been making fairly liberal appropriations, the amount carried in this bill being about $1,600,000. This is as it should be, for the farmer has no time, equipment, nor training for questionable experimentation. He is not following his vocation out of curiosity, nor will his yearly profits permit risks the success of which is questionable. Our Department of Agriculture has undertaken this work for him, and its investigations have been of inestimable value. Nevertheless, the processes through which this information has been disseminated have been defective and inadequate, and the great bulk of it has never reached the farmer for effective and profitable utilization. I am no advocate of extravagant appropriations, but there ought to be an annual expenditure of $10,000,000, and the amount is insignificant by comparison with other expenditures authorized by Congress, to send men trained in the science of farming and acquainted with its practical problems into each county of the Nation to demonstrate by practice and in theory the value of improved methods of cultivation and all that pertains to progressive agriculture. Agents of this department have in some sections, through the organization of boys' corn clubs, demonstrated the possibility and practicability of quadrupling our corn production per acre at an increased cost trivial in comparison to the increased returns. There is not a crop grown on our farms that will not yield the same profitable increase by the application of better methods, developed by painstaking investigations at our experiment stations.

I hope to see the day when the Federal Government will, by a thorough and complete system of financial aid to the States, give to each farm boy in the Nation a practical and scientific agricultural education. We educate boys to fight, and every year make liberal appropriations for the maintenance of our Army and Navy schools for the sole purpose of teaching the science of war and how to kill widely and effectively. And yet when danger threatens it is not to the graduates of these institutions that we look for our defense, but to the boys of the country, without military education, but who, out of the abundance of their patriotism, have not yet failed to rally to the defense of the flag and the maintenance of the supremacy of the Nation. For these boys out on the farm, toiling for the support of 100,000,000 of people, and whose existence is our main reliance, both in peace and war, I plead for a square deal at the hands of Congress and a recognition in some degree commensurate with the services they render. As we educate and strengthen them, so do we strengthen the fabric of our institutions and guarantee the permanence and freedom of this Republic. An enlightened citizenship is a country's best defense, and each dollar expended in this direction will give greater protection to our country and its citizenship than ten times the amount devoted to military education and the support of immense armies and navies.

In the cities of this country are bred the germs of discontent and anarchy. If the black flag of anarchy is ever raised, it will be by the vicious and unemployed, who are the products of our city life. And if such a condition should arise, it will be the boys bred in the pure air of our country homes who will come from every hill and valley of this broad land to uphold the majesty and glory of our flag and keep inviolate the principles of civil and religious liberty.

Mr. Speaker, this question is a broad one, and occupies a place second to none that will come before us for consideration. Too long has it been neglected. The drift from the country to the town and city must be stopped, and the proper place to begin this movement is here and now. Place within the reach of every farm boy an opportunity to educate himself according to the demands and necessities of his vocation, and within the next decade the problem of our food supply will have been solved, and with it other problems of lesser importance. Carry out to the farmer himself, who is struggling in an effort to improve his methods and better his condition, information which has been developed by the practical men of our Department of Agriculture, show him how it is possible and practicable "to make two blades of grass grow where but one grew before," and you will have rendered a service more permanent and patriotic than you have yet rendered in your capacity as guardians of the Nation.

Oliver Goldsmith possessed a breadth of vision which gave him a thorough understanding and appreciation of the importance of country life in its relationship to national life when he wrote:

> Ill fares the land, to hastening ills a prey,
> Where wealth accumulates and men decay;
> Princes and lords may flourish or may fade—
> A breath can make them, as a breath has made;
> But a bold peasantry, their country's pride,
> When once destroyed can never be supplied.

Indian Appropriation Bill.

SPEECH
OF
HON. CLAUDE WEAVER,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 20, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 12579) making appropriation for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1915.

Mr. WEAVER. Mr. Chairman, while the House is considering the Indian appropriation bill I desire to raise my voice in an appeal for justice for the Indian citizens of my State. I am the representative in this Congress of more than a hundred thousand Indians who live in Oklahoma who possess a threefold citizenship. They are members of the Five Civilized Tribes, citizens of the State of Oklahoma, and citizens of the United States. I am the representative also in this House of the sovereign State of Oklahoma and of all its population, now approximating two millions of people. A right solution of the Indian question involves the welfare alike of the Indian people and of the white people—the welfare of all the people of the great American Commonwealth of Oklahoma.

This House is a great business organization. It legislates by committees. Its Members are specialists. If you except the members of the Committee on Indian Affairs, the Oklahoma delegation, and a few other Members who have given the subject particular study, I make the broad statement that this House does not know the Indian question. The House knows better our Territorial possessions—the frozen wastes and glaciers of Alaska—and our insular possessions—Porto Rico, the Hawaiian Islands, and the far-away Philippines; it knows better the government and the peoples of continental Europe, and of the Orient—of India, China, and Japan—than it knows the Indian people and the white people of the State of Oklahoma.

Gentlemen of the House, I was born on the Indian Territory border. From my earliest childhood I lived a neighbor to the Choctaw and Chickasaw people. I was a guest, a welcome guest, in their homes in the days of my boyhood, and when I became a man I moved to their country, and have lived among them for 20 years. I know the Indian history, the Indian character, the Indian people. That is my apology, if apology be needed, for speaking to-day in their behalf.

On yesterday and again this morning, with interest intense, I listened to the debate on the point of order—made by the gentleman from Mississippi [Mr. HARRISON], in whose district reside the Mississippi Choctaws—against the proposed per capita payment of $100 each to the Indians of the Choctaw and Chickasaw Nations. My colleagues from Oklahoma, who are members of the Committee on Indian Affairs [Mr. CARTER and Mr. MURRAY], presented the arguments on our side of the question with such clearness and power that the distinguished Chairman, now presiding, the gentleman from Tennessee [Mr. BYRNS], sustained their contention and overruled the point of order. May I not apply in commendation of that able decision of the Chairman of this committee upon a delicate and difficult question of parliamentary law, may I not apply to him the exclamation of Shylock to Portia at the famous trial of the cause of Shylock versus Antonio:

> A Daniel come to judgment; yea, a Daniel;
> O upright judge, how I do honor thee!

And now the gentleman from Mississippi [Mr. HARRISON] moves to strike out from the bill the per capita payment clause, and that is the question before the committee.

I have prepared an amendment increasing the per capita payment from $100 to $200, as follows:

AMENDMENT PROPOSED BY MR. WEAVER.

On page 33, line 22, strike out "$100" and insert "$200." The paragraph would then read:

That the Secretary of the Interior be, and he is hereby, authorized in his discretion to make a per capita payment of $200 to the enrolled members of the Choctaw and Chickasaw Indians of the Five Civilized Tribes entitled under existing law to share in the funds of said tribes, or to their lawful heirs, out of any moneys belonging to said tribes in the United States Treasury, or deposited in any bank, or held by any official under the jurisdiction of the Secretary of the Interior, same to be made under such rules and regulations as he may prescribe: *Provided*, That in cases where such members are Indians whose restrictions have not been removed, the Secretary of the Interior may, in his discretion, withhold such payment and use the same for their benefit.

I had intended to offer this amendment, for it is just and ought to be adopted; but I will not offer it now, because I feel

that there is, perhaps, a sentiment here hostile to such increase. I will content myself with urging the $100 per capita payment unanimously recommended, after full hearing, by the Committee on Indian Affairs.

With hypnotic eloquence and

* * * with all the zeal
That young and fiery converts feel—

the gentleman from Mississippi, Mr. SISSON, and the gentleman from Mississippi, Mr. HARRISON, have urged the cause of their Mississippi Choctaw constituents before this House, and doubtless have awakened a deep sympathy for those Indians in the breasts of gentlemen always prone to sympathize and to side with the weak and the unfortunate. I do not censure, I do not criticize, the able Representatives from the State of Mississippi. Rather, I commend them for their devotion to a cause which they consider just.

But, Mr. Chairman, I say that the claims of the Mississippi Choctaws will not bear the light of day. Their claims have been tested in one court after another, for the Mississippi Choctaws neither respect nor fear the time-honored doctrine of res adjudicata. When the courts decided against them, they appealed to Congress, and time and again Congress has made them the beneficiaries of gratuities, measured with a generous hand, piled up and running over. If Congress wants to give the Mississippi Choctaws further bounties out of the Public Treasury, that is a question to be decided when we reach it; but I want to register now my bitter opposition to the Congress giving to the Choctaw Indians of the State of Mississippi the moneys and property belonging to the Choctaw and Chickasaw Indians of the State of Oklahoma. To do that is dishonest, and I will fight it to the last ditch. I want this House to know the true facts. I can establish four propositions conclusively to the satisfaction of any fair-minded man.

PROPOSITIONS.

First. The Mississippi Choctaws have no interest whatever in the property of the Choctaw and Chickasaw Indian Nations of Oklahoma.

Second. This per capita payment proposed does not come out of the public funds of the United States Treasury. It comes out of the tribal funds belonging to the Choctaw and Chickasaw Nations of Indians.

Third. The amount of the per capita payment proposed will not affect the rights of the Mississippi Choctaws, for conceding, for argument's sake, that theirs is a valid claim, the partial payment leaves an unexpended balance sufficient to satisfy such claims multiplied many times.

Fourth. The Choctaw and Chickasaw Indians of Oklahoma, to whom this bill gives a wretched and miserable pittance of their own money, are, in common justice, entitled to this payment as wards from their guardian, the Government of the United States, because these Indians are not savages, but are possessed of intelligence, strength of character, and business capacity.

EARLY HISTORY OF THE CHOCTAWS AND CHICKASAWS.

A short historical retrospect may help us to a more accurate understanding of the status of the Mississippi Choctaws and to a better knowledge of the advancement in civilization attained in our day by the Choctaw and Chickasaw Indians of Oklahoma.

If some great American writer like Washington Irving or William H. Prescott were living now, he could find no labor more worthy the genius of a great historian than to write the history of the Choctaw and Chickasaw people. I like the phrase "The history of a people." Madame Roland wrote: "In the history of nations and empires I look for the human heart." Possessed of what absorbing interest are books like Green's History of the English People, Woodrow Wilson's History of the American People, as compared to the dead chronicles of wars and intrigues, courts, and kings.

The Choctaw and Chickasaw Tribes of Indians are of a kindred stock, belonging, with the primitive Creeks and Seminoles, to the great Muskhogean family. When the first Europeans came to the Atlantic coast the Muskhogean Tribes were confined chiefly to the Gulf States east of the Mississippi, occupying almost all of Mississippi and Alabama and parts of Tennessee, Georgia, Florida, and South Carolina. According to a tradition held in common by these tribes, they formerly lived on the upper Red River, in what is now western Oklahoma, from whence they migrated eastward to their historic seats east of the Mississippi River. The Choctaws located in western Georgia and southern Alabama and Mississippi, and the Chickasaws in what is now the northern part of the State of Mississippi, where the headwaters of the Tombigbee meet those of the Yazoo River and its affluent, the Tallahatchie. Their famous landing place on the Mississippi River was at Chickasaw Bluffs, where Memphis now stands. The Chickasaws were a brave, independent, warlike race, engaged in almost constant fighting with the Osages, Cherokees, and Shawnees, and attacking not infrequently their kinsmen, the Choctaws. The Choctaws were preeminently an agricultural people.

A considerable knowledge of these tribes, their habits, manners, feelings, and way of life, is obtained from a study of the tribal treaties with the Government of the United States, called by the Indians the Great White Father.

Taine, the philosopher, profoundly observes:

> What is your first remark on turning over the great stiff leaves of a folio, the yellow sheets of a manuscript—a poem, a code of laws, a confession of faith? This, you say, did not come into existence all alone. It is but a mold, like a fossil shell, an imprint, like one of those shapes embossed in stone by an animal which lived and perished. Under the shell there was an animal, and behind the document there was a man. Why do you study the shell, except to bring before you the animal. So you study the document only to know the man. The shell and the document are lifeless wrecks, valuable only as a clue to the entire and living existence.

What will these treaties teach us of these aborigines?

EARLY CHICKASAW AND CHOCTAW TREATIES.

When Washington became President he set about accomplishing a cherished object—the forming of treaties with the various Indian tribes. He knew the Indian character better perhaps than any man in our history, with the exception of Houston. The Indians revered and loved Washington, and he was ever their faithful friend.

In January, 1786, Benjamin Hawkins, Andrew Pickens, and Joseph Martin, acting for the United States, negotiated the Hopewell treaties—the one with the Choctaws, the other with the Chickasaws. These treaties fix the boundary lines of the Indian country, guarantee to keep intruders from the Indian lands; give to the United States the exclusive right of regulating trade with the Indians and of managing their affairs; and declare that the hatchet shall be forever buried and the Indians received into the favor and protection of the United States.

Other treaties with the Choctaws were negotiated in December, 1801; in October, 1802; and in November, 1805; and in October, 1816. Treaties with the Chickasaws were agreed on in June, 1805; in September, 1816; and in October, 1818. They were all treaties of cessions of lands from the Indians to the Federal Government in consideration of goods, moneys, and annuities. All express the great friendship of the Indians for, and their dependence on, the Great White Father. These treaties show the tender care of the Indians for their poor, for their old women, their orphan children, their aged warriors, and tribal chiefs. The Chickasaw treaty of June, 1814, made a reservation 4 miles square at the Salt Lick Springs on the Sandy River for the benefit of the poor and warriors of said nation, and by it annuities of $100 each were given to many of their chiefs, Mingoes, and warriors. It provided, too, for the payment of the sum of $1,089 to Maj. James Colbert, the Indian interpreter, being the amount of a sum of money taken from his pockets in the month of June, 1816, at a theater in Baltimore.

PROGRESS OF THE INDIANS IN CIVILIZATION.

In the period of nearly 30 years between the date of the first treaty and the date of the trade of the Indian lands east of the Mississippi for the country west of the Mississippi, the Choctaws and Chickasaws made great progress in the useful and domestic arts and approximated more and more toward the life of their white neighbors. Licensed traders had stores among them; the Indians themselves engaged in barter; Christian missionaries came into their country and taught the pure doctrine of the Nazarene, and many Indians embraced that religion. White men intermarried with the Indian women and a process of amalgamation began—slow in the beginning but continuing until the present day—that will result in the ultimate complete absorption of the Indian by the white race.

In the War of 1812–1815 the Choctaws and Chickasaws refused to join the great Shawnee warrior, Tecumseh, and the hostile Creeks in their alliance with Great Britain. The Choctaws and Chickasaws remained friends to the United States, had no part in the terrible massacre at Fort Mims, and many of them, under the leadership of Pushmataha, fought with Andrew Jackson at Horseshoe Bend.

After the War of 1812 a tide of immigration from the Atlantic States poured westward into the Indian country, and the Indians began to long for the pathless and virgin West where their forefathers had lived.

THE CHOCTAW TREATY OF 1820.

So that in the year 1820, at the treaty ground in the Choctaw Nation, near Doak's Stand, on the Natchez Road, the Choctaw chiefs and warriors met in council and negotiated with the United States commissioners the treaty of 1820. Andrew Jackson and Thomas Hinds represented the United States and Push-

mataha, a full-blood Choctaw chief, warrior, statesman, and orator, was spokesman for his people.

Jackson make a long speech to the Indian warriors, telling the purpose of the President in making the treaty, and drawing an attractive picture of the country beyond the Mississippi. He said:

To enable the President to effect this great national and very desirable object to accommodate the growing State of Mississippi, and thereby secure greater safety and protection to the Choctaws and their seminaries of learning at home, it was proposed by him to exchange for a small part of their lands here a large country beyond the Mississippi River, where all who live by hunting and will not work and who, by the nature of their mode of life, are widely scattered, may be collected and settle together in a country of tall trees, many watercourses, rich lands, and high grass, abounding in game of all kinds—buffalo, bear and deer, antelope, beaver, turkeys, honey, and fruits of many kind—in this great hunting ground they may be settled near together for protection and to be able to pursue their peculiar vocation without danger.

Pushmataha knew the country that Jackson described better than Jackson did, for he had hunted over it in years gone by. He gave an account of its resources very different from that of the hero of New Orleans, and described it to be fertile in part, but in the far west trackless and sandy deserts, and closed by saying that a part of it was an undefined portion of Mexican territory. Jackson showed him a map marking the Mexican boundary on the west, but Pushmataha said, "That paper is not true," and he proceeded to mark out on the ground with the handle of the pipe hatchet which he held in his hand the Canadian and upper branches of Red River, and showed that the country Jackson offered to trade extended far over into the dominion of the Mexican Republic. "You must be mistaken," said Gen. Jackson. "At any rate, I am willing to make good the proposition I have named."

So the treaty of 1820 was made, and in 1825 a second treaty, and in 1830 a third treaty, called the treaty of Dancing Rabbit Creek, between the Choctaw Nation of Indians and the United States, and these three treaties contain the agreements whereby the Choctaw Nation ceded to the United States the entire country east of the Mississippi and the United States ceded to the Choctaw Nation of Indians the country west of the Mississippi now a part of the State of Oklahoma.

RIGHTS OF THE MISSISSIPPI CHOCTAWS.

Let us now investigate the rights of the Mississippi Choctaws, for whatever rights they have are secured by these three treaties.

In July, 1912, Hon. JOHN H. STEPHENS, chairman of the Committee on Indian Affairs, referred H. R. 19213, entitled "A bill to reopen the rolls of the Choctaw-Chickasaw Tribe and to provide for the awarding the rights secured to certain persons by the fourteenth article of the treaty of Dancing Rabbit Creek, of date September 27, 1830," to the Department of the Interior for an opinion as to the merits of the bill. He received in reply a most interesting letter from Hon. Samuel Adams, First Assistant Secretary, reviewing the history and defining the status of the Mississippi Choctaws, and expressing the opinion that the bill should not be enacted into law.

I will read from that letter some extracts giving the historical facts:

STATEMENT OF HON. SAMUEL ADAMS.

* * * a review is necessary of the pertinent facts concerning the origin of the claims of the Mississippi Choctaws and the efforts heretofore made by the Government to adjudicate the rights of such persons.

These claims are based upon Article XIV of the treaty of September 27, 1830 (7 Stat., 333, 335), which reads as follows:

"ART. XIV. Each Choctaw head of a family being desirous to remain and become a citizen of the States shall be permitted to do so by signifying his intention to the agent within six months from the ratification of this treaty, and he or she shall thereupon be entitled to a reservation of one section of 640 acres of land, to be bounded by sectional lines of survey; in like manner shall be entitled to one-half that quantity for each unmarried child which is living with him over 10 years of age, and to a quarter section to such child as may be under 10 years of age, to adjoin the location of the parent. If they reside upon said lands intending to become citizens of the States for five years after the ratification of this treaty, in that case a grant in fee simple shall issue. Said reservation shall include the present improvement of the head of the family or a portion of it. Persons who claim under this article shall not lose the privilege of a Choctaw citizen, but, if they ever removed, are not to be entitled to any portion of the Choctaw annuity."

When the commissioners representing the United States attempted to negotiate the treaty of 1830 they encountered much opposition from many members of the tribe, because of the reluctance of a large number of the citizens to give up the land which they had occupied for many years and to abandon the graves of their ancestors, as would be necessary in view of the removal of the tribe to lands west of the Mississippi River, as provided by the terms of the treaty. The principal purpose of the Government in negotiating this treaty was to induce Indians to go west, and it appeared for a time that the efforts of the commissioners, for the reasons stated, would be fruitless. However, at the suggestion of one of their chiefs, Greenwood Leflore, Article XIV was inserted in the treaty. By the terms of this article the Indians were allowed to elect whether they would remain in Mississippi or remove west. Finding that they were to have this privilege the opposition to the treaty vanished, and the negotiations were completed to the satisfaction of the Government.

Pursuant to the terms of the treaty a large number of Choctaws were transferred to the country west of the Mississippi, later known as Indian Territory. These Choctaws and their descendants now constitute the main body of what is known as the Choctaw Nation. The removal of the people was effected by the United States at various times by contractors who conducted the several migrations.

The great majority of the fourteenth-article claimants remained in Mississippi. Some of them, however, drifted into neighboring States and others finally made their way west and joined the main body of the tribe in Indian Territory. It should be noted in this connection that by various acts the Choctaw Council recognized the right of the Absentee Mississippi Choctaws to remove to the nation, and actually invited them to do so.

Those who removed to the Indian Territory were allowed to settle upon the lands of the tribe, and some of them were recognized and enrolled by the tribal authorities either by acts of the council or decrees of the tribal courts. A number of them, however, appear to have enjoyed the substantial benefits of Choctaw citizenship, but without establishing by any legal procedure their right to enrollment.

The commission to the Five Civilized Tribes having been created for the purpose of negotiating with those tribes plans looking to the allotment of their lands and the breaking up of the tribal governments, rendered a report to Congress under date of January 28, 1898, setting forth what the commission deemed to be the rights of the Mississippi Choctaws in the lands occupied by the main body of the tribe in Indian Territory. This report appears on page 10 of the printed report of the commission to the Five Civilized Tribes for one year, 1898. After reviewing the history of the Mississippi Choctaws, and certain laws relating to them, the commission stated its conclusion, as follows:

OPINION OF THE DAWES COMMISSION.

It follows therefore from this reasoning, as well as from the historical review already recited and the nature of the title itself, as well as all stipulations concerning it in the treaties between the United States and the Choctaw Nation, that to avail himself of the "privileges of a Choctaw citizen" any person claiming to be a descendant of those Choctaws who were provided for in the fourteenth article of the treaty of 1830 must first show the fact that he is such descendant and has in good faith joined his brethren in the Territory, with the intent to become one of the citizens of the nation. Having done so, such person has a right to be enrolled as a Choctaw citizen and to claim all the privileges of such a citizen except to a share in the annuities; and that otherwise he can not claim as a right the "privilege of a Choctaw citizen."

To the claim, as thus defined, the Choctaw Nation has always acceded, and has manifested in many ways its willingness to take into its citizenship any one or all of the Mississippi Choctaws who would leave their residence and citizenship in that State and join in good faith their brethren in the Territory, with participation in all the privileges of such citizenship, save only a share in their annuities, for which an equivalent has been given in the grant of land and citizenship in Mississippi.

When as a practicing lawyer I am called upon to present a law question to the court, I count myself fortunate if I can substitute a case in point for my own processes of legal reasoning. So to-day, instead of giving you my interpretation of the meaning of the fourteenth article of the Dancing Rabbit treaty I will cite the decision of a judge invested by the Congress of the United States with jurisdiction over the persons and the subject matter—the case of Jack Amos versus the Choctaw Nation, decided by the United States Court for the Central District of the Indian Territory. Jack Amos and 2,500 other Mississippi Choctaw Indians made application to the Dawes Commission for enrollment as citizens of the Choctaw Nation under the act of Congress March 3, 1893, creating that commission and directing it to enroll the members of the Five Civilized Tribes. The Dawes Commission denied the application and they appealed to the United States court, and that court affirmed the decision of the Dawes Commission. The precise question involved was as to the right of citizenship of those Choctaws who under the treaty of 1830 decided to remain in the State of Mississippi, called Mississippi Choctaws, and who had not since removed into the Indian Territory. The opinion was rendered by Judge William H. H. Clayton, well known to the Representatives here from the State of Arkansas as well as those from the State of Oklahoma as a great lawyer and as an upright judge. I will read you a part of his decision:

JACK AMOS ET AL. V. THE CHOCTAW NATION.

In this case the proof shows that the claimants are Choctaw Indians by blood now living in the State of Mississippi; that neither they nor their ancestors have ever removed into the present Choctaw Nation.

The claimants base their right to be enrolled as Choctaw citizens upon the terms of the second and fourteenth articles of the treaty negotiated at Dancing Rabbit Creek on September 27, 1830, and of the conditions of the patent to the lands of the Choctaw Nation executed by President Tyler in the year 1842. (Durant Ed. Choctaw Laws, p. 31.)

Articles 2 and 14 of the treaty of 1830 are as follows:

"ART. 2. The United States, under a grant specially to be made by the President of the United States, shall cause to be conveyed to the Choctaw Nation a tract of country west of the Mississippi River in fee simple to them and their descendants, to inure to them while they shall exist as a nation and live on it, beginning near Fort Smith, where the Arkansas boundary crosses the Arkansas River, running thence to the source of the Canadian Fork, if in the limits of the United States, or to those limits; thence due south to Red River and down Red River to the west boundary of the Territory of Arkansas; thence north along that line to the beginning, the boundary of the same to be agreeable to

the treaty made and concluded at Washington City in the year 1825; the grant to be executed so soon as the present treaty shall be ratified.

"ART. 14. Each Choctaw head of a family being desirous to remain and become a citizen of the States shall be permitted to do so by signifying his intention to the agent within six months from the ratification of this treaty, and he or she shall thereupon be entitled to a reservation of 1 section of 640 acres of land, to be bounded by sectional lines of survey; in like manner shall be entitled to one-half of that quantity for each unmarried child which is living with him over 10 years of age, and a quarter section to such child as may be under 10 years of age, to adjoin the location of the parent. If they reside upon said lands, intending to become citizens of the State, for five years after the ratification of this treaty, in that case a grant in fee simple shall issue. Said reservation shall include the present improvements of the head of the family or a portion of it. Persons who claim under this article shall not lose the privilege of a Choctaw citizen, but if they ever remove are not to be entitled to any portion of the Choctaw annuity."

The conditions of article 2 of the treaty, that the land should be conveyed "to the Choctaw Nation in fee simple to them and their descendants, to inure to them while they shall exist as a nation and live on it," are carried into the patent and are the only portions of that instrument which shed any light on the question now being considered, and therefore article 2 and the conditions of the patent may be considered together.

The whole object of the treaty of 1830 was to procure the removal, as far as practicable, of the Choctaw people to the lands west of the Mississippi which they now occupy. The Supreme Court of the United States, in the case of the Choctaw Nation *v.* United States (119 U. S., 36), after reviewing the treaties of 1820 and 1825, says:

"In the meantime, however, under the pressure of the demand for settlement of the unoccupied lands of the State of Mississippi by emigrants from other States the policy of the United States in respect to the Indian tribes still dwelling within its borders underwent a change, and it became desirable by a new treaty to effect, as far as practicable, the removal of the whole body of the Choctaw Nation, as a tribe, from the limits of the State to the lands which had been ceded to them west of the Mississippi River. To carry out that policy the treaty of 1830 was negotiated."

Again in the case, page 27, the court says:

"It is notorious as a historical fact, as it abundantly appears from the records of this case, that great pressure had to be brought to bear upon the Indians to effect their removal, and the whole treaty was evidently and purposely executed not so much to secure the Indians the rights for which they had stipulated as to effectuate the policy of the United States in regard to their removal."

Article 3 of the treaty of 1830 stipulates that the Choctaws agree to remove all of their people during the years 1831, 1832, and 1833 to those lands. (7 Stat. L., 333.)

Article 14 of the treaty, however, provides for certain privileges and rights for those who might choose to remain in Mississippi with a view of becoming citizens of that State. They and their descendants were to receive certain lands and after living on them for five years, intending to become citizens of the State, those lands were to be granted to them in fee simple. Then follows this very peculiar clause:

"Persons who claim under this article shall not lose the privilege of a Choctaw citizen, but if they ever remove are not to be entitled to any portion of the Choctaw annuity."

The difficulty in construing this clause of the treaty is to ascertain the meaning of the word "remove." To what does it relate, and how shall we give it meaning? It certainly does not propose to impose a penalty on the Choctaw, who may choose to remove for removing, and for that reason forfeit his right to the annuity, because so long as he remained in Mississippi he was not entitled to any annuity, and therefore by removing he could not forfeit that which he did not have. If he removed he was to have no annuity, and if he remained he was to have no annuity. It is evident therefore that the word was not used for the purpose of forfeiting the annuity on case of removal. Then, what are its uses? The very object of the treaty was to procure a removal of these people. The whole of the Choctaw Nation, with all its sovereignty, its powers, and its duties, was to be transferred beyond the Mississippi. It was to exercise its powers, confer its privileges, and maintain the citizenship of its people in another place. Those who were left behind not to maintain this Choctaw citizenship, but only the "privileges of a Choctaw citizen"—that is, that when they put themselves into a position that these privileges could be conferred upon them they were to have them—and under the purposes and conditions of this treaty how would it be possible for them to put themselves in such a position without first removing within the territorial jurisdiction of the Choctaw Nation and within the sphere of its powers? What privilege would it be possible for the Choctaw Nation to confer or a Mississippi Choctaw to receive so long as he remained in Mississippi and out of the limits of the Choctaw Nation? By the very terms of the treaty they were to become citizens of another State, owing allegiance to and receiving protection from another sovereignty. If one Mississippi Choctaw were to commit a wrong against the person or property of another, the right would be enforced and the wrong redressed under the laws of Mississippi. The Choctaw Nation would be powerless to act in such a case. The Choctaws in that State can not vote, sit as jurors, or hold office as a Choctaw citizen or receive any other benefit or privilege as such. They can not participate in the rents and profits of the lands of the Choctaw Nation, because by the very terms of the grant the Choctaw people and their descendants must live upon them. If they do not, it is an act of forfeiture, made so by the provisions of article 2 of the treaty of 1830 and also of those of the patent to their land afterwards executed.

The title of Choctaw people to their lands is a conditional one, and one of the conditions of the grant, expressed in both the second article of the treaty of 1830 and the patent, is that the grantee shall live upon them. And who are the grantees? Who are these people who are to live upon the land? Unquestionably the Choctaw people and their descendants; for while the grant is to the Choctaw Nation, the people seem to be included, both as grantees and beneficiaries. The language of the treaty is, and it is carried into the patent:

"The President of the United States shall cause to be conveyed to the Choctaw Nation a tract of country west of the Mississippi River, in fee simple, to them and their descendants, to inure to them while they shall exist and live as a nation on it."

The Choctaw Nation is not "them," and can not have "descendants." And while it may exercise its sovereignty and its national powers within certain defined territorial limits, it can not "live on land." Those expressions of the grant which are expressed in the plural and attach to "descendants," and which require as a condition that the land shall be lived on, beyond doubt refer to the Choctaw people and their descendants. Whatever effect upon the title the limitation upon the right of alienation expressed in the patent, so that the lands can not be sold except to the grantor or by its consent, may have, there can be no question but that the second article of the treaty of 1830, negotiated 12 years before the execution of the patent, and in which no limitation on the right of alienation is expressed, was intended to convey a fee-simple title, burdened by two conditions subsequent, the one that the grantees should continue the corporate existence of their nation, and the other that the people of that nation and their descendants should forever live upon the land. A failure of either would work a forfeiture of the title to the grantor.

Now, why was it that this fee-simple title was to be burdened by the condition that the grantee must live on the land? In the light of the knowledge of the conditions that then existed, the answer is plain. The policy of the Federal Government at that time relating to the Indian tribes was to move them upon a reservation and keep them there; and if the Indian, either singly or in numbers, should stray off, soldiers with guns and bayonets were used to drive them back. This very treaty was negotiated with the Choctaws for that very purpose. Hence the condition in the grant that they should live on the land or it should be subject to forfeiture to the United States. This condition was inserted for two reasons: First, to compel the grantees to remove upon the lands; and, second, to compel them to remain on them after removal. It was not intended that some should go and locate on the lands and hold the title for themselves and also for the others who should choose to remain. This would defeat the very object of the condition.

To permit men with, perchance, but a strain of Choctaw blood in their veins, who 65 years ago broke away from their kindred and their nation, and during that time or most of it, have been exercising the rights of citizenship and doing homage to the sovereignty of another nation, who have borne none of the burdens of this nation and have become strangers to the people, to reach forth their hands from their distant and alien home and lay hold of a part of the public domain, the common property of the people, and appropriate it to their own use would be unjust and inequitable.

It is therefore the opinion of the court that the absent Mississippi Choctaws are not entitled to be enrolled as citizens of the Choctaw Nation.

The action of the Dawes Commission is therefore affirmed, and a decree will be entered for the Choctaw Nation.

What can I add to the force of this reasoning? The court had jurisdiction of the persons who voluntarily came before it. It had jurisdiction of the subject matter, and it was by the express terms of the act of Congress made the final arbiter—a court of last resort. That decision is the law of that case. It is the law of this land. Congress is bound by it and can not change it if it would. Congress has not unbounded license of power. There is a court above it. The property rights of the people of the Choctaw and Chickasaw Nations in their own funds and their own domain in the State of Oklahoma, once the old Indian Territory, are guaranteed to them by public treaties, by solemn covenants, by the public faith of this Nation. The Supreme Court of the United States in the case of Choate *v.* Trapp (224 U. S., 665) held that Congress has no power to take from the Indians a property right vested by treaty, and that, therefore, the act of May 27, 1908, making the Indian lands alienable and subjecting them to taxation was, in so far as it sought to subject said lands to taxation, absolutely void.

In my argument I have now given you, in the first place, the views of the Assistant Secretary of the Interior, who, after exhaustive study from the viewpoint of a high public functionary, with no interest except to render a just decision, has in the discharge of the duties of his office given it as his deliberate conclusion that the Mississippi Choctaw Indians have no property interest in the tribal funds or lands of the Oklahoma Choctaw and Chickasaw Nations. I have given you the same conclusion as reached by the Dawes Commission, an impartial tribunal created by act of Congress, of which the late Senator Dawes, of Massachusetts, was chairman, and which had for its membership men like Gov. Stanley, of Kansas; Thomas Needles; Tams Bixby; A. S. McKennon; and Clifton R. Breckenridge, once a Member of this House and afterwards minister to Russia. My good friend and colleague, the gentleman from Arkansas, Hon. H. M. JACOWAY, was for years the secretary of that commission. And I have read you the decision of the Federal court in the Indian Territory to which the Congress gave jurisdiction to try the cause and determine the rights of the Mississippi Choctaws. From these authorities and from the history of that memorable exodus of the Choctaw people the following salient and illuminating facts stand out from the record:

First. It was the policy of the Government of the United States, the public policy, to remove this nation of Indians from the State of Mississippi so that the State of Mississippi might be developed, settled, cultivated, controlled, and governed by the white men, who were invading and monopolizing the Indian country.

Second. It was the public policy of the Government that this nation of Indians should move west into a section remote and almost inaccessible, far beyond the white man's country, where these Indians, unmolested, could have a government of their own and a country of their own with their own manners, cus-

toms, ways of life, tribal laws, and from which the white men were to be excluded by the Federal Government.

Third. The treaty was so understood by the council, the Mingoes, the chiefs, the warriors, and the masses of the Choctaw people, and acting in accordance with its terms and its meaning and its policy, the tribe pursued its journey, like the wandering tribes in their migration from Egypt, back to the wilderness.

Fourth. It was the policy and the intention of the Government that each Choctaw head of a family desirous to remain in Mississippi should become a citizen of that State, and thereupon be entitled to a homestead of 640 acres of land, and all unmarried Choctaws and all children over 10 years of age should receive 320 acres of land, and all under 10 years of age 160 acres of land.

Then there is no escape from the conclusion that it was intended that those Choctaw Indians who remained in Mississippi should forever lose their identity with the migrating nation, becoming identified with the white citizenship of the land where they chose to live by the graves of their ancestors.

Fifth. But it was contemplated that some of those who remained in Mississippi might become discontented and want to join the tribes in the new country, so the concluding paragraph of the fourteenth article was inserted:

Persons who claim under this article shall not lose the privilege of a Choctaw citizen, but if they ever remove are not to be entitled to any portion of the Choctaw annuity.

For whose benefit and protection was this clause written? It was written for the benefit of those persons living at that time. Inasmuch as this clause is the basis of the claim of the Mississippi Choctaws asserted now, and inasmuch as it was written for the benefit of persons who were living in Mississippi in 1830, and inasmuch as those persons are now all dead, it is obvious that the Mississippi Choctaws now living can claim no benefits under this provision. But what is the meaning of the phrase "privilege of a Choctaw"? That meaning is clear, namely, that the discontented Indian remaining in Mississippi, who had abandoned his tribe or whom the tribe had abandoned, whichever way you put it, might, by migrating to the West and joining his people, have all the privileges of a tenancy in common of the Choctaw lands in the Indian Territory and a participation in the tribal government there, but he was to forfeit all interest in the annuities received from the Government of the United States.

Sixth. The Mississippi Choctaw claimants have contributed nothing to the laws, the government, the social life, the industrial development, the agricultural improvement, the progress in civilization of the Choctaw people of the Indian Territory. The Indians who migrated left comfortable homes back in Mississippi, where they had improved places, cattle, and slaves. They settled in the primeval solitude, exposed to hardships, suffering, and danger, and to constant attacks from the nomadic and savage Indians of the plains. The development of the Choctaw and Chickasaw people in the old Indian Territory from semi-barbarism to civilization is a miracle of modern history, but in their dangers, privations, toil, and achievements the Mississippi Choctaws had no share.

I have now established my first proposition, namely, that the Mississippi Choctaws have no interest whatever in the property of the Choctaw and Chickasaw Indian Nations of Oklahoma. Their existence as a part of the Choctaw Nation of Indians is swallowed up and lost by the night of oblivion that closed over the 10 lost tribes of Israel.

GRATUITIES TO MISSISSIPPI CHOCTAWS.

It is true that the Indians who remained in Mississippi in 1830 suffered injustice. The agent to enroll them was harsh and abusive. Only a few received allotments. Many were denied their just rights. To remedy this injustice the Congress passed an act, in 1837 and again in 1842, for commissions to investigate the claims of Indians who were denied allotments in Mississippi. All who made application to these commissions and were found entitled to enrollment were awarded scrip in lieu of the land which should have been allotted them under article 14 of the treaty of 1830. This scrip gave the applicants the right to enter public lands in certain Southern States. Later the portion of the scrip not delivered was commuted by a money payment. But it will be seen that never at any time has the Congress appropriated for the benefit of the absent Choctaw Indians, those who remained in the State of Mississippi, any portion of the funds or of the property of the Choctaw Nation of Indians in Oklahoma without the consent of that nation. The Choctaw people in the Indian Territory passed many acts and resolutions inviting these absent Choctaws to move into their country, and on one occasion appropriated a considerable sum of money to assist them on their journey, and on December 24, 1889, the General Council of the Choctaw Nation passed a resolution requesting the United States Government to make provisions for the emigration of said Choctaws from their eastern homes to the Choctaw Nation.

By the Atoka supplemental agreement of July 1, 1902, the Choctaw and Chickasaw Nations agreed that all persons identified by the Commission to the Five Civilized Tribes as Mississippi Choctaws shall be entitled to allotments in the Choctaw or Chickasaw Nations by removing in good faith and continuously residing there for a period of three years. Some 2,500 were identified by the commission as Mississippi Choctaws, and of these, 1,070 persons failed to remove. So the record proves, and it is the impartial verdict of history, that the United States Government, and the Choctaw and Chickasaw Nations as well, have always been generous to the absent Mississippi Choctaws. The right of citizenship in the Choctaw Nation, conferred on the Mississippi Choctaws upon condition of their moving to the Indian Territory by the Atoka supplemental agreement of July 1, 1902, was a gratuity. That was the legal opinion delivered by Philander C. Knox, Attorney General of the United States and one of the greatest lawyers our country has produced (vol. 24, p. 689, Opinions of Attorneys General), and that is substantially the holding of the Supreme Court of the United States. (Choctaw Nation *v.* The United States, 119 U. S., p. 1.) The question of what the Congress will do with the claim of the Mississippi Choctaws it will be time enough to decide when we reach it, but the question before the House now is whether it will give to the Choctaw and Chickasaw Indians of Oklahoma a per capita payment of $100 of their own money. The Congress can withhold the money because it has the power to do so; but between the power to do a thing and the right to do a thing there is—

A gulf profound as that Serbonian bog
Betwixt Damiata and Mount Casius old,
Where armies whole have sunk.

The Congress should remember in Shakespeare's immortal drama the despairing cry of Claudio, unjustly doomed to die:

'Tis excellent to have a giant's strength, but tyrannous to use it like a giant.

THE TRIBAL PROPERTY OF THE CHOCTAW AND CHICKASAW INDIANS.

In January, 1837, the Chickasaws, having determined to move west, entered into a treaty with the Choctaw Indians, the United States being also a party, by which the Chickasaws paid to the Choctaws the sum of $537,000 and were ceded the Chickasaw Nation, to which they at once removed. This treaty gave them equal rights with the Choctaws in the Choctaw and Chickasaw country excepting the right to participate in the Choctaw annuities. For years the Choctaw Nation and the Chickasaw Nation had the same government in the old Indian Territory, but before the Civil War the Chickasaws formed a government of their own and each tribe had a separate government. By the Atoka supplemental agreement, approved by Congress July 1, 1902, it is stipulated that the proceeds arising from the sale of coal and asphalt lands and the coal and asphalt deposits shall be deposited in the Treasury of the United States to the credit of said tribes and paid out per capita to the members of said tribes, with other moneys belonging to said tribes, in the manner provided by law. As I stated to-day when I interrupted the gentleman from Virginia [Mr. SAUNDERS], there have been four per capita payments already made to the Choctaw and Chickasaw Indians. In 1904 there was a per capita payment of $40; in 1906, a per capita payment of $35; in 1908, another per capita payment of $20; and in 1911, from the general fund, a per capita payment of $50. This per capita payment proposed does not come out of the public funds of the United States Treasury. It does come out of the tribal funds belonging to the Choctaw and Chickasaw Nations of Indians. The amount of the per capita payment proposed is but a small part of the total fund and total property of these two nations, and if this payment is made the rights of the Mississipp Choctaws, conceding that they have rights, to their pro rata part upon an equitable accounting would be jeopardized in no wise. Let us see what is the value of this tribal property.

The Choctaw and Chickasaw tribal attorneys recently prepared a statement showing the funds belonging to the Choctaw and Chickasaw Indians now in the hands of the United States Government to be as follows:

CHICKASAW.	
In the Treasury	$603,469.06
On deposit in State and National banks	852,929.88
Total	1,456,399.94
CHOCTAW.	
In the Treasury	1,918,798.69
On deposit in State and National banks	2,274,439.19
Total	4,193,237.88
Grand total	5,649,637.82

The unallotted lands of these two nations which has been sold during the last two years brought a total of $10,137,094.85, of which there has been paid by the purchasers $4,891,310, leaving a balance due on deferred payments of $5,245,784.85.

In the hearings before the Senate Committee on Indian Affairs, Sixty-second Congress, third session, on H. R. 26874, pages 313 and 314, J. George Wright, Commissioner of the Five Civilized Tribes, February 8, 1913, testified that the property of the Choctaw and Chickasaw Tribes undisposed of was worth approximately as follows:

Sale of surface of coal and asphalt lands	$4,000,000
Value of mineral deposits in coal and asphalt segregation	12,000,000
Value of timber reserve	3,500,000
Total	19,500,000

Adding to this the total cash now on hand, $5,649,637.82, and the deferred payments still due on the sale of the unallotted lands amounting to $5,245,784.85, makes the total tribal property of these two tribes amount to $30,395,422.67.

There are about 27,000 persons enrolled as citizens of the Choctaw and Chickasaw Tribes entitled to share in these funds, and a payment of $100 per capita, as provided by the present Indian appropriation bill, will amount to approximately $2,700,000. If this payment is authorized, there will still remain over $27,500,000 worth of tribal property yet undisposed of.

These figures are based upon the estimate of the unsold timber and mineral lands at nineteen and a half millions of dollars, when in truth, considering the discovery recently of new oil fields and gas fields in Oklahoma of incalculable value, these bodies of land—450,000 acres of mineral lands and 1,300,000 acres of timberlands—are worth, in my judgment, at a conservative valuation, at least a hundred million dollars.

We have now reached the conclusion—for the conclusion is inevitable from the admitted facts—that the Mississippi Choctaw Indians have no interest in the tribal property of the Oklahoma Choctaw and Chickasaw Indians. We have seen that the payment proposed is but a fractional part of what is due by the Government, for we have the inventory of the tribal moneys and we know that the payment proposed is not out of the public funds of the United States, but it is a payment to the Indians of their own money; so that the sole question remaining is, Shall they be trusted to receive it? Now, the Indians classed as full bloods, called by the Indian Bureau "incompetents," I frankly concede should have the guardianship and protecting care of the Federal Government, and this bill by express terms protects that class by the following proviso:

> That in cases where such members are Indians whose restrictions have not been removed, the Secretary of the Interior may, in his discretion, withhold such payment and use the same for their benefit.

But what reason has been given, what reason can be given, why Indians not belonging to this incompetent class shall be denied a payment of which many are in sore need? I said in beginning my speech that these Indians are not savages; that they are possessed of business capacity, of intelligence, of strength of character.

THE PROPHECY OF PUSHMATAHA.

Representatives, I have told you the story of how Pushmataha, the Choctaw chieftain, traded the lands of his people east of the Mississippi River for the lands west of the Mississippi River, where now is my own State of Oklahoma—a land richer, more beautiful, than the promised land flowing with milk and honey that greeted the rapt vision of Moses from the heights of Nebo.

I pause to pay tribute to this Indian warrior, statesman, orator, and prophet. The inscription upon his tombstone is no false epitaph:

> Pushmataha was a warrior of great distinction. He was wise in council, eloquent in an extraordinary degree, and on all occasions and under all circumstances the white man's friend.

He was born to command, and though not the son of a chieftain was elevated to lead his race by his own restless energy, extraordinary talents, indomitable will, and strength of character. No greater orator ever lived. He was a giant in size, but exquisitely molded, and his face, the mirror of all human passions, reflected the intense soul within. He had a voice of melting music, whose harp strings were a lute, and in his own native tongue he was master of the grand harmonies of human speech. The oration delivered to the great Choctaw council of 1811 under the open sky, far in the forest wilds of Mississippi, made in answer to the fiery appeal of Tecumseh—the oration of Pushmataha that kept the Choctaws from rebellion and maintained their friendship with the Americans, could it have been preserved, would have made him immortal as the old Greek, whose eloquence stirred the Athenian rabble with one voice to exclaim: "Let us arise and go against Philip." Pushmataha was the true forest-born Demosthenes.

The story he told to Gen. Jackson of his supernatural origin recalls in the myths of cloud and storm of the Hellenic races the fable of Minerva—sprung from the brain of Jove, full-orbed and glorious in her divine wisdom and radiant beauty.

When Pushmataha was asked what made him distinguished among the Choctaw warriors, he answered:

> If the white chief must know, tell him that Pushmataha was not born of woman; that he has neither father nor mother nor kinsman upon the earth. Tell him that once upon a time, far away from here in the great forests of the Choctaw Nation, a dark cloud arose from the western horizon, and with astonishing velocity traveled up the arched expanse; across its dark face the bright lightning played in incessant flashes, while the rolling thunder reverberated in muffled tones from hill to hill amid the vast solitudes of the surrounding forests. Swiftly and majestically it climbed the western sky, while the lightning flashed, followed by the thunder's roar in successive peal after peal. In silence profound, all animate nature stood apart; soon the fearful cloud reached the zenith, then as quickly spread its dark mantle o'er the sky entire, shutting out the light of the sun, and wrapping earth in midnight gloom, lighted only in lucid intervals by the lightning's fitful glare, followed by peals of thunder in deafening roar. Then burst the cloud and rose the wind; and while falling rains and howling winds, lightning's gleam and thunder's roar, in wild confusion blended, a blinding flash blazed athwart the sky as if to view the scene, then hurled its strength against a mighty oak—an ancient monarch of the woods that for ages had defied the storm with his boasted power—and cleft it in equal twain from utmost top to lowest bottom, when, lo! from its riven trunk leaped a mighty man; in stature, perfect; in wisdom, profound; in bravery, unequaled—a full-fledged warrior. 'Twas Pushmataha.

Pushmataha died in Washington City in 1824. He was here as a delegate of his nation, with other Choctaw chiefs, in the interest of his people. He was taken sick, and said to his red brothers:

> I am dying, and will never return again to our native and loved land. But you will go back to our distant homes, and as you journey you will see the wild flowers of the forest and hear the songs of the happy birds of the woods. But Pushmataha will hear and see them no more. When you return home you will be asked, "Where is Pushmataha?" and you will answer, "He is dead." And it will fall upon their ears as the sound of the mighty oak falling in the solitude of the woods.

His dying words were, "When I am gone let the big guns be fired over me." His request was complied with. The minute guns were fired on Capitol Hill, and a procession of more than a half a mile in length marched to the Congressional Cemetery, and there the Choctaw chief and warrior lies buried.

A little while ago I stood by his grave. A magnificent forest tree casts its shade there in summer days, and the spot is marked by an ancient and weather-beaten stone fast crumbling to decay. But there is a monument in the State of Oklahoma to the great Choctaw that will endure. A county in the old Choctaw Nation bears the name of the chieftain. It is a wild and rugged, broken, and beautiful country, where the swift Kimichi River rushes through the pine-clad mountains and the voice of the wind is a coronach to the memory of Pushmataha.

> The very gale his name seems sighing,
> The waters whisper of his name,
> The woods are peopled with his fame.
>
> His spirit spans the dusky mountain,
> His memory sparkles o'er the fountain,
> The meanest rill, the mightiest river,
> Rolls mingling with his fame forever.

Before I describe the advancement of these Indians I will tell you of an Indian prophecy. We believe that the age of prophecy is gone, for Miriam, the sister of Moses, sleeps in the dust of the desert; Elijah, in his chariot of fire, long ago scaled the crystal battlements of heaven; and Delphi and Dodona are silent and their oracles are dumb. But I will give you the prophecy of an Indian chieftain, made a hundred years ago, concerning his own people—a prophecy with inspiration surpassing the nine Sybils of old Rome—the prophecy of Pushmataha.

When Pushmataha was speaking to the council of his nation, when the treaty of 1820 was made, he said:

> I most solemnly declare that on my part the sacred words "perpetual friendship," included in the last article of the treaty, shall never be violated or suffer the slightest infringement. We have made many treaties with the United States, all conducted in peace and amicably carried out, but this last one, the greatest of all, has been peculiar in its stipulations, giving another and a stronger proof of the fostering care and protecting intentions of the United States toward their Choctaw friends. In all our treaties we have been encouraged by them to institute schools, urging us to prepare ourselves as fast as possible to become citizens and members of that great Nation. In the treaty which has been concluded to-day the subject of schools has been more particularly urged and appropriations more extensively provided than any other former treaty. The applauding murmurs on that subject have passed through the camps of the red people. It meets their approbation. They will most certainly succeed. It is a peculiar trait in the Choctaw character that all the national movements turn out to be successes. I am pleased to hear so many speaking favorably of school institutions. It tells me that they will have them. It is a national sentiment, and I here venture the prediction—for I am considered a sort of a prophet, anyway—that the time will come, and there are many children and some grown men here to-day who will live to see it—when the highly improved Choctaw shall hold office in the councils of that great Nation of white people, and in their wars with the nations of the earth mixed up in the armies of the white man the fierce war

whoops of the Choctaw warrior shall strike terror and melt the hearts of an invading foe. Mind that. Pushmataha has this day declared it. clared it.

The prophecy of Pushmataha has been fulfilled. The Five Civilized Tribes, transplanted from their eastern homes to trans-Mississippi solitudes, have in less than a hundred years attained a high civilization. The love of liberty is as strong in the Indian as in the Saxon race, and his was the boast of the free-born Robin Hood:

I am as free as nature first made man,
Ere the base laws of servitude began,
When wild in woods the noble savage ran.

The Chickasaws, the Choctaws, and the Cherokees, in the experiment of self-government, will compare favorably with the governments of the Western States, created by the hardy pioneers who conquered the wilderness. They had written constitutions and written laws. They had legislatures composed of two houses, and a tribal chief, or governor, as the executive. They had courts and trial by jury to administer old-fashioned, plain, and simple justice. The Indians early learned the great truth that Alexander Campbell expressed in the maxim, "To educate the citizen is the first and imperative duty of the State." They spent large sums of money to establish free and common schools, founded academies of higher learning, and appropriated public moneys to educate the brightest youths of the nation in the higher education of eastern universities.

I lived in the Indian Territory when the Atoka agreement of 1898 was made. The delegates of the Choctaw government were Green McCurtain, J. S. Standley, N. B. Ainsworth, Ben Hampton, Wesley Anderson, Amos Henry, D. C. Garland, and A. S. Williams, and those of the Chickasaw Nation were R. M. Harris, I. O. Lewis, Holmes Colbert, P. S. Mosley, M. V. Cheadle, R. L. Murray, William Perry, B. H. Colbert, and R. L. Boyd.

I lived in the Indian Territory when the Atoka supplemental agreement was made, in 1902. The Choctaw representatives were Gilbert W. Dukes, Green McCurtain, Thomas A. Sanquin, and Simon E. Lewis, and the Chickasaw representatives were Douglass H. Johnston, Calvin Grant, Holmes Willis, Edward B. Johnson, and Benjamin H. Colbert.

I knew these men—nearly all of them—some on the terms of close intimacy and personal friendship. Some of them are living still, honored in their own land, and others have crossed the River of Silence, "to where beyond these voices there is peace."

I speak no panegyric of them when I say that—Indians though they were—for business ability, unsullied honor, far-seeing statesmanship, aye, in all the attributes of the noblest manhood, they were peers of the Members of this House of Representatives.

The tribal attorney for the Chickasaws is Reford Bond, a Chickasaw Indian. The tribal attorney for the Choctaws is Will F. Semple, a Choctaw Indian. The tribal attorney for the Cherokees is W. W. Hastings, a Cherokee Indian, and if they were not men of spotless integrity and great ability as lawyers they could not hold their high places for a day.

True, these Indians are representative of the highest type, but the rank and file of the Choctaw and Chickasaw Indians of Oklahoma of less than half Indian blood—the great majority in number—are wide-awake, competent business men who have no more need of guardianship over their affairs than have the white citizens of the State of Oklahoma or any other State in this Union.

In the War between the States the Choctaw, Chickasaw, and the Cherokee warriors leagued with the soldiers of the South to repel the northern invader and to make common cause with their true friends, the southern people, in the defense of their native land.

With the coming of the railroads after the Civil War white settlers swarmed into the Indian country, and the Indians gave them generous welcome. The old Indian Territory was an ideal poor man's country, for here farmers could get the use of fertile land for low rent or none. The Indian courts, all powerful over the tribal members, had no jurisdiction over white men. The whites and Indians for years lived together in an anomalous social state, with no government, no court, no taxes, and a man who would not pay his just debts was ostracised, for the obligation of honor was more binding among these primitive people than the attachment and sequestration writs of the boasted jurisprudence of the States.

The estimate that rated the Indian Territory as the Alsatia of refuge for criminals of other States did gross injustice to the population. The bandits and desperadoes were few in number, erratic and ill-starred characters, transient bubbles on the still stream, most of them killed by one another, like the armed men who sprang from the dragon's teeth upon the Theban plain. The people in the general mass were peaceful and law-abiding, shrewd merchants, industrious and thrifty farmers, and cattlemen who prospered by grazing vast herds on the luxuriant native grasses.

When the government of the new State of Oklahoma was in the making Choctaw, Cherokee, and Chickasaw Indians were in the legislature, were members of the constitutional convention, and were elected by the votes of white people to hold the highest offices in the State.

To-day the Register of the Treasury of the United States is a Choctaw Indian. The ranking member of the Committee on Indian Affairs in this House, who for nearly eight years has rendered service so distinguished to the Indian people, to the State of Oklahoma, and to this great Nation, is a Chickasaw Indian, and when Oklahoma is represented in the hall of fame in this Capitol, if the choice of the people of Oklahoma shall be reflected, there will stand there for future generations the statue of a Cherokee Indian, the Senator from Oklahoma, ROBERT L. OWEN.

Here were two of the primitive races of mankind—the red man and the white man—whose contact made them friends, not enemies, the one fitted by age-long environment to wrest a livelihood from the waste and the wild, the rock and the bramble, the other bearing in its hands the tribute of all the ages and wearing on its brow the jewels torn from the diadem of every civilization. Their blended race in Oklahoma has produced a material development and an evolution in arts and government the wonder and the admiration of the world. With its immeasurable mineral wealth—oil, asphaltum, coal—hidden in the womb of earth; with great forests of hardwood timber and long-leaf pine; with rich soils, the raw material of agriculture; with its independent and self-relying white population; with its Indian races, proud, generous, and brave, the old Indian Territory contributed its full share to the glories of the Commonwealth of Oklahoma and to the luster of the twin star that burns brighter than the gold band of Orion in the constellation of American States.

PROBLEM OF TAXATION IN OKLAHOMA.

I had intended to speak at some length to-day to this question of taxation, the right exercise of which is essential to all government and the abuse of which is destructive of all government. But I fear to tax the patience of those who hear me, and of my good friends in Oklahoma who will read my speech, so I will defer the tax discussion for another day.

It is well that the Members of this House shall sometimes forsake the narrow way of the partisan to walk the broad way of the patriot. I congratulate my colleague from Oklahoma [Mr. MORGAN] on the very excellent speech that he made yesterday on the subject of the exemption from taxation of Indian lands in Oklahoma, and I rejoiced exceedingly when from the 435 Members of this House not a single voice was heard to protest against the clause of this bill which appropriates the sum of $275,000 to be expended in the discretion of the Secretary of the Interior, under rules and regulations to be prescribed by him, in aid of the common schools in the Cherokee, Creek, Choctaw, Chickasaw, and Seminole Nations in Oklahoma during the fiscal year ending June 30, 1915.

Though the Indians were made the target for the arrows of unjust censure for refusing to pay the taxes imposed by the government of Oklahoma upon their lands, I do not blame them for contending for their treaty rights. In the Atoka agreement of 1898 is this language:

All the lands allotted shall be nontaxable while the title remains in the original allottees, but not to exceed 21 years from date of patent.

To preserve this right the Indians were compelled to appeal from one court to another until at last they found the highest tribunal, the Supreme Court of the United States, to be the shadow of a great rock in a weary land. The wrong that was done was to the white people when the Federal Government by the organic act that made Oklahoma a State failed to make compensation to the State for the revenues lost from the nontaxable lands.

Years ago I foresaw, and in many public speeches in Oklahoma I foretold, the blight and ruin to our people from unequal and unjust taxation with which the Federal Government had burdened us.

When the act of Congress of June 16, 1906, admitted Oklahoma into the Union I was the first to announce as a candidate for Congress. I need not apologize, my good friends, for my tardy appearance among you. "Barkis was willin'." It was in the old convention days, and to give you the details of my shipwreck would be an unprofitable story now. In my platform in 1906 I said:

INDIAN PLATFORM OF CLAUDE WEAVER IN 1906.

The State of Oklahoma is confronted in the dawn of its existence with conditions unnatural, perilous, and peculiar. In the formative period

of a State the burden of taxation is always oppressive. That burden will fall on old Oklahoma with crushing weight for the reason that in the Indian Territory the great body of the land is nontaxable. This rank injustice should be at once eradicated. Moreover, in the Indian Territory these nontaxable lands can not now be sold. A domain vaster and more magnificent in wide extent of rich valleys and fertile plains than that which the Norman conqueror divided among his robber soldiery is held inalienable; a condition which is an absolute bar to the growth, the development, and the prosperity of that section of our State.

If elected to Congress, it will be my first endeavor to remedy these evils, and to do so I shall advocate the following changes in the law:

First. I advocate the immediate removal of the restrictions on alienations of homesteads owned by intermarried citizens of white blood.

Second. The removal of all restrictions on land owned by persons of mixed blood, except homesteads.

Third. The removal of all restrictions on the sale of lands of all full bloods except homesteads, but such sales to be under the supervision and approval of the Department of the Interior, and the proceeds of such sales to be devoted to permanent and substantial improvements on the homesteads.

Fourth. The nonalienable homestead to consist of not more than 80 acres of average land.

Fifth. All lands in Oklahoma to become equally taxable at once upon the passage of the foregoing law.

Thereby:

First. The Indian Territory would bear with old Oklahoma equally the burden of State taxation.

Second. The farm lands would divide the burden of county taxation with city property.

Third. The homeless and landless tenant farmers in the Indian Territory, who have largely created its material prosperity, could buy homes and obtain a permanent foothold in the soil where they have toiled for so many years for the enrichment of Indian landholders.

Fourth. Thousands of farmers from other States would move to the Indian Territory part of Oklahoma to buy farms and add to the population and wealth of our State.

That was a good platform in 1906—that is a good platform in 1914. Is it better for each Indian to possess 320 acres of land and not cultivate it at all, or 160 acres of land and cultivate it poorly, or 80 acres of land and cultivate it well?

In Oklahoma County where I live I know American, German, and Bohemian farmers who will take 80 acres of land and in a little while, as if by magic, you will see on that 80-acre farm good houses and big barns and the seven great staple crops—cotton, corn, kaffir corn, broom corn, wheat, oats, and alfalfa—all growing in the same fields, and there will be chickens and sheep and hogs and horses and cattle, and in the springtime the air will be heavy laden with odors of orchard blossoms. Such farmers are the bone and sinew of a nation.

> Princes and lords may flourish or may fade,
> A breath can make them as a breath has made;
> But a bold yeomanry, their country's pride,
> When once destroyed, can never be supplied.

Let the full-blood Indians have an 80-acre homestead, inalienable, and for the other Indians break the chain that binds them to a far-away government, and you will settle the tax problem in Oklahoma, and the burden of taxation will be borne by all the people in proportion to the benefits received. Then the State will be divided into small farms where the home owner will live and till his own land, and you will see an agricultural development, a prosperity among the farming people such as exists to-day in rural France and nowhere else in the world.

The Indians need their money to improve their allotments. They are land poor. They lack the means of financing a profitable agriculture. If a part of their lands could be sold, leaving them a homestead on which they can build good houses and substantial improvements, if they had money to buy agricultural implements, horses to plow with, and a few cattle and hogs these Indians would in a little while be prosperous, where now they pine and perish in the midst of abundance. So Tantalus was mocked by golden and delicious fruits forever beyond his reach, and fountains of living water that forever fled his thirsting lips.

The policy that denies these Indians their own is a short-sighted policy, disgraceful to American statesmanship, injurious and unjust alike to the Indians and the white people of the State of Oklahoma. Why not give them their money? It belongs to them just as much as the salary of the ranking member of the Committee on Indian Affairs, Mr. CARTER, of Oklahoma, belongs to him. Suppose when the gentleman from Oklahoma, Hon. CHARLES D. CARTER, on the 4th day of March presents his salary check for $625 to the Treasurer for payment that official would answer, "Yes; it is due you as a Member of the House of Representatives, but I can not trust you with the money; you are a Chickasaw." Suppose when Gabe Parker presents his check for payment the Treasurer would say, "Yes; it is your salary. You are the Register of the Treasury of the United States, and every piece of money printed by the Government bears your signature, but I can not trust you with this money; you are a Choctaw." Suppose when ROBERT L. OWEN presents his check for payment the Treasurer would say, "Yes; this money is yours. You are a Senator from the State of Oklahoma. The greatest constructive piece of legislation of modern times, the Owen-Glass currency bill, bears your name. You have been merchant, lawyer, banker, farmer, cattleman, publicist, statesman—successful in every field of endeavor, but I can not pay you the money; you are a Cherokee."

Do you not see to what a miserable position you are driven? What an ignoble policy has dominated? Do you not see how you find youself in the wilderness of error, recalling the lines with which the great Italian poet begins the Divine Comedy:

> In the midway of this our mortal life,
> I found me in a gloomy wood astray.

CHOCTAW AND CHICKASAW TREATY RIGHTS.

The Choctaw and Chickasaw Indians of Oklahoma stand to-day on the same high ground where they have stood from the beginning. They are asking from the Government no special benefits, no bounties nor gratuities nor charity, but only that the Government shall keep its plighted faith and observe its solemn covenants with the Indian people.

How are the treaties—the agreements between the United States and the Indians to be construed? They are to be construed from the standpoint of the Indians as they were understood by the Indians. The Supreme Court of the United States has so held. The court said in the case of Worcester *v.* Georgia (6 Pet., 515):

> The language used in treaties with the Indians should never be construed to their prejudice. If words be made use of which are susceptible of a more extended meaning than their plain import, as connected with the tenor of the treaty, they should be considered used only in the latter sense. * * * How the words of the treaty were understood by this unlettered people, rather than their critical meaning, should form the rule of construction.

And again, in the case of the United States *v.* Kagama (118 U. S., 375):

> These Indian tribes are the wards of the Nation; they are communities dependent on the United States, dependent largely for their daily food, dependent for their political rights. They owe no allegiance to the States and receive from them no protection. Because of the local ill feeling the people of the States where they are found are often their deadliest enemies. From their very weakness and helplessness, so largely due to the course of dealing of the Federal Government with them and the treaties in which it has been promised, there arises the duty of protection, and with it the power. This has always been recognized by the Executive and by Congress and by this court whenever the question has arisen.

And again, in the case of Choctaw Nation *v.* United States (119 U. S.):

> The recognized relation between the parties to this controversy, therefore, is that between a superior and an inferior, whereby the latter is placed under the care and control of the former, and which, while it authorizes the adoption on the part of the United States of such policy as their own public interests may dictate, recognizes, on the other hand, such an interpretation of their acts and promises as justice and reason demand in all cases where power is exerted by the strong over those to whom they owe care and protection. The parties are not on an equal footing, and that inequality is to be made good by the superior justice which looks only to the substance of the right without regard to technical rules, framed under a system of municipal jurisprudence formulating the rights and obligations of private persons equally subject to the same laws.

Now, what was in the mind of the Choctaw and Chickasaw people when they ratified the Atoka agreement of 1898 and the supplemental agreement of 1902? The controlling consideration and thought with them was that they were to surrender and abolish their tribal governments; that they were to become citizens in fact as well as in name of the United States and of the new-born American Commonwealth to be erected in their Territory; and that the Federal Government without delay and at a time when the Indians who made and the Indians who ratified the treaty were still living to enjoy its fruits—that the Government would give them their land and their money. That was the treaty; and how has the Government kept it? Like the black, perfidious, uncanny, foul, and evil witches who greeted Macbeth and Banquo on the road to Forres—

> And be those juggling fiends no more believed
> That palter with us in a double sense;
> That keep the word of promise to our ear
> And break it to our hope.

The Government, with jealous care, observes its treaty obligations to the great powers of the world. We are ready to repudiate a party platform, and I think we ought to repudiate a party platform, that stands between us and the sacred preservation of the public faith. Why will not the Government redeem its covenant with the Indian people as well as with a world power like the Empire of Great Britain? Let the Federal Government scrupulously keep its treaties with the Indians, and there will be no Indian problem. There is but one solution to the Indian question, and that is to give to the Indians their property while they are alive and can enjoy it.

A Roman senator closed every speech with the saying, "Carthage must be destroyed," and I will close my speech with the solemn appeal to the Representatives of the American people here assembled, Be honest with the Choctaw and Chickasaw Indians of Oklahoma; give to the Indian his own.

Resolutions Adopted by the Legislature of Massachusetts.

EXTENSION OF REMARKS
OF
HON. ALLEN T. TREADWAY,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 14, 1914,

On the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. TREADWAY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include resolutions adopted by the Legislature of Massachusetts.

The resolutions are as follows:

THE COMMONWEALTH OF MASSACHUSETTS, 1914.

Resolutions relative to certain payments by the United States Government in aid of the Massachusetts Nautical School.

Whereas by an act of Congress passed March 4, 1911, entitled "An act for marine schools, and other purposes," it was provided that a sum not exceeding $25,000 should annually be paid by the United States to any State or municipality which maintained a marine or nautical school and annually appropriated therefor a sum not less than $25,000; and

Whereas this Commonwealth maintained during the years 1911, 1912, 1913, and intends hereafter to maintain, a nautical school, and appropriated therefor the sum of $68,000 in each of said years, and has appropriated a like sum for the current year: Be it

Resolved, That payment to the Commonwealth of the said sum of $25,000 for each of the years 1911, 1912, 1913, and 1914 is hereby requested.

Resolved, That the Senators and Representatives in Congress from Massachusetts are hereby requested to procure, if possible, the payment to the Commonwealth of the said sum.

Resolved, That copies of these resolutions, together with the twenty-second annual report of the commissioners of the Massachusetts Nautical School, be sent by the secretary of the Commonwealth to the Secretary of the Navy of the United States and to the Senators and Representatives in Congress from Massachusetts.

In house of representatives, adopted, March 2, 1914.
In senate, adopted, in concurrence, March 5, 1914.
A true copy.
Attest:

FRANK J. DONAHUE,
Secretary of the Commonwealth.

In accordance with the wishes expressed in these resolutions I have communicated with the Secretary of the Navy and the following is a copy of letter addressed to him:

MARCH 14, 1914.

Hon. JOSEPHUS DANIELS,
Secretary of the Navy, Washington, D. C.

DEAR MR. SECRETARY: Resolutions have been adopted by both branches of the Legislature of the State of Massachusetts requesting the payment to the Commonwealth of the sum of $25,000 for each of the years 1911, 1912, 1913, and 1914, in accordance with chapter 265, third session, Sixty-first Congress, approved March 4, 1911, entitled "An act for the establishment of marine school, and for other purposes."

In each of the years designated the Commonwealth of Massachusetts has appropriated $68,000 for maintenance of a nautical school. In accordance with the resolution above referred to I respectfully ask that whatever course of procedure is necessary to secure this payment to the Commonwealth should be undertaken by the Navy Department. Kindly inform me at your early convenience what action will be recommended.

Sincerely, yours,

ALLEN T. TREADWAY.

I have acknowledged the resolutions in a letter addressed to the president of the Massachusetts senate, of which the following is a copy:

MARCH 14, 1914.

Hon. CALVIN COOLIDGE,
President of Senate, Statehouse, Boston, Mass.

DEAR SIR: I beg to acknowledge receipt of the resolution adopted by the house of representatives and the senate relative to certain payment by the United States Government for aid of Massachusetts Nautical School.

I beg to state I have to-day called upon the Bureau of Navigation, and find that under chapter 265, third session, Sixty-first Congress, no provision is made for the appropriation required by this act, and that no payment has ever been made under it. I have formally presented the claim to the Secretary of the Navy, in accordance with letter of which I inclose copy. As soon as the matter is taken up by the department and answer made to this letter I will again communicate with you about the subject.

Assuring you of my interest in an effort to secure this sum for the Commonwealth, I am,

Sincerely, yours,

ALLEN T. TREADWAY.

I also include the act of Congress referred to in the resolutions:

[Chapter 265, Sixty-first Congress, third session.]

FEDERAL AND STATE LEGISLATION.

AUTHORITY OF THE UNITED STATES.

[H. R. 24145. Approved March 4, 1911.]

An act for the establishment of marine schools, and for other purposes.

That the Secretary of the Navy, to promote nautical education, is hereby authorized and empowered to furnish, upon the application in writing of the governor of a State, a suitable vessel of the Navy, with all her apparel, charts, books, and instruments of navigation, provided the same can be spared without detriment to the naval service, to be used for the benefit of any nautical school, or school or college having a nautical branch established at each of the following ports of the United States: Boston; Philadelphia; New York; Seattle; San Francisco; Baltimore; Detroit; Saginaw, Mich.; Norfolk; and Corpus Christi, upon the condition that there shall be maintained at such port a school or branch of a school for the instruction of youths in navigation, steamship marine engineering, and all matters pertaining to the proper construction, equipment, and sailing of vessels or any particular branch thereof.

SEC. 2. That a sum not exceeding the amount annually appropriated by any State or municipality for the purpose of maintaining such a marine school or schools or the nautical branch thereof is hereby authorized to be appropriated for the purpose of aiding in the maintenance and support of such school or schools: *Provided, however*, That appropriations shall be made for one school in any port heretofore named in section 1 and that the appropriation for any one year shall not exceed $25,000 for any one school.

SEC. 3. That the President of the United States is hereby authorized, when in his opinion the same can be done without detriment to the public service, to detail proper officers of the Navy as superintendents of or instructors in such schools: *Provided*, That if any such school shall be discontinued, or the good of the naval service shall require, such vessel shall be immediately restored to the Secretary of the Navy, and the officers so detailed recalled: *And provided further*, That no person shall be sentenced to or received at such schools as a punishment or commutation of punishment for crime.

SEC. 4. That all laws and parts of laws in conflict herewith are hereby repealed.

Statement Prepared by Judge D. C. Beman, of Denver.

EXTENSION OF REMARKS
OF
HON. H. H. SELDOMRIDGE,
OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 14, 1914,

On the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. SELDOMRIDGE. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a statement prepared by Judge D. C. Beman, of Denver, in reference to the appropriation for the migratory bird law.

The statement is as follows:

"The Federal migratory bird act and the regulations thereunder, prepared by a committee of the Biological Bureau, went into effect October 1, 1913.

"It is most revolutionary in character, and undertakes to nullify at one stroke all the statutes of the several States not in harmony therewith.

"Whether it is valid, and if so, what it means, are important questions to the sportsmen and game-bird propagators of the country.

"The country is divided into two zones, called the 'breeding' zone and the 'wintering' zone. Colorado is placed in the breeding zone, along with Montana and the northern States touching the Canada line. Kansas and Utah are placed in the wintering zone, along with Texas and other States touching the Gulf of Mexico.

"Although some migratory birds breed in Colorado, as they do in all the States, it no more belongs to the breeding zone than does Kansas or Utah. In fact, the north boundary of Utah is many miles north of that of Colorado. Somebody evidently had it in for Colorado.

"Instead of dealing with migratory birds as a class, a designation easily understood and defined, the act protects by name certain birds and then protects generally 'all other migratory game and insectivorous birds which do not remain permanently the entire year within the borders of any State or Territory.'

"It is well known that there are many kinds of game and insectivorous birds of the migratory class (not specifically named in the act) which remain in Colorado and other States the year round, and never, in fact, attempt to migrate. These birds, although in the migratory class, but not being specifically named in the act, are therefore without protection under its terms, and it would seem that in an action as to killing one of them it would be incumbent on the prosecution to prove that the bird in question was not one of these permanent residents. This would involve a practical impossibility and shows the lack of care in drawing the act.

"The regulations give a long list of protected birds, called migratory insectivorous birds, and adds that 'all other perching birds which feed entirely or chiefly on insects' are also protected.

"How many sportsmen know what a 'perching' bird is or whether it feeds chiefly on insects?

"Natural history says that perching birds constitute such a large and difficult group that ornithologists do not agree on their classification.

"Yet the sportsman must at his peril decide the question, and if he decides wrong he is a criminal.

DOVES "UNKNOWN QUANTITY."

"It seems to be generally understood that doves are not specifically protected by the regulations, although they are classed as, and no doubt are, migratory birds. Whether this is a blunder of the regulations or merely a trap set for the innocent sportsman under the term 'perching' birds, I dare not decide.

"Doves are protected under Colorado laws, and no one will contend that they should not be protected.

"While the regulations prohibit night shooting, they do not protect eggs or nests, provide any bag limit, or have any other sensible and necessary provisions contained in the game laws of Colorado and most other States.

"The act also generously provides that the States may enact laws to render 'efficient' the regulations made under the act. This is an admission that the regulations are not expected to be 'efficient,' and the States are left to do just what the promoters of the act have contended that the States have failed to do.

"It is also elemental that criminal laws should be plain and easily understood. This act is anything but plain.

"The regulations not only prohibit spring shooting, but also make a five-year closed season on shore and other birds, many of which are worthless as food, but are ravenous feeders on the small fish in our lakes and reservoirs, and materially lessen that important and growing food supply.

"One common argument against spring shooting is that the killing of a female duck in her spring flight means the destruction of immature eggs. The fact, however, is that the mating and breeding of migratory birds does not ordinarily begin until migration is completed and a nesting place selected.

"In any event, if the female duck had been killed the fall before, the egg shortage would have been the same.

"It has been suggested that the storks as common carriers of babies are within the interstate-commerce powers of Congress. This seems unanswerable.

"Many years ago migration in the West was chiefly along the valleys of the Mississippi and Missouri Rivers. Feed was scarce, the spring flights were long, and ducks in poor flesh.

"Now, however, conditions have changed and the greater spring flight is over the plains just east of the Rocky Mountains, where there are now thousands of acres of stubble fields of scattered grain for food, and hundreds of reservoirs, furnishing frequent resting places. These induce short flights, and the ducks are generally in good flesh here in the spring. Just east of and near the front range in Colorado there are now over 100 large reservoirs, where there were none 30 years ago. Many of these are supplied from seepage and other warm underflow, and are partly open the year round.

"This increase of food supply and resting places has unquestionably caused an earlier spring flight. As I write this article, the last of February, the spring flight of ducks has reached the region about Denver.

"In Colorado practically all the canvasback and redhead shooting is in the spring, as they seldom stop in their fall flight.

"If the sole object of the game laws is simply to preserve the game, then it can be done best by prohibiting all shooting.

"If, however, there is a double purpose, to preserve the game as much as practicable with its use as food and as furnishing reasonable recreation to the people, there are two sides to the question.

FEW OPPONENTS ARE SPORTSMEN.

"A canvass of the opponents of spring shooting will probably show that few of them are sportsmen or shoot at all.

"Spring recreation to the sportsman who has been housed all winter is far more acceptable and valuable than in the fall after a summer of outdoor work. Lessening the spring bag limit, if thought best, will not be opposed by sportsmen.

"A ban on spring shooting will close many shooting clubs of people of limited means, who have time to spare in the spring but are busy in the fall, while those of the wealthy can afford a year's clubhouse expense for a short fall shoot.

"The main argument in support of the legality of the act is that as migratory birds, being transitory, do not generally remain in any one State the year round, therefore they do not belong to the State and can not be legislated about by the States. By the same sign, as many of them do not stay in the United States the year round, but go to Canada and elsewhere, they do not belong to and can not be legislated about by the United States.

"It is also true that many people of the North and East migrate to Florida and California in the winter, but there has been no difficulty in subjecting them to the laws of any State through which they pass or are in for the time being; nor has Congress as yet undertaken to control the local police regulations of these States. The air, water, and sunshine are also transitory, if not migratory, yet while within its boundaries their use is controlled by each State.

"The act fails to provide for the collection or keeping of birds of any kind in public parks, or as house pets, or by people engaged in game-bird propagation. There are thousands of people in the East and some in Colorado engaged in the propagation of game birds, and this is encouraged and protected by the game laws of Colorado and some other States, and thousands of dollars are invested in it. It is a coming and important industry.

"Extensive game-bird propagators in the East have taken this failure up with the Biological Bureau without effect. I have a letter from one of the largest game-bird propagators in the East, in which he says that if the law is to be literally construed it will work a great hardship on game propagators and experimenters who are doing so much good work. This failure is one of the worst features of the act and is absolutely inexcusable. If it should be held valid, it wipes out hundreds of pages of State game laws, the result of years of work by game protectors familiar with local conditions, and leaves the whole question in hopeless chaos.

"It is also proposed in personal letters from the bureau to the State game commissioners that they furnish names of their deputy wardens to be appointed by the bureau to enforce the act for a slight compensation.

"Whether this proposal arises from thoughtlessness as to the situation in which it would place State officers, or is a cunning device intended to induce them to favor the Federal law, is uncertain; but it is certain that State game commissioners' and wardens' duty and oath require them to obey and carry out the State law in relation to game. Hence they can not enforce Federal law where it conflicts with State law without being false to their duty and oath. In any event, an effort to influence State officers to violate their plain duty is beneath the dignity of the National Government and its representatives and should meet public condemnation.

"No State game commissioner or warden can lawfully make or accept such an appointment.

SUPREME COURT FAVORS STATES.

"The Supreme Court of the United States has, over and over again, decided that the people of the States own and have the power of control over the game and fish while within their respective borders. In fact, this ownership and control has never been denied by any court in the land.

"Perhaps the strongest case in favor of State control is that of Ward versus Racehorse, decided by the United States court in 1896. In that case a treaty between the United States and the Bannock Indians provided that the Indians might return to their former reservation in Wyoming and hunt so long as the game lasted. Wyoming was then a Territory and under absolute Federal control. Afterwards it was admitted to the Union and passed a game law which Racehorse, a Bannock Indian, violated by killing an elk out of season. Being prosecuted for the violation, he pleaded the treaty provision in his defense.

"The Supreme Court decided that the game laws of Wyoming annulled the treaty in that respect, saying that if the treaty was allowed to control 'Wyoming would have been admitted to the Union not as an equal member, but as one shorn of a legislative power vested in all the other States of the Union, a power resulting from the fact of statehood and incident to its plenary existence.'

"The attorney general of the State of New York in November last rendered an opinion to the State conservation commission that the act in question was unconstitutional and beyond the power of Congress to enact.

"It is a duplicate of an act proposed by Representative Shiras in 1904, which was discussed through the sportsman's journals at the time by myself and other lawyers, without, I believe, finding one who believed it was valid.

"At the same time Mr. Shiras proposed acts giving Federal control of all migratory game and fish, based, like the bird act, on sentimental reasons. Both failed to pass, but if this bird act should be sustained we may look for one on migratory game quadrupeds and fish, so that Kansas catfish and suckers migrating to Colorado via the Arkansas River will enjoy the dignified protection of the Federal Congress, while the people of Alaska are left to chew the thistles of discontent and congressional neglect.

"The reasonable protection of all of our game and insectivorous birds is favored by all right-thinking people, and it has pro-

gressed in a remarkable degree by the action of most of the States, and they should be left to complete it in terms applicable to the conditions in each State.

"The act is another example of how easily harmful or illy digested measures may be put through under the influence of a laudable purpose and a lot of sentimental journalists and others led to approve them and condemn offhand those who hold different views.

"My prediction, perhaps I should say guess, is, however, that this migratory bird act will find an open season in every court to which it goes, and will be shot to pieces as incomprehensible and unconstitutional.

"DENVER, COLO., *February 28, 1914.*"

Canal Treaty History.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 14, 1914,

On the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. MOORE. Mr. Speaker, Congress is being bombarded with speeches, briefs, resolutions, and other forms of expression relating to Panama Canal tolls, but nowhere have I seen a more comprehensive historical statement of this mooted problem than that I now present under leave to extend my remarks. The author of this paper is Mr. Wilfred H. Schoff, secretary of the Commercial Museums of Philadelphia, who for many years has been a careful student of South American conditions. Mr. Schoff adopts the view of Dr. Nicholas Murray Butler and other scholars who have expressed themselves in favor of a repeal of the free-toll clause of the Panama Canal government act, and in the course of his reasoning groups together briefly certain data which should be of great value at this time. Here is what he says:

THE PANAMA "FREE-TOLLS" CONTROVERSY AND ITS DEPENDENCE UPON ANTECEDENT TREATIES.

"The question of 'free tolls' to American coastwise shipping in the Panama Canal depends upon the Hay-Pauncefote treaty of 1901 and the Clayton-Bulwer treaty of 1850, but also upon numerous treaties in colonial times, which affect both British and American rights in Central America.

"In the Clayton-Bulwer treaty of 1850 it was agreed by the Governments of the United States and Great Britain that neither one would 'ever obtain or maintain * * * any exclusive control' over an American interoceanic ship canal or would fortify or occupy or colonize the adjacent Central American coast, and that both Governments would jointly guarantee protection to any parties undertaking the construction of such a canal and would maintain equal rights and privileges in the canal for the subjects of each nation.

"In the Hay-Pauncefote treaty of 1901 the question of having a canal constructed by private parties was abandoned, as it had become evident that only a national government could carry the enterprise through successfully, and that the British Government was not disposed to undertake it, while the United States Government desired to do so. That treaty, therefore, provided that the canal should be 'constructed under the auspices of the Government of the United States,' and that the said Government should 'have and enjoy all the rights incident to such construction as well as the exclusive right of providing for the regulation and management of the canal.' The treaty further provided that the canal should be neutral, and embodied the convention of Constantinople of 1888 relating to the Suez Canal, agreeing that the canal should be 'free and open to the vessels of commerce and of war of all nations * * * on terms of entire equality,' so that there should be 'no discrimination * * * in respect of the conditions or charges of traffic.'

"That is to say, the principle of neutrality originally agreed upon as between the United States and England was now extended to include all nations, while the advantage gained by the United States was of sole ownership and operation, but not of special privilege.

"The United States Congress, in enacting regulations for operating the canal, provided that the coastwise shipping of the United States should pass through free of tolls, on the assumption that such shipping was not included within the terms of the treaty, which was interpreted as referring either only to vessels engaged in international trade or to vessels of other nations than the United States.

"Current discussion of this question has usually begun with the Clayton-Bulwer treaty of 1850, and many persons in the United States have asserted that treaty to have been an unfair measure, by which England gained from the United States privileges to which she was not entitled. In order that the question may be fully understood upon its merits, it is necessary that the circumstances antecedent to that treaty be fully examined.

"At the time of the Clayton-Bulwer treaty the relations between United States and England were seriously strained, owing to conflicting claims not only in Central America but in the Vancouver region and elsewhere, and it was only after much anxiety that war was averted by mutual concessions, leading to the establishment of the boundary between the present State of Washington and British Columbia and the acknowledgment of equal interests in Central America. In the negotiation of this treaty under the conditions ruling at that time the United States really gained more than might have been hoped for—in all probability much more than might have been gained through a war.

"As regards the dispute in Central America, while at that time the possibility of a canal at Panama was recognized the principal interest was in the Nicaragua route, utilizing the Nicaraguan lakes and the San Juan River. For the construction of a canal over that route the United States had secured an exclusive concession from the Republic of Nicaragua, including possession of the islands in the Gulf of Fonseca, the proposed western terminus of the canal; but sovereignty over its eastern terminus was claimed by England under treaties with the Mosquito Indians, who inhabited practically the entire Atlantic coast of Nicaragua. Back of each privilege was the assertion of full sovereign right to grant it, and the validity of such rights depended on the condition of Spanish power in colonial times, the Nicaraguan Republic having inherited whatever rights Spain relinquished in the war of independence, and England having acquired whatever rights the Mosquito Indians might have maintained against the Spaniards, whose sovereignty they never recognized and to whom they never had become subject.

"By right of original discovery, confirmed by the papal demarcation, Spain possessed the West Indies and the American Continent lying west of the mouth of the Amazon. Later territorial disputes raised the question of how far these original rights had been established by settlement and occupation. The Spaniards made their great conquests in Mexico and Peru and along the coasts of what is now Colombia and Venezuela. Their lines of interoceanic transit were at Panama and across southern Mexico. Along the Pacific coast and in the mountain valleys of Central America they made a few settlements, but never occupied that region in force because it was not rich in precious metals and was peopled by hostile Indians, whom they did not find it worth their while to subdue. Particularly along the Atlantic coast of Central America, which was low and unhealthy, the Spanish power was feebly asserted, and this coast became the rendezvous for buccaneers and pirates of almost every European nationality, but particularly English, French, and Dutch.

"English privateers were active in the Gulf of Honduras throughout the Elizabethan wars. The town of Truxillo, now in the Republic of Honduras, was taken and sacked by the English privateer Barker, in 1576, and there were further raids by Newport in 1591–92 and Shirley in 1596–97. The first actual settlement of Englishmen on the coast seems to have been made in 1638 by the English buccaneer Willis, whose name is perpetuated in the modern Belize in the colony of British Honduras. In 1630 King Charles I issued to an English company a grant of two small islands off the Mosquito coast which still bear English names—St. Andrews and Providence—although now belonging to the Republic of Colombia; and from these islands British trade was extended over the entire Mosquito coast. The company maintained a trading station on the coast and received privileges from the Indian king, who sent his son on a three years' visit to England.

"In 1655 an English force took possession of Jamaica and the island was ceded by Spain to England in a treaty made in 1670, which explicitly recognized all English settlements in that region and provided that the British Crown should 'keep and always possess in full right of sovereignty all the lands, countries, islands, colonies, and other places, be they what they will, lying and situate in the West Indies or in any part of America which the said King of Great Britain and his subjects now hold and possess.' Subsequently Spain tried to interpret this treaty as referring only to Jamaica and adjacent islands, but Great Britain claimed that it included English settlements in Hon-

duras and Nicaragua as well, and such claim seems to be fully justified by the language of the treaty above quoted.

"Soon after the British occupation of Jamaica the Mosquito king, probably the same prince who had visited England, placed his country under the protection of Great Britain, acknowledged British sovereignty, and became subject to the governor of Jamaica. Similar embassies of submission from the Mosquito Indians visited Jamaica in 1687 and in 1725, and from that period the Jamaica government continuously appointed justices of the peace in the Mosquito territory. In 1739 the Mosquito king concluded a new treaty of alliance, in which he 'resigned his country to Great Britain.' In 1741 a resident agent was sent from Jamaica, and in 1742 two British forts were built—one on the island of Ruatan and the other on the mainland at Black River.

"By the peace of Paris in 1763 England agreed to demolish forts 'in the Bay of Honduras and other places of the territory of Spain in that part of the world.' The settlements, however, continued, and in 1775 there was a council of government, a court of common pleas, and a bench of justices of the peace in the Mosquito territory. In 1782 the Spaniards attacked the colonists at Black River, who were reinstated five months later by troops from Jamaica.

"In 1780 British interest in a canal at Nicaragua was so aroused that Lieut. Horatio Nelson, who later became admiral of the British Navy and destroyed Napoleon's fleet at Trafalgar, was sent with troops to take possession of Lake Nicaragua. The expedition suffered severely from the local malaria and was withdrawn the following year.

"In the treaty of 1783 England and Spain agreed that the English settlers should leave 'the Spanish continent or dependent islands' and should retire within the limits of the present colony of British Honduras; and by the convention of London, in 1786, it was further agreed that the British colonists should evacuate the Mosquito territory on the stipulation that the Spaniards should treat the Indians with kindness. These treaties of 1783 and 1786 were, however, broken by Spain in 1798, when Spanish forces, without notice or declaration of war, made a determined attack on the British colonists at Belize, and after a hard fight on land and sea were beaten off and British occupation changed from one by sufferance to one by right of conquest. In 1816 the status quo ante 1783 was fully resumed when the king of the Mosquito Indians was crowned in Belize. In 1847 the British Government openly declared the Mosquito king to be under the protection of the British Crown.

"Such was the state of affairs when conflicting claims to possession of the interoceanic canal route brought the United States and England to the verge of war. The Republic of Nicaragua had inherited the Spanish claims to the Mosquito coast, but Spanish settlers within the territory had always been extremely few. Spanish power had never been recognized by the natives, and Nicaraguan administration had never been successfully asserted within the Indian territory. The Nicaraguan Government had, therefore, only a vague and shadowy claim to the sovereignty over the Atlantic terminus of the canal, whereas the British Government had treaties with the Mosquito Indians running over a continuous period of more than two centuries, with British sovereignty over that coast interrupted only once, by the treaties of 1783 and 1786, which were broken, not by England, but by the treachery of Spain.

"This act of Spanish treachery, under all diplomatic usages, canceled the treaties of 1783 and 1786 and left British sovereignty over the Mosquito territory in exactly the condition existing before those treaties—under the Mosquito treaty of 1739, by which the country was 'resigned to Great Britain' and a regular form of government instituted there.

"By the Clayton-Bulwer treaty of 1850 England agreed to abandon her claim to sovereignty on the Nicaraguan coast on condition that the United States should abandon any similar claim to sovereignty in Central America, and this agreement was carried out by British treaties with Honduras in 1859 and with Nicaragua in 1860, by which British territorial claims were relinquished to those Republics, and the question of Indian self-government was referred to arbitration of the Emperor of Austria, who made his award in 1881 to the effect that Nicaraguan sovereignty over the Mosquito territory was not full and unlimited, but was limited by the rights of self-government secured to the Indians by the earlier treaties.

"It has been asserted by some persons in the United States that English maintenance of the colony of British Honduras was an infraction of the Clayton-Bulwer treaty. Such an assertion can hardly be maintained. The treaty bound England and the United States jointly not to colonize in Central America, but did not bind either power to give up colonies already established. The colony of British Honduras was recognized as early as 1667 and 1670 in treaties between England and Spain, again in the treaty of Utrecht in 1713, and in the treaties of 1783 and 1786. As already explained, the existence of the colony by Spanish sufferance was converted into a possession by conquest after the treacherous attack of 1798. Nothing in the Clayton-Bulwer treaty obligated England to relinquish this colony. That treaty extended specifically to Nicaragua, Costa Rica, and the Mosquito coast, and related to future and not past action.

"Reduced to its lowest terms, the Clayton-Bulwer treaty was an agreement that if England would give up here territorial claims at the eastern entrance to the proposed privately built canal the United States would not assert such claims at the western end, and that both powers would jointly guarantee the neutrality of the canal. The British side of this agreement was fulfilled in advance by the relinquishment of British claims to the Mosquito coast. The subsequent negotiation of the Hay-Pauncefote treaty changed the agreement only to the extent of permitting the United States to build and own the canal, while it went further than the Clayton-Bulwer treaty in guaranteeing equal treatment to the vessels of all nations, not merely to those of the two contracting powers, as had been the case with the treaty of 1850.

"The subsequent change in the location of the canal from Nicaragua to Panama made no change in the existing obligations of the United States with respect to the canal.

"The design of the Clayton-Bulwer treaty was defined in article 6 as 'that of constructing or maintaining the said canal as a ship communication between the two oceans, for the benefit of mankind, on equal terms to all, and of protecting the same'; and in article 8 the treaty was extended to 'any other practicable communications, whether by canal or railway, across the Isthmus which connects North and South America'; among which specific mention was made of Tehuantepec and Panama.

"These stipulations were unchanged by the Hay-Pauncefote treaty, the object of which was declared to be 'to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans by whatever route may be considered expedient.'

"The treaty with the Republic of Panama did not modify these conditions. Sovereignty over the Canal Zone was not passed to the United States; it was a grant in perpetuity, a leasehold from the sovereign power, and article 18 provided that the canal should be 'neutral in perpetuity' and operated upon the terms of the Hay-Pauncefote treaty."

OPPOSITION OF IRISH-AMERICANS.

In this same connection, Mr. Speaker, I desire to say that while I have had numerous communications from leading constituents urging the repeal of the free-toll clause, many leading trade bodies and societies have forwarded messages and resolutions in opposition, which I have already submitted in the regular way. The Irish-American societies have been conspicuous amongst those. A few nights ago, at the Academy of Music in Philadelphia, the Clan-na-Gael, which met to listen to an address upon Robert Emmet by an eloquent colleague, the gentleman from Rhode Island [Mr. O'SHAUNESSY], took occasion, also, to pass upon this subject. I append the resolutions with an explanatory letter from the secretary of the meeting:

726 SPRUCE STREET,
Philadelphia, March 5, 1914.

Hon. J. HAMPTON MOORE,
House of Representatives, Washington, D. C.

DEAR SIR: Inclosed find a copy of resolutions which were unanimously adopted at an overflow meeting held in the Academy of Music, Wednesday evening, March 4, 1914, under the auspices of the Clan-na-Gael of Philadelphia, to commemorate the one hundred and thirty-sixth anniversary of the birth of Robert Emmet, and to which I respectfully request you to give your considerate attention. I would also respectfully ask you to request that the inclosed resolutions be inserted in the CONGRESSIONAL RECORD.

Yours, very truly,

WILLIAM J. BRADLEY,
Secretary.

At a monster celebration, held under the auspices of the Clan-na-Gael of Philadelphia, in the Academy of Music, 4th of March, 1914, to commemorate the one hundred and thirty-sixth anniversary of the birth of Robert Emmet, the following preamble and resolutions were unanimously adopted:

"We, the Clan-na-Gael of Philadelphia, assembled to honor the memory of Robert Emmet, reaffirm our belief in the principles and policies for which he gave his life and our determination to make Ireland an independent nation.

"We affirm that Ireland's right to a separate and distinct national existence is God-given and inalienable. She has never forfeited that right, and the history of her connection with England from the time of Strongbow to the present day proves conclusively that nothing short of complete national independence can ever make her people happy or enable them to repair the havoc wrought by English rule.

"We denounce as an unwarrantable presumption Mr. Redmond's oft-repeated assertion that the Irish in America will prove false to their citizenship and work for an Anglo-American alliance out of gratitude for a measure which is aimed to perpetuate and consolidate English authority in Ireland and blast for all time Ireland's hope of real free-

dom. We pledge the united efforts of all true nationalists in America to the work of achieving complete national independence for Ireland until the last link that binds her to England shall have been broken, and we shall continue to oppose with all our powers and resources England's efforts to entrap the United States into an alliance fraught with danger and dishonor to this Republic.

"We are justified in asserting that the allegiance of the Irish race to this Republic and their loyalty to the policies bequeathed to it by George Washington will not be weakened in the smallest degree by an act of the British Parliament or by any other European consideration.

"We call on Congress to defeat all attempts to repeal that part of the Panama Canal act which exempts American coastwise shipping from the payment of tolls. England, who claims that the exemption is a violation of the Hay-Pauncefote treaty, flagrantly violated the Clayton-Bulwer treaty by annexing Belize, now known as British Honduras, and her object is to place American shipping at a disadvantage in competition with her own subsidized vessels.

"*Resolved*, That copies of this declaration be sent to the President and Vice President of the United States, the Secretary of State, the Speaker, and the Senators and Representatives of Pennsylvania, with a request that it be inserted in the CONGRESSIONAL RECORD."

WILLIAM J. BRADLEY, *Secretary*,
726 Spruce Street, Philadelphia.

A BUSINESS VIEW OF THE PROBLEM.

I also submit a self-explanatory letter and resolution giving a business view of the situation:

PHILADELPHIA BOURSE,
Philadelphia, Pa., March 12, 1914.

Hon. J. HAMPTON MOORE,
House of Representatives, Washington, D. C.

MY DEAR SIR: I beg to hand you herewith a copy of resolution originally adopted by the Philadelphia Bourse November 29, 1911, on the subject of Panama Canal tolls, which at our meeting held March 11, 1914, was reaffirmed. We are sending you this thinking that it may be of some value to you in the discussion which will probably take place on H. R. bill 1922, proposing to repeal a portion of the Panama Canal act.

Yours, very truly,

EMIL P. ALBRECHT, *Secretary.*

Re Panama Canal tolls. Resolution originally adopted by the Philadelphia Bourse November 29, 1911; reaffirmed March 11, 1914.

Resolved, That to cover actual cost of operation of locks, maintenance, terminal, and other facilities, a tonnage tax should be imposed, which should be based on the actual displacement of the vessels and should be equal per ton of displacement for all vessels in all trades: *Provided*, That vessels flying the American flag engaged in the domestic trade of the United States shall be entitled to a refund of 50 per cent of the tonnage tolls paid: *And further provided*, That when such vessels are owned, controlled, or operated, directly or indirectly, by any land transportation line or lines which are operated in competition with such water lines no refund shall be paid to the vessels so owned, operated, or controlled.

Of course, Mr. Speaker, I reserve the privilege of expressing my own views upon the Panama Canal toll question when the bill comes up in the House.

Agricultural Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. CHARLES H. SLOAN,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 14, 1914,

On the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. SLOAN. Mr. Speaker, I hope this appropriation in the aid of Louisiana sugar planters may pass. It is one of the humane measures of the Agricultural Committee in its capacity as red-cross relief corps palliating the wrongs, and to some extent overcoming the damage and destruction, committed by the Ways and Means Committee

We have all read with some interest and approval of the chivalrous highwayman who, having taken the horse, purse, and valuables of his victim, hands back a crown piece to insure him lodging at the next inn.

Modernly we are told that at Monte Carlo, the world's greatest gambling place, that after the players' pockets have been drained by the remorseless wheel into the coffers of the great casino, the officers give him a gold piece to tide him over unto the morrow and mayhap save him from the river.

Shall we be less considerate and humane than they? Louisiana sat in the game at Baltimore. She now knows that the wheel was fixed against her. Still, for all that, the Government, vouching in a way for the masters of Baltimore, should stake her. The plank which stated that legitimate industries should not be injured has been repudiated over the protest of the home producer, while the toll plank is to be reversed at foreign behest. How potent in trade and diplomacy has the voice beyond the seas become. How weak and ineffective is the clamor of the American multitude, though it swell to Niagara's roar. The Louisiana people now know that the three great sources of damage to agriculture in this country are the hog cholera, cattle tick, and the Ways and Means Committee. We have an efficient serum against the first, an effective dip for the second, but to meet and overcome the ravages of the third we have no present serum and no dip into which it can be submerged before the first Tuesday after the first Monday in the coming November. This proposed appropriation should, therefore, be granted.

It is suggested by my colleagues that this will be another discrimination against the North, as the appropriation for sugar beets is quite small. Well, with the following discriminations, I think that we can stand this much more.

The Underwood tariff bill discriminates against the Northwest.

Free list: Meats, cattle, corn, eggs, wool, wheat (under conditions).

Protected: Rice, tobacco, peanuts, Angora goat hair, mica, cotton fabrics.

Protected: Eighty per cent of the products of New Jersey, 36 per cent of the products of the territory west of the Mississippi River.

It is not Louisiana's fault. It is, however, in the main, the majority side's confession.

Rural Post Roads.

SPEECH
OF
HON. JAMES S. DAVENPORT,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, February 6, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 11686) to provide that the United States, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. DAVENPORT. Mr. Chairman, if the bill under consideration becomes a law, it will, in my judgment, materially benefit more people than any bill that has originated in this House for many years. It will enact legislation that will affect all of the people in the United States. It is not political in its nature, and in the discussion of its provisions no one can be charged with supporting the measure because he is a candidate for reelection or because his political party is the only party that has advocated the passage of such legislation.

I am indeed anxious to see this bill become a law, for the reason it is right and it is legislation that is in the interest of all of the people. During the Sixty-second Congress many bills were introduced providing for Government aid in the construction of rural post roads, and we passed a measure in the House, but it failed of passage in the Senate. The provisions of the pending bill are similar to the provisions in the bill we passed in the Sixty-second Congress.

This bill provides for three classes of roads to be constructed by the Government, and these classes are defined in section 4 of the bill, as follows:

SEC. 4. That certain roads in the States which are adapted to use by the United States as rural post roads shall be divided into three classes, to be known as class A, class B, and class C.

Class A shall embrace roads upon which no incline is steeper than is reasonably necessary in view of the natural topography of the locality, well drained, with a road track composed of macadam or other material of equal utility and cost, constructed and maintained in such manner that it shall have a smooth, firm surface.

Class B shall embrace roads upon which no incline is steeper than is reasonably necessary in view of the natural topography of the locality, well drained, with a road track composed of shells, gravel, or a proper combination of sand and clay or other material of equal utility but less expensive than macadam, constructed and maintained in such manner that it shall have a smooth, firm surface.

Class C shall embrace roads upon which no incline is steeper than is reasonably necessary in view of the natural topography of the locality, with adequate drainage and ample side ditches, with a roadway constructed so as to quickly shed water into the side ditches and kept crowned and compacted by dragging or other adequate means, so that it shall be reasonably passable for wheeled vehicles.

This bill also carries an appropriation of $25,000,000 to be expended by the Government in conjunction with the several States and subdivisions thereof upon the post roads through the United States. Oklahoma has 1,099 rural mail delivery routes and there are many more being established each year. The aggregate length of mileage of the rural routes in Oklahoma is 29,616 miles. The average length of each route is 26.94

miles. Oklahoma also has 321 star routes, with an aggregate length of mileage of 4,482.97. The average length of each star route is 13.97. Under the provisions of this bill Oklahoma's share of the $25,000,000, based upon the aggregate mileage of rural and star routes, will amount to $572,500, quite a handsome sum, and if properly expended in connection with the amount the State or subdivisions will be required to expend will assist very materially in road building in Oklahoma. All other States of the Union will share proportionately according to their aggregate mileage of rural and star routes. By the terms of this bill it is intended to and, in my judgment, will in an equitable manner, distribute to the 48 States of the Union a portion of the revenues of the Government. We all admit that this is a new undertaking on behalf of the Government, yet we all agree that it is one of the most important; and no time should be lost in carrying out its provisions. We have in this House a bill pending providing for Government construction and ownership of a railroad or railroads in the Territory of Alaska, which provides that $35,000,000 may be expended by the President of the United States in the construction of such railroad or railroads.

Many gentlemen upon this floor earnestly advocated the passage of the Alaska railroad bill; but I have not favored that bill, for the reason I do not think it opportune, and I felt the necessity of first aiding the thickly populated rural districts throughout the United States in the way of constructing dirt roads, in order to enable the farmer to get his product to market and bring his supplies from railroad points. In other words, I have contended that before we should venture into a sparsely settled Territory of the United States we should first turn our attention to the rural districts, where there are millions of people living on farms who stand in great need of improvement of rural roads in order to get to and from the market. Every man on the floor of this House must depend upon the products of the farm, and the cheaper you can bring these products to the door of the consumer the better off we will all be. Therefore it seems to me that the pending bill now under consideration is the wisest piece of legislation we have had before us for some time, and I wonder why the Government of the United States has neglected this proposition for such a great number of years, as it has been assisting every other enterprise, as I will show before I conclude my remarks, but so far has overlooked the construction of dirt roads in rural communities. This Government has constructed roads in our Territorial and insular possessions and has expended millions in constructing roads and trails in Alaska. It has expended great sums in the Canal Zone, Porto Rico, and the Philippines, and we have now reached the point where we should assist the people at home by extending aid in the construction and maintenance of rural post roads, which are now established and used by the Government under the supervision of the Post Office Department for the carrying of mail. This aid will have the direct effect of benefiting all those who reside in the rural communities in the way of providing a means for the farmer to get his products to market, and those residing in the cities and towns will have the benefit of getting the products delivered to their doors daily.

The United States is the only progressive Nation in the world that has not given great consideration to the construction of its highways and the improvement of its internal traffic. All of the progressive nations of Europe are giving national aid to their highways, while this Government has neglected to extend aid, and has thereby imposed a burden of millions of dollars annually on our producers. Quite a different condition exists in the countries of Europe. There a splendid system of roads has been inaugurated. During the days of Napoleon, following the example set by the Roman Empire, an extensive system of road building was established throughout France, and many millions of dollars are expended yearly by that Government in the construction and maintenance of their roads.

The improvement of our inland highways by our Government not only cheapens the necessities of life but furnishes employment for many thousand of laborers who need the work. The farming population of this country constitutes about 35 per cent of the total population of the United States, and it is unfair to expect this large per cent to construct, unaided, the highways of this country. They should not be required to construct the roads over which they must haul their product to the consumer; at least the consumer should be required to contribute his share of the expense, as he receives as great a benefit as the farmer. All must admit that the farmer is the real producer of the Nation, and all must admit that he creates the wealth of the Nation, which largely finds its way into the pockets of other people, yet the producer has been required, unaided, to maintain and construct his roads over which he travels to the commercial centers of the United States.

Anyone who desires to be fair, even though he may reside in a city, will concede that there is no unfairness or unjustness in an appropriation by the Government to construct and maintain highways, and I rejoice to see the Members of this House who reside in city districts giving their aid to this bill. It shows conclusively that the city Members are patriotic and fair-minded business men and view this question in an economical way, and they realize all must be benefited by this appropriation. At no time in the history of our Government has there been as close relation between the people on the farms and the people in the cities. The rural-mail routes and the rural telephone has done much to bring the country and city together, and the effect of this bill, should it become a law, will result largely in causing the young men and young women of the country to remain at home, as they will have all the advantages of the city life, and at the same time enjoy the free out of doors and pure open air. At this time the high cost of living renders it important that we should seriously consider the question of transportation, and we should do all in our power to bring the cost of transportation to the lowest minimum. Transportation is now a paramount question. All civilized countries of the world have progressed rapidly along this line, and the great change made in the last decade is wonderful.

We have but three methods of transportation, viz: Water navigation, railroads, and wagon roads. Each of the three depend largely upon the other. The railroad can not exist without the aid of the wagon road, and neither the wagon road or the railroad can properly perform their functions of upbuilding a nation without water transportation. Each of these methods has an important duty to perform, not only in the local community, but in an interstate and foreign commerce. Two of these methods of transportation are owned and controlled largely by private corporations and are operated for gain. The third method, or the wagon-road transportation, is controlled by the State and is free to all of its citizens.

Our Government imposes a duty on many articles of life, an internal revenue and corporation tax, which in all respects places an additional cost upon the articles and fixes a charge on the article by the corporation paying the tax. All of our citizens are taxed in one way or the other and proportionately to the amount they purchase and consume.

The railroads of the United States have grown in magnitude and efficiency until we have perfected the greatest railroad system in the world. Our navigable streams and Great Lakes are crowded with vessels large and small ,all engaged in interstate traffic. Rivers and harbors are provided for annually by our Government, and large appropriations are made yearly for their improvement; and we also make large appropriations annually for the construction of public buildings throughout the United States. In the past our Government has donated millions of acres of land as a subsidy to railroad companies to induce them to construct railroads, yet practically nothing has been done for the improvement of dirt roads or national highways. We have to-day in the United States daily rural delivery service, which traverses about 42,000 miles of different highways of the Nation, coming in daily contact with more than 20,000,000 people living in the rural districts. I do not anticipate that anyone will seriously oppose the passage of this bill in the House; but if they should do so, I desire to invite their attention to the fact heretofore mentioned that in the early construction of railroads throughout the United States land was donated to the railroads as an inducement to the corporations to construct their lines, at an estimated value now of more than $1,000,000,000. There has been appropriated for rivers and harbors since 1875, $592,355,000; for the building of levees alone to June, 1902, $16,582,000; for the construction of public buildings up to June, 1911, $213,376,000. Again, we have expended nearly $400,000,000 on the Panama Canal; for the construction of roads in Porto Rico, the Philippine Islands, and the Territory of Alaska, $8,300,000.

The United States now has an estimated mileage of rural roads and highways amounting to 2,199,645, of which only 190,769 miles are improved. When you mention the number of miles of highways in the United States those who are disposed to oppose an appropriation for the improvement of rural roads may suggest that it would bankrupt the Government if we undertook to lend aid to the States in the improvement of roads; but is is estimated by the Office of Public Roads that 90 per cent of the traffic is confined to less than 30 per cent of the roads, and that the improvement of 440,000 miles of public roads would practically satisfy the demands of the country. If this estimate of the Office of Public Roads is correct, the improvement of our rural roads is not an undertaking so gigantic

as one would suppose; at least, it is not as great an appropriation as Federal pensions and the maintaining of our Army and Navy, nor would the appropriation reach a sum as great as was added to the Federal pension rolls a few days ago, which passed the House without any serious objection; and in that connection I might say that I was heartily in favor of the recent pension bill and supported it, because I believe it to be right and believe the Government should look to the protection and convenience of those who fought for it in time of war, keeping in mind all the time the merit and efficiency necessary to maintain the Government.

I now think the time has come when we should consider the interest of those who live in the rural communities and provide for the improvement of our internal highways, so that those living in the rural district may reap as great benefit from the Government as those living in cities, on railroads, and navigable streams.

The report of the Secretary of the Treasury for 1910 discloses that the tariff revenue aggregated $331,683,445; and the Government census of 1910 shows that we have 18,400,000 families in the United States. If you will apportion this tariff revenue among the families of the United States, each family is entitled to $18.13. The report of the Interstate Commerce Commission of the gross earnings of the railroads for the same period shows an aggregate of $2,787,266,136. Divide this amount by the number of families in the United States and you will find that each family paid a tax to the railroads for transportation of $151.48. The total amount of freight handled by the railroads for the fiscal years 1906 and 1907 was 1,100,000,000 tons. It is estimated that at least one-half of this tonnage was hauled to and from the railroad by wagons, and it would be fair to estimate that as much as one-third more was hauled to the consumer by wagons, on what may be termed a "second hauling," making a total of 800,000,000 tons hauled by wagons. In addition to this, a large bulk of the cotton crop, which amounts to practically 3,000,000 tons annually, is hauled from the farm to the gin, thence back to the farm, and finally to the railroad or to water navigation. It should also be stated that large quantities of agricultural, forest, and miscellaneous products are first hauled in their crude state over the rural roads before they reach the railroads and waterways, thus necessitating a rehauling of these products. So it is perfectly fair to estimate that the per capita transportation tax on the people of this country amounts to $53.37, as against a tariff tax of $18.13.

It is estimated by Mr. Page, the director of the Office of Public Roads, who is an expert on road building and wagon transportation, after a careful study of the question, that the cost of wagon transportation over the improved roads of England, Germany, and France by wagon, is only 10 cents per ton per mile, but eliminating any doubt as to the cost of these countries of transporting a ton a mile by wagon we will say that it amounts to 12½ cents per ton. If by the construction of good roads in this country we can reduce the cost of wagon transportation from 25 cents per ton per mile, which it now costs, to 12½ cents per ton per mile, we will save the people of our country on this item alone, at the very least calculation, $500,000,000 yearly.

Investigation shows that the cost to the American farmer is about 1.6 cents more to haul a bushel of wheat a distance of 9.4 miles from his farm to the neighboring railroads than it does to ship it from New York to Liverpool, a distance of 3,100 miles. If we had a system of good roads throughout the country, the farmers would save in the cost of wagon transportation of the cotton crop yearly $5,076,183; of the wheat crop, $10,256,058; of the corn crop, $12,700,278; whereas it now costs for wagon transportation to get these three great crops to market twice this sum.

The question of reduction in the cost of getting the crops to market is not the only benefit to be derived from good roads throughout the rural districts, because statistics show that good roads in a community add from $2 to $10 per acre to the land value, and the total area of farm lands in the United States in 1900 was shown to be about 850,000,000 acres. If an estimated increase of $5 an acre should be added to the value of the land by the construction of good roads, it would enhance the taxable value of the farm lands $4,250,000,000.

The great disadvantage that now confronts the American farmer is that he must market his crops when the roads are good, and he is not permitted to hold them until the demand is the greatest and the price is the highest. The present condition of rural roads throughout the United States renders it practically impossible to market his crops during the winter months. It matters not what price he is paid he must market his crops when the roads are passable.

Another great item to be considered in this matter is that the farmer is required to do his hauling when the roads are good, and when the roads are good it is usually pretty weather and he should be devoting his time to the fields. If good roads are established, the farmer will be permitted to do his hauling when his fields are too wet to work, and thus save him a large amount of time which he would otherwise lose.

For the last few years we have been continually hearing the cry from every source "Back to the farm." The intelligent boys and girls of our rural districts are seeking to escape the social conditions prevalent in the country during the long, dreary winter months of the year, attributable almost entirely to the bad roads. The drift of our population from the rural districts to the cities is really becoming alarming, yet if we improve the roads we will remedy this condition and largely eliminate this desire to get to the cities. The telephone and rural free delivery has done much to satisfy those who live on the farm, and if we would lend aid in the construction of public roads, instead of the dreary winter months in the rural communities, farm life would be more enjoyable and profitable. Bad roads prevent attendance at school and church; they make literary societies, social gatherings, club and lodge meetings practically impossible during the bad weather.

I have had an opportunity to learn personally of the conditions that exist in the rural districts, and have had actual experience and know of the inconveniences that go with country life a distance from the railroads. I was born and reared quite a distance from the railroad, and I know how difficult it is to get to and from the market places over unimproved roads.

Another great benefit to all of the people, regardless of citizenship in any State, which will be derived is the good effect it will have upon the rising generation in the rural communities, and, in my judgment, the improvements of country roads will make country life more pleasant, more enjoyable, and more profitable, and will be the strongest inducement to cause the young boys and girls to remain on the farm, and the question of supply and demand and high price of food products will almost be solved. I feel that within a few generations we will have improved roads throughout the United States, and few, I take it, will prefer the crowded city life to the freedom of outdoors in the country.

Another great benefit to be derived is that it provides better facilities and better opportunities for school and church attendance, and this means, of course, a stronger and better government. If we make a provision for the improvement of roads, it will increase the attendance at schools and churches and will in every way tend to upbuild the intellectual and moral standards of every community in the United States. There is no good reason that can be urged against the passage of this bill. No one who knows anything at all about country life can doubt that internal improvements is one of the best assets a country can have, and this improvement will advance and establish better government, better morals, better citizens, and promote social intercourse. The passage of this bill will materially cause the people in the country and the people in the cities to come closer together.

I want to see the day when every farmer can haul his product to market over good roads without being forced to drive in mud up to the hub of his wagon. I want to see the day when every farmer can travel with pleasure the same as the man in the city who has the advantages of paved streets. It is nothing more than right that we should assist in the improvement of the post roads as provided in this bill.

There is one other advantage to be gained by the passage of this bill which I desire to touch upon, and that is the relief it will extend to the rural mail carriers and the star-route carriers. These men are compelled to expose themselves daily to all kinds of weather. The passage of this bill will lessen their burdens and lessen the wear and tear on their teams and equipment. I want to see the improvement of the post roads for that reason; and, another thing, I want to see the day when these rural mail carriers are given sufficient wages to compensate them for the great amount of labor they are performing. Take into consideration the fact that these carriers are required to expose themselves and perform their duties in season and out of season, and compare that fact with the compensation they are now receiving and I think you will agree with me that they should be paid better wages.

I therefore trust that this bill may pass without any serious opposition and will soon become a law, and that the people residing in the rural districts throughout the United States will commend its passage and heartily cooperate with its provisions and give their aid to the improvement of the rural roads leading into the different post roads which will be improved by the passage of this bill.

Gov. Woodrow Wilson, Presidential Candidate, Speaks to Farmers in Favor of Free Tolls and Against Railroad Domination of Canal, Upholding Democratic Party Platform.

EXTENSION OF REMARKS

OF

HON. JOSEPH R. KNOWLAND,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 28, 1914.

Mr. J. R. KNOWLAND. Mr. Speaker, I wish to extend my remarks by inserting in the RECORD a speech delivered by President Wilson to 2,500 farmers at Washington Park, N. J., August 15, 1912, in which he deplores the nonexistence of an American merchant marine and directs attention to the Panama Canal, which he says will allow the farmers to ship their products to the Pacific by way of Atlantic ports in coastwise steamers. He then points out that the House and Senate have passed a bill for free tolls for American ships through the canal and prohibiting ships to operate through the waterway owned by American railroad companies, declaring that everything done in the interest of cheap transportation is done directly for the farmer. He winds up by stating that the platform is not molasses to catch flies, and that gentlemen who talk one way and vote another are going to be retired to private and quiet retreat.

[From the Philadelphia Record, a Democratic paper, Aug. 16, 1912.]

Gov. Wilson said, in part:

"Now, there is another matter you know, we are digging a tremendous ditch across the Isthmus of Panama. It is predicted by the engineers in charge of that colossal enterprise that we shall be able to open it to the ships of the world by the year 1915. What interest have you in opening it to the ships of the world? We do not own the ships of the world. By a very ingenious process, which I would not keep you standing in the hot sun long enough to outline, the legislation of the United States has destroyed the merchant marine of the United States. The chief road by which your crops travel to the Orient is through the Suez Canal. They do not go around by the Pacific. Most of your maps do not show you the short road to the Orient, because they are spread out flat.

"If you will get a globe and draw a circle around the globe you will see your short road is through the Suez Canal, not across the Pacific, and that the Western farmer, therefore, has to ship his crops across the continent in order to reach the ships that are to take that road. And when his crops reach the port, do they find American ships waiting for them? Not at all. In most years not a single ship carrying the American flag goes through that canal carrying freight.

"Some ships carry the American flag through that canal, but they are mostly private yachts. A friend of mine who has just traveled around the world told me that he did not see the American flag once between New York and Hongkong, going by the way of the canal, until he reached the Island of Ceylon, and then saw the flag of Mr. James Gordon Bennett's yacht. If the shipowners of the nations carry your grain and cargoes they are going to carry them by routes and to markets which suit them, not the routes and the markets which are chosen by you.

"One of the great objects in cutting that great ditch across the Isthmus of Panama is to allow farmers who are near the Atlantic to ship to the Pacific by way of the Atlantic ports, to allow all the farmers on what I may, standing here, call this part of the continent, to find an outlet at ports of the Gulf or the ports of the Atlantic seaboard, and then have coastwise steamers carry their products down around through the canal and up the Pacific coast or down the coast of South America.

"Now, at present there are no ships to do that, and one of the bills pending—passed, I believe, yesterday by the Senate as it had passed the House—provides for free toll for American ships through that canal and prohibits any ship from passing through which is owned by any American railroad company. You see the object of that, don't you? [Applause.] We don't want the railroads to compete with themselves, because we understand that kind of competition. We want water carriage to compete with land carriage, so as to be perfectly sure that you are going to get better rates around the canal than you would across the continent.

"The farmers of this country are, in my judgment, just as much concerned in the policy of the United States with regard to that canal as any other class of citizens of the United States. Probably they are more concerned than any other one class, and what I am most desirous to see is the farmers of the country coming forward as partners in the great national undertakings and take a wide national, nay, international, view of these great matters, feeling all the pulses of the world that beat in the great arteries of their own life and prosperity. Everything that is done in the interest of cheap transportation is done directly for the farmer as well as for other men. So that you ought not to grudge the millions poured out for the deepening and opening of old and new waterways. * * *

"Our platform is not molasses to catch flies. It means business. It means what it says. It is the utterance of earnest and honest men, who intend to do business along those lines and who are not waiting to see whether they can catch votes with those promises before they determine whether they are going to act upon them or not.

"They know the American people are now taking notice in a way in which they never took notice before, and gentlemen who talk one way and vote another are going to be retired to very quiet and private retreat."

Columbus, the World's Benefactor—The Man of Destiny, Who Conquered Through Faith in an Overruling, Guiding Providence.

EXTENSION OF REMARKS

OF

HON. CLEMENT BRUMBAUGH,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 16, 1914.

Mr. BRUMBAUGH. Mr. Speaker, as Columbus Day is now very properly and fittingly observed everywhere throughout the Nation, and as the House of Representatives of the United States is now in session on the day that such exercises are being held, I ask unanimous consent of the House to be permitted to address the House and submit some words of praise in honor of and in commemoration of the life, services, and fame of Christopher Columbus, the world's great benefactor, the man of destiny, who conquered through his sublime faith in an overruling, guiding Providence.

Representing a congressional district that has within it the largest city of the world bearing the honored name of Columbus, I have thought that I might appropriately ask the time and attention of this great legislative body of the Nation to present a few remarks in commemoration not only of Columbus Day, now so fittingly observed throughout the Nation, but also to commemorate the life and fame of this great and good man.

Mr. Speaker, there are some great benefactors whose services to mankind have been so transcendently great that we honor ourselves by remembering to honor them. This is eminently true of Columbus.

Christopher Columbus was one of the greatest souls that ever wore the clay of earth about him. To rightly estimate the superb dimensions and nobility of this great character we must study his life in connection with the beliefs and prejudices of the age in which he lived.

Because he lived on the mountain top of faith and vision, above the fog and ignorance of his age, he was misunderstood, maligned, and often persecuted.

With supreme courage, heroic endurance, and with an unfaltering faith in God he combated the superstitions of his day, became the benefactor of the ages, and bathed his name in immortality. [Applause.]

COLUMBUS, THE GREAT STAR IN THE HEAVENS OF FAME.

Every age has her great characters, every land her great heroes. Backward across the centuries of the past we can see yet a few sunken mountain peaks jut out from oblivion's sea.

The telescope of time as it sweeps the historical heavens still shows here and there those great stars whose magnitude is unabating through the cycling ages. Among the greatest is the name of Christopher Columbus.

The greatest souls of all history are those who, like Columbus, have conquered in the face of every adversity—those who have defied fate and all that fortune, death, and danger dare—throwing all in the balance, have hitched their chariots to the

star of hope, led victory captive, and snatched immortality from the ruins of ceaseless time. This did Columbus.

Few men win immortal fame, or even respect, amidst the applause of the people of their age, but this does not condemn them in history.

Seven cities claimed Homer dead
Through which the living Homer begged his bread.

The world yet ponders over the witticisms of Diogenes, yet Diogenes had no better bed than his ever-present tub.

The eloquence of Cicero still thrills the world, yet Cicero lost his life while pleading the cause of right and justice for the people who slew him.

Moreover, the greatest events of history often have been accomplished by men out of touch with their times and not only in the face of ridicule, but contrary to the wisdom and teachings of their age.

They were always doing the impossible.

Hannibal did the impossible when he crossed the Alps.

Cæsar conquered contrary to all military rules of his time.

Thus lived and died and became immortal Demosthenes, Socrates, Plato, Galileo, and the One who was greater than man—the Christ—the Savior of men.

THE FALSE CONCEPTIONS AND TEACHINGS CONCERNING THE FORM, DIMENSIONS, MYSTERIES, AND SUPERSTITIONS ABOUT THE EARTH.

Columbus sailed in the face of all the learning of his age, contrary to the religious thought of the world, and against the accumulated wisdom of mankind.

No one can understand the propelling purposes in the life of Columbus, the supreme courage and faith of the man, or even the history of the age in which Columbus lived without first thoroughly understanding the conceptions and teachings the people of the world held, both before and at the time Columbus lived, concerning the form, size, and dimensions of the earth, and also the superstitions that filled the minds of all men concerning the powerful mysterious forces that governed the earth, the lives of men, and even determined the destiny of the souls of men.

It is most interesting and also necessary to notice the conceptions the people held concerning these things to understand the struggle through which Columbus passed and the great work that he accomplished for all men of all times.

CHINESE CONCEPTION OF THE FORM OF THE EARTH.

The Chinese geography taught that China was the center of the world and covered the face of the earth, the other lands being small islands in the seas. The sky was held up by seven pillars in the center and rested down on the land at the rim of the horizon.

HINDU THEORY OF THE EARTH'S FORM.

The Hindus taught that the world rested upon four elephants. The elephants stood upon the back of a huge world-wide tortoise. To carry the investigation below the tortoise was profanity.

Plato at first taught that the world was a cube—a six-sided figure. And so each nation of antiquity had its own peculiar view of the earth, to dispute which stamped the offender as impious to the gods and a heretic in religion.

THE CONCEPTIONS OF THE ANCIENTS AS TO THE FORM OF THE EARTH.

And here, as throwing a flood of light upon Columbus and his times, as well as explaining the religious and scientific theories concerning the earth's form, shape, and dimensions, let us digress to notice the teachings of the ancients in regard to our earth from the time of their first crude conceptions of its form and dimensions till the truth blossomed forth centuries later in the knowledge of the earth's rotundity.

Doubtless the first man, as he stood alone upon the earth and looked into the face of the silent stars, speculated as to what this world was, its extent, and its sustaining force.

THE FIRST CONCEPTION—THE EARTH A PLANE.

The first and oldest conception of the world's shape, as taught by the ancients, was that the earth was a plane. The first theory was something like this: They looked upon the earth as a plane stretching away beyond the Ægean Sea. Around the plane ran the broad, deep River Oceanus. Beyond Oceanus was the region of fire and the abode of the spirits of the dead and the realm of darkness. Here Hemera, Earth, joined his brother, the heavens, and here beyond the river was the dreary house of death. This conception of the earth was substantially the common belief of the people for centuries, and must be noted to understand Columbus and his time. This was the conception of that wonderful people, the Greeks.

There is preserved to us a tale told by the Satyr Salinus to the King of Phrygia. This speech was made 400 B. C. It is such a vivid description of their conception of the earth and contains sentences of such surpassing beauty and full of such historic suggestiveness that I shall take the privilege of repeating it here. The Satyr delivered himself as follows. I quote.

The ocean sea circumscribeth and surroundeth the island named Europe, Asia, and Liberia. Beyond this ocean there is a continent of dry land infinite and unmeasurable, with green meadows and pastures, sundry big and mighty beasts. In the borders adjacent to the country is a perilous place; a gaping gulf, a bottomless pit, and the ground openeth like the mouth of insatiable hell. It is neither perfectly lightsome or absolutely darksome, but the air hangeth over with a certain kind of cloudy redness. Here two floods set their courses that way. One of sorrow and one of joy, and about each stream grow trees. The tree which grows by the flood of sorrow yieldeth its fruit, and if any man taste thereof a stream of tears flows from his eyes like a river and the whole race of their lives is turned into lamentations in so much that weeping and wailing he knitteth his carcass in winding sheets for the greedy grave to swallow and devour.

The other tree, which prospereth upon the banks of the flood of pleasure, bears fruit clean contrary to the former, for whoever tasteth thereof he is presently weaned from the power of his ancient appetite and desires so that the remembrance of them is quite abolished. But also, little by little, he recovers the years of his youth and becomes young again. The forwardness and crookedness of old age is first shaken off. The amiableness and loveliness of youth begin to bud, in so much that they presently put on the estate of striplings, then become boys, then change to children, then reenter infancy, and at length, in great happiness, death maketh a final end of all.

Such was their conception of the earth and the spirit land beyond. What a picture! This was their theology, their geography, their view of the after life—the tree of good and evil, a material hell to shun and a glorious eternity to gain. Such was the belief that filtered down through the minds of the ancients down to Columbus's time. Ancient literature and mythology are full of such conceptions of the world and of the future life.

Mythology taught that somewhere in the plains of the valley of death was a little stream, a sip of whose waters caused all forgetfulness of all sin and pain to the troubled spirits of the departed souls.

THE RIVER OF FORGETFULNESS AND THE SPRING OF YOUTH.

Moreover, all the world believed that somewhere was the spring of youth, where you would bathe and not only be whole but young again. Just where this spring was no one knew, but it was the duty of the good to search for it. Popular imagination of Columbus's day said it was in that marvelous diamond-robed India. These views were not idle imagination, but thoroughly believed by the people.

Later we find the repenting old man, Ponce de Leon, searching for this spring of youth among the evergreen foliage of Florida. About the time of Plato and Aristotle they began to conceive of a different shape for the earth.

THE SECOND CONCEPTION OF THE FORM AND SHAPE OF THE EARTH—THE EARTH A SPHERE.

The second conception of the earth was that of the sphere. This was a natural outgrowth of the idea of a plane. Who first promulgated the theory that the earth was a sphere is not known. Pythagoras we know believed it; Aristotle taught it and made it orthodox among the learned of his age, while Hipparchus and Ptolemy made it at last a part of the religion of the Greeks. The Greeks transmitted it to the Romans, and Rome, through the teachings of Pliny, Virgil, Ovid, and Cicero, impressed it upon barbaric Europe. It passed into the books of the Middle Ages and filtered its way down to Columbus's time, and thus made possible the invention of the magnetic needle, the navigation of the world, and the discovery of America.

THE NEXT GREAT STEP—THE EARTH'S DIVISIONS AND INHABITANTS.

After this belief became settled the next step in the development naturally came in the form of the questions which they asked themselves. If the earth is a sphere, first, how is it divided; second, are the unknown parts of it inhabited? You will see at once that these were momentous questions. Upon their answer determined the destiny of the world. First, is it divided? How was this question worked out?

The Arabs upon the plains of Assyria were our first astronomers. In their silent tents at night they had watched the stars in their courses and listened to the music of the spheres. They had divided the heavens into circles. It was a near thought to transfer these circles to the earth and divide the earth by circles into five zones. This great thought is credited to Pythagoras.

THE MYTHOLOGICAL FABLES.

The Greeks believed then in two temperate zones, each capable of sustaining life, but that no life existed in the other zones. As to the division of land and water, some held that one ocean covered the whole earth, and that the land was an island. The other theory was that the earth was so large that it held the sea in a hollow form. To this latter theory belong those beautiful fabled stories of Atlantis holding the heavens up.

The pillars of Hercules.

The golden apples in the gardens of Hesperides.

The feats of Hercules, who held up the heavens for Atlantis while Atlantis went off on a ramble for the golden apples watched over by the fair goddess in the Garden of Hesperides.

THE UNKNOWN INHABITANTS.

Was the unknown earth inhabited? Columbus was not the first, of course, to believe that it was inhabited.

Pythagoras held that the whole world must be inhabited.

Aristotle proved that the Southern Hemisphere must have its temperate zone.

Pliny taught that there were antipodes on the other side of the globe.

In Cicero's Republic the younger Scipio, long since dead, is made to relate a dream. The hero of that name, Scipio Africanus, dead centuries before, takes Scipio the younger up to the Milky Way of the sky to show him the vanity of human fame. He tells him that there were places where his authority could never reach although he should conquer the whole known earth. "Dost thou see in how few places the earth is inhabited and that tribes live directly off from you on the other side?"

THE MARVELOUS INDIA.

Such was the Greek thought of the world.

To the north were the happy land of the Hyberborians beyond the blasts of Boreas. To the east was wondrous India. To find a waterway to this marvelous India became the mainspring of all of Columbus's action. To the south was Ægean, which ran into unknown Oceanus. But the west! What was it? The west was all the world beyond the pillars of Hercules or the Straits of Gibraltar. There was the great land of fables. Here the great Atlantis held up the curtains of the sky. Here were the Elysian fields, the home of heroes exempt from death, and those dying in battle—a thought very like the Indians' happy hunting grounds. Of these fields the Poet Pindar sang thus in beautiful strains:

Those who have had the courage to remain steadfast and to keep their souls altogether from wrong pursue the road of Zeus to the castle of Cronas, where o'er the isles of the blest ocean breezes blow, flowers gleam with gold, and with these they entwine their hands with bracelets and make crowns for their heads.

Such was the song. Illustrious Pindar! Magnificent barbarian!

EARLY LIFE OF COLUMBUS.

Such in brief was the conception of the earth when Columbus came on the stage of action.

In his early life and up to the age of 35 there is nothing of importance or promise of greatness. His father was a poor wool comber; some of his kindred sea rovers. These sea rovers were pirates and robbers. They hired themselves out to fight and plunder for any potentate who wished to employ them. With these desperate characters Columbus was sometimes forced to associate. From the age of 14 to 35 his home was a ship; his life was that of a rover of the seas.

It was with these sea robbers that the great captain learned the art of navigation; learned the power of control; learned how to carry himself in fight when with sword in hand he sprang over the board of the hostile vessel. The story of one of these sea fights off the coast of Portugal is preserved to us by Columbus's son, Ferdinand. The fight lasted, we are told, from morning till night. Early in the engagement the fighters had linked their ships together with iron grapplings never meant to be loosened. No quarter was ever asked or given. Late in the day both vessels became enveloped in a sheet of flame of fire, and the only escape was to jump overboard. Columbus plunged into the sea and, being an expert swimmer, swam by the help of an oar 8 leagues to land.

Such was the life of Columbus up to his thirty-fifth year. Wild and roving, but more humane always than his companions with whom fortune and circumstance forced him to associate.

GOD MOVES IN A MYSTERIOUS WAY HIS WONDERS TO PERFORM.

Mighty forces were converging, and Columbus was the man upon whom, by past training and the decree of Providence, these mighty forces were to converge. Columbus, by that destiny that shapes our ends, was changing with it, destined to play his part in the world's greatest drama since the life of Christ on earth.

THE RELIGIOUS PERIOD OF COLUMBUS'S LIFE.

At the age of 35 a sudden change occurred in Columbus's life. He suddenly left his seafaring life, settled down to deep study concerning the earth and the religious condition of the Holy Land, then in the hands of the infidels. An Italian by birth, he accepted the religious faith of his land and age and became a devout Catholic.

A great religious impulse now seized him and never left him. He believed that the world would come to an end in about 100 years; that before that time the Scriptures must be fulfilled; that the gospel must be carried to the heathen; that he was the chosen agent of Heaven to do that work. Moreover, to do this work Columbus reasoned that the Holy Land and the sepulcher of our Savior, Jerusalem and Palestine, now all in the hands of the Turks, must be taken and redeemed to Christianity. To do this he must lead an army to India.

THE TRADE WITH INDIA.

It will now be necessary to note the condition and enterprises of the world at this time, when Columbus's great purpose was moving his soul. All the courts of Europe were one giddy round of extravagance. The court ladies demanded the precious jewels, perfumes, and spices of India, and a brisk trade between every court in Europe and India sprang up to meet this demand. But the voyage could only be made by a long and perilous journey—a journey through deserts and mountain cliffs beset by desperadoes and robbers.

Yearly the caravan of travelers, with their camels, made this perilous journey, and yearly these mountain desperadoes, who made a business of murder and piracy, grew more desperate. But the demand was great, and many companies of men lost their goods, their camels, and their lives in the efforts to supply that demand. At last Constantinople, the last natural passway, fell into the hands of the Turks, and the last gateway to India was closed. The problem now arose whose attempted solution finally led to the discovery of America.

A WATER ROUTE TO INDIA.

The burning question now arose how to reach India by water. Columbus, by his study, had come to the conclusion that he could reach India by a sea route due westward. Should he do this, he knew that he would become the greatest benefactor of the world; for, according to his conception of the size of the earth, he would then have carried the Gospel all over the earth and have prepared the earth for the coming of the Kingdom of Heaven. Besides, according to the customs of the times, whoever opened up the way to India would not only redeem its people, but be the rightful possessor not only of the people but of all the marvelous wealth of fabulous India. To this end Columbus devoted his life with a perseverance which nothing but death could stop.

Columbus's mistake was not in the form, but in the size, of the earth. Aristotle states that the mathematicians of his day placed the circumference of the earth at 400,000 stadia. Later Strabo figured it down to 180,000 stadia.

Columbus accepted the views of Strabo. He believed that Europe covered four-fifths of the earth's surface and that only a narrow sea separated them on the west. The thought that between India and Italy to the west was the great Atlantic, then the great American Continent, and then still the vast Pacific Ocean never entered his head. He was sure that it was only a short trip from Italy to India through this western sea of horrors; that the way could be found by any navigator with the courage to defy the terrors of the western seas and steer due westward to India. India, then, by his conception, completed the circuit of the earth. The thing seemed so feasible and plain that Columbus became possessed with the idea to do it. He always believed that he had done it, and went down to his grave in that belief.

FINDING A WAY TO INDIA.

And why should all the nations of the earth desire to find a waterway to India, a desire which was not only manifest in Columbus's life but in that of every sailor for 300 years after him. I have already alluded to the great demands of trade for precious gems, perfumes, and spices, and the perils of the journey and the final stopping of the last passway by the capture of Constantinople by the Turks.

But, beyond all this, India was believed by the people to be a veritable paradise, a land in wealth and pleasure beyond the loftiest imagination of the mind of man to conceive.

About this time Sir John Mandeville and Marco Polo had written some wonderful stories of India, which had stirred the popular mind to feverish excitement. It is necessary to see what they thought India to be in order to understand Columbus or the history of the times. Take the story of India as given by Polo, a brief part of which I here relate:

POLO'S STORY OF THE KINGDOM OF FABULOUS WEALTH, INDIA.

First, to start with, he affirmed that in the Far East had reigned for centuries a line of mighty monarchs of the race of Kublai Khan. Their Kingdom was made up of many Provinces or States, one of which was Mangi, bordering upon the sea. Let us for our purpose just consider this one Province. In this Province, Marco Polo said, were 12,000 cities, all within a few days' travel of each other. As a sample of what the people believed of all India let us take the description of one city of the 12,000 cities of this one Province of the Kingdom, Quinsai. Quinsai was 100 miles in circumference; 30,000 soldiers guarded

it; 100,000 police were on duty within it; the main street of the town was 40 paces wide and 33 miles long; at the distance of every 4 miles market places, each 2 miles in compass, and 40,000 to 50,000 people met here to trade daily. The streets were all paved with pure stone. The waterworks were so arranged that twice a day the river was conducted through the streets, sweeping the filth into a great pool beyond and then into the sea. The city had free hot and cold baths and trained fire department. The palace of the King, with its wide terraces and courts, filled a space of 10 miles, and here on the days sacred to the gods 12,000 guests were feasted at a time. The people of Quinsai were so wealthy that a part of each day was spent on the lakes in pleasure barges for banqueting, a part in driving through the parks, and a part in resting under inviting bowers, whose branches sent off perfumes at every sway of the branches.

INDIA A PARADISE.

Such was the description of this one city of the 12,000; "a city for the excellence thereof," declares Polo, "the world hath no equal. It hath so many pleasures a man would think he were in paradise." The description of the whole Kingdom was in keeping with the above.

Polo continues: "Throughout the Kingdom radiated roads all magnificently paved. Out of the soil sprang waters which cured all diseases." I shall not weary you with a description of the King's winter palace of pure white marble, roofed with gold; 10,000 picked soldiers always acted as bodyguard, and his army was like the sands of the sea and the generals sat in chariots of solid silver. Such was the description of this wonderful India. The people believed this story. The people believed that in India priceless pearls were scattered like pebbles. Mountain peaks of jasper pierced the sky; palaces were roofed and floored with gold. In India rivers for healing for all diseases sprang out of the ground. The climate was so luxurious that every tree, as it swayed in the breezes, sent off an incense that filled the air with sweetest perfume. Such was in part the fairy story of the traveler and such was the belief of the people of the world in the age Columbus lived.

And now, after the blockade of the pass at Constantinople, commenced that great movement to find a water route to this rapturous India that resulted in the discovery of America, for that nation which should discover this route could, by the customs, claim the people and their riches for the service of God and the true church.

THE TWO GREAT UNKNOWN WHO GAVE COLUMBUS THE ESSENTIAL INFORMATION AND HELP.

The great truth, the invaluable information which became his, was furnished Columbus and worked out in the gallant, patient struggles of two men hardly known to the pages of history.

THE TWO GREAT UNKNOWN FRIENDS—PRESTRELTO AND PRINCE HENRY OF PORTUGAL.

Prestrelto had been a brave sailor under Prince Henry. He had braved the western sea of horrors; had made charts, maps, and journals of his trips. Columbus, by his marriage to Dona Prestrelto, on the death of her father came into possession of these invaluable maps. It was this that gave Columbus his first conception of a water route to India and explains the great change in the life and habits of Columbus.

PRINCE HENRY OF PORTUGAL AND THE WESTERN SEA OF HORRORS.

The other man was the gallant Prince Henry of Portugal, who built his home by the sea, where its roar, as he said, would ever be in his soul. He called all the wise men about him. He had rejected the teachings of the wise men regarding the possibilities of navigating that fearful western sea of horrors. And what and where was this sea of horrors that played such a part in the world's development? It was all the unknown waters beyond the pillars of Hercules, or the Straits of Gibraltar—our Atlantic. The wise men taught and the people believed that in this western sea of terrors was a heated region beyond the boundary line of which no one could breathe the air and live.

THE WESTERN SEA OF HORRORS—THE SEA OF FIRE AND DEATH.

The Poet Pindar had said, beyond its gates no man, however brave, might navigate. Only a god might voyage these waters. The people believed this sea to be presided over by the spirits of fire, death, and darkness. Such was the belief that chained and bound navigation for centuries and which played such a great part in the world's development, whose terrors kept sailors for centuries in the Mediterranean, blocked the progress of the world, and all but made the sailors on the voyage with Columbus compel him to turn back when almost in sight of America. But Prince Henry said: "We'll cross that line," and he did. And in doing it he gave the world, I think, its greatest example of physical courage and broke one of the greatest cords of bondage that ever bound the human mind in the darkness of ignorance. Prince Henry was the liberator of the world's greatest superstition. Columbus got the benefit and praise of the completed work of this great heroic deed.

From these two sources Columbus got all his practical valuable information. From his conception of the size of the earth the shortest way to India would be to the west. He now became thoroughly satisfied that the kingdom of the great King Khan and all that wonderful India could be reached by any navigator bold enough to defy the fancied terrors of this sea and sail for 30 or 40 days to the west, and for the accomplishment of this he dedicated his life. The western sea of darkness had no terrors for him. Prince Henry had smashed that superstitution.

THE ONE OBJECT OF COLUMBUS.

Columbus, in the words of Shakespeare, now realized that—

There is no darkness but ignorance.

He felt and realized that the blackest darkness is ever the superstitions of ignorance.

He now became a man wrapped in only one thought. His conception was first and foremost to carry the gospel to India and second to take the riches of India to equip an army which should take and redeem Jerusalem, the Holy Land, and the sepulcher from the hands of the infidels, the Turks, and thus bring the whole earth under the saving influence of the church. This was the sublime conception that filled his mind and thrilled his soul. This is what he thought he had done when he discovered America.

He held on to his purpose through 18 years of disappointment, starvation, and ridicule with the faith and determination of a martyr. For this great work he believed God had singled him out and set him apart. He said:

My name is Christopher, which means Christ bearer. Therefore I am to bear the gospel to the ends of the earth.

He was a diligent student of the Bible and studied its prophecies. He believed that the end of the world would come when the gospel had been carried to these lands. Moreover, he believed that the time of the end was close at hand; that in one century the end would have arrived.

Listen to the following. I quote his own words. Speaking after his voyage to America, in profound ignorance of what he had done, he says:

God made me the messenger of the new heavens and the new earth spoken of by St. John in the apocalypse after having spoken of it by the mouth of Isaiah, the prophet.

And he adds:

He showed me where to find it.

Further, as showing his belief, he says:

Our Lord wished to do a miracle by my voyage to India.

It was necessary to hasten his purpose, for—

By my calculations there only remained 100 years till the end of the world.

THE HEROIC, PATHETIC, STRUGGLING PERIOD OF HIS LIFE.

This purpose once conceived, nothing but the hand of death could still that great determination which beat in his soul. For 18 years he tramped all over Europe talking to anybody and everybody who would listen to his wonderful scheme. Every court was harangued and bored by this enthusiast of his age talking to them what they termed "unintelligible stuff." Defeated in one court, footsore and weary, he took up his tramp to another.

His method of procedure was something like this: With his charts, maps, and drawings he would tramp to the capital of a kingdom. There he lived partly by drawing and selling maps and partly by begging his bread, talking all the time to everybody who would give him attention, until gradually he got nearer to the King. When the circle of interest he had generated reached the King, Columbus would be admitted to his presence.

With a new ray of hope Columbus presented himself before the monarch. Here he made the same eloquent plea, describing in glowing terms both the honor and wealth that would come to that kingdom which should send him forth. The monarch, usually ignorant, but always moved with interest, would then submit the question to the learned men of the court. Before the court of the nation's collected wisdom Columbus next appeared to tell the story that burned in his soul, and here Columbus was always sure of defeat. In regard to him the wise men differed, as wise men always do; some believed him crazy, others thought him a harmless crank, while others thought him a smart impostor hatching out some heretical scheme.

In regard to his theory that the world could be sailed around they were all of the same opinion. It was too absurd for consideration. The idea that the world was round, that on the other side were men who went about with their heels over their heads, the wise men declared to be positively funny, and they held their sides as they roared in derision at this sad-eyed,

pious, determined crank. But, further, said they, if the world is round, there is another sky where snow and ice fall upward, and that, cried they, is blasphemy. So they all advised the King to have nothing to do with this ridiculous, absurd scheme and to invite this pest of the court to move on. And thus, with a perseverance which nothing could wear out and a patience absolutely unconquerable, Columbus waited, toiled, and suffered for 18 years.

He first asked aid of Genoa, his native city, and was refused. Next he turned to King John of Portugal, the successor of the great Prince Henry. He told John of the nearness of time, his heavenly mission, and assured him that he could give him India in two months.

After having been made a football of ridicule by the wise men of the court, Columbus left Lisbon and went back to Cordova to lay the matter before Ferdinand and Isabella, but they were then engaged in a civil war driving out the Moors and had no time for his scheme. Columbus, to gain their favor, joined the army and was a soldier at the fall of Granada. At last he gained a hearing and suffered defeat at the hands of Ferdinand and Isabella. It was with a sad heart that he turned away from his last hope. Now occurred one of the darkest hours in Columbus's life. There are hours so dark in human life that even hope seems to have left our breast. Such an hour had come to Columbus.

THE TURNING POINT.

There are times when the success of human life and destiny of the world hangs upon a straw. I propose to show that it was the happening of the most insignificant event that not only decided the destiny of Columbus's life, but the fate of the world in the discovery of America.

Columbus, on his journey from the court of Ferdinand and Isabella, stopped, footsore and weary, at the gates of a convent to get a morsel of food for his starving little son, whom he led by the hand. This is not an event history would stop to note, you say. Aye! But that determined the future life of the great discoverer. With Lowell we may say: "How small an arm may turn the iron helm of fate."

"Give me food and drink for my starving boy," cried Columbus. The good monk, touched to the heart with pity, gave him food and insisted that Columbus stay for the night.

There are times so full of bitter disappointment that we long for a place and friend, that we may lay open our very heart. Columbus had found such a place and such a friend in the presence and at the fireside of the good monk.

Columbus, as he sat by the fire and talked the night away, seemed inspired. He wrapped the monk in wonder. Some of that light that never was on sea or land shone about him. As he told this religious man of the coming of the kingdom his face lit up with angelic brightness. But what of the outcome? It was a turn of the wheel of fate. Little knew Columbus that upon this talk this night fortune would smile upon him and mark him for her own. This convent became Columbus's home henceforth in all his dark and trying hours, but vastly more important by far than this was the seed sown and the later harvest.

THE PINZON BROTHERS.

Now, there lived by the convent three remarkable brothers, very pious and very wealthy. They were learned, wealthy, religious, and influential. They took up Columbus's scheme with as much zeal as if it had been their own.

It was the Pinzons that made Columbus's success possible.

It was the Pinzons that got him the ear of Ferdinand and Isabella again.

It was the Pinzons that furnished Columbus his money; and when at last he sailed it was the Pinzons that commanded the other two ships in which he sailed.

The Pinzons lived at Palos, and now the schoolboy knows why his history has this sentence:

Friday, the 3d of August, 1492, Christopher Columbus set sail from Palos, Spain, with three ships, manned by 120 sailors. He knelt on San Salvador October 12, 1492.

HONOR TO WHOM HONOR IS DUE.

It was after the Pinzons became sponsor for him that Isabella said: "Call him back; he shall sail if I have to pawn my jewels." "Honor to whom honor is due." The honor is due the Pinzons. Columbus returned to court with all haste. The articles were soon drawn up, the Pinzons furnishing Columbus's part of the expenses. Now began the search for ships. But who would rent a ship to go upon that western sea of horrors? No one but the Pinzon brothers could get the ships. When he finally succeeded in getting his ships the question arose, Where are you going to get your crew? Who would be such a fool as to peril life in certain death upon the sea of darkness, death, and fire? The people looked upon the intended trip as the wild vagaries of a madman or a crazy lunatic.

THE CREW FOR THE VOYAGE.

There were only two men in all the Kingdom who could be depended upon.

Martin Alonzo Pinzon would take the ship *Pinta*.

Vincente Yauze Pinzon would take the ship *Nina*.

Columbus himself would take the *Santa Maria*.

But where is the crew? That was the burning question. Who for pay or the love of fame and glory would sail out into a sea guarded over by the spirits of the dead, whose atmosphere of fire no one could breathe and live? No one. Criminals were offered their liberty if they would go. They refused, but were at last pressed into service. When those ships left Palos there was weeping and wailing, for even bad men have hearts and feared the pictured sea of terrors.

THE VOYAGE.

Volumes of thrilling interest have been written about that voyage, that first trip of Columbus and his three crude ships, battling with death on the briny deep; the criminal crew, the hardships, the mutiny, the dangers to Columbus, his prayers, and his Christian faith in God that held him true to duty in the face of every danger.

I have read of these things with unabating interest. I should like to tell something of it, but for want of time I can not go into that thrilling subject now.

We only know this: The stars must have looked down in wonder on this brave man on that strange scene, and we know that God looked down upon it with divine approval.

As descriptive of this trip, as well as the sublime purpose of the great Columbus, the wonderful poem on Columbus from the pen of that grand old poet of the Sierras, Joaquin Miller, has always seemed to me both very beautiful as well as very appropriate. I always love to quote it, because it always seems to me to breathe the breath of faith and inspiration. Here it is:

Behind him lay the gray Azores;
Behind, the gates of Hercules;
Before him not the ghost of shores;
Before him only shoreless seas.
The good mate said: "Now must we pray,
"For lo! the very stars are gone;
"Brave Admiral, speak; what shall I say?"
"Why say, 'Sail on; sail on; and on!'"
"My men grow mutinous day by day;
"My men grow ghastly, wan, and weak"—
The stout mate thought of home; a spray
Of salt wave washed his swarthy cheek.
"What shall I say, brave Admiral, say,
"If we sight naught but seas at dawn?"
"Why, you shall say at break of day,
'Sail on; sail on; and on; and on!'"
They sailed and sailed as winds might blow,
Until at last the blanched mate said:
"Why, now not even God would know
"Should I and all my men fall dead.
"These very winds forget their way,
"For God from these dread seas is gone.
"Now speak, brave Admiral, speak and say"—
He said, "Sail on; sail on; and on!"
They sailed. They sailed. Then spake the mate:
"This mad sea shows its teeth to-night.
"He curls his lips; he lies in wait;
"He lifts his teeth as if to bite!
"Brave Admiral, say but one good word,
"What shall we do when hope is gone?"
The words leaped like a leaping sword:
"Sail on; sail on; sail on; and on!"
Then pale and worn, he paced the deck,
And peered through darkness. Ah, that night
Of all dark nights! And then a speck—
A light! A light! At last, a light!
It grew. A starlit flag unfurled!
It grew to be Time's burst of dawn.
He gained a world. He gave that world
Its grandest lesson: "On; sail on!"

[Applause.]

THE RETURN TO SPAIN.

Six months later Columbus entered the same port amidst a halo of glory, such as had never shone around any other mortal man. Columbus advanced to court with his sailors amidst shouts and over strewn branches and garments.

The King and Queen hesitated as to whether they should receive him as a human man or as a messenger from Heaven, for Columbus came back to tell that he had sailed around to India; had opened the water route; had three strange-looking men, whom he said he had picked up off the coast of India; had redeemed the world and prepared the way for the coming of Christ. This is what Columbus always believed he had done and this is what the people for a while believed he had done. Aye, fickle fortune, this same conquering hero must come again in this same port in disgrace and in chains.

The people went wild with joy "All India is ours." "Acres of jewels are ours." Everybody who could sell property sold all and put to sea, and when the spell broke saw that they had lost all. They came back paupers, their homes gone.

They sat around the court wretched indeed. When the King appeared they held up their rags and cursed the King for being imposed upon by a man whom everybody has suspected of being a fool. When Columbus's sons appeared they stoned them.

With cursing they demanded the arrest of the man whose lies had brought them from wealth to want. Isabella being dead, the weak Ferdinand yielded and signed that warrant for the arrest of Columbus which throughout all times must ever stand a blot upon his name. But while the truth became apparent to the people, with Columbus the spell never broke. He never so much as suspected that he had discovered the great American Continent; that thought never entered his mind.

HIS GREAT BELIEF.

When we consider his great, noble conception, we see how cruel it would have been to have undeceived him. A merciful Providence, who patiently deals with all our follies, let him go down to his grave in the sublime faith that he had carried the Gospel all over the earth and prepared the world for the second coming of our Savior; that he truly was the great Christ bearer, spoken of in the Scriptures.

He required every sailor on board the ships before landing to take oath that he had been on the coast of Asia. Cuba he was positive was Japan. As he stepped upon San Salvador he was sure that he had redeemed all Asia.

No wonder he fell prone on his face in the dust on San Salvador and gave thanks to Almighty God, who had, in Columbus's own words, "made him to conquer over his enemies and had given him India." When he saw the natives he at once said, "Here are the inhabitants of India." When he saw the rings in their ears he said, "A proof of their riches." When the natives pointed inland, said at Cabamacan was much gold, he was sure that Cab-a-ma-can was the Indian way of saying Kublai Khan.

Before him arose the splendor and opulence of those thousands of cities of gold, those lakes of pearls, those rivers of healing, and the coming of Heaven. What a dream! How cruel to disturb the sweet joy of the sleeper. It would have been like reaching up into the skies and pulling back the glorified spirit to dull and sinful earth. He never understood how he could have deceived anyone. When he asked for his fetters, after having been carried home like a villain in chains, he said he was determined to keep those fetters as a memorial of his reward for his many services. He hung those fetters on the walls of his chamber, and six years later they were laid with him in his grave.

But the prison was not destined long to detain this great spirit. His soul was soon to become a citizen of the skies; his soul was soon to leave the world he sought to redeem and stand in the presence of the Redeemer; his soul was soon to partake of that real stream of life and find the real spring of youth and find that real youth in immortality. [Applause.]

COLUMBUS, THE IMMORTAL.

Carlyle says that biography is the only true history as well as the most interesting study of history. Columbus believed in the guiding hand of a divine Providence. He also believed in astrology. He believed the stars foretold for him a glorious destiny.

Who of us shall dispute his faith? Who of us shall say that he did not, like Joan of Arc, hear the silent voices speaking to the listening soul down out of the skies—voices that have ever called to duty, to service, and destiny?

Whose blood does not run faster and warmer when he reads the faith and struggles of this great man?

Christopher Columbus! The storm-tossed life over which rolled all the bitted waves of hate; against which beat all the biting winds of persecution; whose ship of life sailed every sea of sorrow, through every night of despair, without a friendly star of hope.

With sublime courage and supreme faith Columbus sailed a trackless sea. We know the silent stars must have looked down with wonder upon this new strange sight of his three crude ships struggling with death in the briny deep of an angry unplowed sea; and we know that the God who rules both wind and wave looked down upon him with his approving smile.

By his supreme faith in Providence he became the divine instrument to blaze the pathway that marks the destiny of time.

His name is revered by all mankind. The very honor of having the resting place of his mortal body has been contended for by the nations of the earth.

His ashes repose in the America he discovered, his fame walks the pathway of the stars, and his soul rests in the presence of God. [Applause.]

Bureau of Labor Safety.

EXTENSION OF REMARKS
OF
HON. FINLY H. GRAY,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, March 11, 1914,

On the bill (H. R. 10735) to create a bureau of labor safety in the Department of Labor.

Mr. GRAY. Mr. Speaker, the necessity and pressing need of legislation to conserve the health and safeguard workmen against accident and death is most apparent when we come to consider statistics relative to casualties and vocational diseases. Out of the 34,000,000 workmen engaged in industry there are more than 38,000 deaths, 2,000,000 accidents, and more than 500,000 of which are of a serious nature, all estimated as entailing an annual economic loss of $40,000,000. In addition to these accidents and casualties there are 3,000,000 cases of illness directly attributable to vocational causes which are preventable and entailing a loss of $200,000,000 annually.

Estimating the economic value of the laboring man at $2,000, which is less than was often placed upon human beings under involuntary servitude, the annual loss entailed by accidents, casualties, and vocational diseases, most of which are preventable or possible of being greatly minimized of their serious character, exceeds $350,000,000. But this sum constitutes the least important item to be considered. More than 15,000 widows and 45,000 orphans are left helpless upon the world without a breadwinner, and human health and limb and life are sacrificed, the value and consideration of which is impossible of estimate or measurement in money or economic value.

But appalling as is this economic loss, the physical suffering and sacrifice of human life, we must still add to this awful waste by reason of accident, disease, and death the blight in the development of the physical body and the distraction and impairment of the mind resulting from the din of the workshop and the mad pace of production urged on by the commercialism of to-day filling our almshouses with the indigent and our asylums with the insane.

It is certainly time for this belated legislation. With bureaus created and supported by liberal appropriations for investigation, research, and development to be made in aid of more rapid production, the increase of trade, and the promotion of profit and gain, there is and can be no excuse for a further delay in the enactment of this law. It is a reproach upon our civilization and the policy of our Government that consideration of human health and of life and limb should have been thus postponed for property and profits.

Rural Transportation System.

EXTENSION OF REMARKS
OF
HON. FINLY H. GRAY,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 14, 1914.

Mr. GRAY. Mr. Speaker, while a rural transportation system in some form is inevitable as an economic necessity of the times, it can not be hoped that it will come all at once or as a momentary transformation or as a sudden industrial revolution. It will come as a growth gradually and in the progress of orderly economic development. It will be tried out in experimental stages until the service required is formulated and ascertained. While no such industrial movement can be advanced beyond the economic conditions calling for the same, the remedies to meet such conditions are often delayed and postponed. The conditions making rural transportation a vital necessity have long existed, and improved highways must precede the establishment of such transportation facilities in the natural order of things.

Nor will such increased transportation facilities revolutionize business, nor dispense with needed merchants nor useful mercantile pursuits, nor the employment and occupation of men to store, hold, and distribute the multiplicity of articles and commodities now required for use and consumption in everyday life. Such a rural transportation system will work to the advantage of those engaged in mercantile pursuits as well as the masses engaged in production and the great consuming public. It would enable business men to make a greater income at a lower rate of profit by a greater volume of trade and thereby performing a greater economic use and service to the people and a greater duty to the public in the industrial system of the country.

Which Shall We Construct, Asphalt Pavement for Automobilists from Ocean to Ocean or Good Dirt Roads for the Farmer from His Home to Market?

SPEECH

OF

HON. J. B. THOMPSON,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 7, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 11686) to provide that the United States shall aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. THOMPSON of Oklahoma. Mr. Chairman, in announcing my candidacy for Congress in 1912 I set forth clearly and distinctly what I stood for and the measures I would strive to have enacted into law if the people should honor me with a seat in this body. I then promised that, if elected, I would favor Government aid in the construction and maintenance of good roads; that I would favor the enactment of such laws as would reserve for the benefit of all the people the natural resources of the country and its territorial dependencies; that I would favor the passage of an immigration law that would exclude from the United States all foreigners who did not belong to the Caucasion race and restrict those belonging to that race, so as to prohibit the admission of all who were criminals or brought here under contract to compete with the laboring people of our country.

The Democratic national convention held at Baltimore, at which the present occupant of the White House was nominated, spoke in its platform on two of these subjects. It was there declared on the subject of good roads:

> We favor national aid to State and local authorities in the construction and maintenance of post roads.

On the subject of conservation the Baltimore platform declared:

> We believe in the conservation and the development for the use of all the people of the natural resources of the country. Our forests, our sources of water supply, our arable and our mineral lands, our navigable streams, and all the other material resources with which our country has been so lavishly endowed, constitute the foundation of our national wealth. Such additional legislation as may be necessary to prevent their being wasted or absorbed by special or privileged interests should be enacted and the policy of their conservation should be rigidly adhered to

And it was further declared in that platform:

> Immediate action should be taken by Congress to make available the vast and valuable coal deposits of Alaska under conditions that will be a perfect guaranty against their falling into the hands of monopolizing corporations, associations, or interests.

I am one of those who believe that a promise made before election should be kept after election. Service in this House will grow less attractive to good men as time passes if they can not respond and live up to personal promises and platform pledges. I am a firm believer in the rule of the people. I believe the people have capacity, especially the Anglo-Saxon race, for self-government. Heretofore it has been my pleasure to utter certain words on the floor of this House calling attention to the amount appropriated by this Government for shipbuilding and appropriations for war as against the small and insignificant amount appropriated to develop and promote the interests of our farming and laboring people. On September 6, in speaking on the urgent deficiency appropriation bill, I called attention to the alarming increase in the cost of government; the stupendous sums appropriated for the support of the Army and Navy, and I pointed out the small sums expended for the benefit of our agricultural and laboring population.

The people of this country will sustain this Democratic administration in making the necessary appropriations for the public service economically administered. They will approve of all appropriations that will assist in making this Nation a better place in which to live, all appropriations that will add to the happiness of our people and afford them wider opportunities to improve and better their condition in life. They will approve of this good-roads bill and the appropriation it carries. They will do so because this bill more than any other piece of legislation enacted at this session will add to the Nation's wealth and the happiness of the Nation's people. They will not approve of all that part of the more than one thousand million dollars that will be appropriated which goes toward supporting an army of useless employees, toward supporting and maintaining a large number of useless Army posts, and toward building battleships and maintaining a large Navy in times of peace. I am informed that the appropriation for our Navy will approximate $140,000,000. I have just read in the news dispatches from Tokyo, Japan, the following Associated Press bulletin:

> Clubs and sabers in police hands subdued anti-Government agitators and 200 were arrested in fierce rioting throughout the city to-night. Many men were injured by the officers. Shortly after midnight 500 policemen charged a mob of several thousand antitax advocates who were clamoring against the Diet for sustaining the Government in the naval scandal. Several opposition newspapers, which criticized the Government, have been suppressed and their editors jailed. The Government, encouraged by the defeat in the Diet of the resolution of want of confidence, is adopting drastic means to put down rioting, and the police and troops are armed with authority to use any force necessary to disperse mobs.

This dispatch discloses a condition in Japan that will shortly exist in our country if a halt is not called in the wild extravagance of the past. The naval scandal referred to was an appropriation of about $60,000,000 as against nearly two and one-half times that amount here. The antitax referred to is, as I understand it, a tax on the wages of the working people. If the expenses of this country continue to increase for the next three decades as they have grown during the past 30 years, the laborer will be required to surrender a part of his wage for the support of this Government, and it requires no prophet to foretell what will occur when that day comes. It is pleasing to hear fine words spoken of our civilization, our monuments, our museums, our public libraries, our fine public buildings, our battleships speeding around the world, and our diplomats housed in magnificent homes befitting the dignity of this great Nation.

But, Mr. Chairman, beautiful words and poetic allusions will not solve the great questions which now press themselves upon us. We must do something that will be of real and substantial benefit to the people of the country—something that will inspire all with confidence that there are no favored classes here, but that all men are measured by the same standard; that we are not indulging in extravagance for pomp and ceremony's sake and merely to please the fancy and satisfy the pleasure of those who know no toil.

And, again, on December 22, 1913, in the course of my remarks on the subject of rural credits I called attention to the discrimination against the farming and laboring classes of our population. I do not do this, Mr. Chairman, for the purpose of arousing antagonism between those of our people engaged in different occupations. I do so that laws may be enacted that will insure every man every penny that he by his industry honestly earns; laws that will prohibit the taking of one penny from any man to enrich another who has not honestly earned it.

It is a demonstrated fact that consumption of farm products is increasing at a much more rapid rate than production. If this consumption continues to increase in proportion to the production during the next three decades as it has during the past three, we will be face to face in this country with famine. If we, as we should, are willing to look into the future and face this problem, we will begin at this time to encourage and promote every movement that looks toward making farm life more pleasant and agricultural pursuits more profitable. I do not believe there is any other one thing that would more promote a "back-to-the-farm" movement than the building of good roads. It has been often said that we have in the United States the best railroads in the world and the poorest dirt roads, and this is true. We have been, during all the history of this country, neglecting the farmers of the country, the source from which originates all wealth, and giving our attention, governmental and otherwise, to the promotion of the interests of those engaged in other lines of business.

I am in favor of this bill because by its provisions every community within the United States that seeks to improve its roads will secure governmental aid in proportion to the amount it is willing to advance for the same purpose; and though the amount we spend will be small, the effect of the appropriation on the people of the country generally will result in the improvement of the roads throughout the entire country. In France and in practically all the countries of the Old World the Government builds, or largely assists in the building of, dollar has ever been contributed toward assisting the farmers

good roads. Here in the United States, where the Government uses more than one-half of the total mileage of the roads in the delivery of mail, either on the rural or star routes, not one in building and maintaining their roads. On the contrary, the Government has threatened and has oftentimes discontinued the delivery of mail over its rural and star routes because the farmers did not maintain the roads in that condition which the post-office inspector considered sufficient.

I was glad to hear the chairman of this committee say that in framing and presenting this bill he had prepared, or sought to prepare, a bill which would extend aid to every community in the United States that would take advantage of its provisions and enable the farmers of any community to secure governmental assistance in building and improving the roads to their nearest railroad station. We have two classes of advocates in the building of good roads in the United States. One class is commonly know as the automobile class, who advocate a great national thoroughfare from Canada to the Gulf and from the Atlantic to the Pacific—a thoroughfare which after it is constructed will be of little practical value except to those who are rich in purse, proud in spirit, and who are able to travel from one part of the country to the other in an automobile. I would be glad to have such highways as these for the pleasure of those who are able to enjoy them, but I am not in favor of the Government aiding in the construction of such highways until the farmers of our country, who produce the wheat, corn, and cotton that feeds and clothes the people of our country and the millions in other parts of the world, are able to haul at least a decent load over the roads which connect their farms with the railroad stations.

Mr. Chairman, I want to quote from the remarks of the chairman of the Good Roads Committee [Mr. SHACKLEFORD] to show what means are and will be used to defeat those who stand for the people and against those interested in good roads from a selfish and commercial standpoint—to create a greater demand and larger sale of automobiles. Mr. SHACKLEFORD said:

Before it is read I desire to make this statement: In the last Congress we passed in the House what was called the "Shackleford good-roads bill." I sent a copy of it to various parts of the country, among others to the members of the Automobile Club of St. Louis. The Automobile Club of St. Louis passed a resolution indorsing the bill. As time went along that bill was defeated in the Senate, and the letter I have sent to the Clerk's desk will explain how it was defeated in the Senate, as the writer of that letter understands it. When the Sixty-third Congress met I introduced that bill again. The writer of that letter, a member of the committee on resolutions which passed these resolutions of the American Automobile Association and vice president of that association and member of its executive board, wrote that letter to the president of the Automobile Club of St. Louis. I would like to have the Clerk read the letter.

The Clerk read as follows:

KANSAS CITY, MO., *September 3, 1913.*

Mr. EDWARD M. FLESH,
President Automobile Club of St. Louis,
Planters' Hotel, St. Louis, Mo.

DEAR SIR: I understand that at one time last year your club, through the influence of Mr. Roy Britton, passed a resolution indorsing what is known as the "Shackleford road bill."

This bill, as you probably know, carries with it an appropriation of $15 per mile for dirt roads through the rural free-delivery districts of the United States. We consider this bill the biggest joke ever introduced into Congress. The American Automobile Association, through its influence, beat this bill once in the Senate after it had been passed by the House.

Mr. SHACKLEFORD has shown throughout his course to be antagonistic to the automobilist and to automobile interests both in this State and in the United States. The probabilities are that he will continue to create trouble as his mental make-up leads him altogether in that direction.

I consider Mr. SHACKLEFORD a joke, and we look for him to be retired in the district in the coming election.

If this resolution was passed at a regular meeting of your club and not by a few members, or by its directors, I would like to have a resolution, if possible, ordered passed rescinding the former action taken and reported as the action of your club.

The American Automobile Association, of which you are a member, is doing everything in its power to beat this man for the coming term.

Yours, respectfully,

H. D. TRAIN, *President.*

Mr. Speaker, that is one letter that by accident came to my attention. How many others like it have been sent out over the country no man can tell. Looking at that thing, I should say that men who have dared to vote in favor of a community system of roads that will aid in hauling the products of the farm to the nearest town or railroad station are marked. Wherever Mr. Train and others like him can do anything to put some of those members out of commission it will be done. They have not many votes in my district, and I do not know to what method they would resort to defeat me at the coming election, as he says they have determined to do, except by putting their hands down into their treasury and fill the papers of my district and my State with canned editorials against me. This is an outrage, but they can not defeat me. My people may retire me some time, and surely will if I do not carry myself circumspectly. I call the attention of this House and the country to the nefarious methods that are being resorted to in order to defeat legislation in which all of the people are interested. [Applause.]

The man who wrote that letter I happen to know, as does my friend from Missouri [Mr. BORLAND]. He is no weakling. He is a business man. He knew what he was doing. He never intended that letter for my eye. It was his expression of a deliberate purpose. Mr. Harry D. Train, the author of that letter, never wrote it spasmodically or without consultation with his fellows. And now, let me warn some of you country-road advocates, look out! There will be somebody in your district, too. You may not be fortunate enough to get hold of a letter, but all of you "knights of the dirt roads" who attempt to go against the edict of this association, look out! [Applause.] Who leads their forces here in this Capital, where they have established headquarters in order to influence the action of Congress? Not Mulhall, He was discredited long ago. They must get another leader if they would be effective here.

With 451 subordinate associations from whom they are collecting funds they must every year get hundreds of thousands of dollars, which they are expending in pushing their scheme for national highways. I have never heard of their spending a dollar on a road, but they spend all they collect.

Now, there are a number of other road associations. This is the joy riders' concern. They want to try out the automobiles from New York to San Francisco in order to see which one can win the race. They want a road that is adapted to their purposes, and they want the farmer down on the muddy roads in my district and yours to pay the expenses of this peacock lane over which these peacocks shall strut in luxurious automobiles [Applause].

Now, I take up another road association. I do not know its methods. I have not any letters that I can use against it like the one which I have just read, but I am going to call attention to its fundamental organization. I speak now of the National Highways Association. That association is fairly well organized, like this "Three A" association. They have different grades of members—some who are high up and some who are high privates in the rear ranks, with no duty to perform except to pay their dues and do the bidding of those above them.

Mr. Speaker, I take the liberty of calling the attention of the Members of this House to the different varieties of membership in that association, and let each one of them look at his own pocketbook and determine to what class of these memberships he will belong. The founder members make a payment of $25,000 each. Those founder members are limited in number to 53, each one of whom puts in $25,000. Fifty-three times $25,000—I have not time now to calculate. Take it home with you, sleep with it, and figure it out yourself. Next, they have a national member. The national member pays $10,000. Next comes the collective member. He pays $2,500 for his membership. And next comes the life member. He pays $1,000 for his membership. Then comes the sustaining member. We are getting down now, Mr. Speaker, into the pond where the suckers swim. [Laughter.] A sustaining member pays $100. Then what? They take his $100 in order to put across national roads in this House and in the Senate, against the wishes of the people that these Members here are sent to represent.

Then, coming on down to smaller suckers, they have contributing members, who pay $10 each, and then they have assisting members, who pay $5 apiece. Lastly, in order that no man, however humble, shall be permitted to escape this dragnet for funds relied upon to prosecute this propaganda for the rich and special interests, they have a subscribing membership for a dollar apiece. And then, in order to get the other fellow who has a little vanity in him, they have what they call an "associate membership," who gets down to 50 cents apiece. [Laughter.] They have spread this net out all over this country, taking in every man, from the fellow willing to pay $25,000 for a founder's membership down to the man who pays 50 cents in order that he may wear upon the lapel of his coat the badge of an apostleship in the peacock-lane propaganda. [Laughter.]

Mr. Chairman, I may not be sent back to Congress, but I would prefer defeat and to be left at home fighting the battles of the common people than come back here wearing the servile collar of plutocracy.

I believe the first governmental aid should be extended to the producers and consumers of our country, and not to those, who by reason of their wealth, are able to spend their time in traveling by automobile and other modern methods of conveyance. The farmer will not alone be benefited by Federal aid in the construction of good roads from the farm to town. The merchants will be likewise benefited; the landowner and every class engaged in toil will be benefited by the construction of good roads. Farm lands now worth from thirty to fifty dollars per acre will double in value; the merchant who during rainy weather and muddy roads is now compelled with his force of clerks to stand idle behind the counters will be able to sell to his country trade, for with good roads bad weather will not prevent a visit to town. The farmer will be benefited in the saving of wear and tear of his wagons and harness, and in the time necessary to market his crop and haul out his produce. By reason of the fact that there are good roads he can haul two and three times the tonnage he is able to convey over bad roads.

I am not unmindful, Mr. Chairman, that in taking this position I am inviting powerful opposition—opposition that will not hesitate to spend large sums to defeat those who believe the people who reside in the country community, and not the tourist, should enjoy good roads.

I live in one of the greatest agricultural districts, not only in Oklahoma but in the whole of our great country. The people, all classes, bankers, merchants, farmers, and laboring people are among the most intelligent, the most progressive, and the most patriotic people in all this country. They are deeply interested in this great question as they are interested in all matters that will promote the prosperity and happiness of our country. The farmer and the laboring man, the merchant and the banker, all are striving to give their children, their girls and boys, better opportunities than they themselves were afforded. It is the wish of the farmer to give his children the best educational advantages, and the lack of school privileges

in the country is driving thousands to our cities and towns. Good roads will make consolidation of rural district schools possible and thereby bring to the farmer what he has heretofore been compelled to seek by removing to the town or city. The families of our farmers enjoy their social gatherings, their Sunday schools, prayer meetings, and church services quite as much as those who live in town or city. Good roads will make possible these activities during all seasons of the year. The people can now attend such gatherings only during fair weather.

Another idea which will justify this legislation is the dead time it will save. During periods of protracted bad weather the farmer is practically housed in his home, unable to travel over the bad roads from home to market. With good roads he could do his hauling at that time. What would the banker, the merchant, or those engaged in any other line of business think—what would they do—if their places of business were closed when the weather grew bad? This Congress long ago would have given them relief. The rural routes in the country to-day, I believe, are, on an average, 26 miles in length. If good roads are constructed, these routes can be lengthened until they reach an average of 30 miles or more, and the amount saved to the Government by lengthening these routes will, in great part, if not wholly, take care of the appropriation of $25,000,000 per year carried in this bill.

The two greatest virtues of this bill, in my opinion, are: First, it extends aid to those who help themselves, by advancing a dollar from the Federal Treasury every time the State or local authorities advance a like sum, thereby establishing a system of cooperation which will be most helpful by arousing the citizens' interest in the subject. Second, the aid goes to the neighborhood road, where the farmer and the local business man will secure the benefit, by enabling the transportation in all seasons of farm products to the local market.

This bill is so conservative in the amount appropriated, so fair in the amount it requires the States and the legal subdivisions to advance in order to participate in its benefits, so just in distribution among the people—Oklahoma receiving $572,000, which will be about $7,500 to each county—and of such universal value to all classes of our people, it seems to me, it ought to pass without a dissenting vote.

SHALL WE PERMIT CHEAP LABOR AND LOW STANDARD OF LIVING FROM EUROPE AND ASIA TAKE CHARGE OF OUR FARMS AND FACTORIES, OR SHALL WE PRESERVE THE UNITED STATES FOR OUR OWN FARMERS AND LABORING PEOPLE?

Mr. Chairman, the subject of immigration has long been a question of serious interest to the American people. When the country was yet young, laws were enacted prohibiting the further importation of the African, and as early as 1828 Congress began the consideration of petitions and memorials asking the colonization in a distant land of the free colored people. That great Senator, Henry Clay, filed many of these memorials and spoke frequently on the subject, expressing the view that all history teaches, that no two races can for any great length of time occupy the same country and engage in business in competition who can not amalgamate and become homogeneous by intermarriage. When competition becomes keen and one race is pushing the other out of business race riots and bloodshed will follow and the weak will give way to the strong. The views then expressed by Mr. Clay are being demonstrated as correct almost daily in different parts of the world, and I might add here in our own country. We witnessed it in the case of the Chinese immigrant on the Pacific coast until Congress passed the Chinese exclusion act. We have it now in the Japanese situation in California. For this reason I am in favor of excluding from our shores all Asiatics, which includes Japanese, Chinese, and Hindus. I am also in favor of excluding all Africans. If we are to continue to advance as a Nation, we must preserve the purity of the Caucasian race. The mingling by intermarriage of two dissimilar races, such as the Caucasian with the Malay, the African, or the Asiatic, produces a progeny that has all the vices of both races and the virtues of neither. Statistics of those countries in South and Central America where the population is made up in part of the descendants of the Caucasian, the Asiatic, and the African mixed show that this mongrel race furnishes almost the entire criminal population of those countries, though the percentage of mixed breeds is small when compared with the entire population. It will invariably be noticed that those who control the country—who manage its business and maintain its civilization—are the descendants of ancestors who have maintained their racial purity by refusing to intermarry with a dissimilar race. If this view, Mr. Chairman, is correct, and both science and history bear unanimous testimony that it is, then those races with which the Caucasian can not amalgamate without serious danger to its continued dominant and controlling position in history should be excluded from our shores. We had according to the latest census in the United States, exclusive of outlying possessions, 91,972,266 people, and, including Alaska, Hawaii, and Porto Rico, which are permanently a part of our country, 93,402,151 people distributed among the different races as follows:

Caucasian or white race, 81,997,640, and this includes the American Indian, for experience has demonstrated that intermarriage between the whites and Indians has resulted in injury to neither the white nor the Indian. On the contrary, a mixture of blood between them has developed a citizenship which is a credit to both races.

There were 2,545 Hindus, 71,531 Chinese, 72,157 Japanese, 9,827,763 Africans, a total of 9,973,996 people.

It will be seen that more than 11 per cent of our population belong to races that can never amalgamate and become a part of a homogeneous population.

If we do not close the ports of our country to these people it does not require an imaginative person to foretell the serious consequences of immigration from Asia, now inhabited by nearly 1,000,000,000 of Hindus, Chinese, and Japanese, all seeking entrance to this country to compete with our farmers and wage earners. When they come the price of the farm products will decrease in value and the wage of our workingmen will be reduced, for these people do not possess the high standard of living of the American farmer and the American workingman. It is estimated by competent authority that they can and do live on about one-twentieth what it costs our people. Mr. Chairman, in practically every paper we read we find that thousands of our people are out of employment and walking the streets, unable to secure work, living off the bounty of charitable organizations. The papers tell us of a great public meeting held just the other day in New York in the interest of the army of unemployed and describe in detail the weeping of those who attended while listening to recitals of the misery, the hunger, and the suffering of those who could find no work to do.

Practically every national Republican platform since 1876 has carried a declaration in favor of restricting immigration, and the same is true of the national Democratic platforms of 1876, 1884, and 1892. President Cleveland vetoed a bill restricting foreign immigration, and the demand was left out of the succeeding platform and our party went to defeat. The demand for the enactment of legislation restricting foreign immigration has not by any means been confined to the two great political parties. From 1840 until the Civil War came along and diverted the minds of the people to other issues there sprang up in this country what was known as the "Know Nothing Party," whose bid for popularity and votes was based chiefly on opposition to foreign immigration. After the discovery of gold in California and the consequent rush of immigration to this country the Know Nothing Party became a serious political contender for the suffrage of the American people. At one time this party had 43 Members of this House and the governors of five States. For nearly 100 years the people of the United States, by petitions, memorials, platform demands, resolutions adopted by patriotic societies, farmers' and labor organizations, have asked Congress to exclude undesirable foreigners. At the last meeting of the National Farmers' Congress resolutions were passed favoring the restriction of immigration. They said:

Whereas the congressional Immigration Commission's report of 40 volumes has just been published and recommend the very measures which this organization has been advocating in its resolutions for years to judiciously restrict undesirable immigration:

Resolved, That we enthusiastically approve the commission's legislative recommendations that the head tax be increased, the illiteracy test be enacted, the foreign steamships be fined for bringing undesirables, and that other judicious measures be adopted, which are hereby urged upon the Congress of the United States.

The Farmers' Educational and Cooperative Union, the most powerful farmers' organization in the country, with a membership of more than 3,000,000 American farmers, at a recent meeting passed resolutions expressing the view of this great body of our citizenship on this subject. The resolution said:

Whereas the Immigration Commission, after a four years' investigation at home and abroad, involving an expenditure of a million dollars, reports that "many undeniably undesirable persons are admitted every year"; that "there is a growing criminal element in this country, due to foreign immigration"; and that "substantial restriction is demanded by economic, moral, and social considerations"; and

Whereas that commission recommends increasing the head tax, excluding illiterate adults, requiring some visible means of support, fining the foreign steamships for bringing undesirables that could be rejected on the other side, and other measures, law in other new countries, and urged for years by this organization in its resolutions, before congressional committees, and otherwise; and

Whereas it is proposed to relieve the Northeast of its intolerable immigration evils and to continue the unloading of undesirables upon this country by diverting and distributing the incoming, ever-increasing influx from southern Europe, Asia, and northern Africa over the agricultural sections of the South and West.

And the resolution, after further recital, concluded by asking Congress to prohibit further immigration of undesirables. The United Mine Workers of America, the National Grange, the Railway Trainmen's Association, Brotherhood of Conductors and Firemen, American Federation of Labor, International Brotherhood of Locomotive Engineers, Junior Order of American Mechanics, Knights of Labor, and other farming and laboring organizations have from time to time and whenever an opportunity was presented been asking Congress to amend the laws and restrict immigration.

This bill provides for the exclusion of all idiots, imbeciles, feeble-minded, epileptics, insane, paupers, persons likely to become a public charge, beggars, vagrants, persons afflicted with tuberculosis or other contagious diseases, persons having physical or mental defects of such a nature as to affect their making a living, those who have committed a felony, persons who practice or believe in polygamy, persons who teach the unlawful destruction of property, prostitutes, procurers, contract laborers, and persons who are unable to read 40 words in their own language—this last provision being commonly known as the literacy test. Is it right to exclude these classes of immigrants? I think so, and am ready to give the reasons for the faith that is in me. I assume it is not necessary to advance an argument in support of the exclusion of all those classes enumerated in the bill except the illiterate. Acting on this assumption, I will quote the literacy test carried in this bill so that all may know how extremely liberal are its terms in that respect. It is as follows:

That after four months from the approval of this act, in addition to the aliens who are by law now excluded from admission into the United States, the following persons shall also be excluded from admission thereto, to wit:

All aliens over 16 years of age, physically capable of reading, who can not read the English language or some other language or dialect, including Hebrew or Yiddish: *Provided*, That any admissible alien or any alien heretofore or hereafter admitted, or citizen of the United States, may bring in or send for his father or grandfather over 55 years of age, his wife, his mother, his grandmother, or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not; and such relative shall be permitted to enter. That for the purpose of ascertaining whether aliens can read the immigrant inspectors shall be furnished with slips, of uniform size, prepared under the direction of the Secretary of Labor, each containing not less than 30 nor more than 40 words in ordinary use, printed in plainly legible type in the various languages and dialects of immigrants. Each alien may designate the particular language or dialect in which he desires the examination to be made, and shall be required to read the words printed on the slip in such language or dialect. No two aliens coming in the same vessel or other vehicle of carriage or transportation shall be tested with the same slip. That the following classes of persons shall be exempt from the operation of the literacy test, to wit: All aliens who shall prove to the satisfaction of the proper immigration officer or to the Secretary of Labor that they are seeking admission to the United States solely for the purpose of escaping from religious persecution; all aliens in transit through the United States; all aliens who have been lawfully admitted to the United States and who later shall go in transit from one part of the United States to another through foreign contiguous territory.

Mr. Chairman, we have heard a great deal of this literacy test. We have been appealed to from every angle—patriotism, sympathy, and philanthropy. We all, I am sure, have been deeply touched by these appeals so earnestly and ably made. That we can not close our eyes to the misery of the world and discharge our duty to mankind I am willing to concede. While this is true, our highest duty is to the citizenship of our own country. This duty ought to be fully discharged before we reach out and assume new and greater burdens. We ought to look to the future happiness and welfare of our own people before we extend our vision oversea to view the unfortunate condition of people who live in other lands. In my State, and my information is that the same is true of a majority of the States, we have a compulsory educational requirement for the children and an educational test before a citizen can cast his ballot. If we apply these tests to our own citizens, I do not see how we can be fairly criticized if we apply the same test in much milder form to those who seek admission here. This bill specifically exempts from the educational test the victims of religious persecution. If it did not, I might vote against the test, for this country was settled by those who sought an asylum from religious persecution, and I would turn no religious refugee back who answered all other requirements of the bill merely because he or she could not read.

Mr. Chairman, the population of continental United States is now seeking location in other lands. Reliable statistics show that 200,000 of the very highest type of our citizenship, sturdy, home-building, family-loving men, men in sympathy with the ideals of the Republic, and who cherish its institutions, for want of sufficient opportunity here have crossed our frontier and gone into Canada to secure homes. Is it sound economically to give up this part of our people and at the same time accept more than a million people annually from all parts of the world? The greater part of these immigrants never become citizens of our country, and from 30 to 40 per cent of them finally drift back to the country of their birth.

Out of more than a million foreigners who land on our shores each year about 300,000 are illiterate. When President Taft was considering a bill carrying the literacy test in 1912 the prosecuting attorney of Somerset, N. J., addressed him a letter, from which I quote the following:

My duties as prosecuting attorney of Somerset County, N. J., have given me an excellent opportunity to check up in one important particular the investigations and conclusions of the Immigration Commission with reference to the literacy test. During the last two years I have kept a careful record of the last 114 criminal cases that I have prosecuted against aliens, with the following interesting results:

	Illiterate.	Literate.
Homicide	3	.....
Atrocious assault and battery	34	6
Simple assault and battery	9	2
Larceny	14	2
Sexual crime	7	1
Perjury	2	1
Excise	11	5
Marriage	3	1
Frauds	2	4
Miscellaneous	6	1
Total	91	23

The following conclusions are deducible from the above:

(1) Of the 114 crimes committed by aliens 54 were acts of personal violence; and of these 54, 46 were committed by illiterates, while only 8 were chargeable to those able to read and write.

(2) Of the 46 committed by illiterates, 3 were homicides, 34 were atrocious assaults (by maiming and wounding with a deadly weapon), and only 9 were simple assaults, showing conclusively that the illiterate alien 37 times out of 46 makes use of a deadly weapon in order to avenge his wrongs, fancied or real.

(3) Out of 16 cases of larceny (stealing of all kinds), 14 defendants were illiterate.

(4) Out of 8 sexual crimes, 7 were committed by illiterates, 3 of these being carnal abuse of infants under 10 years of age.

(5) Out of 3 perjury cases, 2 were against illiterates; that is, of those brought to justice.

(6) Out of 16 cases for violation of excise laws, 11 were illiterates showing an utter disregard for laws.

(7) Of the 4 crimes against the institution of marriage, 3 were illiterates.

(8) Only in cases of fraud did the literate exceed the illiterate.

I am, Mr. President, sincerely, yours,

FREDERICK A. POPE,
Prosecutor of Pleas, Somerset County, N. J.

The facts with reference to insanity are equally as startling. The New York Times of March 23, 1913, carried this news item:

INSANE ALIENS.

The Times is informed by Secretary McGarr, of the State commission in lunacy, that of the 31,432 insane patients under treatment in the 14 State hospitals on February 10 last, 13,163, or 41.9 per cent, were aliens. Foreign-born patients have increased since the Federal census of December 31, 1903, by 1,552, or 13.4 per cent. In the two State hospitals for the criminal insane there were 1,230 patients on February 10, of whom nearly 44.4 per cent were of alien birth; the Federal census of 1910 showed a percentage of aliens to total population in this State of 29.9 per cent.

The prevalence of insanity among immigrants is evidently much greater than among the native born. Of the 5,700 patients admitted to the civil hospitals for the year ending September 30, 1911, 2,737, or 48 per cent, were aliens, and 1,481, or 26 per cent, were of alien parentage, while only 1,224—less than 26 per cent—were of native stock. Of the whole number, the nativity of but 218, which is 3.8 per cent, was not ascertainable. Insanity among the foreign peoples of this city occurs in a still larger percentage of cases. Of the first admissions to the hospitals, 2,006 out of 3,221 residents of the city were of foreign birth; that is 64.1 per cent, although the foreign-born population is but 40.4 per cent of the whole.

Mr. Chairman, the opposition to this bill does not come from the American people, for they desire its passage. It comes from the Steamship Trust, which has thousands of agents scattered through every country in the Old World gathering from all quarters immigrants of every class and description and transporting them to our shores for the $100,000,000 which they rake into their coffers by the transaction. The passage of this bill will be a distinct triumph for the people and a slap at the Shipping Trust.

I consider this one of the most important bills that will be acted on in this Congress. During every hour of the 24—day and night—more than 100 persons, born in foreign lands, are being landed on our shores—more than 30,000,000 within the

last 90 years. By refusing to pass this bill we choose that which is producing a plutocratic class of idle nobodies resting upon the industrial slavery of a great mass of imported and low standard of living wage earners. By restricting immigration we influence the bringing about of a condition that will give to a large body of our citizens a decent and comfortable standard of living.

SHALL THE GOVERNMENT BUILD A RAILROAD IN ALASKA AND PRESERVE ITS RESOURCES FOR ALL THE PEOPLE, OR SHALL THE MORGAN-GUGGENHEIM SYNDICATE BUILD IT AND MONOPOLIZE THE MINES AND FORESTS FOR PRIVATE GREED?

Mr. Chairman, I shall take advantage of the latitude allowed by the rules in general debate and express my views on the subject of building a railroad in Alaska by the Government. When this subject was first presented to Congress I was inclined to oppose it. When the bill was reported, accompanied by majority and minority reports, the minority report being signed by my colleagues from Oklahoma [Mr. FERRIS and Mr. DAVENPORT], I was all the stronger inclined to oppose the proposition on account of the respect I have for the high character and great ability of these gentlemen. I realize that by favoring the bill and voting in favor of constructing the road a political issue will be raised, but since listening to the debate and acquainting myself with the subject as much as possible by reading such articles and data on the subject as I could secure, I have become convinced that the bill ought to pass, and the Government ought to construct the railroad. Having convinced myself that it is the right thing to do I shall not count the cost nor look about me to ascertain the result of my vote. I shall follow what I think is the right and proper thing to do and rest content by giving the reasons that have controlled my actions.

Let us analyze the reasons advanced in opposition to the bill. Its opponents say they are against it because, first, they are opposed to Government ownership and, second, because there is nothing in Alaska that will justify the expenditure of the sum of money appropriated to construct the railroad. I do not intend to enter upon a discussion of the merits of Government ownership as compared with private ownership at this time. It is not involved in this legislation. The question here is vastly different. No friend of Government ownership ought here to be drawn into a discussion of that question. This Alaska project can prove either a success or failure and not in the least change the economic questions involved in Government ownership in countries already thickly populated and having freight and passenger traffic sufficient to insure a tonnage that will yield an income large enough to guarantee financial success. I might say, however, in passing, that I do not belong to that class who become frightened when Government ownership is mentioned. Mr. Bryan, the great Secretary of State, on his return from a trip around the world, in a speech delivered at Madison Square Garden, New York, said:

I have been slow in reaching this position, and I can therefore be patient with those who now stand where I stood for years, urging strict regulation and hoping that that would be found feasible. I still advocate strict regulation and shall rejoice if experience proves that that regulation can be made effective. I will go further than that and say that I believe we can have more efficient regulation under a Democratic administration with a Democratic Senate and House than we are likely to have under a Republican administration with a Republican Senate and House, and yet I would not be honest with you if I did not frankly admit that observation has convinced me that no such efficient regulation is possible, and that Government ownership can be undertaken on the plan outlined with less danger to the country than is involved in private ownership as we have had it or as we are likely to have it. I have been brought to regard public ownership as the ultimate remedy by railroad history, which is as familiar to you as to me. Among the reasons that have led me to believe that we must, in the end, look to Government ownership for relief, I shall mention two or three. First and foremost is the corrupting influence of the railroad in politics. There is not a State in the Union that has not felt this influence to a greater or less extent. The railroads have insisted upon controlling legislatures; they have insisted upon naming executives; they have insisted upon controlling the nomination and appointment of judges; they have endeavored to put their representatives on tax boards that they might escape just taxation; they have watered their stock, raised their rates, and enjoined the States whenever they have attempted to regulate rates; they have obstructed legislation when hostile to them, and advanced by secret means legislation favorable to them.

* * * * * * * *

Another reason which has led me to favor Government ownership is the fact that the people are annually plundered of an enormous sum by extortionate rates; that places are discriminated against and individuals driven out of business by favoritism shown by the railroads. You say that all these things can be corrected without interference with private ownership. * * * Is there any Democrat who is not willing to go as far as President Roosevelt and admit the necessity of Government ownership in case the people are convinced of the failure of regulation? I can not believe it.

Prof. Parsons, a high authority on the subject of freight rates in this country and abroad, after studying here and in Germany, has furnished a comparison of the rates charged on Government owned and operated roads in Germany with those charged on privately owned and operated roads in the United States. He says:

After studying Government freight rates on the ground and comparing them with American rates for similar distances and shipments, I found that the German per ton-mile rates on local traffic are generally less than one-third of ours.

Local rates in Germany and America compared.

Item.	Miles.	Average rate per ton-mile.	
		American railways.	German railways.
Iron ore	327	0.492	0.474
Structural steel	398	.73	.45
Cast-iron fittings	377	.69	1.28
Structural steel	63	2.22	1.17
Fertilizer	18	5.28	1.56
	36	3.33	1.20
	40	2.75	1.14
	22	4.55	2.75
Raw cotton	44	3.18	2.16
	39	3.08	2.24
Portland cement	65	2.15	1.16
	69	1.96	1.13
Hay	42	3.81	1.39
	98	2.45	1.04
Potatoes	34	3.53	1.21
	94	2.98	.92
Linseed oil	38	4.21	1.50
	39	3.59	1.50
	43	3.72	1.46
	78	2.05	1.34
	20	18.40	5.18
Milk	70	5.94	4.26
	31	9.68	4.81
	65	7.69	4.29

It may be said, however, that the comparison between Germany and the United States is not a fair comparison; that these countries are not on the same hemisphere; that conditions are different; that wage scales are not the same. To avoid this criticism, we will compare the rates on Government-owned roads in Germany and privately owned roads in England. No criticism can be made that the conditions in these two countries are dissimilar. The following appeared in a recent English journal:

It costs $5.72 to transport a ton of hardware from Birmingham to London, while the rate for the same class of goods over the same distance in Germany is about $2.25. Cotton goods from Manchester to London costs, per ton, $8.76; in Germany, the same distance, $4.86 to $5.60. General machinery from Leeds to Hull costs $6.09; in Germany, over precisely the same distance, $1.09 per ton.

I have just had an opportunity to review the report of Postmaster General Burleson to the Senate in response to a resolution of that body asking for information collected on the subject of Government ownership of telephone and telegraph lines. The facts disclosed by this report relative to the charges for services over Government lines and private lines are so pronounced, so startling, that I desire to call the attention of the country to the comparison. The charges for telephone service over continental lines owned and operated by the Government and the Bell Co. lines, privately owned and operated, in the United States are shown by the following table:

Comparison of continental with Bell Co. rates.

25 MILES.	
Average continental rate	$0.07
Bell Co. rate	.25
100 MILES.	
Average continental rate	.16
Bell Co. rate	.60
300 MILES.	
Average continental rate	.30
Bell Co. rate	1.80
400 MILES.	
Average continental rate	.36
Bell Co. rate	2.40
500 MILES.	
Average continental rate	.37
Bell Co. rate	3.00
700 MILES.	
Average continental rate	.45
Bell Co. rate	4.26

If we strike an average, it will be found that the rate on private lines is a little more than seven and one-tenth times as much as it is on Government-owned lines. The great reduction of rates over Government-owned as compared with private telephone lines holds good in the telegraph monopoly. The rate for sending a telegram over private telegraph lines in the United States is 25 cents for 10 words and 2 cents for each additional word. The rate over Government-owned lines is: Germany, 11.9 cents and 1.1 cents for each additional word; Belgium, 9.6 cents for 15 words and 1.9 cents for each additional word; Denmark, 13

cents for first 10 words and 1.3 cents for each additional word; France, 9.6 cents for first 10 words and 1.9 cents for each additional word; Great Britain, 12.1 cents for first 12 words and 1 cent for each additional word; Italy, 9.3 cents for first 15 words and 1 cent for each additional word; Norway, 13.4 cents for first 10 words and 1.3 cents for each additional word; New Zealand, 12 cents for first 12 words and 1 cent for each additional word. This ratio holds good for all the countries where the Government owns and operates the telegraph business. The taking over by the Government of the telephone and telegraph business is shown by this report to have proved a financial success. In Germany the profit to the Government in operating the post office and the telephone and telegraph lines was shown to be $22,678,361, and in other countries it was shown to be as follows:

Austria	$720,270
Belgium	3,989,489
Denmark	1,099,577
France	8,922,676
Great Britain	22,330,417
Hungary	5,561,687
Italy	5,342,213
Japan	15,326,863

We are told by the great captains of industry that corporations, combinations, and trusts are necessary in this day and age. They say the operation of all the railroads of the country under one management makes for economy, that it reduces expenses, that it eliminates useless employees, that it prevents disastrous rate wars, that it destroys useless duplication of both rolling stock and trackage. In making this contention the operators of these public-service utilities advance a most powerful argument for Government ownership and control. If their contention is true and centralization of control is necessary for economical and satisfactory service, I, for one, am unwilling to permit private greed to exercise that control for their own selfish ends. My philosophy of government is that this world was created for all the people; that the interest of all the people should be placed above the interest of a few of the people. I believe in individualism, but I do not believe in a system of laws that will permit one individual or a combination of individuals to absorb all the property of the Nation. There must be some scheme devised whereby a limit can be placed on the amount of property any one man may acquire and use for private purposes. The thinking rich are fast having the necessity for such a provision impressed upon them. No system of government can long endure where one man can accumulate unspeakable wealth and multiplied thousands become beggars on the streets. Judge E. H. Gary, president of the Steel Trust, had this in mind when he said in an address before the Lehigh Club, of New York, that our Nation faces a crisis, and unless the rich realize it the mob will help them. When less than 10,000 of our population draw yearly incomes of nearly two thousand millions of dollars, while nearly 95,000,000 enjoy incomes of less than $600 per year, it is time serious thought was given the subject and a remedy provided for the evil. The peril of these gigantic fortunes is being considered by the public men of this day, and when the American people let it be known that they demand legislation that will insure a more equitable distribution of the wealth of the country that legislation will be forthcoming. Senators CLAPP, NORRIS, WILLIAMS, SUTHERLAND, and BORAH have had occasion to refer to this impending danger in speeches delivered in the United States Senate. Senator CLAPP said:

The people have too much of the thought in this country that prosperity consists of a few men sitting around the banquet board heaped so high with the good things of life that a few crumbs must fall to the floor, and the gathering of these crumbs by the rank and file constitutes prosperity.

Having tolerated a system under which these accumulations have been made, we should tax them; yet I can not help but feel that taxation and the receipt of these benefactions from great, overgrown fortunes serve to enslave the American mind and make us more tolerant of conditions, which it should be the primary thought and effort of every American patriot to see if there is not some way to so adjust the situation that instead of that banquet board thus being heaped overhigh and the crumbs falling to the masses, there might be a banquet board around which all could sit with a fair equation of opportunity.

Senator NORRIS had this to say:

It has often been said during the course of the debate in this Chamber on the income-tax provisions, and I have not heard it contradicted here or elsewhere, that immense swollen fortunes are an evil and a detriment not only to our Government but to humanity. Here everyone agrees, as far as I know, that these immense fortunes are an evil and a menace; but when we come to any method that would in any way interfere with their being entailed from generation to generation and made still larger, then we are going to fall out about the method we are going to do it.

I have nothing in the world against Mr. Vincent Astor. As far as I know, he is a perfectly honorable and honest gentleman. I know that I would not harm him if I could. I would not take away from him one single cent that I believed I had no right to take. But who is there, here or elsewhere, who will say that he ever so much as crooked his finger toward the accumulation of the $80,000,000? He is the son of the man who owned it, who in turn got it from his father, and so on. That is his only claim for it.

Senator WILLIAMS said:

I do not know to what extent inequalities of fortunes are a menace to the Republic. I do know that they are a menace to a large extent; I do know that our ancestors acted wisely when they abolished primogeniture and entail; and I think I know that the time will come when there must be a limitation put upon the amount that may be inherited or left by bequest or devise to any one person or purpose. I especially fear a sort of habit that has grown up among a few of the great rich families of America of not permitting their fortunes to be divided equally between their children, but leaving them to the best money-grubber in the family.

Senator SUTHERLAND said:

I entirely sympathize with the Senator's view with reference to the evils which result from the amassing of vast fortunes. I think it is one of the great evils which we have in this country to-day. To my mind there are indeed two great evils: First, of putting into the hands of few men a vast sum of money or a vast deal of property, and, then, the evil which lies at the opposite pole, the depriving of a vast number of people of even common necessaries of life. Those are the two things in our civilization that I think very greatly threaten it; and I would sympathize with any legitimate effort for breaking up both conditions of affairs to which I have referred.

I think it is a very great evil for any man in this country to have as much as $50,000,000, or to accumulate in a single lifetime as much as $50,000,000. It is a menace in and of itself, and will turn out to be so as it comes to be more and more understood. It is a menace to our scheme of civilization. I think if the holding of such vast fortunes were impossible it would be a very wholesome thing. I have not the slightest doubt about it. That has been my opinion for a good many years.

Senator BORAH made the statement:

One individual in this country is represented to receive an income of twelve millions a year. He lives most of the time abroad. In my judgment, he does not pay as much toward the support of the National Government, under the present laws, as one of his employees.

Mr. Chairman, I have wandered from the line of thought I desire to develop. I think, however, in view of the criticism that has been leveled against Government ownership and especially the severe arraignment of this Alaskan project, I am justified in these few general observations.

Alaska is an unorganized territory of the United States. It was purchased from Russia in 1867 for the sum of $7,200,000. It lies principally between the sixtieth and seventieth parallels of latitude and contains an area of 590,834 square miles, or 378,133,760 acres. It is about one-fifth the size of Continental United States; contains an area equal to 20 of the present States of the American Union, and greater by 290,000 square miles than the 13 Colonies at the time of the formation of our Government. It is more than eight times as large as Oklahoma, and contains a greater area than Norway, Sweden, Finland, Denmark, England, Wales, Scotland, and Ireland combined. If its extreme southeastern point were placed at Atlanta, Ga., the northwestern islands that reach far out into the sea, toward Russian Siberia, would find a place on our map near San Francisco.

If its northernmost point in the Arctic Circle were placed at our Canadian border, its southern boundary would rest along the northern limits of Oklahoma. It has more than 35,000 miles of coast line on the Pacific Ocean, Bering Sea, Bering Strait, and the Arctic Ocean. The Yukon River is navigable from northern Canada to where it empties into the Bering Sea, a distance of more than 2,000 miles—a greater distance than the Mississippi. There are more than 6,000 miles of navigable inland streams. These rivers all run in a northwest direction and empty their waters either in the Bering Sea or the Arctic Ocean. The building of this railroad will connect these inland streams with the ports on the Pacific Ocean. It is a country of matchless natural resources. It contains forests having an area three times as great as Oklahoma, and of an estimated value of more than $300,000,000. There can be found in abundance game and fish and fowl of every variety and description. In 1891 the United States Bureau of Education imported a little more than 1,000 reindeer from Siberia and turned them upon the Alaskan ranges. They number now nearly 40,000. They live on mosses gathered from the mountain sides above agricultural possibilities or the grazing lands of cattle. They do not require feed at any season of the year and furnish a fine meat supply. It is estimated by competent authority that there is sufficient range on the mountain sides, valuable for no other purpose, to support more than 2,000,000 reindeer. I quote from the great speech delivered by the Delegate from Alaska [Mr. WICKERSHAM] relative to climatic conditions. He said:

The most serious objection made to the passage of the bill before the House has the least basis of fact to support it. That objection is that the climate of Alaska is so harsh and rigorous that people can not live there in comfort, can not raise gardens or agricultural products sufficient to subsist on, and that a railroad could not be operated in the winter even if constructed with Government aid. The data with respect to the climate of Alaska is so abundant, so exact, and so at variance with the general opinion, that it is offered to the House in the hope that this objection can be effectually and finally disposed of.

North of the Equator, and, of course, in the United States and in Alaska, the date of the winter solstice, December 21, is the shortest day of the year. The sun on that date has reached its farthest point south and begins its return journey toward the north. On the date of the

vernal equinox, March 21, it has reached the mid-point of its northern journey, and on the date of the summer solstice, June 21, it reaches its most northern point, stops, and begins its retreat. On September 22 it crosses the Equator on the autumnal journey south, and continues its retreat to the winter solstice on December 22. Those movements of the sun's light and shade produce the four seasons—spring, summer, fall, and winter—and determine the periods in which vegetation may grow for beautifying the earth and providing food for men and animals. We are so familiar with these movements of the sun, with the resulting day and night and the seasons of the year, that few people give consideration to them beyond their effect in the production of their crops. Twice each year, when the sun crosses the Equator, the length of the day and night is everywhere equal, but when the sun is north or south of the Equator days and nights are never equal, though at the end of the solar year the total amount of day and night is everywhere the same. In short, every spot on the earth's surface, in the course of the solar year has the same amount of day and night. Your attention is now directed to a graphic chart representing the years division of sunshine and shadow at Fairbanks, in the Tanana Valley, the central distributing point in the interior of Alaska. Fairbanks is on latitude 65° north, and on December 22, the date of the winter solstice, the low southern sun skirts the horizon for only two hours and sinks out of sight. It is in the date of the northern midnight.

Immediately after December 22 the sun begins to rise, and from day to day its course across the southern heavens is higher, until on March 21 the day and night at Fairbanks are exactly equal in length. But we are now to have compensation for its long absence during the winter, and it continues to rise until on June 21 its highest culmination is reached and the Tanana Valley is ablaze with 22 hours of sunshine and heat. Not only does nature thus compensate us for the hours of sunshine lost in the winter, but she puts vigor and activity into plant life in an equal measure. Our crops have the same number of sunlit hours for growth that similar crops have in more southern climes, though in a less number of days. In 100 days, between May 20 and September 1, the growing season in the Tanana Valley, the sun shines 1,800 hours, while during the same 100-day period in Oklahoma it shines but 1,500 hours, or one-fifth less time than in the Tanana. For every 5 days' sunshine and heat in Oklahoma during that 100 days the Tanana Valley has 6. Our crops grow in equal proportion—where Oklahoma crops grow 5 units ours grow 6 in the same period of time.

During May, June, July, and August, the summer season of the Tanana, the whole earth is ablaze with the glory of the solstitial sun. During that period the Tanana Valley has more hours of sunshine than sunny California, and more hours of summer than Ohio or any other State in the Union. The gardeners and farmers are at work early and late, crops grow vigorously in the long hours of sunshine and heat, and the valleys, the birch-clad hills, and the mountains of the northland respond to the magic touch of the life-giving sunlight.

Between the 21st day of March and the 22d day of September—the summer six months—the sun shines exactly 70 per cent of the total time, including both day and night. Out of 4,500 hours of time, day and night, the sun shines 3,150 hours. No valley in the United States has that many hours' sunshine in the growing season, and these long hours of sunlight, heat, and growing force give the Tanana its wonderful climate and great agricultural productivity.

There is in the northern Pacific Ocean a stream known as the Black Stream or Japanese Current, which carries the warm waters of the Equator north along the eastern shores of Asia until it strikes Japan, where it is deflected north and east and continues its journey until it strikes Alaska. The effect of the warmth of this stream on Alaska is exactly the same as the effect of the Gulf Stream on England and Norway and Sweden. England is in the same latitude as Labrador, and if it were not for the influence of the Gulf Stream it would be a bleak and barren waste of ice and snow. Norway and Sweden are in the same latitude as Greenland and Iceland, and if it were not for the Gulf Stream there, too, would be perpetual winter. The mean annual temperature of Juneau, the capital of Alaska, is 42.3; of Christiania, the capital of Norway, 41.5; of Stockholm, the capital of Sweden, 42.3; and of St. Petersburg, the capital of Russia, 39.6. In Norway and Sweden more than 10,000,000 sturdy, enterprising, enlightened people, who support themselves mostly by agriculture, make their homes. Alaska is in the same latitude; and with a railroad that will open up that country so that our people can go there and develop its great possibilities, it, too, within a marvelously short time, will be teeming with a happy, sturdy, self-sustaining American citizenship. Crops are not produced in the winter months anywhere, so far as I am informed. It makes no difference how cold it becomes during the winter on the growth the following summer. It is almost, if not quite, as cold during the winter months in Montana, Dakota, Minnesota, and Canada as it is in Alaska; but I take it we could find no one who would say these States are not suited to agriculture. But why should I or any other man who has not lived in Alaska and made a study of the soil, the climate, and the conditions of that country attempt to furnish information on the subject, in face of the fact that our Agriculture Department has had its trained agents in that country for more than 10 years making observations and experiments for the purpose of determining accurately its agricultural possibilities? Dr. Walter H. Evans, Chief of the Division of Insular Stations in the Office of Experiment Stations in the Department of Agriculture, who is thoroughly familiar with conditions in Alaska, after many years of experiment and observation and a careful study of conditions of soil and climate in Norway, Sweden, Finland, and the Russian Provinces lying in the same latitude as Alaska, has prepared a comparative official statement, which I desire to insert here as a part of my remarks. Dr. Evans said:

As a result of the investigations at Sitka, Rampart, and Fairbanks, supplemented by hundreds of letters from settlers, it can be safely asserted that in almost any part of Alaska south of the Arctic Circle hardy vegetables of good quality can be produced, so far as the climate is concerned. A list of these vegetables would embrace radishes, turnips, kale, mustard, lettuce, carrots, parsnips, parsley, peas, cress, cabbage, cauliflower, Brussels sprouts, kohl-rabi, onions, spinach, endive, leeks, beets, potatoes, and rhubarb, and, among the herbs, caraway, catnip, mint, and thyme. In specially favored localities and in favorable seasons, asparagus, beans, celery, cucumbers, squash, and salsify have been grown by taking advantage of warm sheltered spots with exposures toward the sun. Under ordinary conditions, corn, melons, tomatoes, eggplant, and pumpkins have proved failures.

In the interior valleys grain can be successfully grown, and there has not been a year since 1900 when the majority of the varieties of oats, barley, and rye have not ripened at the Rampart station (lat. 65° 30′ N.). Wheat, both fall and spring sown, has ripened some years. Similar results have been secured at Fairbanks in the Tanana Valley, but the work has not been in progress for as many years. In 1909, out of 60 varieties of grain of all kinds, 55 ripened their entire crop, as follows: Spring wheat 1, winter wheat 1, winter rye 7, spring rye 1, spring emmer 1, spring barley 29, and spring oats 15.

AGRICULTURE IN NORTHERN EUROPE.

In order to further establish the possibility of agriculture in Alaska a comparison has been made of the countries of Norway, Sweden, Finland, and the Russian Provinces of Archangel, Vologda, and Olonetz. All the countries lie between latitudes 58° and 70° north, and for the most part they are north of 60°, the approximate latitude of the northern reach of the Gulf of Alaska. In Europe, within the above limits, are embraced over 985,000 square miles, or about 599,450,000 acres. Alaska, with its 570,390 square miles, or 365,049,000 acres, extends from latitude 54° 30′ in southeastern Alaska to more than 71° at Point Barrow. A study of the topography, climate, native plants, etc., shows that the conditions are not very dissimilar in the two regions, whatever advantage there is in climate being probably slightly in favor of the European countries. In these countries of Europe more than 11,000,000 people are living, while the census of 1910 reports 64,356 as the population of Alaska. Recent statistics show in the three countries and three Provinces in Europe which lie mostly north of 60° that 8,373,000 acres of land were producing cereals of all kinds, the total yield being: Wheat, 6,683,840 bushels; rye, 36,509,640 bushels; barley, 26,963,545 bushels; oats, 109,036,780 bushels. In addition, potatoes to the amount of 100,521,100 bushels and 7,871,119 tons of hay were reported. Live stock are returned for these countries as follows: Horses, 1,516,251; cattle, 6,110,476; sheep, 4,033,578; hogs, 1,484,124; goats, 368,021; and reindeer, 564,732.

The area reported under cultivation varies from less than 0.01 per cent in Archangel and 0.5 per cent in Norway to 4.1 per cent in Sweden. In Finland, Vologda, and Olonetz only about 1 per cent of the total area is in cultivation, as the term is commonly used. In nearly every country there are natural meadows of large extent used as pasture and for haymaking, so that the total under agricultural use is probably about double the figures quoted above. On a basis of 1 per cent of the total area available for crops and 2 per cent for crops, pastures, and haying, there should be over 3,650,000 acres capable of cultivation, or 7,300,000 acres available for possible agricultural development in Alaska. In 1894 the Director of the United States Geological Survey, in a letter to the House Committee on Agriculture, estimated the area of tillable land in southeastern Alaska, in the Cook Inlet country, the Alaskan Peninsula, and adjacent islands at from 3,000 to 5,000 square miles, or 2,000,000 to 3,000,000 acres. In 1900, after traveling repeatedly throughout Alaska and comparing estimates from various sources, Prof. C. C. Georgeson estimated the tillable and pasture land of Alaska at 100,000 square miles, or 64,000,000 acres. In 1910 Mr. J. W. Neal, who is in charge of the agricultural experiment station near Fairbanks, made a reconnoissance survey of the Tanana Valley, and he estimated the agricultural and grazing lands of that valley and the small valleys leading from it at about 15,000 square miles, or 9,700,000 acres, or more than the total area reported under crops in the specified countries of Europe.

With the same development of agriculture in Alaska as in Europe, to supplement its mining, fisheries, and other industries, Alaska should support a population almost equal to that of Europe north of 60° latitude and a commerce of equal or of greater importance.

Comparative area of some European countries.

Mr. Chairman, we have taken from Alaska since we acquired title to it in 1867: Gold, $228,512,471; silver, $2,037,280; copper, $16,074,625; gypsum, $647,345; marble, $555,443; tin, $88,062; coal, $340,189; sealskins, $52,042,528; aquatic furs, $12,616,937; land furs, $9,537,081; walrus products, $368,053; whalebone, $1,707,410; fishery products, $182,569,625; a total of $507,097,049, and we are just beginning to touch the top of the unthinkable wealth of that vast empire. Dr. Brooks, of the Geological Survey, speaking in reference to coal in Alaska, page 50 of Bulletin 442, says:

About one-half of the known tonnage of Alaska coal is lignite, a little over one-fifth is anthracite and high-grade bituminous coal, the rest falls into the bituminous and subbituminous classes. It is fair to assume that these ratios will hold for the coals of the areas on which no tonnage estimates are possible.

The anthracite of the Bering River and Matanuska fields is but little below that of Pennsylvania in composition. * * * The coals classed as semianthracite are of about the same composition as the Loyalsock or Bernice Basin coals of Pennsylvania. The higher grade bituminous (semibituminous) coals of the Bering River and Matanuska fields are comparable in composition and heating power with the Georges Creek, New River, and Pocahontas coals of the East. * * * The lower grade Alaska bituminous coals compare favorably in composition with the coals of Japan, Vancouver Island, Washington, and Australia. This is an important point, as these are the fuels with which the Alaskan coal must come into competition.

On page 50 Mr. Brooks says:

As only about one-fifth of Alaska has been surveyed geologically, it is evident that any estimate of the area of the coal fields serves only as a measure of the minimum area. With these limitations on the accuracy of the figures, the total known coal fields included an area of about 12,667 square miles. It is not impossible that future surveys may prove that the coal fields embrace many times this area.

On page 68 Mr. Brooks further says:

On the other hand, the Bering River and Matanuska fields furnish the only known source of high-grade fuels near either the eastern or the western shore of the Pacific Ocean, unless such fuels may be had from the inland coal fields of China. They have, therefore, a great importance to industries of the Pacific coast. From them must come the high-grade steaming and coking coals and anthracite needed by the growing population of the Pacific seaboard States. Unless they are utilized the manufacturing and smelting industries and the Navy must depend largely on foreign fuels, except as coal may be brought around Cape Horn or until after the completion of the Panama Canal. Alaska's own need for high-grade coal can be supplied only from these two fields, unless it is furnished by such foreign fuel as is transported for a thousand miles or more.

Railway construction is necessary before the Bering River and Matanuska coals can be brought to tidewater. (See pp. 73–76.) The lack of railways is one of the causes which has delayed the development of these coals, as a large investment of capital is necessary before any returns can be expected. Moreover, it increases the cost of the product and places the coal at a corresponding disadvantage with that of such fields as those of Vancouver Island, New South Wales, and some of China and Japan.

It furnishes more gold than any other country in the world. Its salmon supply is unequaled. The world looks to it for its future supply of seal furs. With these known products and with untold and unspeakable riches yet unknown—for it must be remembered only one-fifth of this country has been geologically surveyed—what shall we do? Shall we build this road or turn this country over to private greed? Shall we build it by the Government and develop this country in the interest of all the people of the United States, to whom it belongs, or shall we turn it over to the Morgan-Guggenheim-Alaskan Syndicate for private exploitation?

Since 1906, when it was discovered that Morgan-Guggenheim were by the aid of dummies trying to monopolize all the rich copper and coal mines, and President Roosevelt withdrew these lands from entry, the country has been locked up. We must do one of three things: We must keep it locked up, or we must unlock it ourselves by building this road and opening up and operating the rich coal and other minerals located on public land and give the settler a chance to go there and establish a home, or we must turn it over to the Morgan-Guggenheim Syndicate to be opened up and looted for private gain. Which shall we do? I think we can best answer this by determining what you or I would do if Alaska belonged to either of us. If it were mine, I certainly would not keep it locked up, nor would I turn it over to the Morgan-Guggenheim Syndicate to be looted. I would place a mortgage on it and open it up for my own use. That is just what we are proposing to do by the passage of this bill. The bill proposes to build the road out of public funds and reimburse the Treasury for the cost of construction out of the proceeds of the sale of public lands and other property there which belong to the people of the United States. The Guggenheims and Morgans are ready and willing to build this road, if the Government will turn over to them the coal mines. Shall we repeat the mistake we made when we gave away more than 158,000,000 acres of our public domain and $65,000,000 in money to encourage the building of railroads through the country west of the Mississippi and to the Pacific coast? The land and money given to aid in building these roads would have constructed and equipped every mile that was built by the companies to whom we extended the aid. Are we to repeat what we did then by turning over the rich resources of Alaska to private monopoly?

Shall we permit private monopoly to construct the roads out of the property we give them and own both the property and the road? I for one am unwilling to do so. I think a great mistake was made when land grants were made in 1864 to the Union Pacific and the Northern Pacific to induce them to construct their lines through the West. If the Government had kept the 158,000,000 acres of land and the $65,000,000 it gave to aid in the construction of less than 5,000 miles of road and constructed those lines out of funds from the Treasury the amount would have been returned twice over from the sale of the lands and the people would now own the roads. We made a mistake then, let us not repeat it now. Mr. Chairman, if I had my way I would reserve all the mineral wealth on all the public domain for the benefit of all the people. The natural resources of the Nation should be preserved for all the people and not monopolized by a few. If this policy had been followed in the past and our forests, our gold, silver, copper, coal, lead, zinc, and all other minerals, our water power and all other natural resources reserved, the public lands of our country would now be in possession of farmers instead of the Guggenheim syndicate and the lumber barons. We would have fewer millionaires, it is true, but our taxes would also be less. If the income from all these natural resources were flowing into the National Treasury instead of the pockets of monopoly, the people of the country would be relieved from taxation. The income from these sources would be sufficient to support the Government. There would be no wrong to any individual in this, for neither the hand nor the genius of man created them. When they lie beneath the earth's surface, a part of the public domain, they belong to all the people and the people have been quite generous enough when they, without price, grant the surface of the land.

Mr. Chairman, the apostles of despair in prophesying disaster to this enterprise are not without company, for when Alaska was purchased we had some doleful complaints. They are so like those we now for more than a month have listened to that I will quote from a few. Hon. Hiram Price, in the course of his remarks, said:

There, the gentleman from Massachusetts pointed out to me, the fish with which these waters swarm—no, sir; I beg pardon; not swarm; there is no room for them to swarm; they are piled up, fish upon fish, pile upon pile, solid columns of fish; no human arithmetic can compute their numbers. And sir, such fish—shad, salmon, cod—according to the description a foot and over through the shoulders, with sides and tails to match. As I stood there, Mr. Chairman, listening to the gentleman from Massachusetts, with fish to the right of me, fish to the left of me, fish all in front of me, rolling and tumbling, I had to acknowledge that the picture as painted made Alaska a good country—for fish.

These remarks, made in the spirit of sarcasm at the time, I am sure the most bitter oponents of the bill will not repeat now.

Mr. Loan, of Missouri, was another who ridiculed the resources of this, now admitted, rich mineral land. He said:

That it is an utterly barren waste, wholly incapable of supporting a population of civilized people, is substantially admitted by those who speak most earnestly in favor of its acquisition, and that it is entirely worthless for any useful purpose is not seriously denied.

It is true that we have had most glowing descriptions given us by some who favor this appropriation of the beautiful scenery of Alaska; of the salubrity of its climate; of the productiveness of its soil; of its azure skies and balmy breezes; of its boiling springs and brimstone vapors; of its vast mineral wealth; of its great deposits of coal, iron, and copper; of its mines of cinnabar, silver, and gold, and of the brilliant diamonds of the largest size and purest water lying around in the utmost profusion; and I acknowledge the pleasure derived from listening to these graphic descriptions drawn from the prolific imaginations of some of our most gifted orators. * * * Why buy Alaska for the

sake of its contingent mines, that could, if they exist, only be worked in eternal snow and ice? Alaska is utterly worthless, and if it were otherwise we have no earthly use for it.

Mr. Ferriss, of New York, was even more positive that nothing good could come out of the purchase, and presented a disagreeable, cold, bleak, and repulsive picture of that distant country. He said:

Alaska, with the Aleutian Islands, is an inhospitable, wretched, and God-forsaken region, worth nothing, but a positive injury and encumbrance as a colony of the United States.

Against these dark and discouraging prophecies we have but to call attention to what has come out of that great northwest Territory—more than five hundred millions in products from mine and sea and land—and to what remains that is known to man—three hundred millions in lumber, the greatest gold supply in the world, the richest copper mines, more salmon than in the Columbia, and the world's supply of seals—and only one-fifth of its vast extent geologically known. The history of Alaska, Mr. Chairman, is but the history of the development of our own great West told again. We were not without prophets of evil when the Oregon country was made a part of our domain. This was in the day of Daniel Webster, and even so great a man as he could see nothing good in that rich country on our Pacific coast. He said:

What do we want with this vast worthless area, this region of savages and wild beasts, of deserts, of shifting sands and whirlwinds of dust, of cactus and prairie dogs? To what use could we ever hope to put these great deserts or these endless mountain ranges, impenetrable and covered to their base with eternal snow? What can we ever hope to do with the western coast, a coast of 3,000 miles, rock-bound, cheerless, and uninviting, and not a harbor on it? What use have we for such a country? Mr. President, I will never vote one cent from the Public Treasury to place the Pacific coast one inch nearer to Boston than it is now.

Senator McDuffie, in describing the Oregon country which now constitutes the three great States of Oregon, Washington, and Idaho, and a part of the States of Montana and Wyoming, said:

As I understand it, about 700 miles this side of the Rocky Mountains is unhabitable, where rain scarcely ever falls, a barren, sandy soil. There are three successive ridges of mountains extending toward the Pacific and running nearly parallel, which mountains are totally impassable except in certain parts, where there are gaps or depressions to be reached only by going some hundreds of miles out of the direct course. Well, now, what are we to do in such a case as this? How are you going to apply steam? Have you made anything like an estimate of the cost of a railroad from here to the mouth of the Columbia? Why, the wealth of the Indies would be insufficient! You would have to tunnel through mountains 500 or 600 miles in extent.

It is true they have constructed a tunnel beneath the Thames, but at a vast expenditure of capital. With a bankrupt Treasury and a depressed and suffering people, to talk about constructing a railroad to the western shore of the continent manifests a wild spirit of adventure which I never expected to hear broached in the Senate of the United States. And is the Senate of the United States to be the last intrenchment where we are to find this wild spirit of adventure which has involved the country in ruin? I believe that the farmers, the honest cultivators of the soil, look now only to God in His mercy and their own labor to relieve them from the wretchedness in which the wild and visionary schemes of adventure have involved them. * * * Why, sir, of what use will this be for agricultural purposes? I would not, for that purpose, give a pinch of snuff for the whole territory. I wish to God we did not own it! I wish it was an impassable barrier to secure us against the intrusion of others. This is the character of the country. Whom are we to send there? Do you think your honest farmers in Pennsylvania, New York, or even Ohio or Missouri will abandon their farms to go upon any such enterprise as this? God forbid! To any man who is to go to that country, under the temptation of this bill, if he was my child, if he was an honest, industrious man, I would say to him, "For God's sake, do not go there! You will not better your condition; you will exchange the comforts of home and the happiness of civilized life for the pains and perils of a precarious existence." But if I had a son whose conduct was such as made him a fit subject for Botany Bay, I would say, "In the name of God, go!" This is my estimate of the importance of the settlement.

Oregon in 1910 contained a population of 672,765. There were 45,502 farms with an acreage of 11,685,110. The farm property was valued at $528,243,782, and the farm land was worth on an average of $35.23 per acre.

Washington, according to the 1910 census, contained a population of 1,141,990, and 56,192 farms with an acreage of 11,712,235, farm property valued at $637,543,411. The average value of farm land was $44.18 per acre.

Idaho at the same time had a population of 325,594, with 30,807 farms, with an acreage of 5,283,604, farm property valued at $305,317,185, and an average value of farm land per acre of $41.63.

These three States comprising the greater part of the Oregon territory sustain a population of 2,140,349 sturdy, enterprising, and patriotic American citizens. It may be well also to draw attention to the fact that only 28,680,949 acres of a total area of 157,310,080 acres is now in farms and the larger part of this is not listed as improved. Think of the possibilities of those three States with 128,629,131 acres not listed as farm land. This is but a part of the story of the wonderful resources of this wonderful section of our country.

Oregon produced agricultural products for the year 1909 having a value of $49,041,000. Washington during the same year produced crops of the value of $78,927,053, and the farm products of Idaho for the same period amounted in value to the sum of $34,358,000.

There were in Idaho, according to the census of 1910, 453,807 cattle, 197,772 horses, 4,036 mules, 178,346 swine, and 3,010,478 sheep; and in Oregon, 725,255 cattle, 271,708 horses, 9,927 mules, 217,577 swine, and 2,699,135 sheep; and in Washington, 402,120 cattle, 280,572 horses, 12,185 mules, 206,135 swine, and 475,555 sheep. These figures but in part represent the vast wealth already developed there, and, great as it is, it is but a mite when compared with the possibilities of the future.

All this, Mr. Chairman, in a region which so great a genius as Daniel Webster less than three-quarters of a century ago pronounced fit only for the habitation of savages and wild beasts. I am as sure as that I live to-day that all the evil prophecies we have heard on this floor will in the end result as did the vision of Webster.

Mr. Chairman, the present Secretary of the Interior, Hon. Franklin K. Lane, in his latest annual report strongly recommended the building of this railroad by the Government, and in speaking of Alaska, its present and its future possibilities, said:

The largest body of unused and neglected land in the United States is Alaska. It is now nearly half a century since we purchased this Territory, and it contains to-day less than 40,000 white inhabitants, less than 1,000 for each year it has been in our possession. The purchase was made as a means of protection against the possible aggression of a foreign nation and without the hope that it would be even self-supporting. In the intervening 46 years we have given it little more than the most casual concern, yet its mines, fisheries, and furs alone have added to our wealth the grand sum of $500,000,000.

For almost a generation it was the rich harvest field of a single company. Individual fortunes have been made in that country larger than the price paid to Russia for the whole Territory. How rich its waters are we know, because they have been proved, but how rich its lands are in gold and copper, coal and oil, iron and zinc no one knows. The prospector has gone far enough, however, to tell us that no other section of our land to-day makes so rich a mineral promise. And in agriculture the Government itself has demonstrated that it will produce in abundance all that can be raised in the Scandinavian countries, the hardy cereals and vegetables, the meats and the berries off which 9,000,000 people live in Norway, Sweden, and Finland. It has been estimated that there are 50,000,000 acres of this land that will make homes for a people as sturdy as those of New England. Whether this is so or not, it would appear that Alaska can be made self-sustaining agriculturally.

This vast and unsurpassed asset lies almost undeveloped. A territory one-fifth the size of the United States contains less than a thousand miles of anything that can be called a wagon road. It has a few inconsiderable stretches of railroad, which terminate, with one exception, either in the wilderness or at a private industry. Only the richest of its mines can be worked, and one of its resources of greatest immediate value to the people—its coal lands—lies unworked.

The one constructive thing done by this Government on behalf of Alaska in nearly half a century was the importation of reindeer for the benefit of the Eskimo on the border of the Arctic Ocean. For the white man we have done nothing—so little, in fact, that to mention what we have done is matter for chagrin and humiliation. I have thought that, perhaps, the scandals that have developed in Alaska have been in some part the result of a feeling that it was a no-man's land, where the primal instincts and powers were the only law.

This unfortunate condition can not be explained on the ground of the inhospitality of the Alaskan climate. A careful study of isothermal lines shows that some of southeastern Alaska has a climate more temperate and more equable than that of this city, while much of the greater portion to the north has a kindlier climate than Stockholm or St. Petersburg. Moreover, our people are not stayed in their quest for homes or wealth by the rigors of a long winter. The spirit and purpose which brought them from Europe to Virginia and to Massachusetts take them to-day to Montana and Saskatchewan. The United States lately opened to entry a tract of land in Montana for which there were 46,000 applicants for registration, and only 7,000 of these could be given an opportunity to homestead. There is more railroad building 500 miles north of the Canadian border than there is for the same distance south of it.

Why has not this land been developed? The frank answer is that we did not realize until within a few years that it was worth developing. As soon as we discovered its value as a national asset we became alarmed and drew back, affrighted at the thought that we might lose it, or, at least, that it would become the property of those who would exploit it, without respect to the public interest. Since then we have been waiting to make up our minds as to what wisely could be done. We have hesitated and halted out of the very keenness of our appreciation of what Alaska might become. It has rather been in complement to Alaska than in derogation of her value that we have done so little for her in late years. It was a new land, to be opened under new conditions. The mistakes made there and here we did not wish to repeat. But now, after a long pause, it would seem to be the sense of the people that we shall proceed at once and in a large way to deal with the problem of Alaskan development.

We have withdrawn Alaska from the too-aggressive and self-serving exploiter. What have we to substitute as a safer servant of public interest? To this question I have given much thought, and my conclusion is that if we are to bring Alaska into the early and full realization of her possibilities we must create a new piece of governmental machinery for the purpose. We should undertake the work in the spirit and after the method of a great corporation wishing to develop a large territory.

The coal fields should be opened not to speculators but to operators. Those should have these lands who will use them. None should be opened as a basis for a gamble in future values. If these premises express a sound public policy, there appears to me but one conclusion that can be reached as to the manner in which they may safely be

turned over to the public—under a leasing and royalty system similar to that under which the State of Minnesota leases its ore lands and the States of Montana and Colorado their coal lands.

Mr. Bryan commended Mr. Lane in a signed statement, as follows:

The Senate by a large majority has passed the bill providing for the building of a Government railroad in Alaska. It is quite certain that the House will also pass the measure, and the President stands ready to sign it.

The chief objection made to the project is that it is an experiment in Government ownership. This is hardly a fair objection, because the public character of the ownership is not a matter of choice but a matter of necessity. The conditions which exist in the United States do not exist in Alaska. Here there is a certain amount of competition in the building of railroads, but in Alaska it is merely a question whether the Government will construct the road in the interests of the people of Alaska or allow it to be constructed by a corporation intent upon monopolizing the country's possibilities. The experience under Government ownership in the construction and operation of the Alaskan railroad may be useful as a guide, but it can hardly be taken as a precedent for Government ownership in the body of our country.

Secretary Lane deserves credit for the formulation of the plan and for the legislative victory which has been won in connection with it.

The President, in his address delivered to a joint session of the Congress on December 2, 1913, referring to Alaska—and I quote from his address as it appears in the CONGRESSIONAL RECORD of that date—said:

A duty faces us with regard to Alaska which seems to me very pressing and very imperative; perhaps I should say a double duty, for it concerns both the political and the material development of the Territory. The people of Alaska should be given the full Territorial form of government, and Alaska, as a storehouse, should be unlocked. [Applause.] One key to it is a system of railways. These the Government should itself build and administer [applause], and the ports and terminals it should itself control in the interest of all who wish to use them for the service and development of the country and its people.

But the construction of railways is only the first step; is only thrusting in the key to the storehouse and throwing back the lock and opening the door. [Applause.] How the tempting resources of the country are to be exploited is another matter, to which I shall take the liberty of from time to time calling your attention, for it is a policy which must be worked out by well-considered stages, not upon theory, but upon lines of practical expediency. It is part of our general problem of conservation. We have a freer hand in working out the problem in Alaska than in the States of the Union, and yet the principle and object are the same wherever we touch it. We must use the resources of the country, not lock them up. [Applause.] There need be no conflict or jealousy as between State and Federal authorities, for there can be no essential difference of purpose between them. The resources in question must be used, but not destroyed or wasted; used, but not monopolized upon any narrow idea of individual rights as against the abiding interests of communities. That a policy can be worked out by conference and concession which will release these resources and yet not jeopard or dissipate them, I for one have no doubt, and it can be done on lines of regulation which need be no less acceptable to the people and governments of the States concerned than to the people and Government of the Nation at large, whose heritage these resources are. We must bend our counsels to this end. A common purpose ought to make agreement easy.

Mr. Chairman, I do not contend that the opinions of these great and patriotic men who have given careful consideration to this subject should be conclusive, but I do say they should be most persuasive. They are charged with great responsibility in administering this trust, and unless, after careful consideration, I conclude they have erred in judgment I would follow their lead. I am happy to say that the limited investigation I have been able to give this subject has convinced me they are right, and I shall cast my vote for this bill.

I shall vote for this bill because a railroad in Alaska will develop for the benefit of all the people the matchless resources of that distant land.

I shall vote for this bill because its passage will prevent a monopoly of the rich mines of gold and copper and coal, the quarries of marble, the fish and furs of the sea, and the timber on the land for the benefit of the greed and selfishness of the Morgan-Guggenheim Syndicate.

In Opposition to the Proposed Freight Increase in the Eastern District.

EXTENSION OF REMARKS

OF

HON. THETUS W. SIMS,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 17, 1914.

Mr. SIMS. Mr. Speaker, on the 16th of January last I addressed the House in opposition to the then and now pending proposed increase in freight rates by all the railroads in the eastern district, also called "official classification territory," embracing all that part of the United States north of the Ohio and Potomac Rivers and east of the Mississippi River, embracing within these boundaries that portion of our country served by the best-equipped railroads in the United States, where the traffic is dense and the amount per mile of line is greater than in any other part of our country. Since the delivery of that speech I have received hundreds of letters from all parts of the United States, from ocean to ocean and from the Lakes to the Gulf, strongly approving my contention against the proposed increase. These letters are not from theorists or railroad baters, but from conservative business men, who would not under any circumstances deny to the carriers reasonable rates.

It is urged by the carriers that the labor costs and the costs of supplies have increased, while no increase in freight rates of the carriers has been permitted; that net earnings have been so materially reduced that the credit of the carriers has been materially impaired.

Mr. Speaker, it is certainly interesting in this connection, and I beg to call the attention of the House and the country to the fact that only a few days ago the Louisville & Nashville Railroad Co. and the Nashville, Chattanooga & St. Louis Railroad Co., without State or National compulsion and without court decree, voluntarily reduced the passenger fares from 3 to 2½ cents per mile, thus reducing passenger rates 16⅔ per cent. These roads have kept pace by way of improvements, maintenance, and new construction with any of the great railroads in the eastern district asking to be permitted to increase their freight rates in a gross sum that for that district alone will amount to more than forty millions of dollars per annum, while the increase in labor costs and for materials in the section of the country served by the Louisville & Nashville and Nashville & Chattanooga Railroads have been relatively just as great as in the eastern district. We find these two great railroads instead of asking for a 5 per cent increase on rates are voluntarily reducing existing passenger rates, not 5 per cent but 16⅔ per cent.

As the letters I have just referred to are very illuminating in connection with the proposed increase of rates in the eastern district, I will read a few of them for the information of the House and the country.

[The Van Dusen-Harrington Co., Atlas Elevator Co., Star Elevator Co., Crescent Elevator Co., Home Grain Co., Inter-State Grain Co., Mann Lumber Co., National Elevator Co., Pioneer Steel Elevator Co., Atlas Lumber Co., G. W. Van Dusen & Co.]

OFFICE OF TRAFFIC MANAGER,
Minneapolis, Minn., February 13, 1914.

Hon. THETUS W. SIMS,
House of Representatives, Washington, D. C.

DEAR SIR: I have just had the pleasure of reading your speech of January 16 in opposition to the proposed increase of freight rates in official classification territory, and wish to say that, in my judgment, you could not have covered the ground more clearly, more thoroughly, or more correctly.

I do not think that anyone interested in the movement of tonnage would object to an increase in rates if an increase was necessary, provided the increase was so made as not to disturb the present adjustments to and from competing markets, and any increase on a percentage basis is bound to throw out of line the present adjustments.

Under the proposed adjustment Buffalo, N. Y., for example, would get an advance on grain of about one-half of a cent per 100 pounds, while Chicago would get an advance of nine-tenths of a cent to Boston, and Minneapolis would get an advance of 1¼ cents per 100 pounds.

The campaign carried on by the carriers for the moulding of public opinion has certainly been an expensive one, and undoubtedly has created the impression among those who are not familiar with the conditions that all carriers must have more revenue if they are to operate successfully. Because of this sentiment it is going to be difficult to create any general opposition to the advance, even though the carriers may not be justified in asking for an advance at this time.

I have charge of a movement of tonnage approximating 90,000 carloads per year, and am certainly interested in the general prosperity of the carriers, but disclosures indicating improper management of several large railway systems during the past few years raises a doubt as to the advisability of permitting any increased rates until laws have been enacted that will define clearly just what a common carrier will be permitted to do with its earnings.

If you will consider these expressions as confidential, it will be appreciated very much.

Yours, truly,

H. A. FELTUS.

[John C. Haddock & Co., exclusive agents for the Plymouth Coal Co., Whitehall Building, 17 Battery Place. John C. Haddock, president; Elbert A. Bennett, treasurer; Emil W. Kahn, tidewater sales agent.]

NEW YORK, *February 19, 1914.*

Hon. T. W. SIMS,
House of Representatives, Washington, D. C.

MY DEAR SIR: The writer's attention has just been called to your debate on January 16 before the House relative to the application of the railroads for an increase in freight rates. I have read over same with a great deal of interest and note that you are fully aware as to the peculiar methods and practices that have existed and now exist on the part of the railroads. Their questionable methods still continue and in their efforts to harass and annoy they will not stop at anything.

The Interstate Commerce Commission is no doubt overworked, but from recent developments I am quite sure that they are making a thorough investigation that may have some beneficial results in the long run.

The writer is engaged in the anthracite coal business, and from certain facts which the commission has brought out in its hearings held at Philadelphia recently they have disclosed conditions as to the

methods of the anthracite coal carrying roads in their attitude toward individual operators and their efforts to control the anthracite situation in every possible way. The transportation rates on anthracite coal have been notoriously exorbitant for many years, and through the maintenance of excessive rates they have succeeded in stifling competition to a minimum, and after expending millions in improvements they have paid handsome dividends and accumulated comfortable surpluses besides.

For the anthracite roads to be a party to ask for a general increase of 5 per cent is an imposition upon the intelligence of the general public. The records of the Delaware, Lackawanna & Western Railroad, the Philadelphia & Reading, the Delaware & Hudson, the Jersey Central, and the Lehigh Valley Railroad will show that their enormous earnings have come principally from the extraordinary profits in coal transportation. It may be true that some classes of freight are carried at practically cost, and possibly, in some instances, at a loss, and while a readjustment may be in order on this class of transportation, on the other hand, from the facts developed by the Interstate Commerce Commission, transportation rates on anthracite coal will stand for a very radical reduction. In fact, the Interstate Commerce Commission has filed an exhibit which shows that the actual cost of performing the service as related to anthracite coal to tidewater is materially less than 75 cents a ton, whereas the rates exacted run as high as $1.40 to $1.58 per ton.

The publicity bureau of the railroads is actively engaged in hoodwinking the public, and it is barely possible that the newspapers that lend themselves to these corporations are controlled in some way by them. These, of course, are facts which would have to be developed.

Probably the main difficulty that the commission has had to contend with in the past is the fact that there are so many commercial jokers in the railroad situation that take time and effort to develop and the commission probably has not received very much assistance from the business community in developing these commercial jokers. This has probably been caused through fear on the part of the average business man. In fact, I doubt very much, even with the present effort that is being made by the administration to give the honest business man every opportunity to make good, even under these conditions it is almost impossible for the average merchant to lay himself open to the peculiar methods and tactics that would be resorted to by the railroads if he dared to complain about them.

Railroads like the Delaware, Lackawanna & Western, the Pennsylvania, and the New York Central have lavishly expended millions of dollars that could have been put to much better use if judiciously expended, and especially so in the case of the New York Central and the Pennsylvania Railroad. All of the roads in general are undoubtedly doing a good business, and while it has been made to appear that their expenditures are heavy, it is due in a large measure to extraordinary improvements that are going on—improvements that will carry them for years to come, and instead of the railroads showing a disposition to care for these improvements out of some of their surplus earnings, it is evidently their idea to have the public pay for these improvements through increase in freight rates.

I hope that your efforts will be successful in preventing a general increase in freight rates, and that in instances where extortion exists that there will be a radical reduction and in other instances where the business is done at cost or at a loss that there will be a readjustment.

The anthracite freight monopoly is the most vicious combination that has ever existed. This has been developed during the past 20 to 25 years, during which time many individual operators have fallen by the wayside and several of the largest have been bought up by the anthracite roads at fabulous prices. If the anthracite roads had met the situation fairly and honorably there would have been no need for the Erie Railroad purchasing the Pennsylvania Coal Co. for double the amount that the properties were worth at the time of acquiring. Neither would there have been any reason for the Lehigh Valley to purchase Coxe Bros. & Co. and the Delaware, Susquehanna & Schuylkill Railroad, which Coxe Bros. & Co. had built to protect themselves against extortion and discrimination. Neither would there have been the necessity for the formation of the Temple Iron Co. to purchase the interest of Simpson & Watkins, large and influential miners, who were projecting the building of another road to carry anthracite coal to tidewater at reasonable rates.

Your, very truly,

EMIL W. KAHN.

[John C. Haddock & Co., exclusive agents for the Plymouth Coal Co., Whitehall Building, 17 Battery Place; John C. Haddock, president; Elbert A. Bennett, treasurer; Emil W. Kahn, tidewater sales agent.]

NEW YORK, *February 21, 1914*.

Hon. THETUS W. SIMS,
House of Representatives, Washington, D. C.

MY DEAR SIR: I am in receipt of yours of the 20th, in reply to mine of the 19th, and note what you say. You are at liberty to use my letter in any way that you may see fit, and I leave it entirely in your hands.

If there is any other way in which I can be of assistance in bringing railroad matters to your attention, I shall be very glad to do so. I wish that it were possible to convince the average business man that now is his opportunity to speak out and aid the Government in what it is trying to do to correct the notorious conditions that have existed for many years. I can readily see that the timidity that has been forced upon business men is likely to continue, and, of course, the "hired men" who are delegated to manage the railroads will take every advantage of this condition.

On May 23, 1912, I happened to be present at a dinner given by the Economic Club, at which President Wilson was one of the speakers, his subject being "Government in relation to business." His remarkable address is still fresh in my memory, especially his very forceful remark that no honest business man need fear if he will take the Government into his confidence. It appears that at that time he was still governor of the State of New Jersey, and without disclosing details he referred to the fact that some very prominent business men in his State had approached him and acquainted him with conditions that existed, but forced upon him the seal of secrecy, as they feared the consequences if their names were revealed. President Wilson's address was a most able one, given to a representative body of men, and no doubt the impression that it made with me was shared by many others who were present at that time.

Yours, very truly,

EMIL W. KAHN.

[John C. Haddock & Co., exclusive agents for the Plymouth Coal Co., Whitehall Building, 17 Battery Place; John C. Haddock, president; Elbert A. Bennett, treasurer; Emil W. Kahn, tidewater sales agent.]

NEW YORK, *February 28, 1914*.

Hon. THETUS W. SIMS,
House of Representatives, Washington, D. C.

MY DEAR SIR: I beg to acknowledge receipt of the pamphlet containing complete copy of your speech in the House of Representatives on January 16 last, for which please accept my thanks.

I have carefully read same, and the additional interesting facts which it contains demonstrates that your opposition to the proposed increase in freight rates is based on the soundest principles and with a knowledge regarding the situation that is quite unusual as related to men in public life. The newspaper accounts of your speech, which I had previously read, contained only a synopsis of the more emphatic parts, and the figures which appear in the pamphlet which you sent are not alone interesting but make an effective finale to a most convincing argument.

Would it be possible to send me a number of copies of the speech, as I would like to bring it to the attention of quite a number of my friends.

I note your comments regarding the creation of the commission and the authority which it now possesses. As you may be aware, in the earlier days the powers of the commission were very limited, and it was not until after 1906 that the commission began to come into its own, and while the interstate-commerce law was amended to give that body additional power which it so very much needed, I am of the opinion that the result of the present investigations that are going on will develop facts that will warrant Congress in further extending the powers of this important body.

The writer was an ardent admirer of Franklin K. Lane, now Secretary of Interior, for with his thorough knowledge of the railroad situation I have always felt that his guiding hand had much to do with the decision of the commission when it declined to grant the request made by the railroads three years ago, and I have felt for some time past that the present move on the part of the railroads was made because Mr Lane was no longer a member of that body, and that the railroad interests felt that the opportunity for obtaining an increase was more favorable.

While the net earnings of the railroads have diminished, Mr. Lane's judgment has been vindicated, and if the present railroad managers are not capable of producing satisfactory results based upon their present gross earnings, they should be succeeded by men who possess the ability to do so.

The evils which you have exposed open up in a limited way how low these railroads will stoop to accomplish their purposes. There is no limit to what they will do to wreck and ruin, if necessity demands it. The favored interests will always line up with them, and since the advent of the "community of interest" idea the railroads have played the game to the limit. Controlled, as they are, by a coterie of financiers and interlocking directors, the term "competition" is unknown among the railroad world. In the earlier days, when ruinous competition among them was a fad, the question of requesting an increase was not even considered. It was simply a case of the survival of the fittest.

Does it not seem curious that with the enormous profits that have been made by some of the roads mentioned in your tabulations that all of them should ask for an increase simultaneously, and that among these roads are some of the most prosperous in this country?

Your careful subdivision of the anthracite carriers and the synopsis you give of the net results to their stockholders proves the fallacy of that particular group in requesting an increase. In this connection it is not necessary to pass any extended comment on the earlier history of the Erie and the New York, Susquehanna & Western and the particular reason for their lack of prosperity as compared with other anthracite carriers.

In the case of the New York, Ontario & Western, the shiftless management of that road stands out in striking contrast to the others in that particular group.

Why should any shipper or shippers join in the petition to grant the request of the railroads? What is the motive for it? Have they considered who finally pays the increase? I believe that some have used the argument that if freight rates are increased that the prosperity of the railroads will be helpful to business. Why should an increase in freight rates stimulate business, when certain important commodities are now burdened with transportation rates that are extortionate? Certainly the Consolidation Coal Co. does not present such a petition in good faith, for the records show that the Interstate Commerce Commission has ordered numerous reductions in rates on coal in various sections of the country. If the Consolidation Coal Co. were not in some way allied with the railroads they would be clamoring for a decrease rather than an increase. Shippers, manufacturers, and dealers who sell to the railroads have been sandbagged into the belief that before they can expect to obtain their usual share of business they must further the interests of the railroads by urging that the advances be granted.

With reference to your remark that the railroads have been conducting their campaign of publicity in order to overwhelm the commission, allow me to say that every obstacle that the railroads can throw in the way of the commission is being resorted to, the result being that that body is now so overtaxed with the complaints that are being filed from day to day, which are increasing so rapidly in number, that the time is coming when the shipper who requests relief from burdensome conditions will suffer very materially through the inability of the commission to grant early hearings or to render timely opinions.

As you also stated in your speech, the carriers are already earning a margin of profit on certain commodities which, compared with the cost of the service, is grossly out of proportion to what it should be. This is particularly so in the case of the rates on anthracite coal, and I believe that the commission has already developed facts in that particular investigation which should result in as radical a reduction in rates on coal as was ordered in the case of the express companies as related to their charges.

The railroad managers are fully aware that their present attitude is a false one, but, inasmuch as they are only "hired men," they must do the bidding of their masters or lose their jobs. All lines of business have their periods of depression, and railroads are not an exception to the rule. Extravagance and waste in railroading prevails, and if such a condition is permitted to exist indefinitely there is only one result. Why should the public be requested to pay for this extravagance and waste? The Pennsylvania Railroad, in its efforts to locate its terminal

in New York City, has built a monument that stands for the most remarkable waste in railroading that has ever occurred.

The New York Central, to go the Pennsylvania one better, tears down an expensive terminal which it had completed only a few years prior and replaces it with one that cost millions of dollars. In this case, however, there will be some satisfactory return in the future; but instead of the railroad showing a willingness to pay for this out of its profits it practically asks the public to do so by requesting an increase in rates.

The Delaware, Lackawanna & Western has been expending money on a lavish scale, and, notwithstanding their efforts to conceal their real earning capacity, the net results for 1913 are such that under no circumstances is that road justified in asking for any increase whatever.

For some time past repeated efforts have been made to break up the so-called Anthracite Coal Trust. All of these efforts have proved failures in the past, and, legally, I doubt if anything can be done to prove the existence of a trust. It is true that each of the anthracite railroads controls coal companies, and the relationship between the respective railroads and their coal companies is a matter that will stand for correction rather than an attempt to prove that there is a coal trust in general among these anthracite roads.

What really exists is an anthracite freight monopoly, and for many years the coal departments of these anthracite roads were operated at a loss, inasmuch as the profit came out of the transportation, and by keeping transportation rates at high figures it acted as a check on individual operators from competing successfully. The result was that many operators were sandbagged into selling their product at the mouth of the mine to the anthracite coal roads, with the result that the number of individual operators left is such a small percentage that they are hardly a factor in the situation, and, harassed and annoyed, very few dared to make a complaint, fearing retaliatory measures on the part of the railroads to embarrass them still further. It is rather strange that this condition should have been developed since the advent of the interstate-commerce law, but that is the condition; and with the facts that are now being developed by the commission in its anthracite inquiry many of the abuses are now being brought to light.

If you will be good enough to send me as many copies of your speech as you can spare, I shall very much appreciate it.

Yours, very truly,

EMIL W. KAHN.

[H. M. JACOWAY, fifth district of Arkansas. Committee on Agriculture.]

HOUSE OF REPRESENTATIVES,
Washington, February 26, 1914.

Hon. THETUS W. SIMS,
House of Representatives, Washington, D. C.

MY DEAR MR. SIMS: I am just in receipt of the inclosed from the secretary of the Board of Trade of Little Rock, Ark., and would like greatly to receive your opinion on same. Kindly return the inclosures with your reply.

Thanking you cordially in advance, I am,

Very truly, yours,

H. M. JACOWAY.

[Little Rock Board of Trade, Rail and River Transportation. Officers: Charles S. Stifft, president; W. W. Dickinson, vice president; C. A. Pratt, treasurer; George R. Brown, secretary; August Probst, assistant secretary; William F. Mangiesdorf, M. D., chemist; Dan Daniel, grain inspector and chief weigher; S. J. Storthz, mineralogist. Directors: J. J. Mandlebaum, Ad Hamberg, Robert E. Wait, Charles J. Kramer, John F. Boyle, jr., W. S. Mitchell, Guy C. Smith, Max Mayer, Morris M. Cohn, George W. Rogers, G. C. Byrd, T. P. Murrey, Harry M. Ramey, H. L. Remmel, L. B. Leigh, John M. Rose.]

LITTLE ROCK, ARK., *February 17, 1914.*

Hon. H. M. JACOWAY,
Member of Congress, Washington, D. C.

MY DEAR FRIEND: Recently we received from Hon. T. W. SIMS, of Tennessee, a copy of his speech on "In opposition to the proposed increase of freight rates in official classification territory." We referred the speech to Mr. A. R. Bragg, of the Merchants' Freight Bureau, for a report. Thinking you might desire to show it to Mr. SIMS, it is herewith inclosed. Kindly return to me with information as to comments he may make.

Yours, truly,

GEO. R. BROWN, *Secretary.*

[The Merchants' Freight Bureau, organized by the merchants and manufacturers of Little Rock for their mutual protection. Board of trustees: J. J. Mandlebaum, chairman; T. H. Bunch, J. T. Beal, W. W. Dickinson, Max Mayer, Adolph Geyer, J. T. Jarrell. A. R. Bragg, traffic manager. Office: Moore & Turner Building.]

LITTLE ROCK, ARK., *February 13, 1914.*

Mr. GEORGE R. BROWN,
Secretary the Board of Trade, Little Rock, Ark.

DEAR GEORGE: I return herewith the speech of the Hon. THETUS WASHINGTON SIMS, of Tennessee, in the House of Representatives, regarding the proposed increase in freight rates in Central Freight Association territory. The argument made by Mr. SIMS is well taken. It is a well-known fact that the railroads throughout the country are seeking to increase their present rates, both east and west of the river.

Personally, I think the railroads in what is known as official-classification territory are entitled to some increase, and I believe they will eventually get it, but it will affect our rates to the extent that the western railroads will attempt to increase the through rates, instead of absorbing the difference, as they should, as the rates on classes and commodities west of the Mississippi are about 100 per cent higher, considering the mileage, than they are east of the Mississippi. What I mean is that rates in western classification territory are very much higher per mile than rates in official classification territory. As an illustration: The first-class rate from New York to East St. Louis is 88 cents per 100, official classification; first-class rate under western classification from East St. Louis to Little Rock is $1 per 100—about one-third the distance.

I do not believe that all the speeches that can be made in Congress will remedy the evil or equalize this apparent discrimination. The whole question of increase in rates east of the Mississippi is now before the Interstate Commerce Commission for consideration, but the advance is being opposed by nearly all the commercial bodies in the large cities, as well as by manufacturers, and it is hard to tell what the ultimate result will be.

Yours, truly,

A. R. BRAGG, *Traffic Manager.*

Hon. THETUS W. SIMS,
House of Representatives, Washington, D. C.

DEAR SIR: Am very much interested in your speech before the House of Representatives on January 16 in connection with proposed increase in freight rates in official classification territory.

We are pleased to know that we have such an able friend in Congress, and will appreciate it greatly if you will send each member of this association shown on the back of letterhead a copy of your speech; also send the writer about a half dozen copies.

Would be pleased to have you advise about what date you will mail these, as we desire to issue a circular to all members calling their particular attention to your speech, urging them to give same close study.

Yours, very truly,

J. H. TOWNSHEND,
Secretary-Manager.

[Sheffield-King Milling Co., 38 Chamber of Commerce.]

MINNEAPOLIS, MINN., *March 4, 1914.*

Hon. THETUS W. SIMS,
House of Representatives, Washington, D. C.

DEAR SIR: We have had the pleasure of reading your speech of January 16 in the House of Representatives in opposition to the proposed increase in freight rates and wish to compliment you on covering the matter so thoroughly.

We would like to get a few copies of this—10 or 12, if possible, or less, if that is too many—to distribute. Will you kindly put us in the way of getting these? If it is possible to get them from the Public Printer we will be pleased to send him a check for the number that he can spare us.

Thanking you for your kindness, we beg to remain,

Yours, truly,

SHEFFIELD-KING MILLING CO.,
H. H. KING, *President.*

[San Francisco Chamber of Commerce. Transportation department. Cable Address-Exchange.]

FEBRUARY 16, 1914.

Hon. THETUS W. SIMS,
House of Representatives, Washington, D. C.

MY DEAR MR. SIMS: I have read with deep interest and approval your speech of January 16 in opposition to the proposed increase of freight rates in official classification territory, and wish to congratulate you upon your timely action.

It occurs to me that if copies of your speech could be mailed to the various members of this organization, such action would go a long way toward revealing to them the fact that the articles which appear from day to day in certain journals in support of the proposed advance do not represent the unanimous views of the country. Therefore I am taking the liberty of inclosing the latest mailing list of our membership, with the request that you be so good as to direct that copies of your speech be mailed to each member. I would also like to have a dozen or so for this office.

Thanking you for your attention to this request, I remain,

Very truly, yours,

WM. R. WHEELER,
Manager Traffic Bureau.

(Inclosure.)

[The Globe Soap Co.]

CINCINNATI, OHIO, *February 9, 1914.*

Hon. THETUS W. SIMS,
Member of Congress, Washington, D. C.

DEAR SIR: We have read with interest your speech before the House of Representatives on the subject of increased freight rates in official classification territory, and feeling that you are interested in this subject, we are taking the liberty of sending you, merely as a matter of information, a copy of our letter of even date to the Interstate Commerce Commission.

Yours, very truly,

THE GLOBE SOAP CO.,
FRANK VAN SLYCK,
Traffic Manager.

FEBRUARY 9, 1914.

GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Referring to the investigation that is now being conducted by the commission under I. & S. Docket No. 333, regarding rate increases in the official classification territory, the railroads ask the shipping public to pay increased freight rates aggregating between $45,000,000 and $50,000,000 annually, and justify the increase by the claim that they can not continue to operate under present rates without danger of bankruptcy, or at least without inability to give efficient service or keep their roads up to the proper standard, on account of lack of credit, thereby curtailing their purchases of necessary equipment and material.

We desire to call the attention of the commission to several ways in which we think the carriers could practice economy, and believe that much could possibly be saved in these directions toward making up to the railroads the $45,000,000 or $50,000,000 annually which

they claim it is necessary for them to have. It may be that these matters have already been suggested to the commission, but on the chance that they have not been brought to your attention, we respectfully beg to submit them for your consideration and investigation, if you deem best, and even if they have been brought to your attention before, we feel that they are of sufficient importance to justify a reconsideration.

First. Expensive passenger terminals. We are heartily in favor of improvement in terminal facilities, but we respectfully suggest that if the railroads are so hard up as they would lead the shipping public to believe, they are not justified in spending so many millions of dollars as they have spent in the past for building extensive passenger terminals in various large cities in our country. It is true that these terminals are beautiful and very convenient to the public, and we enjoy them ourselves when we have occasion to pass through such cities, but beyond being an ornament to the particular city in which they are located, or an advertisement of the particular railroad that erects them, they can not be productive of revenue, but merely take up many millions of dollars. If the railroads could afford to stand these many millions for erecting beautiful and artistic edifices, they should certainly be entitled to credit for their efforts in helping to beautify the city, but if done when the railroads are nearing bankruptcy (so they say), we think that in cases where new passenger terminals are necessary that the garment should be cut to fit the cloth, and an equally convenient but much less expensive terminal should be made, and the balance should be turned in to help pay for the new rails and equipment that they so badly need, but can not float stock or bonds to pay for.

Second. Uptown ticket offices: The railroad companies maintain ticket offices at their passenger stations, for the sale of both railroad and Pullman tickets, but in all cities of any size and consequence so-called "uptown ticket offices" are also maintained. The latter are almost invariably located in the heart of the business portion of the city, on streets where rents are of the highest and usually in the most modern skyscrapers, and, not satisfied with being located in the more expensive buildings in the city, they occupy the corner room on the first floor if possible. Such offices are usually fitted up with mahogany furniture and marble floors and trimmings, and while they are without doubt a credit to the community, it seems to us that if the railroads really desired to practice economy here is an opportunity where hundreds of thousands of dollars, if not millions, could be saved by doing away altogether with these "uptown ticket offices" and selling their tickets at the depot, or if, in their desire to accommodate the public, they consider that the public demand convenient facilities uptown for securing transportation and sleeping-car reservations, the result could be just as easily attained by locating their "uptown ticket offices" in less expensive quarters, or by maintaining a joint city ticket office, as they do in union depots. As a matter of fact, if they maintained a joint city ticket office, it could be located on any by-street and at a very reasonable expense for rent. There would be no question but what the public would turn into a street a few steps farther around the corner if there was only one office. These "uptown ticket offices" are not a source of revenue except as they enter into competition, one line with another, and while there may be reasons why they should be kept separate, there is certainly no reason why they should always be located in the most expensive quarters in the city. Nothing whatever is gained, as one road usually has practically as elaborate quarters as another, and therefore if all of these offices were maintained in a more economical way the same result would accrue in the end to all.

As we stated before, some of these ticket offices are a credit to the railroad company and city, but they are a luxury, as now maintained, rather than a necessity, and if the railroads are as hard up as they claim, and can unite in efforts to secure an increase in freight rates, they should be able to easily get together on a question of economy such as this, and save hundreds of thousands of dollars annually that they are now practically wasting on these beautiful, but more ornamental than necessary, offices.

Third. Automatic stokers on locomotives: A large number of freight and passenger locomotives are fired and stoked by hand, although the locomotives otherwise are models of the latest mechanical and engineering skill. The average manufacturing plant has installed automatic stokers and self-feeders. Even many of the older plants have been remodeled with such improvements. No manufacturer would consider his boiler room up to date without automatic stokers, and, while the railroads claim to be up to date and, in fact, are up to date in many other things, they are still using old-style methods of firing engines by hand with a corresponding waste of fuel, which would amount in the aggregate to a very fair portion of the sum that the railroads now claim is necessary for them to have to continue operating efficiently. Granting, for the sake of argument, that the railroads need more money for the purchase of equipment, rails, etc., why not attain the same end by reducing the operating expenses instead of increasing the gross revenues?

The advertisement of one company in a recent number of the Railway Review says that one locomotive fired by their stoker is doing passenger work which formerly required two shovel-fired locomotives. The railroads claim that they have practiced economy, but here is one case where they could save a very neat sum in the loss of fuel. We understand that there are at least four or five automatic stokers of approved design, and that are practical, and we suggest that your commission ascertain why the railroads have never generally adopted any of those designs and made an effort to stop this waste of fuel. Certainly it can not be possible that railroads, or those controlling them, are interested in increasing the consumption of coal. If not, then why should not the carriers, if they are sincere in their claims that they are practicing economy, put some of these devices into general use; and if they are not desirous of practicing economy, then why should the shipping public at large be asked to contribute an additional $50,000,000 annually under such circumstances?

Feeling that your commission desires to get to the bottom of this matter, we offer the three suggestions mentioned above for your consideration, and if they are of any service to your honorable body in your investigations or tend to throw any light on the subject, then this letter will have served its purpose.

Yours, very truly,

THE GLOBE SOAP CO.,
FRANK VAN SLYCK,
Traffic Manager.

[The John Dulweber Co. Hardwood lumber. Office: Southwest corner Findlay and McLean Streets. B. F. Dulweber, president and treasurer; J. E. Dulweber, vice president. Capital stock, $225,000. Mills: Ohio, Kentucky, Mississippi, and Louisiana. Distributing yards: McLean Avenue, from Findlay to Poplar Streets, extending north of Bank Street, on Cincinnati, New Orleans & Texas Pacific Railway.]

CINCINNATI, *February 9, 1914.*

Hon. THETUS W. SIMS,
House of Representatives, Washington, D. C.

DEAR SIR: It is with much pleasure that I have just read your speech before Congress on the pending application of the railroads for an increase of freight rates in official classification territory. While I do not pose as a transportation expert, the cost of transportation in my business is so great that I have, perhaps, given this question more consideration than the average active business man, and it is very gratifying to find one, who has studied the situation as thoroughly as you evidently have, so closely in accord with the views I have long held. I hope you will pardon the intrusion upon your valuable time, but I am taking the liberty of inclosing copies of two letters I have recently written on this subject, and a perusal of same, I believe, will develop the same line of thought and reasoning as is in evidence in your speech, although not quite so well expressed.

I should like to have a few additional copies of your speech, as I have a few friends whom I would like to have read it, and if you can provide me with about a dozen additional copies, same, I assure you, will be greatly appreciated.

Respectfully,

B. F. DULWEBER.

FEBRUARY 7, 1914.

Mr. W. H. WILLER,
Secretary the Hardware Manufacturers' Association of the United States, Cincinnati, Ohio.

DEAR SIR: Replying to your favor of the 4th instant, relative to my views on the proposed 5 per cent advance in freight rates, I am inclosing copy of a letter which I have written to Mr. George W. Weedon, assistant general passenger agent, Pennsylvania lines, in response to a pamphlet that was mailed to me by Mr. Weedon. I am also inclosing herewith copy of said pamphlet, which will perhaps prove interesting to you. My reply was directed to Mr. Weedon, as it does not appear from the pamphlet itself who is responsible for its publication, but same has evidently been prepared at the request and expense of some railroad company.

As to whether or not the railroads are entitled to an increase in revenue, I have not fully made up my mind. It appears from the reports of the first eight months of the last fiscal year (unfortunately I have no later report before me) that there has been an increase in net operating income per mile of 9.7 per cent over the corresponding period of 1910. Observe that the increased wage scale and other expenses does not enter into this, as the increase quoted is net. In 1910, the year with which the comparison was made, the Interstate Commerce Commission decided that the rates in effect at that time were adequate, and going on the assumption that the question was fully investigated at that time, and that the decision of the commission was correct, it would not appear that any increase is justified at this time. On the other hand, I admit the possibility that when the condition of the railroads is taken into consideration in connection with the effect that it has on the general business condition and development of the entire country, that possibly, from a standpoint of policy, it would be advisable to give them a reasonable increased revenue, but I am unalterably opposed to granting this increase by means of a general advance in all rates. The increase, if it is deemed necessary or advisable, should be secured by advancing those rates which are now much below what they should be, and I am sure that the necessary increase can easily be obtained in this manner. The rates on lumber are very much too high, considered on a basis of comparison with rates on other commodities, and I believe that eventually a united effort by all lumber interests will have to be made to secure lower and more equitable rates if we are to successfully cope with the constantly increasing competition of other materials.

Yours, truly,

———— ————.

FEBRUARY 5, 1914.

Mr. GEORGE W. WEEDON,
A. G. P. A., Pennsylvania Line, City.

DEAR SIR: I am in receipt of a pamphlet, "Are the wages we pay the railroads high enough?"

I can not learn from the pamphlet who is responsible for its publication, and since it has evidently come to me through your courtesy I am addressing my response to you.

The pamphlet is most interesting and is a splendid argument for a readjustment, but not a general advance in rates. A careful perusal of the facts submitted would convince any reasonable person that the railroads are entitled to higher freight rates on some commodities.

Observe that the relation of the cost of transportation per 1,000 miles to the value of the commodities handled, according to figures compiled by railroad accountants, are approximately as follows:

	Per cent.
Hammers	1.8
Shoes	.6
Clothing	.4
Shirts	.9
Underwear	1.0
Motorcycles	1.7
Harness	1.25
Hats	1.0
Shotguns	0.15
Overcoats	.3
Umbrellas	1.0
Typewriters	.4
Saws	.6

The above commodities are largely handled by less than carload freight, necessitating handling through freight depots, which must be maintained for less than carload service, loading into the cars by carriers, and unloading therefrom at destination into depots. The cost of handling freight in this manner is necessarily great, and when the loss, breakage, and damage is taken into consideration it becomes evident that none of the above rates, and, in fact, I might say, none of the many others contained in your pamphlet are adequate. All of these rates, I firmly believe, could be materially advanced without detriment to anyone.

I observe that the commodity in which I am most interested—lumber—is not included in your pamphlet. I presume that this was excluded for the very good reason that it already contributes more than its proportion to railroad maintenance and profit, the average revenue to the carriers on lumber for the same distance for which the figures on

your other commodities were compiled being 35 per cent, or about 70 and 75 times greater than on clothing and shoes. This enormous rate is made despite the fact that this commodity can be transported more cheaply than any other freight that is handled, no special terminal facilities or depots being required, no special equipment or service, and practically no loss or damage.

Railroad rates on individual commodities have always been made without any regard to the cost of transporting that particular commodity. As a result there are unquestionably many articles which are handled by the railroads at a tremendous loss. While it is true that there are no accurate cost systems being maintained by the railroads today, so that the loss or profit on any given commodity can be definitely ascertained, there are some rates that are so glaringly insufficient, at least when compared with other rates, that it becomes instantly evident that the handling of such commodities is unprofitable. On the other hand, the rates on lumber are as far out of line in the other direction, as will also become evident when comparison is made with rates on other commodities. When a carload of live stock, worth approximately three times the value of a carload of lumber, and requiring special equipment, special facilities for loading, special service, delivery on a certain schedule of time, stopping for feeding, watering, etc., together with the tremendous loss and damage that accrue from the handling of live stock, is handled by the railroad companies at approximately 40 per cent of the revenue derived from a carload of lumber, it must be admitted that one rate or the other is very much out of line.

I will not discuss with you the question of whether or not the railroads are entitled to an increase in their revenue. I believe that the railroads should be supported liberally, and that their revenue should be sufficient to enable them to give good service, and to be a sufficiently attractive investment to encourage the development of new roads and the improvement of those now in existence. I am, however, opposed to the railroads obtaining an increase in revenue by a general advance of all rates. If this is done, even though the increase were 100 or even 200 per cent, I believe that there would still be many commodities that would be handled at a loss. Each commodity should pay its full proportion, and the increase should be secured by a readjustment of the rates on a basis that will yield a fair profit on every commodity that is handled.

Yours, truly, ——— ———.

Hydroelectric Power.

EXTENSION OF REMARKS
OF
HON. GEORGE R. SMITH,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 17, 1914.

Mr. SMITH of Minnesota. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a petition from the Minneapolis Civic and Commerce Association on the subject of hydroelectric power. The petition is as follows:

To the Congress of the United States:

On behalf of the city of Minneapolis, State of Minnesota, the Minneapolis Civic and Commerce Association respectfully urges upon the Congress the early consideration of H. R. 2966, Sixty-third Congress, first session, "To authorize the Secretary of War to make an agreement with the Municipal Electric Co., a corporation, for the disposal of the hydroelectric power developed by the dam between St. Paul and Minneapolis, Minn.," for the following reasons:

1. That delay in the use of electrical energy in connection with the navigation of the upper Mississippi and the operation of the docks incidental thereto must seriously handicap the project of such navigation.

2. That the great work of the Government dam in the gorge between the two cities after many years of work is now in a 90 per cent state of completion.

3. That as this work effects the opening of navigation as far as Minneapolis, it is imperative that construction be begun upon the hydroelectric plant designed to operate and light such Government lock and dam, as well as the municipal docks at St. Paul and Minneapolis.

4. That such docks are now available at St. Paul.

5. That the Legislature of the State of Minnesota having heretofore authorized the city of Minneapolis to own and operate river terminals and docks and to issue $300,000 of bonds for such purpose, the council of Minneapolis has now authorized the issuance of $100,000 of such bonds for such terminals and docks.

6. That these municipal docks in the two cities will require the use of a large amount of electrical energy for hoisting, lighting, etc., and for motive power for dock railroads.

7. That in furtherance of the governmental project the cities of Minneapolis and St. Paul have both agreed to give valuable tracts of park land which will be overflowed by the operation of the Government dam.

8. That the State of Minnesota by legislative action has authorized the Municipal Electric Co., a public commission, to contract for and make use of the electrical energy to be generated, and that such electrical energy can now be made available for the use of the University of Minnesota and the municipalities of St. Paul and Minneapolis.

We therefore urge the earliest consideration of the Stevens bill.

We consider its authorization imperative to meet the unique situation here presented if the prime objects in the construction of this Government work—river navigation and such incidental dock projects as these cities require—be not needlessly delayed.

The reservations of amendment or repeal in the bill now urged wholly safeguard the Government in respect of the grants of power which it contains.

[SEAL.] MINNEAPOLIS CIVIC AND COMMERCE ASSOCIATION,
By HOWARD STRONG,
Secretary.

Management of the National Soldiers' Homes.

EXTENSION OF REMARKS
OF
HON. RICHARD W. AUSTIN,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 17, 1914.

Mr. AUSTIN. Mr. Speaker, while we have the pension bill under consideration I desire to call attention to proposed legislation looking to a transfer of the management of the national soldiers' homes to the War Department and to enter my protest against the proposed change. These homes should be officered and managed by men who have served either in the war for the preservation of the Union or in the Spanish-American War and not under the strict military discipline of the War Department, through the officers of the Regular Army.

I believe I voice the sentiment of a large majority of the ex-soldiers who are members of the various homes in stating that they are decidedly opposed to the proposed transfer to the War Department. In matters of this kind affecting the interest, welfare, and comfort of the ex-soldiers their wishes should be respected by Congress.

There may be some abuses, though I know of none, in the management of some of the homes, but they can be corrected, and, I am sure, will be if called to the attention of Col. J. W. Wadsworth, the president of the board of managers.

I am personally acquainted with the officers in charge of the home near Johnson City, Tenn., and at Hampton, Va., and can say, without fear of contradiction, that there are no better managed institutions, public or private, in this country. In this connection I wish to submit for the consideration of the House and the members of the Committee on Military Affairs a letter from Col. James Sample, who for the past three years has been a member of the home in Tennessee. Col. Sample has a splendid record as a soldier and a citizen, and any statement he makes on this subject deserves favorable consideration.

NATIONAL MILITARY HOME, TENN.,
Mountain Branch, March 15, 1914.

Hon. RICHARD W. AUSTIN, M. C.,
Washington, D. C.

MY DEAR SIR: For the good of my comrades and for what is just and right to the veterans of the Union Army who came out of the Southern States when secession and hell was rampant in the destruction of our glorious United States and the Stars and Stripes, the men who went in at the start without pension or bounty, who could not go to their homes until the war was fought to a finish, am I making this appeal to you as our Representative in Congress to see that this, our home—the Mountain Branch—is not made a cat's-paw for designing politicians and others.

From time to time lately there has been some misleading and false statements uttered by Members of the House and published in the CONGRESSIONAL RECORD and other journals in regard to this branch of the National Military Home of which your humble servant has refuted to the best of his ability.

There seems to be a great degree of ignorance on the part of the general public in the North, and by some of their Representatives in Congress in regard to this branch of the National Military Home.

Few understand how many men there were in the Southern States who were loyal to the National Government in its darkest days and what it cost those men to be loyal to it, and that now many of them are aged and infirm.

To those people who are antagonizing this branch it seems as if it did not amount to much of anything; because there has been a loss of membership in some of the northern branches the Mountain Branch should be closed. * * *

Because there may have been mismanagement in other branches of the National Military Home, there is no reason that the Mountain Branch management should be coupled with those branches, as stated by Representative ANTHONY (see clippings inclosed)—"I have received hundreds of letters from old soldiers from the home at Johnson City, Tenn., containing serious and continued complaints," etc.

The writer has been a member of the Mountain Branch for over three years continuously—never out on a furlough—has seen all the changes

that take place in that time, which are many. During all that time he has been the editor of the military page of the Sunday Journal and Tribune, of Knoxville, Tenn. He has circulated freely among the members. He is well known by all the officers and everyone in and about the home. He knows all the old members on sight and their peculiar characteristics, and of all the conditions in the home; and he will venture to say there is not in this whole land to be found another institution of the magnitude conducted and managed as well as this one of the Mountain Branch. He will guarantee to pay Mr. ANTHONY $5 for every complaint that has been made to him by a member of the Mountain Branch that could not have been settled to the entire satisfaction of the complainant if the same had been made to our governor, Col. John P. Smith, provided the same was made by a sober, steady person, not a lunatic or an alcoholic fiend.

As to the matter of placing all the branches under the direction of the War Department, this has been attempted heretofore, and the last two past Secretaries of that department, after thorough investigation, reported they could not do any better for the veterans than the Board of Managers had done for them these many years past.

In regard to the men who compose this Board of Managers, I wish you to know and remember they are old soldiers and veterans themselves—know how to deal with their comrades, the volunteer, and there is a great difference between a volunteer soldier and a professional soldier. War Department management may do for Regulars of the Regular United States Army, but not for the citizen soldier.

* * * * * * *

I am asking you to give this matter your most earnest consideration, and not this only, but to combat all the attempts to change the present system at this home. I have the honor to be,

Yours, most truly,

JAMES SAMPLE.

Abraham Lincoln.

EXTENSION OF REMARKS

OF

HON. MARTIN B. MADDEN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 17, 1914.

Mr. MADDEN. Mr. Speaker, in a log cabin on the banks of the Sangamon River—a small stream emptying into the Illinois River—there lived, about 83 years ago, a long, lank, homely, sad-eyed rail splitter, unknown save only to his parents and a few scattering neighbors who, like himself, were eking out by the hardest kind of labor a mere existence in a then wild and unpromising section of this the home of the free and the land of the brave. He was not employed by the hour, day, week, month, or year, nor did he receive a daily wage as compensation for his labor. He worked from sunup to sundown, and when he had piled up 400 rails he received from a poor widow, in exchange therefor, enough homespun cloth to make him or his father a pair of trousers.

He was a Kentuckian by birth, and moved when a young man, with a worthless father, a carpenter by trade, to the State of Indiana, and after sojourning there for a short time came on to Illinois, where they built a log cabin on a bluff near the River Sangamon, when the young man soon became famous not only as the champion rail splitter of his county but also for his ability to dispatch hogs with lightninglike rapidity, and for which service he received the munificent sum of 30 cents per day.

His rail-splitting and hog-killing proclivities did not constitute all of the qualifications which this young man possessed and which made him the envy of his many rural competitors. He could run faster, jump farther, strike harder, and could throw down with great ease any man bold enough to question his physical superiority, and although at this time his mental strength did not keep pace with his physical greatness, he could read, write, and cipher, and, above all, he could be relied upon and was absolutely honest, a characteristic which, like the rugged mountain peak, rises majestically above the clouds.

Young Lincoln gave up the rail-splitting industry to engage in the grocery business, but having an inborn dislike for business precision and indoor confinement he speedily abandoned that avocation to engage in the more agreeable pastime of fighting Indians. He had himself elected captain of a military company in 1832, and proceeded to put his company in condition to end the Black Hawk War forthwith, and although it is not recorded that he ever saw an Indian during that engagement, it is a matter of record that his failure to meet the enemy was no fault of his.

Having political ambition and being popular with his neighbors, who for the most part were a sorry lot of very poor people, he in 1833, by such methods as are perfectly familiar to those who are in politics, and in the same way now employed—we have not improved much upon Lincoln's manner of doing politics—ingratiated himself into the good graces of his Congressman and was appointed postmaster, in which position he familiarized himself with current happenings by reading to his patrons newspapers, postal cards, and other publications which came into his official hands for distribution and delivery. His office, as can well be imagined, was a meeting place for all sorts of quaint characters, who came in crowds to listen with admiration to the witty and wise sayings of their foremost fellow citizen. The official duties of this governmental dignitary were not arduous—in fact, it is said he carried the mail in his hat, and when transporting even his heaviest mail in this way there was ample room for a head destined in the near future to furnish intelligence enough to rule with matchless splendor and success the greatest Nation on the face of the earth.

Lincoln at this time had, of course, no intimation of his ultimate greatness, and it is doubtful if he had ever dreamed of representing in an official capacity a greater number of his fellow citizens than were then residing in the little village over which he presided with great dignity as postmaster. The germs of greatness were in him, however, and were being slowly developed by Almighty God to fit him, when the emergency should come, to grapple with and master the greatest and most complicated national problem that has ever fallen to the lot of man to solve. True, he was ambitious, and wisely seeing that his manly character and his native wit had given to him a place of political prominence among his fellow townsmen, it was perfectly natural that he should seek still higher ascendancy in the political firmament, and having natural inclination to orate he became a candidate for the State legislature in 1832 and took the stump. It is written down that his speeches were calculated more to amuse than edify, but with a persistency characteristic of all western men of ambition, and remembering the precept that "Where ignorance is bliss, 'tis folly to be wise," he sailed in and told his rustic hearers all about the affairs of government and a lot more. The following was his maiden speech as a candidate for the legislature: "Fellow citizens, I am humble Abraham Lincoln. My politics are short and sweet, like the old woman's dance. I am in favor of a national bank, of internal improvements, and a high protective tariff. These are my sentiments. If elected, I shall be thankful; if not, it will be all the same."

He was defeated, but having taken on considerable knowledge by his experience and the persistent reading of books, he did not complain or cuss his successful competitor for this high office, but like a good American citizen he went to work and bided his time. Again he tried the grocery business, and again he failed. Somehow, he seemed to be unfitted for the business of selling the products of the soil. Possibly the alluring smile of his customers when they saw the scales tip in their favor had something to do with it. Anyhow, he failed. Anybody less easily discouraged would have, after so many adversities, gone back to the rail-splitting business. Not so with Lincoln. He took to the study of the law, and by so doing he hoped to add to his political success, and at the same time to fit himself so as to render competent legal services to some unfortunate fellow man after he should have mastered the intricacies of human jurisprudence. His great aim in life was to help his brother man, and to do this he was ever ready to give up his life. While studying law, it being necessary to keep body and soul together, he became an assistant surveyor, and by hard study equipped himself to perform the services of such an employee in six weeks. About this time the sun began to shine through the dark clouds of despair which had hung over him, and Lincoln grew more optimistic—he never was a pessimist, but always seemed sad. He purchased a decent suit of clothes, the first he had ever had, made the acquaintance of prominent men, and profited by their acquaintance.

In 1834 the people of the State of Illinois elected a new legislature and Lincoln was one of the successful candidates. The State capital was then located at Vandalia, and Lincoln was prominent in having enacted into law a bill removing it to Springfield. Aside from this bit of wise legislation, nothing was done in which he played a prominent part calculated to create an impression that he was soon to become in fame second only to Washington, but in the succeeding legislature, to which he also was elected, he and his colleague, Daniel Stone, the two members from Sangamon County, introduced the famous resolution declaring that the institution of slavery "was founded on both injustice and bad policy."

In 1837 Lincoln was admitted to the bar and moved to Springfield, a village of some 1,500 people. In 1838, at the age of 29, he was again elected to the legislature, where he continued assiduously, by wise legislation, to better the condition of the people. He found time to carry on the practice of law and was

reputed to be a good lawyer, although his services as such, being respectable, were not great.

Lincoln was a born politician. His heart was in the work, and it was in this prolific field that his great achievements were accomplished. He did not like the technicalities of the law, but rather preferred to make political speeches, in which particular occupation his genius shone with great brilliancy.

In 1840, during the Harrison presidential campaign, Lincoln stumped the State in behalf of the Whig cause, and it was during this canvass that he came in contact with the great scholar and political debater, Stephen A. Douglas.

In 1843 Mr. Lincoln was defeated for Congress, to which high position he had long aspired. He was more successful in 1846, however, when he received a majority of the votes cast in the congressional contest and was elected to a seat in the National House of Representatives. As a Congressman Lincoln's record was but fair. He made some three or four speeches, devoted more to wit and humor than sound reasoning, although questions of great moment were during those days demanding the attention of leading statesmen.

Many biographers have given too much time and attention to Lincoln's domestic life, which was all but pleasant, as is well known to everybody. It is the public services of great men rather than their private affairs that receive and merit the attention of the public, and this incomparable man's public life is so filled with brilliant achievements that to deviate therefrom would avail nothing intellectual and would be doing that which, to say the least, would be unwise.

As I have said before, Lincoln's ability as a lawyer did not shine with any particular brilliancy. He did not become famous through his practice of the law, as a State representative, or as a Congressman. Neither could he compare in eloquence with Douglas, Clay, Webster, or Calhoun as a public speaker. It was his matchless moral character, the prominent part he played in a great cause, and his marvelous leadership that will cause his name to be honored and revered throughout the ages.

His great political career really began in 1854, notwithstanding he had served two years in Congress, 1847–48.

It was the attempt of southern statesmen to compel Congress to extend slavery in the Territories that aroused the great indignation of Lincoln and which, indirectly, made him the leader of the opposition to the movement to establish slavery in territory belonging to the United States, an institution declared by him to be "founded on both injustice and bad policy."

Henry Clay's great compromise bill succeeded in quieting for a time the bitterness that was engendered by this inhuman attempt. It was but the calm that precedes a storm, however, and was short lived. An attempt to pass the fugitive-slave law was regarded as a national outrage by northern men, and the protest that was registered when man hunters seized trembling fugitives and took them back to a life infinitely worse than death was of a nature to cause public men to tremble. The whole North became alive with righteous indignation at this barbarous and unspeakable act of inhumanity. Newspapers protested, orators thundered, excitement exceeded all bounds. More fuel to the flames was added about this time by Stephen A. Douglas, a United States Senator from the State of Illinois, by the introduction of his famous Kansas-Nebraska bill, the purpose of which was to open up the vast territory of Kansas and Nebraska to the introduction of slavery, providing that the people of these Territories should so favor. The South needed this Territory, and Douglas, who had presidential aspirations, was playing into their hands.

The attempt to put the bill on the statute book opened the eyes even of some Democratic leaders of the North and a united outcry of protestation from the press, the platform, and the pulpit was raised in one great scream of wrath, which no doubt could be distinctly heard south of Mason and Dixon's line.

It will not be necessary for me to recount the many crimes committed in the Territory of Kansas by armed ruffians from Missouri, who elected by fraud a legislature favorable to slavery in that Territory. Nor will it be necessary for me to discuss the decision of the Supreme Court in the Dred Scott case. You are all familiar with these matters. Suffice it to say that these triumphs were exceedingly pleasing to the southern cause, and that the question now was, Shall slavery advance into new territory? The North said no, the South said yes.

At this stage of the contest Lincoln came upon the scene and his career as a national character began. He crossed swords with Douglas, reputed to be the most powerful advocate of Democratic principles in the North. They were both candidates for the United States Senate—Lincoln the Republican candidate and Douglas the Democratic nominee. The debates which took place between these two giants became world famous. Lincoln, filled with indignation at the wrongs that had been perpetrated upon humanity, seemed to be inspired as he combated the arguments of the trained political debater Douglas. His battle cry was "The Government can not endure half slave and half free," and that "A house divided against itself can not stand." He did not go beyond the constitutional limits, however, but admitted that the South had a right to a fugitive-slave law, but he never missed an opportunity to let it be known that he despised the institution of slavery. His speeches during this contest attracted such universal attention that he was invited to speak in Eastern States, which he did in such splendid syle as to add increased glory to his fame as an orator.

Following his contest with Douglas, which attracted so much attention throughout the civilized world, the people of the North demanded the nomination of Lincoln as President. The Republican Party heeded the call and in 1860 made him its standard bearer. After the election, which waged furiously in all sections of the country, Lincoln was elected. The North had triumphed over the South. Cannons roared, bells were rung, brave men cried with joy, and the prayers of the oppressed ascended to high heaven. Great was the victory and great was Lincoln.

The South immediately set up the cry that the election was a "sectional and minority election," and between election day and the date when Lincoln was to be sworn into office several of the Southern States seceded from the Union and set up a government of their own at Montgomery, Ala. They seized Federal forts, arsenals, customhouses, post offices, and everything else they could appropriate which would aid them in a war which was sure to follow.

On the 4th of March, 1861, Abraham Lincoln was inaugurated President of the United States. How I should love to have seen that ceremony and listened to the words of wisdom as they fell from his lips during his inauguration address. What a privilege it must have been to look into his sad and pensive face as he counseled his countrymen to remain cool during the pending crisis. His whole address was summed up in two short paragraphs:

> The power confided in me will be used to hold, occupy, and possess the property and places belonging to the Government and to collect the duties and imports, but beyond what may be necessary for these objects there will be no invasion, no use of force, among the people anywhere.
>
> In your hands, my dissatisfied fellow countrymen, and not in mine is the momentous issue of civil war. The Government will not assail you. You can have no conflict without being yourself the aggressors.

The South became the aggressors and inevitable war followed. The trials and tribulations of the great Lincoln were many during these dark and uncertain days; but out of his tribulations came patience, and out of patience came experience, and out of experience came hope, according to the Scriptures. His love for man seemed to grow in the very face of the fiercest war that has ever been waged. A war between father and son, brother and brother—a horrible, unthinkable war. Lincoln well knew, however, that the end justified the means, and realized that out of the awful slaughter of men and loss of treasure would come a reunited country and lasting peace; and, far more important than either reunion or peace, he knew that the shackles which bound in servitude a race of people would fall from bruised limbs and 4,000,000 souls would march erect into the bright sunlight of sweet freedom. Thank God, the great emancipator lived long enough to witness this, his crowning achievement.

Some writers hold that Lincoln's death was timely, in that it prevented a possible political error during the reconstruction period, which might have sullied in some degree his illustrious services. I do not believe it, and I am sorry he did not live to know that even the most radical of southern sympathizers now rejoice in the delivery from bondage of a race of human beings into the glorious realm of liberty; and I am persuaded that had the fatal bullet never been fired from the pistol of the assassin Booth no public act of his, had he lived to this good day, would have resulted in anything but good to his fellow man. His great foresight and his inborn love for justice would have precluded such a result. The present universal admiration for his matchless services frowns upon the very intimation of such a thing. He was too great, too sympathetic, too farseeing, too wise, and too just to enter into any arrangement whereby anything but the full measure of justice would result to all.

Commemoration of the Nation's heroes is not only proper but it is wise. It fosters patriotism, without which no country can be great.

Lincoln's life was one of purest patriotism; it was devoted unselfishly to the promotion of the country's good. He was the friend of mankind; he believed in manhood; he wanted to see

this a land of freedom in fact as well as in name. He worked to that end. He assumed a great burden when he took the Presidency; he met the responsibilities with courage and a heart full of charity, but he met them and overcame every difficulty; he conquered the foes of free government and made this a Government of manhood suffrage.

When this Government was formed it was the most gigantic experiment of the kind ever attempted by man; it was given no place in the political considerations of the world; it was thought to be but a passing illusion. No one believed the experiment would succeed; failure was freely predicted. A government by the people, it was said, was impossible. But Washington's Government still lives. It has grown and prospered. It has become a great world power. It thrills with potent life and exalted hopes. The Civil War was the one test needed to prove the ability of the people to govern themselves; and never was the Nation so full of life, so filled with courage, so encouraging to the friends of freedom, so menacing to the foes of the Republic as when the sun of Appomattox shone upon its banner and revealed within its azure ground the full galaxy of its stars.

Through the instrumentality of the martyred Lincoln and his patriotic followers were fought the battles for the preservation of the Union, and we of the present day are enabled to live in a land where every citizen is a sovereign, and every man, woman, and child is free to worship God according to the dictates of his own conscience; a land whose inventions lead the world; where the printing press and the church follow close upon the march of empire; where caste is ignored; where the humblest child of poverty may aspire, unrebuked, to the highest place in the gift of the Nation.

Men from the worn-out monarchies of Europe can but discern that the noblest trend of human progress lies in the direction of republics. In this form the latent possibilities of the human race may best find expression, and America will stand before the nations of the world forever to exemplify the life and strength of this the greatest of all republics, and the name and works of Abraham Lincoln emblazoned upon the pages of our country's history will forever be handed down to a grateful posterity and be applauded by the generations that are to people this continent in the ages to come as the greatest instrumentality the world has ever seen in the dissemination of the principles of universal liberty.

Government Aid to Good Roads.

EXTENSION OF REMARKS

OF

HON. WYATT AIKEN,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 18, 1914,

On the bill (H. R. 11686) to provide that the United States shall, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. AIKEN. Mr. Speaker, it is not that I expect my remarks or the score or more of speeches made on the subject to change sentiment the least in the House, for sentiment here is overwhelming in favor of the measure.

Since nearly all the main public roads of this country are used by rural carriers for 10 or 15 miles out from every town of consequence, the mere working of post roads, roads used by the United States Government in carrying the mails, will serve the great majority of people of the rural sections and cover a large per cent of the most important roads throughout the United States.

This Government has just recently gone into the express business—a step which I heartily approve—and the real burden of the Parcel Post System falls mainly on the rural carrier. The Parcel Post System will be a great revenue producer, and the revenue will be derived from exchange of products between country and town. If, then, the carrier must go into the express or drayage business, the Government should help give him roads suited to the weight of his new burdens.

What justification was there for the Government granting great areas of western lands to railway corporations to aid in building railroads across the continent except the fact that these railways would hasten the settlement of the West and increase the general wealth of the Nation?

Again, how else can the Government justify its act in artificially watering the western desert except on the broad principle that the lands would be settled by individuals who would contribute to the sum of national wealth? In neither of these instances did the National Government have constitutional warrant for spending the people's money; and yet, I am frank to say, I believe the money was wisely appropriated.

In contributing to public road building the Government has the fullest constitutional warrant—"to facilitate transportation of the mails."

In no way can the National Government benefit the whole people so effectually as by improving public roads. Good roads reduce the cost of transportation from 28 cents per ton to not more than 10 cents per ton per mile.

It has been objected that this legislation is in the interest of the rural sections.

Mr. Speaker, every good-roads movement that has been agitated throughout my section is heartily indorsed by the towns and cities of the country. The man who lives in the town or city is shortsighted indeed if he can not see that whatever reduces the cost of production and transportation reduces the price to the consumer. The city man is wholly a consumer. He of all men should seek to reduce the cost of production and transportation. If it costs 10 cents per pound to carry butter from the producer to the home market, and then 10 cents per pound to carry it from the home market to the city market, the city purchaser finally pays the whole freight. And I can say just here that millions of pounds of surplus butter are annually withheld from the market because producers are not willing to trudge through the mud to market. Scarce butter makes high prices, and it is so with every other product of the farm. Considering the farmer's opportunities for marketing he gets very little for what he sells. If he had a more accessible market, he would sell more products, sell them cheaper, and make more profit. This bill is fair in the distribution of Government funds in aid of road building. It is based on the per cent of population as compared with the total population of the United States, and then on the total road mileage of a State as compared with the road mileage of the United States. And then, too, it will stimulate the States to greater effort, for no appropriation will be made to a State that does not appropriate a like amount.

One of the greatest problems now before Congress and the country for solution is, How shall we provide better roads over which to haul the products of the farm to market at less expense and transport United States mail with more facility and at less cost?

There is a fierce struggle going on just now as to what character of roads in the States shall receive Federal aid. One class is of the opinion that the United States should limit its road activities to a few very high class "ocean-to-ocean" and "cross-continent" highways. Another class believes that aid should first be given to a general system of good roads connecting the farms with the near-by towns and railway stations. The views of this second class are set forth with much clearness in statements made by Secretary of Agriculture Houston and Gov. Majors, of Missouri, before the House Committee on Roads in hearings had on the Shackleford road bill.

Secretary Houston said:

The roads which the Nation most needs to have improved are those that lead from the farm to the nearest railway station. My imagination, of course, is impressed by the picture of a system of roads that would connect all of the leading cities and enable a man to go comfortably to any part of the country, and in time I suppose we shall have such a system, but it seems to me that we should begin with the local road leading from the farms to the nearest railway station. * * * I suppose everybody will agree that the railroad is the national road for a vast majority of people. The man who has an automobile and who has the time will go great distances, but the great mass of the people of the country will take very short trips, and mainly for business purposes.

Gov. Majors said:

The public highways of a country have ever marked by distinct epoches its civilization and progress. It has marked it in the life of our country. In the construction of railways we stand at the zenith. Our waterways, with which we have been blest more than any other nation, have been neglected, while our highways are practically in the beginning, and until these highways stand abreast our broadest civilization, we will not be living up to our best privileges and the highest standard we can maintain in our civic and commercial life.

With the matter practically settled that Congress is in favor of granting Federal aid in the construction and maintenance of highways, the question naturally presents itself to our minds, In what way should aid be given, and what character of roads should be constructed, improved, or maintained?

Men who have not studied the subject or given the proposition much thought will immediately think about the construction and maintenance of macadam, concrete, and brick roads and highways of like character. In other words, they see a mental picture of roads which represent the acme of construction but which are much limited in their service in handling the commerce of the Nation. But, gentlemen, while we favor the construction of these splendid traffic ways, yet these are not the roads which mean most to the whole people. It is the dirt road representing the first leg of the journey, and over which moves the traffic of the Republic, that serves the Nation most; the road which enables William Smith, John Jones, and James Brown to bring more products to the railway stations and to the first markets of the country; the road that enables them to double the size of the haul, make the

transit in less time, save wear and tear of harness and wagons, and the lives of horses; the road that will bring additional hundreds of thousands of acres under cultivation; the road that will increase the value per acre of all the land through which it passes; the road that will save hundreds of thousands of dollars in shrinkage in the delivery of live stock to the markets; the road every tendency of which is to improve community life and make it better morally, civilly, and commercially. As you build up the community you build up the county, as you build up the county you build up the State, and as you build up the State you build up the Nation. So the real progressive and commercial achievements, brought about by good roads, in the finality must rest upon the dirt roads in those sections producing the agricultural products and the live stock that feed the country and bring to the Nation its balance of trade.

The macadam, concrete, and brick roads are great highways and serve their useful purposes as trunk lines in certain sections and under certain conditions and circumstances. Where the commerce between cities and territory adjacent thereto requires this character of roads, the people are building them, and that without Federal aid. We are building them in Missouri, and wherever you find a wealthy and progressive citizenship, and the business interests justify it, the same will continue to be builded no matter whether Federal aid be given or not. Federal aid, however, will enable us to build more of them, and we wish such aid to that end. There are hundreds of men in public life who are championing the cause of these kinds of roads, but few men, however, are championing the cause of dirt roads, the real roads serving the people. The dirt roads are the most important of all roads because these roads reach out like tentacles into country life and over them is moved the products representing the real commerce of the Nation, and the improvement of these roads will mean more to the Republic than any other one achievement which can be brought about.

For these reasons I propose to address myself to the subject of dirt roads and advocate at this time their cause in the securing of Federal aid for construction and maintenance. Those dirt roads are the real highways of commerce. They are in the great majority and without them you would have little or no use for the macadam roads or other highways of like character. I address myself to the subject of dirt roads because I believe in beginning at the bottom in building up the road fabric. As the dirt roads are improved year by year, by process of evolution, when necessity requires a certain percentage of them will become trunk lines and be converted into macadam, concrete, or brick roads. This will come about when the betterment of the dirt roads has so improved the agricultural and other communities through which they pass that the wealth, population, and commerce justify it.

You reach the kernel when you advocate a system of road improvements which begins at the bottom. The country gravel, concrete, and macadam roads serve their useful purpose, but the dirt roads serve a hundred where these roads serve one. These highly improved ways are of small benefit to the men living in the agricultural sections who are struggling and toiling to increase the volume of commerce reaching the markets, and to place same in the markets at a reduced cost for transportation.

Where the roads from the farm to the railway station are partly bad dirt roads and partly good macadam roads, the farmer, when he makes a haul, must gauge his load not by the macadam road over which he passes a part of the distance, but by the bad dirt road he must travel. What we should do is to improve the road, gauging the load the producer must haul. If he has to struggle with bad dirt roads, he is the man we wish to serve. These roads are the arteries of the commerce of the soil, and our very life, credit, prosperity, educational, church, and future interests depend upon them. The closer we place the producer to the markets the lower will be our cost of living. The roads which serve the producer to-day are the dirt roads, and 50 years from now the great majority of roads serving the producer will still be dirt roads—it will never be anything else. So, when it comes to determining what character of roads shall receive Federal aid, I ask what are you going to do about the dirt road, the real road of the people. It is a concrete, open proposition, and more good can be obtained in giving the major portion of your moneys to the improvement of these roads rather than to others.

Pensions.

EXTENSION OF REMARKS
OF
HON. GUY T. HELVERING,
OF KANSAS,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, March 17, 1914.

On the bill (H. R. 14234) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

Mr. HELVERING. Mr. Speaker, in introducing this measure for the consideration of the House, I wish to state that the committee has very diligently and with conservatism arrived at the amounts allowed in the different cases contained in this bill.

It has been charged by some that members of the committee were taking advantage of their position on the committee by securing favorable action on their own bills. This assertion I wish to emphatically deny.

I have here in my hand a complete list of the membership and the number of cases that have been allowed each Member. While some Members have no soldiers to speak of in their districts, and therefore have but few claims, the other districts in which reside a large number of soldiers have all been treated on a uniform basis, as nearly as possible, if their claims have been properly presented and the evidence submitted to the clerk of the committee.

Nearly every day on which pension bills are considered men will rise and ask, Why not enact general legislation to meet these cases? Why not put all soldiers and the widows of old soldiers on an equal basis? As far as I am personally concerned, I would be pleased to see some general legislation passed by this House that would provide for the old soldier or his widow in such a way that they would not be subjected to want and privation, now that they have reached that age in life where the country which they perpetuated and saved has an opportunity to show its appreciation of their sacrifices.

The Sherwood Act was a great law. All over this country are many grateful hearts that are praising that great man for the gallant fight he has made in their behalf and secured for them the legislation that permits the Government to carry out its contract with the soldier, although in some cases it may come as a tardy justice. That grand old man will long live in the memory of all American soldiers.

You who question this bill do not question his motives, you do not question his sincerity, you do not question his loyalty to the flag and to the country. I am indeed proud of the privilege of serving on a committee presided over by so able, so patriotic, and so considerate a gentleman as Gen. SHERWOOD.

But you must admit, and you will admit if you lay aside your prejudice, that general legislation can not meet conditions in all cases. I have often said in the committee and on the floor of this House that we can not gauge the effect of wounds or the resulting conditions of disease. The same causes very often result in vastly different conditions. It is to meet these diverse results that we must resort to special legislation. Gentlemen have in the past, and undoubtedly will in the future, charge that it is politics that actuate Members to support these bills. I hope that no man on the floor of this House will ever be guilty of prostituting his honor, his patriotism, or his oath of office by such a thought or action. My prayer is that we may never so far depart from the ideals of our fathers as to be guilty of so base a deed.

We are men selected to carry out a sacred trust; may we never allow our faculties to become besmirched by so sordid and despicable a coating of selfishness as to prevent us from doing our duty as men and patriots. No man should prey upon the Public Treasury to promote selfish ambitions.

Who are these men and women that will receive the benefits of the passage of this bill? We might ask the question, Who were the defenders of this country in its hours of distress and distraction, and answer it by saying the men whose names you see here. What of those men? What of their loving wives, who in those days suffered in many cases, more than the loyal defender of the flag who was at the front of the battle?

Can a question of this kind ever be discussed without paying a tribute to the Union soldier? Whether his name is enrolled among the living or marks the modest headstone on some sloping hillside of the sunny Southland we honor and respect him. His great work is done. He fought a worthy fight against a gallant and courageous antagonist. History for centuries will record his deeds and assign him the place he deserves. His well-done deeds guarantee that. But to-day—what of to-day—while many of them are still with us? I say let us do our duty to the living while the privilege is ours.

Some men have been heard to remark that "it was only the stay-at-homes and the boys who went on a vacation at the end of the war" that now benefit by the liberal pension policy of our Government. I am glad to know that they at least admit it is the attitude of this great Government to have a liberal pension policy.

It is not my purpose to recall the bitter struggle, the animosities, and bitter enmities engendered by that fierce war, but when men will ridicule the patriotism, the bravery, and the fortitude of those soldiers, then I feel justified in calling attention to the conflict, the fiercest in the history of the world; and, having done so, I would ask if those who engaged in it have not paid the price for the privileges which we enjoy to-day?

I have recently read where it is estimated that there were some 2,730 battles during this war. The slain of the Union Army numbered 5,000 officers and 90,000 men, with over 180,000 who died of disease, a total of nearly 300,000 men. How does this compare with other wars and conflicts famous in history?

The losses during the Revolutionary War, including the killed, wounded, and captured of both the American and British Armies, were about 22,000 men. The loss of either the Union or Confederate Armies at the Battle of the Wilderness or Gettysburg exceeded that number.

Referring to history's pages we find that Frederick the Great lost only 6½ per cent of his force at the great Battle of Liguitz. Napoleon's loss at Austerlitz was less than 15 per cent and at Waterloo about 12 per cent.

How do these figures compare with Gettysburg, where the losses were more than 30 per cent, and at Spotsylvania, where the loss was nearly 35 per cent? Do not these figures tell a story? Do they not refute the idea that we are to-day rewarding services not well performed?

Oh, it was a glorious patriotism that carried these men through that ordeal, and it is a blessed privilege that we are to-day able to reward them for it.

Why Some Farmers Move to Canada.

Last year Jefferson County received from its 730,000 acres in the forest reserve the sum of $602 in lieu of taxes. The assessable area of that gigantic million-acre county is but 280,000 acres.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 14, 1914,

On the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. JOHNSON of Washington. Mr. Speaker, a dozen years or so ago a sturdy, industrious, and frugal man worked in the logging camps of Grays Harbor, in the State of Washington. Having married, he desired to gain something for his young family and went to the Queets River, in Jefferson County, and took up a homestead. Painfully he cleared up a small portion of his lands and with much labor erected a neat house out of cedar shakes.

The man proved up on his land, and by continuous labor he was enabled to support his family at least in comfort. Now he says that the rapid increase in taxes has created a burden which it is impossible for him to meet. His assessment this year amounts to $92.50, and when a man lives on a ranch up in the Queets country and supports a family and is then enabled to pay $92.50 cash for taxes he has performed a wonderful work. It is almost beyond the power of any man to do it, and there is little surprise in the fact that he has gone outside to work and is now endeavoring to sell his property for what he can get, as he feels that as the years go on the burden will increase until his farm is confiscated and his children left penniless.

This man lives in a county of which more than three-fourths is in a great forest reserve. Jefferson County has an area of 1,747 square miles, or 1,078,400 acres, of which 730,000 are in the reserve. Last year Jefferson County received from the Forest Service as its share of the famous 25 per cent sales the munificent sum of $602. In other words, Jefferson County derived as revenue from 730,000 acres the sum of $602. The lands outside of the reserve had to pay for the upkeep of Jefferson County. The area of assessed lands in that gigantic million-acre county is but 280,000 acres. This is why the settlers are being crumpled up. This is why they can not celebrate Christmas. The burden is heavy for the big owners; it simply kills the small owners.

Ordinarily such a proposition as this man had would have proved attractive. The country is beautiful, the soil prolific, and, while there are no markets, because there are no roads, hard work suffices to provide the necessities of life for his family, but it is impossible to earn almost $100 in cash to contribute to the support of this beneficent Government.

This man is trying to sell, and he is only one of hundreds. In a letter to a prominent citizen of Grays Harbor he writes:

I have 149 acres of good river-valley land in township 25, range 10 west, section 26, adjoining the River Queets, in Jefferson County. The county cruise of timber is two and three-fourths million, principally spruce. I have a good six-room, two-story house, painted white. I split the timber from the tree and dressed it by hand. Also have a good bearing orchard. The ranger's statement of improvements was estimated at $3,000 in 1912, when I proved up, which all of my witnesses testified to.

My taxes increased last year from $69.13 in 1912 to $92.38 in 1913, an increase of about 33⅓ per cent per year. I am getting old. I lost 12 years of the best of my life, with untold hardships, which you know are too numerous to mention here, trying to improve a home for my children. I saw no hope, gave up in despair, and moved out. Now I can not support my family and pay rent for a farm outside and pay my taxes.

If I should take sick and see death facing me (which would probably be the only relief), it would be of no use for me to make a will, for at this rate of increase in taxes the place would be sold and a debt against it for more than it was worth when my youngest child became of age.

They tell me the tax is on the timber and improvements, and as there is a strict law against burning timber or improvements, I naturally expect the increase to continue. I can not cut all the timber down and let it rot, as I am too old.

I suppose timbermen are not kicking about taxes, as they are able to pay them, and it does a poor farmer no good to complain, for his voice never rises above his hat, and if he should attempt to present his views, his Representative will likely tell him he has an excellent memory and remembers him. That's about all it ever amounts to.

I note that commercial clubs and chambers of commerce are trying to boom the country to bring new settlers in. In my feeble judgment, their time spent in reducing taxes, by bringing about expedient legislation, would tend to keep acclimated farmers, as well as all other citizens, in the State, instead of driving them into the bread line, which means a sure increase of taxes in the future, for those hungry people must be fed by the taxpayers.

I can not desert my family and have them join the pension roll, which would mean more taxes. If I should, I would be arrested and convicted under the lazy-husband act, and the twentieth-century lash would hasten my final roll call.

I am offering my place, all told, at $3,000. Have advertised it in various papers and can not find anyone fool enough to buy. What will you give me? I will agree to remove all improvements, so as to make the tax as light on you as possible.

If you will only give me enough to pay me and my family's way across the line into Canada, where a farmer that tries to improve his place is protected, please let me hear from you; and if you do not care to buy it, would you be so kind as to call some one's attention to it that might want to buy.

Cordially, yours,

L. G. KEARNS.

Mr. Speaker, I have a hundred or more letters in similar vein. During this debate I have presented several. They came from those who have pioneered for the sake of opening a great country; men who have given from 10 to 20 of the best years of their lives and who are now being slowly ground to death between two gigantic millstones—overmuch conservation and overmuch taxation.

As a pall over all stands the great, gloomy forest, containing countless millions of trees which will rot, fall, and die three times over before that forest pays a single dollar—150 or 200 years hence.

Parcel Post Limitations.

EXTENSION OF REMARKS

OF

HON. SAMUEL W. SMITH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 21, 1914.

Mr. SAMUEL W. SMITH. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article from the Dry Goods Economist, of New York, Saturday, February 28, 1914.

The article is as follows:

PARCEL POST LIMITATIONS.

Valuable as is the work performed by the Post Office Department in connection with the transportation of small packages, the Government should beware of so extending it as to deprive the business community of the indispensable service rendered by private concerns.

That the express companies are fulfilling a necessary function, one which is not performed by the parcel post and in all probability can not be, is the contention of William A. Marble, president of the Merchants' Association of New York.

In an extremely interesting an instructive article in the New York Herald of last Sunday, Mr. Marble shows clearly the wide difference between the service performed by the parcel post and by the express companies.

Inasmuch as it was the Merchants' Association of New York which three years ago organized a Nation-wide movement for the regulation of the express companies, resulting in the reform of the express companies' methods and exerting an important influence toward the establishment of the parcel post, it would be safe to assume that its president has no bias in favor of the companies, even if the absence of such a feeling were not clearly apparent in Mr. Marble's article.

An accurate presentation of the facts in the case is of great value at the present time, in view of the tendency on the part of the Post Office Department to extend the operations of the parcel post even further than it has been carried by recent new regulations. It is to be hoped that President Marble's statements will receive all the consideration they so well deserve at the hands of the Washington administration, as well as from business men throughout the country.

That the parcel post is an immense public benefit President Marble freely admits. He recognizes that the operations of the express companies are, in the main, restricted to the lines of the railways, and that prior to the establishment of the parcel

post all of the population not living in or adjacent to railroad towns was without effective means for cheap and speedy transmission of parcels. Furthermore, the gap between the 60,000 post offices and the 32,000 express offices has been bridged by the parcel post.

In addition, the parcel post charges for small packages are, in the main, materially lower than those imposed by the express companies. There is a reason for this, however. The express companies furnish facilities which are not provided by the parcel post. They collect parcels and give a receipt therefor. They assume responsibility for loss or damage—without extra charge up to the $50 limit, and to any extent in excess of that sum on payment of an additional insurance charge.

All this means a great increase in the express companies' expenses, since an elaborate and complete accounting system is needed to keep track of each of the millions of packages transported.

The Post Office gives no receipts, makes no record of individual parcels, and thus does not require waybills, delivery sheets, or vouchers. It has no detailed accounts with the railroads, but pays them on a basis of bulk weight, computed, by weighing, once in four years. It assumes only a limited responsibility and this only on prepayment of an additional fee.

But, more than this, the parcel post does not provide for the transportation of perishable articles, while certain others are wholly excluded from the mails. All parcel-post packages, too, are subject to opening and examination by the post-office clerks. Again, the parcel post makes no safe provision for the transportation of valuable papers, currency, coin, bullion, jewelry, and similar articles, the movement of which is large; nor does it provide for the safe transportation of fragile packages, which are carried by the express companies in safety trunks.

These disadvantages of the parcel post could not be offset by lower rates. The new express rates on packages of four pounds and upward, as Mr. Marble points out, are approximately as low as, and in some cases lower than, the parcel-post charges; and they include all the costs attaching to a shipment, while the parcel-post charges include only a part of them.

Mr. Marble further points to the indispensability of the express service to merchants in particular. That over 90 per cent of all the express shipments leaving New York are merchants' shipments is largely accounted for, he says, by the comparison above made between express and parcel-post facilities. Merchants need to have their outgoing packages "picked up" by a collection service. They must be protected by receipts. Precautions must be taken against damage, and the safety of valuable packages must as nearly as possible be assured. Indemnity against loss and against damage must be given. Provision must also be made for the transportation of articles of every class, fragile, perishable, and so forth.

To what, then, could merchants have recourse if the express companies were to be driven out of business, is a question which calls for the most serious consideration. And that the express companies would be driven out of business were the Government's facilities extended so as to make the companies' operations unprofitable is easy of demonstration.

In Mr. Marble's opinion, the mere raising of the parcel post weight limit to 100 pounds—which has already been suggested—would sufficiently lessen the volume of traffic available to the express companies to make their business profitless and force their retirement.

The result, as above suggested, would be a serious loss of transportation facilities to the business world. Nor would this loss be offset by the feeling that a "grasping monopoly had been put out of business." The defects, abuses, and excessive rates of the express companies, Mr. Marble asserts, have been thoroughly ironed out. Their efficiency is higher than ever before. Their rates are prescribed by process of law and are as nearly reasonable as it is practicable to make them until they have been tried out through actual operation during a reasonable period of time.

On the other hand, the actual cost of the parcel post is not known. We are glad that Mr. Marble has touched on this point, because it is a fact, as the Economist has endeavored to show, that the Government is not proceeding on a proper business basis in connection with the extension of the parcel post.

The Economist has more than once referred to the injustice done the railroads by the absence of increased payment for the increased service they are compelled to render the Government. Mr. Marble states that thus far the railroads have been paid almost nothing for parcel-post transportation. It is obvious that the outlay in this direction must be increased, and enormously so. The entire machinery of the Postal Service must also be greatly enlarged. There will be need of new terminal buildings and wagon service, of new post-office buildings, and of an army of new employees. "Not until all of these expenses have fully accrued can the true cost of the parcel post be known; and until it is known and the actual revenues are likewise known it is idle," says Mr. Marble, "to contend that the new service is paying its way. To venture further into a far wider field and to assume far greater risk until the financial results of the present undertaking are positively developed would be the wildest financial plunging."

We are satisfied that the merchants and manufacturers will indorse this view. The parcel post, though doubtless it enables the mail-order houses to still further encroach on the trade of the smaller retailers, is, up to a certain point, an advantage to our citizens as a whole. And, as the Economist showed by its recent canvass, much of the harm that would be done even to the smaller merchant is eliminated by the zone system. Granting all this, however, it is equally obvious that so long as the express companies "behave themselves"—and they are now compelled to do so by the Interstate Commerce Commission—there is no good reason for the extension of the Government's activities in the merchandise transportation field. And this is all the more the case if, as seems only too sure, this extension would entail the destruction of transportation agencies which, it is very evident, the Government is in no position to replace.

District of Columbia Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CARY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 24, 1914,

On the bill (H. R. 10523) making appropriations to provide for expenses of the government of the District of Columbia for the fiscal year ending June 30, 1915, and for other purposes.

Mr. CARY. Mr. Speaker, in the course of my remarks on December 19, 1913, in replying to a statement by the gentleman from North Carolina [Mr. PAGE] concerning the purchase of automobiles for District officials, I said that the gentleman probably was unaware of the fact that the purchase of the machine to which he referred was "never authorized for the engineer commissioner, but for the superintendent of street sweeping." A little later, the gentleman from Mississippi [Mr. SISSON] declared that the appropriation act of 1911 specifically authorized the "purchase and maintenance of an automobile for the official use only of the engineer commissioner and the assistant engineer commissioner," and set apart $2,400, or so much of that sum as might be necessary, for that purpose. Then the gentleman from Illinois [Mr. MANN], in his remarks upon the subject, stated that—

there are no assistants to the heads of departments who ride in the automobiles unless they own them. The Government does not provide motor vehicles for the heads of departments, much less for their assistants.

Now, Mr. Speaker, what are the facts concerning this matter? Let us see. In their estimates for the fiscal year ended June 30, 1911, the commissioners made a request, as follows:

For the purchase and maintenance of one motor vehicle for use in inspection by the assistants of the engineer commissioner, or so much thereof as may be necessary, $2,400.

In the hearings before the subcommittee of the Committee on Appropriations they renewed the request. (See House hearings, pp. 71, 93, 94, and 95.) In the hearings upon this bill before the subcommittee of the Committee on Appropriations of the Senate they renewed this same request in identical language. (See Senate hearings, p. 66.) But one machine was asked for and but one was authorized, and it, as the commissioners stated, was to be used officially by the assistants of the engineer commissioner. There was absolutely no understanding by the members of the House or Senate committee that the machine was to be used by the engineer commissioner. How, then, is the statement made by the gentleman from Mississippi [Mr. SISSON] to be explained? Simply in this way: When the bill was taken up by the conferees the words "of the engineer commissioner and" were juggled into the bill, making the entire paragraph read as follows:

For the purchase and maintenance of one motor vehicle for the official use only of the engineer commissioner and of the assistants to the engineer commissioner in inspection work, $2,400, or so much thereof as may be necessary, to be immediately available.

Why and at whose suggestion was this done? What was to be gained by such procedure? Here are five words injected

into the appropriation act. They are not there as an amendment proposed by the Senate, but were inserted absolutely without authority from either branch of Congress.

Soon after July 1, 1910, when the appropriation for the District became available, the machine was purchased and turned over to Capt. Markham, one of the assistants to the engineer commissioner, and used by him, and by him alone. At no time did the engineer commissioner use it. After the retirement of Capt. Markham it was turned over to Capt. Schley, his successor, and since then he alone has used it.

Mr. Speaker, it is time that a halt be called upon such legislation. No wonder that Members of this House and even residents of the National Capital are strongly inclined to favor the abrogation of the half-and-half compact. Without expressing my own views on that subject, I do not hesitate to say that it would be infinitely better to abolish the existing arrangement than to maintain it under the present questionable methods of administration.

ENGINEER COMMISSIONER'S AUTOMOBILE.

In their estimates for the fiscal year ending June 30, 1913, the commissioners asked for an automobile for the superintendent of street cleaning, the cost of which was specifically fixed by them at $2,000. (See Book of Estimates for the fiscal year 1913, p. 468.) Here, it will be observed, there was no reference to the engineer commissioner. And yet when the money for the purchase of this machine became available Engineer Commissioner Judson bought an automobile for his own use, for which he paid $2,350, which was $350 more than Congress appropriated. Instead, however, of turning the machine over to the superintendent of street cleaning, as they told the committees of Congress they intended to do, it was appropriated by Engineer Commissioner Judson and used by him. It is now used by the present engineer commissioner, Col. Harding. Here we have, Mr. Speaker, another case of juggling in conference. I would have you bear in mind, however, that I am not charging the conferees with deliberate wrongdoing in this matter. I am willing to concede that they acted honestly. But I can not avoid the conclusion that they were deliberately misled, and that but for outside influences—in plain terms, official misrepresentation by the District Commissioners—the changes in the law which I have pointed out would not have been made. Certain it is that without the semblance of authority the appropriation act, as it went from this House and as it came from the Senate, was altered in a manner which enabled the commissioners to use money appropriated for specific public purposes illegally. The evil consequences of such legislation—if it may be dignified by that name—are seen in the fact that, under the shelter afforded by the change made in the bill, the commissioners later purchased five additional automobiles—one for the superintendent of street cleaning, one for the first assistant superintendent, one for the second assistant (a man who has been illegally employed for more than a year), one for the chief inspector, and one for the foreman of repairs. There is not a member of either the House or Senate Appropriations Committee who ever saw in writing or heard expressed in words a request for money with which to purchase these machines, or any one of them. The transaction was illegal from start to finish, and was the outgrowth of the juggle in conference to which I have referred and of dishonesty on the part of the late Board of District Commissioners.

Now, Mr. Speaker, as further showing the illegal use of public funds by the District authorities, let me call special attention to the case of the second assistant superintendent of street cleaning, a man named F. C. Bamman. I have had occasion to refer to him before. In their estimates for the fiscal year 1914, under the head of "Salaries, street-cleaning department," the commissioners submitted an item for a new office, that of "second assistant superintendent (submitted), $1,400." (See Book of Estimates, 1914, p. 712.) Congress flatly refused the request. It was plain that there was no necessity for saddling upon the Government and the District this additional expense. During the incumbency of the predecessor of the present superintendent the department had been economically and very efficiently conducted with but one assistant. There had been perfect supervision of every branch of the work, without imposing the slightest hardship upon any member of the force. But in the face of the refusal of Congress to create this new office the commissioners, wholly without authority of law, appointed F. C. Bamman second assistant superintendent at a salary of $4.50 per diem, equal to about $1,600 a year. Let the fact be kept in mind, Mr. Speaker, that Congress refused to create this new office and that not one penny had been appropriated for the purpose of paying an additional superintendent. Yet, in defiance of Congress and in direct violation of law, the commissioners put the name of this man Bamman on their pay roll at a compensation equal to $1,600 a year, and have kept it there, for he is still employed. He is holding the job now, although the commissioners have known for some time that there was objection to his appointment and employment on the ground that it was not authorized by law. Were the Doorkeeper of the House to appoint an extra page at $75 a month without authority for such action, he would be promptly called to account. But the District Commissioners, ignoring the will of Congress, created an unnecessary office and selected a man to fill it at a salary about twice as large. Out of what fund is this man paid for his services, or, rather, for putting in his time?

The committees of Congress are careful to say what the moneys appropriated for District purposes shall be used for. Now, let some one tell me where the commissioners are getting the $1,600 which they are handing out to this man Bamman. Who can do it? Not satisfied, however, with this illegal expenditure, they have provided Mr. Bamman with an automobile, the purchase of which Congress never authorized. Mr. Speaker, I believe in dealing fairly with the District, but I also believe that the District, through its officials, should deal fairly, truthfully, and honestly with Congress. Just now certain Members of this body are being held up by the Washington newspapers and through printed circulars sent to every section of the country as the enemies of the National Capital, and this in face of the fact that men appointed to administer District affairs have pursued methods which in most places would be called crooked.

ILLEGAL PURCHASE OF STREET-SWEEPING MACHINES.

But let me go back a little. Three years ago I called attention to the illegal purchase by the commissioners of a number of street-sweeping machines. Reference to the Senate hearings on the District bill for the fiscal year ended June 30, 1912, pages 32 and 33, will show that the commissioners appeared before the committee and made a request for an appropriation of $6,500 for the purchase of street-sweeping machines, which they had already purchased and which were secretly stored away in a certain stable. In my remarks I pointed out to the House at that time that the District authorities deliberately deceived the committee. Here are the facts:

Some time before, when the street-cleaning department was under the direction of John A. Johnston, one of the civil commissioners, that official purchased 16 street-sweeping machines. Ten of them were bought and paid for out of a fund specifically set apart by Congress for the removal of snow and ice from the streets, a fact of which Commissioner Johnston was fully cognizant. In other words, this was another case of the illegal use of public money. When the machines reached Washington they were hidden away, first in a building in the southwest section of the city and later in a barn located in an alley in the northwest section. It seems that the commissioner was anxious that it should not become known that they were in Washington.

But now, Mr. Speaker, I come to the point to which I invite special attention. Four weeks after these machines had been illegally bought and paid for the commissioners, as I have said, appeared before the subcommittee of the Senate Committee on Appropriations and requested and urged an appropriation of $6,500 for the purpose of purchasing street-sweeping machines which they had already purchased and had caused to be secretly hidden away. They sought, and succeeded in their effort, to create the impression that the transaction was one in contemplation, whereas it had been consummated some weeks previously. What name shall I give this ugly transaction? What, in your opinion, should it be called? Using the mildest terms applicable to it, I brand it as a case of obtaining money and property by false pretenses. As a result of this misrepresentation and false pretense Congress added $10,000 to the District appropriation bill. In justice to Engineer Commissioner Judson, it should be said that he did not specially concern himself with this transaction, which was doubtless too small to interest him. In other words, it was not large enough to insure satisfactory financial returns.

Here we have a case where the commissioners actually purchased 16 street-sweeping machines without any authority in law, and there was no authority in law for their use, even if they had been legally purchased. They were stored away and never used until the 1st of July, 1911. The act of Congress approved May 18, 1910, appropriated the sum of $10,000 "for cleaning snow and ice from streets, sidewalks, crosswalks, and gutters, including services," which appropriation, as you see, carried with it no authority whatever to purchase machinery of any description. The cost of 10 of the machines was charged to that appropriation. The secret manner of putting this deal

through is seen in the following order sent out by the property clerk:

JANUARY 7, 1911.

Inclosed is a voucher made out in your favor concerning the machines in question, and if you will please sign at the place indicated by pencil (x) and forward to me marked "personal," I will see that settlement is made in due course after the machines are received. Please acknowledge receipt of this order and advise date and route of shipment, if accepted.

Yours, very respectfully,

M. HARGROVE,
Property Clerk, District of Columbia.

No bids were ever solicited for the purchase of these machines, as the law requires, and the price paid by the commissioners was largely in excess of what the firm offered to sell them to the District for in case the order came in the regular legal way, through the superintendent of the street-cleaning department. The firm of Hvass & Co., New York, sent their representative to Washington on or about the 8th of January, 1911, and urged that the order come to them in the regular way, and asked who was to get the "rake-off," as the price allowed was the same as paid by the city of New York, which was at least $50 per machine more than the firm would charge the city of Washington on a large order, such as this, for 16 machines.

President Taft was advised of this illegal transaction—was fully informed as to its illegality—but took no action whatever, except to refer the matter to the commissioners, who proceeded to pigeon-hole it. This is a sample of the way they do business in this alleged "best-governed city in the world."

ILLEGAL USE OF PUBLIC VEHICLES.

Every District of Columbia appropriation act for the past 10 years has carried a provision under the title "Contingent and miscellaneous expenses," prohibiting the commissioners from using public vehicles for any purpose except the public business. In the act approved May 18, 1910, the proviso was as follows:

Provided, That horses and vehicles appropriated for in this act shall not be used by the commissioners for any other purpose than to visit such points within the District of Columbia as it may be necessary to visit in order to enable them to inspect or inform themselves concerning any public work or property belonging to the said District or to do any other act necessary to the administration of its affairs.

The following affidavit will show how one of the commissioners—John A. Johnston—complied with this strict provision of the law:

AFFIDAVIT OF JAMES GORDON.

CITY OF WASHINGTON, *District of Columbia, ss:*

Personally appeared before me, a notary public in and for the District of Columbia, James Gordon, who, being first sworn, deposes and says:

That he drove the official carriage assigned to Commissioner Johnston for his official use at the District Building from October 4, 1910, to December 30, 1910; that during said period of time he received all his orders from Commissioner Johnston; that his duties consisted in driving Mr. Ralph B. Pratt from his residence in Brightwood, D. C., to the District Building and back; in driving Mrs. Pratt from her residence in Brightwood to market and back and on her various shopping tours throughout the city and on her various visiting trips in Mount Pleasant and about the city and in hauling their colored servant to such points as she desired to go.

My pay was $50 per month, and the above-named work consumed practically all of my time.

I have been informed that other drivers of the horse and carriage performed similar duties.

Commissioner Johnston never rode anywhere in the carriage to my knowledge.

As soon as this unlawful use of the horse and carriage got noised about in public I was dismissed from the service.

(Signed) JAMES GORDON.

Subscribed and sworn to before me, a notary public in and for the District of Columbia, this 20th day of March, 1911.

[SEAL.] HORACE R. GEORGE,
Notary Public, District of Columbia.

Here, Mr. Speaker, we have a commissioner of the District, a man who knew the law and whose duty it was to enforce it, deliberately violating it by the use of public property for private purposes. The sworn statement of his driver, a man of good repute, whose services had been entirely satisfactory until misuse of the District's horse and carriage started some unsavory and dangerous gossip, shows how this District official, this inflated "general," who won his title amid the terrors of an executive session of the Senate with the help of Theodore Roosevelt, regarded the mandate of the highest lawmaking body in the world. Expressed in dollars and cents, Johnston's brazen egoism was costing the Government and the taxpayers of the District $1,100 a year. Perhaps that was not much. It all depends upon the point of view. To the fair-minded legislator it was enough, if attention had been called to it at the time and action taken concerning it, to warrant a demand for the immediate removal of Capt. Johnston from membership in the Board of Commissioners.

Why, Mr. Speaker, when Capt. Johnston asked for an increase of $1,000 a year in his salary Congress refused the request on the ground that he and his associates were already sufficiently compensated for the services they were rendering to the District. There might have been some justification for increasing the compensation of the triumvirate of which Capt. Johnston was a conspicuous and shining light, for they were public servants, chosen after prolonged and painful consideration by the President of the United States; but what excuse can be found for such flagrant and unauthorized use of the people's money as that of which this second-hand and self-important "general" was guilty?

Johnston had the use of two District horses, one open carriage, one closed coupé, and a driver. The driver drew $50 a month, or $600 a year, while for horse feed, repairs, and other expenses the cost amounted to $500 a year. These items make up the $1,100 a year to which I have referred. Johnston's use of this outfit was confined to a single ride from the residence of his wife to the District building the day following his induction into office. At no other time during his three and a half years of service did he use a public conveyance. Now, to what use were the two horses and two carriages put? Gordon, in his affidavit, says that he drove Mr. Pratt, Johnston's private secretary, once a day and back from his residence in Brightwood to the District building; that they were used by Mrs. Pratt, who, with the knowledge and approval of Johnston, went about the city in making marketing and shopping trips and in paying and returning social calls. Finally, Mr. Speaker, this public property, maintained at public expense and set apart for official use only by the commissioner, was used by the colored servant of Mrs. Pratt in traveling from place to place in the District. Now, let my friend from North Carolina—and other gentlemen from the sunny South—when he returns to his constituents tell the good people of his district, when once again he seeks their suffrages, that he voted for a measure appropriating public money for the use of negro servants.

Bear in mind, Mr. Speaker, that all this took place in this town, where they say they have "a model city government"—it all took place in this "best governed city of the world."

SWINDLING THE GOVERNMENT OUT OF $60,000.

Mr. Speaker, I have shown how Members of Congress have been deceived by the District Commissioners in order to secure appropriations for illegal purposes. I wish now to turn to a little local history of recent date and show the Members of this House how the commissioners have carried on their unlawful practices in matters with respect to which Congress could have no knowledge. Some time prior to the appointment of John A. Johnston as a District Commissioner, it was discovered by the superintendent of street cleaning that certain contractors had annually received thousands of dollars for services which they had not rendered. Large overpayments had been made to them for work they had not performed. This related to the alley and machine-swept sections of the city. In the summer of 1909 the superintendent of street cleaning laid the matter before the Hon. Henry L. West, commissioner in charge of street cleaning, who directed him to lose no time in ascertaining the amounts of the overpayments, to the end that restitution might be made to the District. Before anything further could be done, however, Mr. West resigned on November 28, 1909, and in January, 1910, John A. Johnston was appointed to take his place. The official records of the street cleaning department having been destroyed by former Supt. John T. Twohey, a request was made in March, 1910, by the superintendent of street cleaning to Alonzo Tweedale, auditor for the District, for the temporary use of the duplicate street and alley-cleaning daily reports, then in his office, in order that overpayments made to certain contractors might be figured out and the amounts recovered and turned into the Treasury. Tweedale orally consented to the loan of the reports, but suggested that the request for their temporary use be put in writing. Deputy Auditor Daniel J. Donovan also verbally approved the request, but suggested that it be put in writing, and said he would approve it when it came to him in that shape. The suggestion made by the auditor, and also by his deputy, was complied with by the superintendent of street cleaning, and the written request was made to the auditor for the loan of the machine-sweeping and the alley-cleaning reports. Thereupon, on receipt of the request in writing, the deputy auditor, Donovan, wrote an indorsement that the request of the superintendent of street cleaning be denied, which indorsement was approved and officially signed by Auditor Tweedale, who forwarded the same to Commissioner Johnston—he at the time having general supervision over the street cleaning department and the auditor's office—who, in turn, approved the official duplicity and trickery of the auditor and his deputy. As a result of the concerted action by these three District officials it was impossible for the superintendent of street cleaning to ascertain the amounts of these overpayments to contractors,

and the District was swindled out of a sum of money conservatively estimated at $80,000.

SUBSIDIZING THE LOCAL PRESS.

Mr. Speaker, when the District of Columbia appropriation bill was under consideration in the House, on the 19th of last December, I offered an amendment of the following tenor:

On page 17, line 7, after the figures "$4,700," insert the words: "*Provided*, That hereafter all general advertising, including tax and school notices and notices of changes in regulations, shall be published in one daily newspaper of wide circulation published in the District of Columbia and be let to the lowest bidder: *Provided further*, That the Commissioners of the District of Columbia are hereby authorized and directed to invite proposals to carry out the provisions of this amendment: *And provided further*, That all laws and parts of laws inconsistent with the provisions of this act are hereby repealed."

This amendment went out on a point of order that it was new legislation. It was offered by me for the purpose of curing one of many local evils, namely, of preventing the commissioners from farming out the city advertising in about equal proportions to each of the four daily papers published here, which proceeding amounts to a subsidy to each of these papers. So rank has this abuse become that it is impossible to get fair treatment at the hands of one of these papers. It is so rank, indeed, that, in my judgment, if the late lamented Col. Judson and his fellow commissioners of easy consciences had sold the Municipal Building and divided the proceeds not one of the local papers would have dared insert a news item concerning it.

These same newspapers are daily clamoring against the abrogation of the half-and-half plan, and yet not one of them dares to come out in its news or editorial columns and advocate honesty in the management of local affairs. On the 19th of last December I showed on the floor of this House how the office of one of the departments of the local government had been conducted at a cost of $5,700 per annum while it was under one of the civil commissioners, whereas after the same office had been transferred to the military commissioner the cost of conducting it jumped to $12,240 per annum, or more than double. Local taxpayers paid $2,850 per annum while the office was conducted by one of the civil commissioners, whereas they are now forced to pay $6,120 per annum, or more than twice as much, for the same service, because it is handed out to them by the military arm of the local government. No local paper would pay any attention whatever to this wasteful expenditure—this reckless use of the public funds—because by so doing it might endanger the organic act. In other words, they are so subsidized as to become blinded, and so married to the organic act that they will in no manner assist any one of us in our efforts to secure something approaching common honesty in the management of local affairs.

KLINGLE FORD VALLEY STEAL.

Before closing my remarks on the shortcomings of Col. Judson and other members of the Board of Commissioners I desire to briefly call your attention to what is known as the Klingle Ford Valley steal. In order that Members may have a clearer and better understanding of this matter as I proceed, I will ask that they kindly bear in mind that it was currently reported about the city, and especially in exclusive circles about the financial district, that Col. Judson was to get one-third of the proceeds in case he succeeded to buncoing Congress out of $300,000 for some waste land that was absolutely useless and unsalable. Having failed in his effort, the quantity of land originally offered was increased by 4½ acres, but the price dropped $110,000, being a drop of $10,000 more than the rake-off which Col. Judson was supposed to get. Here is the evidence from the record:

In the Book of Estimates for the fiscal year ending June 30, 1912, at page 466, will be found an estimate, as follows:

For the purchase of 24½ acres of land in Klingle Ford Valley, $300,000.

At the hearings on this proposition, held on December 15, 1910, before the subcommittee of the Committee on Appropriations of this House, Col. Judson said:

The reason why it is necessary to get it in now is that if we do not get it now we never can get it.

Mr. Burleson asked:

Was this project started by the commissioners, or were you instigated by somebody else?

Col. Judson answered:

This was started by us. This section is all building up, and if you do not get it pretty soon you can not get it at all.

Mr. TAYLOR. You think you will have to do it now in order to do it at any time?

Col. JUDSON. Yes.

Furthur on Judson said:

Now, this proposes to take the waste land for public use. It proposes to take the most undesirable land, * * * which is a hole in the ground.

On November 29, 1910, a committee of three local architects, at Maj. Judson's request, wrote him favoring the project. See House hearings, pages 172, 173, 174, 175, 176.

This steal was exposed in the House and went out of the bill.

Thereafter Maj. Judson strenuously endeavored to get the Senate Committee on Appropriations to insert the item in the bill, which they did, but it was exposed and died on the floor of the Senate. In his dying appeal before the Senate committee, Maj. Judson said:

This is our last chance to get that particular piece. I have held them off—

Meaning real estate men—

for six or eight months from filling it up.

See Senate hearings, pages 133, 134, 135.

But the hole is still there, nor has there been the slightest move in the direction of filling it up. Why? I leave the answer to the question to you. The hair on the head of the youngest man in this House will be as white as snow before it is filled up.

In their estimates for the fiscal year ending June 30, 1913, at page 501, will be found an estimate as follows:

For the purchase of 28½ acres of land in Klingle Ford Valley, $190,000.

Maj. Judson requested that this amount be further reduced to $180,000. See House hearings on District of Columbia appropriation bill, 1913, at page 228. The option under which he was probably working the previous year had doubtless expired. Maj. Judson made no explanation whatever to the subcommittees of the Committees on Appropriations of the House and Senate as to why he was asking for only $180,000 for the purchase of 28½ acres, while the previous year he had begged for the sum of $300,000 for the purchase of 24½ acres, saying "this is our last chance to get that particular piece." Suddenly, in the short space of 12 months, he had increased the amount of land to be taken by 4½ acres and decreased the purchase price of this increased amount of land by the sum of $120,000. All this happened in face of the fact that land everywhere in the District of Columbia was constantly increasing in value. If 24½ acres were, as Judson said, worth $300,000, then, at the same rate, 28½ acres would be worth $351,852, or $171,852 more than his second estimate called for.

Now, Mr. Speaker, let me go back again to the present agitation over the half-and-half plan in the District by calling attention to a stirring appeal, in the shape of an unsigned special notice, which appeared in the issue of the Evening Star under "Special notices," of Wednesday, March 4, 1914, on page 3. In this appeal the people of Washington are urged to "please talk with your Member at once and tell him our people are not grafters and our municipal government is honestly conducted."

How does this statement, this appeal in the Evening Star, tally with the facts, the record evidence, I have laid before you? Why have not the people of the District, the men who are front and foremost in its affairs, been as quick and as prompt to detect frauds—such frauds as I have shown you and of which there is abundant proof—as they are when they feel that there is danger of losing the half-and-half plan, to besiege Congress with protests against such action, based on the honesty of the local government?

In the Book of Estimates for the fiscal year ending June 30, 1914, at page 768, will be found an estimate as follows:

For the purchase of 28½ acres of land in Klingle Ford Valley, $190,000.

In the hearings before the subcommittee of the Appropriations Committee of the House, the engineer of the Chevy Chase Land Co. admitted that of the 28½ acres to be taken about 9 acres belong to that company. Said he: "It takes all the low ground." In other words, it was proposed to purchase "all the low ground" owned by that company at that point, or, as Maj. Judson put it, "the waste land," a "hole in the ground."

No appeal was made by Maj. Judson or by either member of the board to keep the item in the bill.

In their estimates for the fiscal year ending June 30, 1915, the commissioners make no mention whatever of this Klingle Ford Valley steal.

JUDSON AND THE CANAL ZONE JOB.

Mr. Speaker, I have here a clipping from the Washington Herald of March 20, 1914, which, I feel sure, was a source of gratification to more than one Member of this House. It is headed—

JUDSON NOT TO GET CANAL JOB.

Col. Goethals came to Washington yesterday from New York, and after conferring with Secretary of War Garrison about Panama Canal matters returned to New York, whence he will sail to-day for Panama.

Recommendations of Col. Goethals for filling the important positions in the permanent government of the Canal Zone, which goes into effect

April 1, have been approved by Secretary Garrison. It is expected that announcement of these details will be made to-morrow.

It was learned yesterday that Lieut. Col. William V. Judson, former Engineer Commissioner for the District, who has been on duty with the Canal Commission for the last year, will not have a place in the permanent zone government.

Mr. Speaker, it is noteworthy that Col. Judson is not to be a member of the cabinet of Col. Goethals, especially in view of the fact that some months ago his record as an official of the District government was forwarded to Col Goethals, and also placed in the hands of the Secretary of War and the President of the United States.

LEGISLATION BY EXECUTIVE ORDER.

In conclusion, Mr. Speaker, I make the statement, which I do not doubt will surprise Members of this House, that legislation for the District which affected the engineer department has been secured by executive order. For years it has been the custom of the engineer commissioner, when he wished to create a new office as a means of increasing official patronage, to come to Congress with a request for the appropriation of a considerable sum for an additional employee to be carried on the annual roll. If, however, the committees of the House and Senate, not being able to see the necessity for such action, refused to make the recommendation asked for by the engineer commissioner, the latter proceeded to create the office anyway, and to appoint a man to fill it at a per diem salary, always much larger than the annual salary requested. Then at the next session of Congress the commissioner again gets into the District estimates an item asking for the creation of the same office for which request had previously been made, but which in the meantime had been created by executive order and filled by appointment at an excessive per diem salary, basing his appeal upon the ground that favorable action upon it would result in a large saving to the Government and the District, because the annual salary for the new official would be much less than the daily compensation allowed him when figured out for the entire year. In this way, Mr. Speaker, Congress has been repeatedly fooled into making appropriations which its committees had refused to sanction at former sessions. This, I must say, however, has, so far as I know, been confined exclusively to the engineer department of the District government. I do not know that the civil commissioners have ever resorted to such trickery to accomplish their ends.

RECORD OF COL. WILLIAM V. JUDSON.

On January 2, 1913, Senator JACOB H. GALLINGER, of New Hampshire, testified as follows at the investigation of the insurance companies of the District of Columbia:

This is the first time I ever have criticized Col. Judson in my life. In thinking the matter over, I recalled the fact that a certain prominent citizen of the District said to me not long ago, "Col. Judson is a very able man, but his mind is so queerly constituted that no one but Infinite Wisdom can understand it." Now, I do not know whether that is so or not. I think he is a little difficult to understand at times; but whether it is so or not, I have come to the conclusion that his restless spirit, after he has attended to his affairs as commissioner, leads him to interfere with the business of pretty much everybody else in the District of Columbia. Col. Judson is a martinet. He is a military man. He is a dominant man. He likes to control affairs and men; and I think I would not transgress the proprieties if I said that I think he is something of a marplot, as some military men are. And so he reaches out and takes control of things which perhaps he might well leave alone. Now, because of this restless activity of Col. Judson, this great desire of his to control things, he sometimes gets the dendrite of the brain a little twisted. That is rather an unusual word, "dendrite," but it was one I learned a great many years ago in a medical college; and if you will take a medical dictionary, you will find out what it means. I say that he gets the dendrite of his brain a little mixed, so that he does not see things straight, nor think along straight lines, nor act on straight lines.

Now, think of what Col. Judson did. Here is a young man who was supporting his widowed mother and supporting a wife and a child. He had made an honorable record. He had made mistakes, no doubt, and only Heaven knows who has not made mistakes; I do not know. And yet this entire investigation was precipitated without the Commissioners of the District of Columbia saying a single word to that young man concerning it. Col. Judson went to the extent of writing a resolution, which he asked his associates to pass, to depose this young man from his position. Why, they do not do that in the departments in Washington with reference to a watchman. The man who sits at the door of one of our departments has a right to be heard and has a right to present his side of the case. But Col. Judson proposed to take this young man, with his widowed mother dependent upon him and his own family dependent upon him, and throw him out of his office without an opportunity to say a word in his own defense. It is a most extraordinary procedure, the most extraordinary procedure that has come under my observation, and I do not think it can be too severely condemned. If the young man ought to be driven out from the office, let it be done decently and in order, and let him have an opportunity to be heard in his own defense and give his side of the case before such drastic action is taken. It is greatly to the credit of Col. Judson's associate commissioners that they refused to pass that resolution, which would have been, to my mind, a wicked thing. (Insurance Investigation, Doc. No. 5, pp. 439, 440, 441.)

On February 5, 1913, at a meeting of the subcommittee of the Committee on the District of Columbia investigating charges filed by Col. Judson against the commissioner of fire insurance, Mr. Charles F. Carusi, in a written motion, declared that "a public official, Engineer Commissioner Lieut. Col. Judson," was serving as the instrument of a deliberate conspiracy to wreck certain insurance companies of the District." (Doc. No. 28, Insurance Investigation, p. 2003.)

On February 10, in the course of an argument before the same committee, Mr. Charles A. Douglas referred to Col. Judson as "a man whose mind is filled with suspicion of everybody and everything excepting himself." (Doc. No. 28, p. 2063.)

On the following day, resuming his argument, Mr. Douglas, after declaring that "this attack was brought on these companies as the result of a deliberate conspiracy to ruin them," charged that the originator of the plot

put the torch in the hands of Col. Judson and made out of him a willing tool to do this work. * * * I charge that the split that took place between Mr. Rudolph and the two other commissioners grew out of the fact that Rudolph would not lend himself to this attack without hearing, would not lend himself to this charge without an investigation, and when Rudolph refused to join hands with them they took the insurance department out of his hands bodily and took it to themselves. (Doc. No. 28, pp. 2089, 2090.)

On February 12, Mr. James S. Easby-Smith, addressing the committee, said:

Gentlemen, I shall not attempt to characterize the conduct of Col. Judson in this case. The course of dishonor which he has pursued in this case is irrevocably and imperishably bound up in these printed pages, which speak silently but more eloquently than any human tongue may speak of that dishonor. It is useless to apply epithets to a man who has dealt doubly with every man with whom he came in contact, who has viciously misled a member of this committee [Mr. Redfield], who has over and over again in the same breath called a man his friend and has traduced him—a man who has been repeatedly contradicted by every reputable witness who has appeared before you in this case. I doubt not that Col Judson would have hesitated long in entering upon his course of action in this case had he realized that the searchlight of truth would be turned upon his accusation and that the X ray of cross-examination would penetrate the innermost and darkest recesses of his insinuating and suspicious soul. (Doc. No. 28, pp. 2111, 2112.)

[Extract from testimony given by H. H. Darneille, under oath, and statement made by Hon. BEN JOHNSON on January 24, 1913, at the hearing before a subcommittee of the Committee on the District of Columbia, investigating the insurance department and certain local insurance companies.]

Mr. Darneille, under oath, said:

Col. Judson has said to me that Mr. LOBECK was a crook, Mr. CARY was a grafter, and that BEN JOHNSON was absolutely insane. He has also said to me that "we (meaning the commissioners) would get our increase of pay if Burleson was toting fair, but that he was not."

Thereupon the Hon. BEN JOHNSON, chairman, said:

Before going further with this I feel that I am entitled to say something. As to whether or not I am crazy, I shall have no argument with Col. Judson or with anybody else, because that may be true. I am not ready to accept for any purpose that the gentlemen named are corrupt. If everybody who differs with Col. Judson in his high-handed methods of doing things here is to be called crazy, I believe that nine-tenths of the people of the District of Columbia would be put in the insane asylum. The question arises as to Col. Judson as a witness and as to his credibility as a witness. If it could be established that he is not entitled to credit on oath because of a lack of veracity, I think that would be admissible. If it can be established that he is a common traducer, without regard to truth, I think that would be admissible. It occurs to me from what I have seen of Col. Judson's conduct in this matter and others that he is entirely too free with the use of other people's names. In addition to the names just mentioned, Col. Judson has told me, in this room, that Mr. O'SHAUNESSY, of the District Committee, was a common crook. He has also told me that another member of this committee, when a candidate for reelection two years ago, had gone among his creditor constituents and had said to them that if he could be reelected to Congress he would be made chairman of the District Committee, from which source he would get money enough to pay his debts. I have spoken to the Member upon the subject, and he has asked me not to mention his name, and in consequence of that I will not do so. I heard Col. Judson and Mr. C. C. Glover sit here and testify the other day, and I saw the utmost good faith upon the face of Mr. Glover when he testified as to Col. Judson having told him, over and over again, that it had been necessary for him (Col. Judson) to defend Mr. Glover's good name around the Capitol, when, in fact, Col. Judson himself was the only man that I ever heard defame the name of Mr. C. C. Glover. He did so in this respect:

Col. Judson told me—not once, but three different times—that Mr. Glover had told him over and over again that it was his way of doing things; that he would seek Members of the Senate and Members of the House of influence and that he would lend them money, if desired, and would induce them to purchase property in the District that the assessments might be kept down and the improvements kept up; and many times he has spoken to me disparagingly of Mr. Glover in that respect. I do not think that I ever had a conversation with Col. Judson of 10 minutes' duration that he did not bring in the name of somebody of whom he would speak disparagingly. I see Mr. Frizzell in front of me, the president of one of the citizens' associations here. I do not think that I ever talked with Col. Judson when Mr. Frizzell was about the committee room, or when any matter was under consideration in which Mr. Frizzell was interested, that he did not always belittle him and traduce him. I received only a few days ago from Col. Judson a communication containing the names of several gentlemen suggesting that they be called to testify as to the value of the site on which the Southern Building stands. One of the names was Mr. William Corcoran Hill. Upon a former occasion Col. Judson had told me that William Corcoran Hill was one of the biggest fools in town. I could not see very well how these two things could be true—that Col. Judson should tell me that Mr. Hill was one of the biggest fools in town and at the same time send his name here to be subpœnaed to come in and testify as to the value of the site upon which the Southern Building stands. It has occurred to me that in view of the character which Col. Judson has established for himself in this committee and, to my certain knowledge, out of it as being a common traducer, and inasmuch as the commissioner of fire insurance now complains that his character is being traduced by Col. Judson, I am bound to say for myself that I believe that is competent evidence and I hope it will not be expunged.

River and Harbor Bill.

EXTENSION OF REMARKS
OF
HON. CHARLES G. EDWARDS,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 24, 1914,

On the bill (H. R. 13811) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. EDWARDS. Mr. Speaker, internal improvements of merit benefit our country and our people. I have never voted for a proposition except as my conscience dictated that it was right to do so. I am opposed to anything that would mean a waste of public money.

Worthy waterway improvement, like public-roadway building, is a progressive movement and in the interest of the whole people. It makes for the development of our country and the prosperity and happiness of its citizens. I have never voted for the improvement of "small rivers and streams that have no commercial value." Any statement to that effect is untrue. The great committee of which I have the honor to be a member has never favored such an unwise policy. On the contrary, I have worked with that committee in saving to the country millions of dollars by opposing every proposed improvement that was not meritorious and in the interest of the public good. Since I have been in Congress I have seen no evidence of "logrolling," so far as appropriations for any purpose are concerned. I have recently seen in print a statement that an ex-Member of this distinguished body says his "brief service in Congress has convinced him that millions of dollars of the Government's money are annually wasted by Congressmen who logroll with one another to secure appropriations that have no merit." That is a grave charge to be made against the character of honorable men, even though the appropriations are for the people they represent and not for the Congressmen themselves.

There are over 400 gentlemen in Congress. Not an honest one was here, except the gentleman who had a "brief service," is the inference to be drawn from the alleged experience of this "paragon of virtue." It is a serious matter to impugn the honesty and patriotism of our public officials, yet demagogues do this thing as glibly as taking a drink of water, thinking only of their own selfish political ends. I can conceive of no greater wrong than to question the motives and patriotism of our public officials in "generalities" and by innuendo.

The people select men to represent them because of their fitness for the particular service to be performed. Honest men are invariably chosen because of their good standing among the people who elect them. A wholesale charge is made that "Congressmen logroll with one another to secure appropriations that have no merit," and thus the honor of every Member of Congress is assailed.

Such "character assassins," and there are many of them throughout the country, would deliberately destroy the confidence of the people in the men who make the country's laws by holding them up as a bunch of "logrolling" thieves, who would betray the trust reposed in them and join in a "raid on the Treasury." It is hardly possible or conceivable that any sane man should think, let alone charge, such a thing against the present Democratic Congress. Not only is the indictment against the Congress, but it is also an unwarranted slur at the present successful Democratic administration.

Now, the purpose of such wild and demagogic statements on the part of these "holier than thous" is not to correct any real evils, but if possible to fasten themselves upon the public pay roll by stepping into office over the ruin and wreckage of human character made by their false charges.

This Government confronts no more serious condition than the wholesale slander of public men as made by "political pirates," sensational writers, and demagogues.

It will be a sad day in this country's history when the people lose confidence in their public servants. That day will hardly come. The people are waking up to the seriousness of this situation, and are putting their "stamp of disapproval" upon such "anarchistic" and "demagogic" methods. If there are dishonest, disreputable, or corrupt men in Congress, let charges be made against them specifically and let them be impeached. Let each man stand or fall upon his own merit. On the other hand, if Members of Congress are worthy and faithful, the public should stand up in their defense and the "wholesale slanders" of reckless "character sharks" should be condemned. Such charges should not be made in "generalities," but should be "specific" as to men and items, so that the truth might be known and that justice might be done by the public and by the official charged. Those seeking to destroy the confidence of the people in their public officials ought to have the manhood and the fairness to specify when they make serious charges, giving facts as to the man and as to the complaint. To do otherwise is cowardly. If they can not be specific, then they ought to have common decency enough to withdraw their "blunderbuss" and false charges against the whole United States Congress. I defy any man to point out any appropriation for which I have voted that was not meritorious and in the interest of the people. So much, then, for this phase of the matter.

I wish now to refer to a few items of interest to the section I represent, carried in this bill because of their merit and because of their great benefit to our progressive citizens, and for the development of south Georgia, and because of their importance to the commerce of the entire country.

THE ALTAMAHA SYSTEM.

The Altamaha, Oconee, and Ocmulgee Rivers, upon which 24 Georgia counties border, and which will open navigation from Brunswick and Darien as far up as Macon and Milledgeville, is one of the most important river systems in the South, and is navigable for 490 miles right through the heart of Georgia and through the most splendid agricultural section in the South. Its importance to the people can not be overestimated.

The assessed valuation of real estate in these 24 counties is $55,000,000. The population, by the last census, is 415,483, and shows a gain of 20 per cent in the last decade. There is no town in this region exceeding 40,000 inhabitants, and all but one of them are much smaller. The population is rural. Farm products for the year 1910 exceeded $36,000,000 in value. These are products that have to be moved to be marketed, and there is the source of a large freight business here. Through business is, of course, the most valuable as a freight regulator and freight saver. From quite accurate and complete information furnished by the Macon Chamber of Commerce, it appears that the annual freight movement to and from that city is 2,000,000 tons, one-half of which is directly to and from the seacoast. It is generally conceded that at least one-third of this could advantageously be carried by boat. If it were carried by boat cheaper than by rail, it ought to fix the rate charged for the whole. If only 10 per cent of the rates at which this 300,000 tons is carried to and from the coast were saved, it would amount to an annual freight reduction of about $100,000. This would be enough to pay the cost of annual maintenance, to pay an interest of 4 per cent on the entire cost of the improvement, and to furnish a sinking fund which would extinguish the whole indebtedness in less than 20 years. This makes no allowance for the through business furnished by Milledgeville, Dublin, Hawkinsville, Abbeville, Lumber City, and other incorporated towns, to say nothing of the 150 landing places where freight is now received or shipped, to some extent, along the river.

In the district I represent this improvement will be of vast benefit—to McIntosh, Liberty, and Tattnall Counties—and will mean cheaper freight rates.

At present the people in that whole section affected by this improvement are suffering from high freight rates. This improvement will regulate and greatly reduce the freight rates, and will materially aid in the development of that great section.

You very rarely hear of railroads advocating waterway improvements. As a general thing the railroads do not care to be compelled by competition or otherwise to reduce their rates.

OGEECHEE RIVER.

A survey is carried in this bill for the Ogeechee River. This is another improvement that will prove of interest to thousands of farmers and others who will get cheaper freight rates, as the railroads will be compelled to meet the water rate, which is the cheapest known transportation. Of this proposed improvement the engineer says:

"It appears that the Ogeechee River has always been regarded as a navigable river. The town of Louisville, the former capital of the State of Georgia, is situated upon this river at what was long ago regarded as the head of useful navigation. The State of Georgia, for a number of years after the adoption of the Constitution, expended money for the improvement and maintenance of the navigation of this river, and in 1824 it incorporated a company known as the 'Savannah, Ogeechee & Altamaha Canal Co.,' having for its purpose and object to construct, among other things, a canal connecting the Ogeechee River with the Savannah River at the city of Savannah. * * *

"This canal was, in fact, constructed and completed about the year 1830. This canal opened a short route, only about 16 miles in length, from the Ogeechee to the Savannah River at Savannah. This must have been a very valuable water route, for there is no harbor at the mouth of the Ogeechee River at Ossabaw Sound, and the present distance from the entrance to the canal, via the inside water route, to Savannah is nearly 50 miles greater than via the canal.

"Up to the time of the Civil War this canal appears to have been extensively used, but during the Civil War and the disturbed period which followed the canal was suffered to fall into decay, so that its use was very difficult; and finally a majority of the stock is said to have passed into the control of the railroad which parallels the river, and this railroad company has made no effort whatever to keep up the canal, and it is now emptied of water, its lock gates decayed, and its banks broken in many places. In short, the company has failed to conform with the principal requirement of its charter, and the charter could doubtless be taken away from it and the State could gain possession of the right of way.

"With the decay and deterioration of the canal followed a deterioration in the river. Snags were not removed, leaning trees grew far out over the channel, and now the river is useless for anything larger than a skiff. The river rises in a good farming country, a region which furnishes material for transportation in considerable quantities. The following is a list of towns along the river near enough to it so that they might ship their commodities by water, and opposite each town is placed the average amount of cotton annually shipped and the rate per bale charged by the railroad, namely:

Town.	Bales.	Rate.
Louisville	9,000	$1.35
Midville	3,000	1.25
Herndon	900	1.20
Rogers		1.20
Millen	10,000	1.15
Scarboro	2,000	1.10
Rocky Ford	2,300	1.10
Ogeechee	3,000	1.05
Dover	1,100	1.05
Cameron	600	1.05
Halcyon Dale	7,000	.95
Oliver		.90
Egypt		.85
Tusculum	125	.80
Guyton		.75
Pineora	100	.70
Eldora	400	
Emmalane	100	1.40

"These rates are very high, apparently making the cost of bringing cotton less than 100 miles to Savannah greater than the cost of shipping it across the Atlantic. The railroad rates appear to be from about 5 to 7 cents per ton-mile. If the river and canal were available for this shipment, so that flatboats, towed by small power launches, could be conveniently used, a very considerable saving could be effected to these producers. I have no record of the return freight, but it must consist of commercial fertilizers, groceries, agricultural implements, etc."

The counties in the first Georgia district to be directly affected and benefited by this proposed improvement are Bryan, Effingham, Liberty, Bulloch, Screven, Jenkins, and Chatham. If navigation can be reestablished on the Ogeechee, which the ablest engineers of the country say is feasible, it will cut freight rates in half, because the railroads will be forced to meet the river rate. The engineers say the improvement can be done with a small sum, and the resulting benefit to the people will be beyond calculation.

RIVER BETWEEN AUGUSTA AND SAVANNAH.

The Savannah River between Savannah and Augusta is a great artery of commerce, and has proven of much value to the people in Effingham, Screven, Burke, Chatham, and Richmond Counties, to say nothing of the rest of the vast area affected by its improvement. For a long time this was the only means of transportation to the people in the great Savannah Valley, and is yet a deciding factor in fixing cheap freight rates upon the cotton, fertilizers, and other articles shipped to and from that great section.

INLAND WATERWAY.

The inland waterway from Savannah to Fernandina is a much-needed improvement, and means cheaper freights and better facilities to the people in the section which it penetrates.

OTHER STREAMS.

Items are carried in this bill for the improvement of Generals Cut at Darien, Ga., and for surveys of Sapelo, White Chimney, Julington, North Sapelo, and other equally important rivers of that section.

SAVANNAH HARBOR AND BETTER PRICES.

The improvement of Savannah Harbor is being carried on. It is Georgia's greatest port. It is the most important South Atlantic port. It regulates and reduces freight rates in that entire section. Not only does it reduce freight rates but it literally brings the markets of the world to our Georgia cotton fields and gives us better markets and better prices for our products. I shall not burden the House with statistics, but suffice it to say that the Government has undertaken no improvement anywhere that is more worthy or more productive of commerce for the amount expended than this port. The expenditures on this port and other projects in that section are well spent and are in the interest of the people and the general public good.

OTHER SECTIONS.

What I have said with regard to the projects in the section from which I come can also be said of waterway improvements in other sections of the country. The improvement of our waterways is a progressive movement, and will help to make our country great. I am for all internal improvements that are meritorious and in the interest of the people, and I am opposed to every unworthy project and appropriation that has no merit.

Exemption of Tolls.

EXTENSION OF REMARKS

OF

HON. EDWIN S. UNDERHILL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 26, 1914.

Mr. UNDERHILL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I publish a letter from a well-known publicist connected with Cornell University, at Ithaca, in my district—Prof. George Lincoln Burr.

The letter is as follows:

THE PRESIDENT WHITE LIBRARY,
CORNELL UNIVERSITY,
Ithaca, N. Y., March 2, 1914.

Hon. E. S. UNDERHILL,
Washington, D. C.

DEAR SIR: Though personally a stranger, I venture to write you upon a matter of public business. My excuse must be that it is one which falls somewhat within the field of my own studies.

You may possibly remember my name as that of the "historical expert" to President Cleveland's commission for the investigation of the Venezuelan boundary. It is my only claim to the attention of a man in public life, and, slight though it is, I trust it is enough to assure you of my seriousness as a student and my maturity.

When year before last the matter of the Panama tolls reached decision in Washington I found myself in London engaged in research, and had ample opportunity to know the surprise and the harsh criticism with which the action of our Government was received, not only in Great Britain but everywhere in Europe. I did not take this too seriously, for I had had occasion to know that even so general a censure may prove unwarranted, and I had given too little attention to the question to feel myself entitled to an opinion. I therefore avoided discussion of the matter, and as soon as I reached home in September I set myself at study of the records to find what basis there really was for the charges made. To my chagrin and dismay I seemed to find the matter even worse than it has been represented. I could not escape the conviction that we were deliberately breaking an engagement about whose meaning there was, at the time it was made, not the slightest doubt or difference of view.

Even yet I found it almost impossible to believe my own eyes and reason in the matter, and when, in November, I found myself gathered in New York with the other officials of the American Historical Association for our annual business meeting, about a board at which sat also ex-President Theodore Roosevelt, I took occasion to lay the question before him. Without hesitation he confirmed all my conclusions. He told us all that there had been not the slightest doubt in any mind that the canal was to be open to all nations on practically equal terms; that America had not only conceded this for answering concessions, but that she had received from Great Britain her quid pro quo—the recognition of our right to fortify the canal. Mr. Roosevelt added, indeed, that he believed it still open to America to seek the consent of the other powers to the exemption of her coasting trade from tolls, and that he trusted this would be done; but without such consent, he said with emphasis, we had not a ghost of right under our treaties to exempt our trade from tolls.

The body to which these words were spoken included many notable leaders of historical work in America—the Hon. Andrew D. White, Admiral Mahan, Mr. Charles Francis Adams, Mr. James Ford Rhodes, and nearly all the university professors who bear a leading part in the organization of that work. Not one of these expressed the slightest dissent or raised a question, and in conversation with many of them, then and afterwards, I found them all of one mind as to the question. Indeed, although my acquaintance with students of history is large, I have not yet found one who holds a different view.

Dining again with Mr. Roosevelt at Boston during the Christmas holidays, at the table of Mr. Rhodes, I found opportunity to ask him if his words as to this matter might freely be published, and he assured me that they might. That, nevertheless, I have not given them to the press or taken any part in print in the discussion of this question is because the clear exposition of the matter later by Senator Root seemed to leave no necessity for further words, and because, even after

permission had been gained. I shrank from using in public debate words spoken at a private gathering.

It seems to me, however, only fair that you should share the knowledge of a constituent in this matter, and that you should know as well how heavily with some of your constituents this matter weighs. I know something of the views of my Cornell colleagues, and among them, too, I know of no divergence in this matter. At the last presidential election a majority of them—though hitherto the majority has always been Republican—cast their ballot for Mr. Wilson and for a Congress in sympathy with his views. And it is true, I believe, of many of them, as of myself, that no consideration weighed more heavily in this than our feeling that President Taft and his Congress had in this matter broken the plighted faith of the Nation, and our trust that President Wilson and his supporters would take what seemed to us a manlier stand.

* * * * * * *

Believe me, dear sir, most respectfully, yours,

GEORGE L. BURR.

MARCH 14, 1914.

When 12 days ago the inclosed letter was begun, I thought to complete and mail it at once; but a fall sprained my right hand and made writing so slow and painful that I could add but a sentence or two at a time. And in the meantime there appeared the ringing message of President Wilson, which made me doubt whether any further plea could be needed. But now that my letter is done, it shall go, if only to show that we at home, too, are interested, and to give you a God-speed in the good work doing.

G. L. B.

Panama Canal Tolls.

Fear not my countrymen, it is not our honor, but the honor of Great Britain that is at stake.

SPEECH

OF

HON. SAMUEL W. SMITH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 27, 1914.

The House had under consideration the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. SAMUEL W. SMITH. Mr. Speaker, volumes have been written and spoken on this subject.

I voted for free tolls May 23, 1912, and it passed the House—yeas 147, nays 128 Seventy-two Democrats voted for free tolls and 95 against. It passed the Senate August 7, 1912, 44 Senators voting for free tolls and 11 against. The following are the Senators who voted against free tolls: Brandegee, Burton, Crane, Fall, Gronna, Lodge, Nelson, Oliver, Penrose, Root, and Wetmore.

With due respect to the President and all others who differ with me, I want to say that the more I study the question the more I am convinced that I voted correctly.

The President is quoted as saying that the bill was not passed by a majority of Democrats but by the aid of Republicans. Surely there were no Republicans voting in the Democratic convention at Baltimore when the tolls plank was adopted by the convention, and, so far as we can learn, without any opposition. The plank reads as follows:

"We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal. We also favor legislation forbidding the use of the Panama Canal by ships owned or controlled by railroad carriers engaged in transportation competitive with the canal."

The following is the plank in the platform of the Progressive Party:

"The Panama Canal, built and paid for by the American people, must be used primarily for their benefit. We demand that the canal shall be so operated as to break the transportation monopoly now held and misused by the transcontinental railroads by maintaining sea competition with them; that ships directly or indirectly owned or controlled by American railroad corporations shall not be permitted to use the canal, and that American ships engaged in coastwise trade shall pay no tolls."

After the convention Gov. Woodrow Wilson, candidate for President, speaking to 2,500 farmers at Washington Park, N. J., August 15, 1912, in favor of free tolls, and against railroad domination of canal, and upholding the Democratic platform, said, in part:

"Now, there is another matter you know, we are digging a tremendous ditch across the Isthmus of Panama. It is predicted by the engineers in charge of that colossal enterprise that we shall be able to open it to the ships of the world by the year 1915. What interest have you in opening it to the ships of the world? We do not own the ships of the world. By a very ingenious process, which I would not keep you standing in the hot sun long enough to outline, the legislation of the United States has destroyed the merchant marine of the United States. The chief road by which your crops travel to the Orient is through the Suez Canal. They do not go around by the Pacific. Most of your maps do not show you the short road to the Orient, because they are spread out flat.

"If you will get a globe and draw a circle around the globe you will see your short road is through the Suez Canal, not across the Pacific, and that the western farmer, therefore, has to ship his crops across the continent in order to reach the ships that are to take that road. And when his crops reach the port do they find American ships waiting for them? Not at all. In most years not a single ship carrying the American flag goes through that canal carrying freight.

"Some ships carry the American flag through that canal, but they are mostly private yachts. A friend of mine who has just traveled around the world told me that he did not see the American flag once between New York and Hongkong, going by the way of the canal, until he reached the Island of Ceylon, and then saw the flag of Mr. James Gordon Bennett's yacht. If the shipowners of the nations carry your grain and cargoes, they are going to carry them by routes and to markets which suit them, not the routes and the markets which are chosen by you.

"One of the great objects in cutting that great ditch across the Isthmus of Panama is to allow farmers who are near the Atlantic to ship to the Pacific by way of the Atlantic ports, to allow all the farmers on what I may, standing here, call this part of the continent, to find an outlet at ports of the Gulf or the ports of the Atlantic seaboard, and then have coastwise steamers carry their products down around through the canal and up the Pacific coast or down the coast of South America.

"Now, at present there are no ships to do that, and one of the bills pending—passed, I believe, yesterday by the Senate as it had passed the House—provides for free tolls for American ships through that canal and prohibits any ship from passing through which is owned by any American railroad company. You see the object of that, don't you? [Applause.] We don't want the railroads to compete with themselves, because we understand that kind of competition. We want water carriage to compete with land carriage, so as to be perfectly sure that you are going to get better rates around the canal than you would across the continent.

"The farmers of this country are, in my judgment, just as much concerned in the policy of the United States with regard to that canal as any other class of citizens of the United States. Probably they are more concerned than any other one class, and what I am most desirous to see is the farmers of the country coming forward as partners in the great national undertakings and take a wide national, nay, international, view of these great matters, feeling all the pulses of the world that beat in the great arteries of their own life and prosperity. Everything that is done in the interest of cheap transportation is done directly for the farmer as well as for other men. So that you ought not to grudge the millions poured out for the deepening and opening of old and new waterways. * * *

"Our platform is not molasses to catch flies. It means business. It means what it says. It is the utterance of earnest and honest men, who intend to do business along those lines and who are not waiting to see whether they can catch votes with those promises before they determine whether they are going to act upon them or not.

"They know the American people are now taking notice in a way in which they never took notice before, and gentlemen who talk one way and vote another are going to be retired to very quiet and private retreat."

You will observe that the President was very solicitous concerning the farmers. What has since arisen to change his mind?—and I ask this question in all kindness and with the best of intentions. I sincerely wish he would make free and bold to tell the country his reasons for his present position.

On the 5th of March, this year, he delivered a message at a joint session of the two Houses of Congress, four minutes in length. He startled me when he said:

"We ought to reverse our action without raising the question whether we were right or wrong."

This made a deep impression upon me for I was being asked, along with other Members, by the President of this great Republic to reverse my vote whether it was right or wrong. I was still thinking of this when he concluded his message with the following:

"I ask this of you in support of the foreign policy of the administration. I shall not know how to deal with other matters of even greater delicacy and nearer consequence, if you do not grant it to me in ungrudging measure."

What is the foreign policy to which he refers? This language clearly implies some hidden and unexplained meaning. If, for one moment, I thought if I did not change my vote I was going to plunge my country in war, I might take a different view of the situation. If there is danger from any quarter, although the President and Secretary of State have since been quoted as saying "we have nothing to fear," why does not the President take Congress, if he does not want to take the country at large, into his confidence at this time and explain more explicitly the last two sentences of his message?

Others will recall with me that previous to the Spanish War Members of Congress, including many Republicans, honestly differed with President McKinley as to certain policies. He invited the Members of Congress by States to visit him at the White House, and there a heart-to-heart talk was had. The situation was freely and frankly discussed in confidence, and more than one Member changed his mind, after listening to President McKinley, and with every opportunity to ask and answer questions.

I have hoped that the President would pursue a similar course, in view of his most earnest appeal to us "to reverse our vote—right or wrong." If he did not feel like taking Republicans into his confidence, he could have invited Democrats and explained to them, for they seem to be quite as much in the dark as to what is meant by the closing words of the message, as are other people.

But some people assert that we ought to vote against free tolls because of this paragraph in the third article of the treaty:

"The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable."

The words "all nations" do not include the United States, as is clearly shown by Senator LODGE, than whom there is no higher or better authority. I quote from the CONGRESSIONAL RECORD, July 17, 1912:

"Mr. LODGE. Mr. President, some time ago I started to say something in regard to the question of tolls charged on vessels passing through the Panama Canal, which was under discussion here the other afternoon when I was unfortunately absent. I now renew the attempt. The question of canal tolls has arisen in connection with representations made by the Government of Great Britain in regard to our rights in fixing tolls. It so happened that I was in London when the second Hay-Pauncefote treaty was made, and, although the draft was sent from this country, that treaty was really made in London. I mention this merely to show that I had some familiarity with the formulation as well as the ratification of that treaty. When the treaty was submitted by the President to the Senate it so happened that I had charge of it and reported it to the Senate.

"The second Hay-Pauncefote treaty, as Senators will remember, embodied in substance the amendments which the Senate had made to the first Hay-Pauncefote treaty. England had refused to accept those amendments, and then the second treaty was made embodying in principle all for which the Senate had contended.

"When I reported that treaty my own impression was that it left the United States in complete control of the tolls upon its own vessels. I did not suppose then that there was any limitation put upon our right to charge such tolls as we pleased upon our own vessels or that we were included in the phrase 'all nations.'"

Note the last clause of the Senator's statement. Can language be clearer as to our right to charge tolls upon our own vessels as we please or that we were included in the phrase "all nations"?

Even the British Law Review, the most authoritative legal publication in Great Britain, holds that free tolls does not violate the treaty.

Many other men and statesmen have expressed similar views. Time will not permit me to quote them, except as to one—Lewis Nixon:

"NO ARGUMENT AGAINST FREE TOLLS.

"Lewis Nixon, eminent naval architect, close student of the world's shipping and shipping laws, writes as follows to the New York World, which has gone completely daft in its eagerness to surrender American rights in the Panama Canal to British demands:

"As the result of years of study I am satisfied there is nothing in the Hay-Pauncefote treaty to prevent the remission of tolls on American vessels by the United States, acting in good faith.

"I have said, and can still say, that I have never seen a sincere or logical argument to uphold the Hay-Pauncefote treaty provisions against remission of tolls.

"Mr. Nixon does not occupy solitary ground. No one else has ever seen a logical argument directed against the right of the United States to remit tolls on its coastwise shipping. It isn't in the woods to make one.

"We admit that there are two sides to the economic question—the side of the transcontinental railroads, whose officials have been demanding protection against the canal, since they can not control it outright, and the side of the people, who are the consumers. But we do not admit that any right anywhere exists to question the authority of the United States to act as it pleases.

"These questions have been settled by the Congress of the United States, which has declared against the insolence of the transcontinental railways and, for the purpose of insuring low freight rates between the Atlantic and Pacific coasts, has permitted independent steamship lines to use the canal free of tolls. In arriving at this decision, Congress established the right of the United States to regulate its interstate commerce without outside interference. And Woodrow Wilson himself, when a candidate, stood squarely upon this ground.

"What foreign nation has questioned this right?"

"Not Germany, not France. No nation has questioned it save England alone, and England has no leg to stand on for this reason: A ton of freight going from Philadelphia to San Francisco constitutes interstate commerce, and it remains interstate commerce no matter whether it is carried in the box car of a railroad or in the hold of a steamship. England can not carry that ton of freight under any circumstances whatever. It is a piece of insolence—nothing else—on the part of England to assume to control in any manner the handling of that ton, to insist that $1.20 in tolls shall be charged upon it, which is to say $1.20 added to the cost to the consumer.

"The canal has been built and is owned outright by the United States. It requires a most unusual stretch of the imagination to hold that the United States can not use that canal for its own domestic purposes in any manner it sees fit. When we place the shipping of foreign nations upon a basis of equality—treat England and Germany and France precisely alike—we fulfill our treaty obligations. That is all there is to the treaty, and the Democratic Congress and the Democratic convention and the Democratic President (when a candidate) have all so declared.

"Come, now, you gentlemen who are about to record the will of the administration, be honest about it. You are not advocating tolls because the treaty has been violated by remitting them, for you know, and have so recorded your votes, that there is no treaty violation. You are swallowing your own convictions, you are abdicating your independence of thought, you are blindly closing your eyes and surrendering, "right or wrong," to save the face of the administration in a mistaken Mexican policy which, for its utter childishness, has been the butt of every world's capital."

If we vote against free tolls, will not our constituents justly charge that our course has been a most humiliating one and that we were selling out our own country?

If we have not the right to grant free tolls to coastwise vessels, then it occurs to me that we had no right to fortify the canal. Such being the case, after going to the great expense of doing so, shall we, at the dictation of Great Britain or any other nation, remove the fortification? And must our battleships pay toll when passing through the canal?

"OUR NAVY AND THE CANAL.

"Let not those Members of Congress who are going to follow the administration, 'right or wrong,' in its astonishing surrender of American rights in the Panama Canal entertain the notion for one moment that they can draw a distinction between vessels of commerce and naval vessels.

"If Congress concedes the right of England to demand tolls upon coastwise steamships, it concedes that battleships can be similarly treated.

"Only such an astonishing mind as is possessed by Chairman ADAMSON, of the House Committee on Interstate and Foreign Commerce, can split the words of the Hay-Pauncefote treaty so that they shall have two distinct meanings.

"'The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules,' reads the treaty, and then follows the provision that such nations shall be treated alike as regards tolls.

"Solidly linked together are the 'vessels of commerce and of war.'

"If a cargo carrier can not pass through the canal free of tolls, neither can a battleship of the United States, according to the wording.

"And this isn't all, by any means. If the expression 'all nations' includes the United States—which, of course, it does

not, since no proprietor of an enterprise cuts himself off from the full enjoyment of his own property—then we should be violating the treaty if we defended the canal with our own warships if we were involved in war. Let us recall these excerpts from the treaty:

"Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary; and the transit of such vessels through the canal shall be effected with the least possible delay, in accordance with the regulations in force and with only such intermission as may result from the necessities of the service.

"No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

"The provisions of this article shall apply to waters adjacent to the canal within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time, except in case of distress, and in such case shall depart as soon as possible; but a vessel of war of one belligerent shall not depart within 24 hours from the departure of a vessel of war of the other belligerent.

"If the United States is to be included as among 'all nations observing these rules,' then every rule must apply to it precisely as it applies to any foreign nation.

"You can not split hairs or draw lines.

"Therefore if this Nation went to war it would become a 'belligerent,' and under the treaty would be bound by the restrictions above quoted.

"This journal has no patience with the plea that there is treaty violation when we relieve American coasting vessels of tolls. It believes that American battleships can use the canal as they see fit without the permission of England; that as 'belligerents' they can take possession and fight off the other 'belligerents.'

"But if the treaty is to be so construed that the United States must personally submit to the rules provided for 'all nations,' then the battleship has no more right in the canal than the coastwise steamer—not a bit more.

"And the Member of Congress who votes for tolls on American coasters surrenders a great principle at the behest of England."

ARBITRATION.

Why has not the President suggested that the matter be submitted to arbitration? Why submit to the dictation of Great Britain without offering to arbitrate; and then, why so much haste? Why not put it off until the next session and let us see how our people at home feel about it? Evidently all the people, or practically all, were with the President when he was for free tolls. Have they all changed their minds? For one, I would like an opportunity to find out.

I have given the views of the President when he was seeking an election, and I now give you the opinion of ex-President Taft:

FROM MR. TAFT'S MESSAGE.

In his message of August 18, 1912, written after receipt of the first formal British protest against tolls exemption, after the passage of the bill by the House of Representatives, Mr. Taft said:

"After full examination of the treaty and of the treaty which preceded it, I feel confident that the exemption of the coastwise vessels of the United States from tolls and the imposition of tolls on vessels of all nations engaged in the foreign trade is not a violation of the Hay-Pauncefote treaty.

"I am sure that it is not the intention of Congress to violate the Hay-Pauncefote treaty or to enact anything inconsistent with its provisions, and that it certainly is not its purpose to repeal, by subsequent enactment, the treaty in so far as it represents the law of the land."

On Tuesday at New Haven Mr. Taft said he had "seen no reason" to change the views then expressed.

And here are the views of ex-President Roosevelt; and I might quote many others, Democrats as well as Republicans, who entertain similar views:

COL. ROOSEVELT'S VIEWS.

"I believe that the position of the United States, as to the Panama Canal, is proper as regards this coastwise traffic. I think that this does not interfere with the rights of any other nation. No ships but our own can engage in coastwise traffic, so that there is no discrimination against other ships when we relieve the coastwise traffic from tolls. I believe that the only damage that would be done is to the Canadian Pacific Railway. * * * We are benefiting the whole world by our action at Panama, where every dollar of expense is paid by ourselves. In all history I do not believe you can find such great and expensive work as the Panama Canal, undertaken not by a private corporation, but by a nation, as generously put at the service of all mankind."

No; we built the Panama Canal by American brains and energy, upon American soil, with the money of the American taxpayer, and it is distinctly an American waterway, and is subject to the exclusive sovereignty and jurisdiction of the United States, and it is for us to make the rules and regulations governing the same, so that all nations may know what they can and can not do respecting the same. Such being the case, what more is there to be said, and what more remains to be done except to vote for free tolls? My colleagues, do you fully realize the significance and effect of what you are about to do? By your votes you will construe a treaty, and your action will be final. Let us hope you will have no regrets in the future.

In conclusion, I say, let us do the right thing. As Americans, representing Americans, vote for free tolls.

An Answer to the Erroneous Statements Made in the Minority Report on the House Naval Bill.

EXTENSION OF REMARKS

OF

HON. FRED A. BRITTEN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 20, 1914.

Mr. BRITTEN. Mr. Speaker, I desire to submit a statement purporting to have been made by Sir Arthur Balfour on "German territorial expansion," appearing in the Nord and Sud:

GERMAN TERRITORIAL EXPANSION.

[An analysis by Arthur Balfour of the German preparation for war.]

The external facts of the situation appear to be as follows: "The greatest military power and the second greatest naval power in the world is adding both to her army and to her navy. She is increasing the strategic railways which lead to frontier States—not merely to frontier States which themselves possess powerful armies, but to small States which can have no desire but to remain neutral if their formidable neighbors should become belligerents. She is in like manner modifying her naval arrangements so as to make her naval strength instantly effective. It is conceivable that all this may be only in order to render herself impregnable against attack. Such an object would certainly be commendable, though the efforts undergone to secure it might—to outside observers—seem in excess of any possible danger. If all nations could be made impregnable to the same extent, peace would doubtless be costly, but at least it would be secure. Unfortunately, no mere analysis of the German preparations for war will show for what purpose they are designed. A tremendous weapon has been forged; every year adds something to its efficiency and power; it is as formidable for the purposes of aggression as for purposes of defense. But to what end it was originally designed, and in what cause it will ultimately be used, can only be determined, if determined at all, by extraneous considerations.

"I here approach the most difficult and delicate part of my task. Let me preface it by saying that ordinary Englishmen do not believe, and certainly I do not believe, either that the great body of the German people wish to make an attack on their neighbors or that the German Government intends it. A war in which the armed manhood of half Europe would take part can be no object of deliberate desire either for nations or for statesmen. The danger lies elsewhere. It lies in the coexistence of that marvelous instrument of warfare which embraces the German Army and Navy with the assiduous—I had almost said the organized—advocacy of a policy which it seems impossible to reconcile with the peace of the world or the rights of nations. For those who accept this policy German development means German territorial expansion. All countries which hinder, though it be only in self-defense, the realization of this ideal, are regarded as hostile; and war, or the threat of war, is deemed the natural and fitting method by which the ideal itself is to be accomplished."

Mr. Speaker, I also desire to answer the erroneous statements made in the minority report of the naval appropriation bill recently submitted to the House.

WHAT CONSTITUTES BATTLE STRENGTH.

The statement which follows compares the *Oregon*, which is over 20 years old, with recent dreadnaughts like the *Wyoming*, and states that the old 13-inch gun of the *Oregon* is only effective at a range of 3,000 yards, while the 12-inch gun of the *Wyoming* is effective at 12,000 yards.

It explains why the battle strength of the Atlantic Fleet would be diminished by the presence on the battle line of ships of the class of the *Oregon*.

It shows clearly that by 1917 our fleet of dreadnaughts will number but 12, but that before that date—in 1916—the German fleet will contain 19 dreadnaughts and 7 dreadnaught cruisers, or a total of 26 ships of the dreadnaught type and battle cruisers.

A review of the statements made in the minority report of the Committee of the House on Naval Affairs contained in pages 64 to 67, inclusive, of the report, displays the following fundamental errors from lack of knowledge of what constitutes battle strength, and these errors underlie the whole argument:

(1) It was assumed that the caliber of a gun gives the exact measure of its power; hence, all that is needed to compare the power of fleets is to count their guns caliber by caliber.

(2) It was assumed that all guns of a fleet, whatever their caliber, count in action.

(3) It was assumed that gun power alone counts in action, and speed, torpedo power, protection, maneuvering power were negligible quantities.

(4) It was assumed that all ships are effective battle units so long as they have guns of given calibers mounted on them, irrespective of the actual power of the guns or the condition of the ships.

(5) A misconception of what does or does not constitute what is technically known as a "dreadnaught."

These errors will be briefly discussed before pointing out the many actual misstatements contained in the report, in which errors of figures are used to deduce false conclusions.

Taking them in order—

(1) Caliber is only one of several elements that constitute the power of a gun. Its other main elements are the construction of the gun itself, its length, the weight of projectile, and the muzzle velocity. All these combined give the penetrative and destructive power of the gun, which is its true power, and may be roughly measured by the muzzle energy. If caliber alone were considered, our 15-inch guns of Civil War period might be counted as formidable weapons now.

We have mounted on the three ships of the *Oregon* class, the two of the *Kearsarge* class, and the three of the *Alamaba* class thirty-two 13-inch guns of 35 calibers, with a muzzle velocity of 2,000 foot-seconds. These guns sound formidable when considered from the point of view of caliber alone; but their penetrative power at 6,000 yards is slightly less than that of the modern 8-inch gun—the one being 9.8 inches of armor and the other 9.7 inches—and only slightly greater at 9,000 yards—the one being 7.7 inches of armor and the other 8.1 inches. Both the modern 8-inch and the old 13-inch would be ineffective at battle ranges. To get effective penetration of a modern battleship's armor with our old 13-inch guns requires a reduction of range to 3,000 yards, when its penetration is about 14 inches, which is about equivalent to the penetration of our 12-inch 50-caliber guns at 12,000 yards. This illustrates the absurdity of comparing guns by caliber alone.

(2) The minority report states, page 66:

> If, instead of counting the broadsides of only the big guns, he had taken the broadsides of all the guns in the battle fleet, it is evident the muzzle energy of our guns would have been greater.

The only guns that count in a fleet action are the guns that will penetrate and so inflict vital injury on the enemy. Minor caliber guns, mounted in the open or behind only light armor, are intended for other purposes. To man and use them in a fleet action between battleships would only invite the destruction of their crews without accomplishing anything against the enemy. Hence, such guns are never taken into consideration in comparing strength of battleships against battleships, as they neither add to nor subtract from that strength. The only guns that count in such a combat are the guns with power to pierce.

(3) The only comparison made in the minority report is based on guns. Torpedoes are not mentioned, nor are speed, protection, and maneuvering qualities, which form such a large element in the classification of ships. In this way the very decided superiority of the German ships in torpedo fire is ignored, as is also their advantage in the matter of homogeneity in maneuvering qualities and speed.

(4) The assumption throughout the argument that all ships since our first battleship, the *Indiana*, are effective battle units is based on a false conception of what an effective battle unit is. An effective battle unit is one that adds strength to the fleet. To add an *Oregon* or an *Indiana* to the battle line, with their ineffective guns and low speed, not only does not add strength to the line, but materially diminishes its fighting efficiency by reducing the speed and tactical mobility of the whole, while putting on the rest of the line the extra burden of protecting such weak and ineffective units. Added to a battle line composed of the predreadnaught ships of the Navy, the three *Oregons* in their present state would reduce the fleet by at least 2 knots, a most serious tactical handicap, without adding any strength in gunfire at battle ranges. Added to the dreadnaught division of the fleet, the tactical handicap would be at least 6 knots. Any ship is obsolete and outworn when it weakens and handicaps the battle line instead of giving it strength. Our first three battleships, the *Oregon*, *Indiana*, and *Massachusetts*, are in this class in fact, irrespective of when laid down or completed. Experience both in our Navy and in foreign navies has shown that, as near as general law can be arrived at, a battleship reaches that condition after 20 years of life in the fleet, or about 24 from the date of authorization. Hence, to maintain a fleet at a fixed numerical fighting strength, a new ship to replace one obsolete would have to be authorized 20 years from the authorization of the original. This is absolute law in Germany and Russia, and is closely followed in England; and, in computing strength of navies, vessels of over 20 years' life—or 24 years from authorization—are considered and are negligible.

(5) The term "dreadnaught" was taken from the ship of that name completed in England in 1906, the first ship of a new type. This was a ship of 21 knots speed, 18,000 to 22,000 tons displacement—light or loaded—armed with a main battery of ten 12-inch guns and a number of small guns for torpedo defense, and a very complete armor protection. Since that date all navies have followed this general type, and all ships of 20 or more knots speed with a main battery of one large caliber capable of piercing armor at battle ranges have been called "dreadnaughts." The calibers of dreadnaught guns in the British Navy have varied from 12 to 15 inches. The same in the Italian. In the German Navy from 11 to 12, and they are now going to 15 inches. With us it has been from 12 to 14 inches. The numbers of main battery guns have also been variable. But the accepted requisites in all navies to constitute a "dreadnaught" are (1) a main battery of a single large caliber of gun capable of piercing armor at battle ranges, and (2) a speed of 20 or more knots, necessary to be capable of acting with other dreadnaughts.

No ship of ours previous to the *Delaware* fulfills both these requisites. The *South Carolina* and *Michigan*, claimed by the minority as "dreadnaughts," have eight 12-inch guns each in the main battery, but in hull construction, speed, size, and all maneuvering qualities class with the six ships of the *Connecticut* class and the five ships of the *Virginia* class. They are, in all essentials, improved *Connecticuts* with the intermediate battery of that class replaced by two 12-inch turrets. In no sense are they "dreadnaughts," being lacking both in speed and size, and to attach them to the dreadnaught division means the tactical sacrifice of that division of over 2 knots speed.

What has been previously said answers fully this remark found in the minority views, top of page 65:

> This table, like the one the Secretary (Mr. Daniels) has discussed before the committee, puts two of our dreadnaughts in the battleship class, includes four German battleships with 11-inch guns in the dreadnaught class, omits three of our battleships altogether.

The two of our battleships—the *Michigan* and *South Carolina*—which the minority erroneously classes as dreadnaughts are put in the battleship class because they are battleships and not dreadnaughts. The four German dreadnaughts—the *Nassau*, *Westfalen*, *Posen*, and *Rheinland*—with main battery of twelve 11-inch guns each, and of 20 knots speed, are classed as dreadnaughts because they are dreadnaughts, having the speed, size, and battery of dreadnaughts, their 11-inch guns being high-powered guns of 3,254 foot-seconds muzzle velocity and capable of penetrating armor at battle ranges. In fact, the Germans have always claimed, though this claim is not conceded by the British, that these guns are superior to the British 12-inch guns. The three omitted battleships from our list—the *Indiana*, *Oregon*, and *Massachusetts*—do not come in the class of effective ships, having been authorized 24 years ago, and being obsolete, and having been shown to be a source of weakness instead of strength to a battle line composed of our other ships from the uselessness of their guns at battle ranges, and the reduction of the fleet speed which would be entailed by their presence.

Following this the minority makes an even more erroneous and misleading statement in regard to cruisers when it states:

> omits the same four armored cruisers that are omitted in the table about which the Secretary had made his statement, gives us 14 cruisers, though the yearbook gives us a list of 24, and therefore we can see nothing in this table to show German superiority.

The fact is that we possess exactly 11 armored cruisers less than 20 years old, while the Germans possess 9 armored cruisers. In addition to this, we possess three—not four—large protected cruisers, mounting only 6-inch guns, the *Charleston*, *Milwaukee*, and *St. Louis*, and these are presumed to be what the minority claims to be the four omitted cruisers. These three are omitted in the tables from the armored-cruiser class because they are not armored cruisers, but are given as large cruisers in a class by themselves, and the total of our large cruisers, including the 11 armored and 3 protected cruisers as given in the lists, of less than 20 years is 14. In the Intelligence tables the cruisers are entered as 11 armored cruisers and 14 cruisers. This 14 includes the three protected cruisers spoken of above and 11 of a smaller size that might be of some value. This makes the total serviceable cruisers of all classes 25 and not 24, as the minority states; but in the comparison in the hearings these smaller cruisers were not included.

The inference from the minority's statement is that a number of our cruisers were concealed in order to make a false com-

parison of strength. In the comparison only cruisers that are usually spoken of as "first class" were considered. If we count the lesser units—which the minority believes to have been concealed—in our Navy, we will have to count the equivalent in the German Navy, when the disparity becomes more marked. Of these vessels completed and serviceable Germany has 9 armored cruisers and 40 cruisers, and we have 12 armored cruisers—1 obsolete and not included in the tables—3 large protected cruisers, and 12 cruisers—1 over 20 years old and not included in the tables. (Note.—The 4 German dreadnaught cruisers are not included in this, as they come under the dreadnaught class).

The minority further states that the tables "give us only 4 monitors, though we have 10." In the comparison made in the hearings monitors were not included at all, as they are of no fighting value to the fleet. Four of the 10 monitors listed are armed with semimodern 12-inch guns; the other six are armed with old low-powered 10-inch 30-caliber and 12-inch 35-caliber guns. In the table of the British Navy League Annual quoted by the minority, the four monitors armed with semimodern guns were entered as "of questionable fighting value." The other six with obsolete guns were not considered by the British authority as of even sufficient value to be entered under any head. The equivalent obsolete coast-defense ships of the German Navy, like our six obsolete monitors, were not considered of sufficient value by the British authority to be entered at all, also. There was no concealment in this. The British authority entered in their tables all ships they considered of any fighting value.

The remarks of the minority contained in the last two paragraphs on page 65 and all of page 66 and top of page 67 indicate a complete confusion in the minds of the minority as to how the comparison between the two fleets was drawn.

Only ships actually completed at the beginning of this year—the *New York* and *Texas* being considered completed for this purpose—were taken into consideration in the comparison for either fleet. It was a comparison of the fleets ready for war at the present time, our own fleet being given the extra advantage of counting the *New York* and *Texas* in, as they are practically complete, and could be gotten ready promptly in an emergency.

None of the ships building were included in the computation for either fleet; therefore the statement of the minority, on page 66—

> Since he left out six of our dreadnaughts, to wit, the *South Carolina, Michigan, Oklahoma, Nevada, Pennsylvania*, and *No. 39*, and only two of the German dreadnaughts building * * *

is a total misstatement of facts. Considering the *New York* and *Texas* as completed, the only dreadnaughts we have building are the *Oklahoma, Nevada, Pennsylvania*, and *No. 39*, and they are not included in the computation.

On the other hand, instead of there being only two of the German dreadnaughts building left out, as incorrectly stated by the minority, all the German dreadnaughts building were left out, including six dreadnaughts and three dreadnaught cruisers, or a total of nine, to wit, the *Grosser Kurfurst, Markgraf, Konig, Ersatz Brandenburg*, "*T*," *Ersatz Worth, Derfflinger, Ersatz Kaiserin Augusta*, and *Ersatz Hertha*.

The *South Carolina* and *Michigan* are left out in the computation of the fire of the dreadnaughts, for reasons already stated, since they are not dreadnaughts; but they are included in the fire of the predreadnaughts, where they belong; and it is to be noted that while the minority makes much of their being omitted from the dreadnaughts in their discussion on page 66, they fail entirely to mention the fact that they are included and their fire counted in the predreadnaught fire, discussed on page 65, and that their full fire is included in the total.

On page 65 the minority states:

> It therefore becomes imperative that in comparing the dreadnaught ships of the two navies the German superiority should be shown, and he accomplishes this by comparing 8 of our dreadnaughts with 17 of the Germans', and thus shows the German superiority. It would have been just as easy to take 17 of our ships and compare them with 8 German ships.

This last, of course, is false reasoning, as we could not take 17 of our ships that were dreadnaughts, since we have only 8, and this 8 includes the *New York* and *Texas*, which, though about completed, are not yet in the fleet. The comparison made was between existing ships, and not ships of the imagination.

The total American dreadnaught fleet existing consists of the *Delaware, North Dakota, Florida, Utah, Arkansas, Wyoming, Texas*, and *New York*, a total of 8.

The total German dreadnaught fleet existing consists of the *Nassau, Westfalen, Posen, Rheinland, Ostfriesland, Helgoland, Thuringen, Oldenburg, Kaiser, Friederich der Grosse, Kaiserin, Prinzregent Luitpold*, and *Konig Albert*—13 dreadnaughts—and the *Von Der Tann, Moltke, Goeben*, and *Seydlitz*—4 dreadnaught cruisers, or a total of 17.

It was the above-mentioned 17 and 8 ships that were compared; and there is no other comparison possible, since they constitute all the completed dreadnaught ships of both navies at the present time. To have added our 4 and the German 9 dreadnaught ships building would have been a false comparison at the present time, but would have emphasized the increasing superiority of Germany in dreadnaught ships in the near future, as by 1917 Germany will have added 9 to our 4.

By 1917 our fleet of dreadnaughts will number 12, and nothing that we can now do can increase that number unless we should buy of other nations.

Before that date—in 1916—the 9 German ships of dreadnaught type will be completed and the German fleet will contain 19 dreadnaughts and 7 dreadnaught cruisers, or a total of 26 ships of dreadnaught type.

No amount of juggling figures can alter these facts.

The statement of the minority on page 66:

> He also takes the 13 German dreadnaughts now built, including 4 with 11-inch guns, and also 4 of the 6 German dreadnaughts now building, as to which he says it is impossible to procure the data, and then compares these 17 German ships built and building with the 8 of ours, built and building—

And so forth,

Partly explains the error into which the minority has fallen. They had failed to grasp what ships constitute the 17 German ships and the 8 American that were being compared, or the fact that in neither lot were any ships building included, or that the comparison was a comparison of the fleets as they actually exist to-day of such ships as both nations could now put in the battle line. With the present building programs of the two nations, German superiority is progressively increasing as just shown by the comparison in 1916.

This error on the part of the minority in failing to grasp what ships were being compared also explains to a great extent the numerous errors in the count of the guns contained in the last part of the top paragraph on page 66, in which the minority states:

> * * * he also finds that the 17 German dreadnaughts have eighty-two 12-inch guns, when, in fact, the 17 dreadnaughts he selects have one hundred and thirty-eight 12-inch guns. He also finds that the 4 German ships that he includes to make the 17 have seventy 11-inch guns, when, in point of fact, as anybody can see who will look on page 832 of the Yearbook, they have only 44. This confusion and mixing of the number of guns on both sides makes the comparison as worthless as the selection of the ships.

There is evidently a great "confusion and mixing" of numbers, but on the part of the minority and not in the statements made in the hearing. The numbers and calibers of the guns given in the hearing for the 17 German and the 8 American ships under comparison were absolutely correct.

The main battery broadside of the 8 American dreadnaughts being compared consist of twenty 14-inch guns and sixty-four 12-inch guns, as given in the hearing.

The main battery broadside of the 17 German ships being compared consists of eighty-two 12-inch guns and seventy 11-inch guns, as given in the hearings. It was the muzzle energy of these two broadsides of ships built and ready for battle that was compared, and the only errors in any of the figures which are quoted in the minority views from the hearings are in the total foot-tons of energy for each navy. The minority took its figures for both the predreadnaught and the dreadnaught ships from the original uncorrected entry in the hearing which gave—

	German.	American.
Predreadnaught muzzle energy	5,007,500	7,741,565
Dreadnaught muzzle energy	13,943,830	9,678,200
Total	18,951,330	17,419,765

All of these figures should have been divided by 2, there having been an arithmetical error in the original computation, MV^2 having been used instead of $\frac{1}{2}$ MV^2 for energy, and were corrected in the final corrections to the hearings. Since the ratio is in no way affected by this, however, as the division is the same for both fleets, the relative strength of the two fleets is not affected whether the double figures quoted by the minority are used or the corrected figures gotten by dividing this by 2.

To obtain the comparison which the minority attempts to deduce at the top of page 67, including the *Oklahoma, Nevada, Pennsylvania*, and *No. 39* in the American fleet, would necessitate another computation which would not be correct until *No. 39* is completed in 1917; and by that time the German strength would have to be added to by including six dread-

naughts and three dreadnaught cruisers they are now building, and would be proportionally greater.

NOTE.—A dreadnaught cruiser is a ship with a dreadnaught battery in which some of the protection and guns have been sacrificed to obtain greater speed. Only England, Germany, and Japan at present possess ships of this type, though Russia is building some. They are ships of from about 27 to 30 knots speed, with main batteries of dreadnaught type and power. They are given great speed for tactical advantage and great batteries to fight in the line with other dreadnaughts. They are a distinct type from what are known as "armored cruisers"—of which we have 11 and Germany 9—with small batteries of 8 to 10 inch guns, thin armor, and inferior speed of 22 to 23 knots, and are classed in all navies as ships of the first order with the dreadnaughts.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. J. D. POST,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 28, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. POST. Mr. Speaker, when the act to provide a government for the Panama Canal Zone was under consideration in the House I was paired against the provisions of the bill permitting the free use of the canal to the vessels owned by citizens of the United States engaged in coastwise trade. I believed then, as I do now, that the plank in the Baltimore platform advocating the free use of the canal to those vessels of our merchant marine engaged exclusively in our coastwise trade is repugnant to our treaty obligations to Great Britain and directly opposed to the economic principles always adhered to by the Democratic Party. I then had confidence in my position, and the intervening time has strengthened my faith in the correctness of my attitude upon this great question. I hope I fully appreciate the gravity of a platform declaration; yet, notwithstanding this, I believe that the obligations of a binding contract, solemnly entered into, constitute a rule of conduct more sacred than the precepts of a party declaration. In this connection it may be consoling that another great party, born on the windy shores of Lake Michigan, in the commercial metropolis of the State of Illinois, coming in on the wings of a cyclone and destined to go out like the disappearance of a gentle zephyr on a blushing May morn, committed the same error, if mistake it be.

Any discussion of this momentous controversy must necessarily revolve around certain provisions, phrases, and words contained in the treaty between this country and Great Britain, entered into and ratified on November 18, 1901, the Hay-Pauncefote agreement, and incidental thereto the Hay-Pauncefote treaty of February 8, 1900, as well as the Clayton-Bulwer agreement of April 19, 1850.

In English jurisprudence intention is the polestar by which we are guided in the construction of contracts, no matter whether they relate to the agreement of ordinary commercial transactions between individuals or deal with international affairs. If the intention can not be gathered from the four corners of the instrument, if its terms are uncertain or dubious, or are ambiguous, or for any other reasons there is doubt as to its true meaning and import, then it is a rule of both municipal and international law that resort may be had to the history of the transaction and to the facts and circumstances leading up to, as well as those surrounding, the consummation of the agreement or convention, and thus to arrive at the correct construction. Let us apply these salutary rules to the momentous question under consideration, and first look to the history of the transaction leading up to the ratification of the Hay-Pauncefote convention.

Let me first say that it was the constant, insistent policy of the United States from time immemorial, whenever treating the subject of connecting the two oceans through the Isthmus of Panama by means of a canal, that such connection should always be neutral and should be equal for the use of the vessels of the citizens of all nations upon just and equal terms.

As early as May 8, 1826, Henry Clay, then Secretary of State, in a letter written to the representatives of this country to the Panama Congress—in fact, instructing such representatives—wrote:

What is to redound to the advantage of all America should be effected by common means and united exertions, and should not be left to the separate and unassisted efforts of any one power. If the work should ever be executed so as to admit of the passage of sea vessels from ocean to ocean the benefits ought not to be exclusively appropriated to any one nation, but should be extended to all parts of the globe upon the payment of a just compensation or reasonable tolls.

At this early day Mr. Clay was speaking for the United States, and no one can doubt that, from the language employed, a canal connecting the two great oceans should be appropriated to the equal use of the citizens and subjects of all nations, subject only to the payment of just compensation or to a charge of reasonable tolls.

On the 3d of March, 1835, the Senate passed a resolution requesting the President to consider the expediency of negotiating with other nations, particularly with the Governments of Central America and New Granada, to protect those who might undertake to open communication between the two oceans upon the Isthmus by means of a ship canal and of extending forever the free and equal right of navigating such canal to all such nations on the payment of reasonable tolls to compensate the capitalists who might undertake and complete such work. Under this resolution every nation agreeing to protect capitalists who would undertake and complete the construction of the canal and pay the proper tolls should have the free and equal right to its navigation.

In 1839 this House unanimously passed a similar resolution, but somewhat more comprehensive. The resolution was reported by the Committee on Roads and Canals. Like the Senate resolution, it requested the President to open up or continue negotiations with other nations to determine the practicability of the construction of a ship canal across the Isthmus and of securing forever by suitable treaty stipulations the free and equal right of navigating such a canal to all nations. No one can doubt the import of the phrase, "the free and equal right to navigate such canal to all nations."

President Polk, in his annual message to the Congress, spoke in no indefinite terms upon this question:

That either of these Governments—

Referring to Great Britain and France—

would embrace the offer can not be doubted, because there does not appear to be any other effectual means of securing to all nations the advantages of this important passage but the guaranty of great commercial powers that the Isthmus shall be neutral power. The interests of the world at stake are so important that the security of this passage between the two oceans can not be suffered to depend upon the wars or revolutions which may arise among different nations.

Language in favor of both equality and neutrality could not be more direct. No one will doubt but that these many solicitations and invitations to other nations on the part of the United States to connect the two oceans by means of a canal culminated in the agreement of April 19, 1850, commonly known as the Clayton-Bulwer treaty. This contract in unquestioned language defines the purpose for which a ship canal is to be constructed. In article 5 it is provided that the canal "may forever be open and free." In article 6 it is stipulated that—

the contracting parties likewise agree that each shall enter into treaty stipulations with such of the Central American States as they may deem advisable for the purpose of more effectually carrying out the great design of the convention, namely, that of constructing and maintaining said canal as a ship communication between the two oceans for the benefit of mankind, on equal terms to all, and of protecting the same.

Article 8 contained a provision to the effect—

that the same canals or railroads, being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other State which is willing to grant thereto such protection as the United States and Great Britain afford.

These historical facts by their terms point with unerring aim to only one conclusion, and that is that the terms and conditions of use of an interoceanic canal should be the same to all comers.

The Clayton-Bulwer convention was sought to be superseded by the Hay-Pauncefote agreement of February 5, 1900, but failed of ratification. It was superseded, however, by the Hay-Pauncefote convention of November 19, 1901. Before looking to the provisions of these two instruments to determine what I contend has always been the fixed policy of the United States in maintaining that any canal constructed across the Isthmus should be open upon equal terms to the citizens and subjects of all nations; let us see what transpired in the half century between the execution of the Clayton-Bulwer and Hay-Pauncefote treaties.

I insist that it has been the policy of our Government throughout its history to maintain the freedom of the seas. This doctrine has been carried from the open seas to the bays, inlets, straits, and navigable rivers the world over. It was

upon our initiative that the Government of Brazil, in 1866, opened to navigation to the vessels of all nations the Amazon and other rivers of that country. At our suggestion the Orinoco and the Plata were added to the list of the free rivers of the world. We established this principle as to the Yukon River, in Alaska, by making it navigable on equal terms to vessels engaged in British trade with those of our own. The formative discussion which led to the ratification of the Clayton-Bulwer and the Hay-Pauncefote treaties are conclusive of the attitude of this Government in this regard. The representations made through the Department of State of the United States from time to time to the British Government and the interpretations made of various State papers by illustrious Secretaries of State was to make and render any means of communication between the two great oceans, either by railway or by canal, to all intents and purposes upon equal terms to the commerce of all nations and all peoples.

Secretary of State Cass, shortly after the ratification of the Clayton-Bulwer treaty in 1857, placed this country's construction upon that instrument in the following language:

The United States, as I have before had occasion to assure your lordship, demand no exclusive privileges in this passage, but will always exert their influence to secure their free and unrestricted benefits, both in peace and war, to the commerce of the whole world.

Secretary of State Blaine, in giving instructions to our minister at the Court of St. James, Mr. Lowell, in 1881, with a view to obtaining a modification of the Clayton-Bulwer treaty, exemplifies the intention of this Government as to the character and nature of the canal in the following language:

The United States recognizes a proper guaranty of neutrality as essential to the construction and successful operation of any highway across the Isthmus of Panama, and in the last generation every step was taken by this Government that it deemed requisite in the premises. Nor, in the time of peace, does the United States seek to have any exclusive privileges accorded to American ships in respect to conditions or tolls through an oceanic canal any more than it has sought like privileges for American goods in transit over the Panama Railway, under the exclusive control of an American corporation. It would be our earnest desire and expectation to see the world's peaceful commerce enjoy the same just, liberal, and rational treatment.

Can anyone doubt that by these representations made in behalf of the United States by James G. Blaine, that it was not the intention of the United States that its vessels, whether engaged in over-sea traffic or coastwise trade, was to have precedence in toll or any other respect over the vessels of all the nations of the world? The intention of this Government was fully exemplified by Mr. Blaine in the representations which I have quoted in comparing the privileges sought to be accorded to American ships with the privileges upon American goods in transit over the Panama Railway.

The Panama Railway is a New York corporation; was built by three Americans; built in 1854 and operated as an American institution until its acquisition by the French Maritime Interoceanic Canal Co., and operated by the latter company until its acquisition by the United States. It was completed and operated under the conditions of the Clayton-Bulwer treaty and the convention between the United States and the Republic of Colombia. It is significant that in its operation for one-half a century no demand was ever made for discrimination in freight charges or any other conditions; no demand was ever made, or even an intimation of a desire, that our vessels engaged in the coastwise trade transshipping over the Panama Railroad should receive any discriminations whatever relative to freight or other charges. It was conducted upon the same principles of equality as applied to the Panama and Suez Canals.

The ancient exactions and restrictions of the seas have been so far removed by modern diplomacy as to firmly establish the peace of the waters. So insistent has our policy been for this principle that, by agreement with great Britain, we have applied it to the canal at Sault Ste. Marie in return for like privileges in the Welland Canal.

That this principle was carried into the convention of 1901 I have not the slightest doubt. It was made to remove any objection that might arise out of the convention of April 19, 1850, and without impairing the "general principle" of neutralization established in article 8 of that convention. The general principle of neutralization mentioned in the preamble is specifically defined in article 3, and included the principle of equality, though the two subjects are entirely distinct.

By section 2 the United States may construct the canal, and subject to the provisions of the treaty—

shall have and enjoy all the rights incident to such construction, as well as the exclusive right to regulate and manage the canal.

It is widely contended that, from the fact we obtained complete sovereignty over the territory upon which we have constructed the canal, that the treaty would not be applicable. But I call attention to the preamble, which recites, "by whatever route may be considered expedient," and "the construction of a ship canal to connect the Atlantic and Pacific Oceans," clearly contemplating any route that would pierce the Isthmus. It is seriously contended that, from the fact that, under article 2, the United States are to have the rights incident to the construction, regulation, and management of the canal, that our authority to regulate and control is unlimited. But I call attention to the fact that such authority is subject to the provisions of the treaty; and by the next section of the agreement we adopted certain enumerated rules embodied in the treaty by the powers of Europe, the Sultan, and the Khedive, for the free use of the Suez Canal at all times and for all the powers. Six of these rules were adopted, the first of which provides that—

The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect to the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

The subsequent rules adopted by the treaty relate exclusively to the neutralization of the canal.

Article 1 of the convention respecting the free navigation of the Suez Canal, ratified at Constantinople, October 29, 1888, provides—

The Suez Maritime Canal shall always be free and open, in time of war as in time of peace, to every vessel of commerce or of war, without distinction of flag. Consequently, the high contracting parties agree not in any way to interfere with the free use of the canal, in time of war as in time of peace.

Under the Suez agreement, the vessels of commerce and war, without distinction of flag, are to be accorded the free use of the canal, while under the Hay-Pauncefote convention it is only the vessels of commerce and war of all nations observing these rules that are to be entitled to the free privileges of the Panama Canal. It is palpable that the rules to be observed are those included in the five sections relating to the neutralization of the canal. The language employed in section 2 of the Hay-Pauncefote treaty to effect the equalization of traffic passing through the canal could not have been more definite or explicit. "Shall be free and open" is imperative. "Vessels of commerce and war" include known designated classes of vessels. "All nations" is broad and comprehensive enough to include any form of recognized government. Yet, upon this term the whole controversy seems to hinge. The canal should be free and open "in terms of entire equality." The adjective "entire" in this connection is significant. "Entire equality" would imply that there should be no impartiality whatever. Again, there shall be no discrimination against any nation entitled to the free use of the canal; and this clause can only be important in reinforcing the terms of entire equality. There shall not only be entire equality, but no discrimination against such nation. But these are applied to the citizens and subjects of such nations. The conditions and charges of traffic must not only be just and equitable, but must be administered on terms of entire equality.

The right conferred upon the Government incident to the construction of the canal can have no bearing upon the right to provide for the regulation and management of the canal, and these rights are restricted by the provisions of section 1, article 2, as to the canal being free and open to all vessels on terms of entire equality, and that the conditions and charges for traffic must be just and equitable.

From the course of our conduct, the facts leading up to the consummation of this treaty, the established policy of this country as respects the freedom of the waters for the purposes of navigation and the peace of the seas, and a careful analysis of the context of the instrument itself, it seems to me that the inevitable conclusion must be impressed upon the mind of any fair-minded thinker that the intention of the high contracting parties to this convention is scarcely susceptible of any contention. The history of the transaction shows that the Clayton-Bulwer treaty probably originated with the letter of Mr. Clay as far back as 1826, that that treaty was sought by the United States and not by Great Britain, that it was modified upon the request of the United States, that both were the culminations of negotiations long previously begun and of resolutions passed by both the Senate and House of the American Congress, of representations made to various governments by several Secretaries of State, throughout all of which representations were made by the United States that it did not seek any selfish advantage, but that a canal connecting the two great oceans should be open to the impartial use of all the nations of the world. I assert that this was the policy of this Government always up to the passage of the canal act on August 24, 1912. That policy was to make the canal a great open highway, to bring remote nations and peoples into more intimate relations with one another for the promotion of human happiness and the dissemination of the blessings of civilization. The stupendous sacrifice of human

energy and enormous expenditure of public money, amounting to a figure in excess of $400,000,000, in the building and fortification of the canal, a critical study of the diplomatic history of the many canal projects from 1835 down to the passage of the canal act will prove conclusively was proffered to be sacrificed and expended for no other purpose. To construct this great highway, "open and free" to the commerce of the world, as an exalted agency of peace, had occupied the dreams of our foremost statesmen from the earliest dawn of our history to the date of that act. To selfishly appropriate the canal as a national monopoly or to legislate its use to the exclusive benefit of a particular class of our citizens was never even remotely intimated on our part in the diplomatic correspondence. England from the earliest times had been ever watchful of her interests in the New World and was vitally interested in the question of transportation over the Isthmus. Her possessions in the Western Hemisphere were numerous. She possessed the vast continental empire known as the Dominion of Canada, larger than the United States; Newfoundland, in the extreme north; the Falkland Islands, to the extreme south, at the southern limits of South America; Bermuda; the Bahamas; Barbados; Jamaica; the Leeward Islands; Trinidad; the Windward Islands; and in the central part of the continent, near the Isthmus, British Honduras; and upon the Continent of South America, British Guiana. Her island possessions in the neighborhood of the canal comprise a territory of 19,500 square miles, and that on the continent 98,800 square miles.

In addition to this, Great Britain is the greatest maritime nation of the world, and so much of her energy and capital has found its way into the ocean-carrying trade that her vessels do about half of the shipping business of the world. Her vessels pay more than half of the tolls of the Suez Canal, and when the number and the tonnage of her merchant vessels are taken into consideration it is not at all improbable that her vessels will pay a large amount of the tolls of the Panama Canal. In 1912 Great Britain had more than 10,000 sea-going steamers, while the United States had less than 1,200, and the tonnage of the British vessels was more than twelve tinfes that of the United States. In view of these facts it is not at all improbable that British vessels will pay more than ten times the amount of tolls in passing the canal than will be paid by vessels of American register. From these facts it can not be doubted that Great Britain was vitally interested that any connecting waters between the Atlantic and the Pacific Oceans on the Isthmus should be dedicated to the peaceful commerce of the world, under the guaranty of its permanent neutrality by this Government and all the nations using the canal in recognition of the freedom of the seas. In any construction to be given to the Hay-Pauncefote convention not only the course of conduct, the varied interests involved, but the intention gathered from such conduct and interests affected must be taken into consideration. It is argued in many quarters that the phrase in the Hay-Pauncefote treaty, "all nations," in the sentence, "The canal should be free and open to the vessels of commerce and of war of all nations," does not include the United States, and that "all nations" means all other nations than the United States. As I have heretofore said, the two controlling features of the treaty is the complete neutralization of the canal, which of course applies only to a condition of war, and that of equalization. How could you have a state of "entire equality of all nations" without including the United States? The guaranty of neutrality in time of war to the vessels of commerce and of war, as well as the guaranty of entire equality to all such vessels, is most generous, but the proposition that these generous promises of our treaty undertaking would be satisfied by preserving equality of condition among all other nations than ourselves and reserve to ourselves substantial advantages does extreme violence to the language employed. The adjective "all" signifies every, so that every nation using the canal and observing the rules adopted by the United States in the treaty must of necessity be included. If the United States is not embraced in the "all nations" clause it seems to me that pertinent language should have been employed to that effect. Article 8 of the Clayton-Bulwer treaty is certainly elucidating upon this point, which provides:

> The Governments of the United States and Great Britain having not only desired, in entering into this convention, to accomplish a particular object, but also to establish a general principle, they do hereby agree to extend their protection by treaty stipulations to any other practical communication, whether by canal or by railway across the Isthmus which connects North and South America. In granting, however, their joint protection to any such canals or railways, it is always understood by the United States and Great Britain that the parties constructing or owning the same shall impose no other charges or conditions of traffic thereupon than the aforesaid Governments shall approve of as just and equitable, and that the same canals and railways being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other state which is willing to grant thereto such protection as the United States and Great Britain engage to afford.

The condition that the canals and the railways shall be open to the citizens and subjects of the United States and Great Britain on equal terms shows conclusively that there should be no distinction in the toll charges for the use of the canal or railroad made between the citizens of each country. No one can doubt that had the canal been constructed under the stipulations of this treaty jointly by the two Governments, or by individuals or corporations under their protection, that its use should have been compensated by equal tolls to the citizens and subjects of each country, and by the citizens of every other nation granting such protection as the two Governments engaged to afford. Then in the third article of the Hay-Pauncefote treaty the United States adopts substantially the same language, and provides that all nations observing these rules shall have the use of the canal on terms of entire equality. Anyone, on the very first reading of the "all nations" clause, will instantly say that there is no ground for supposing the United States is excluded from its provisions. Were the six rules adopted by the United States in the treaty for the neutralization of the canal to apply to other nations and not to include the United States? No one at all familiar with the ordinary rules of construction would answer this interrogative in the affirmative. If the United States is included in five of the adopted rules and bound by their provisions, some very subtle reasons must exist to exclude them from the first or all-nations rule. Such a construction would be to admit that equality is a policy peculiar to the Old World and inappropriate to the new.

Again, in article 3 of the Hay-Pauncefote convention, the United States adopts as the basis for the neutralization of the canal the following rules, substantially as embodied in the Constantinople convention for the free navigation of that canal, and which by its terms was to always be free and open to the vessels of all nations without distinction of flag, and which had been opened for many years and used by the vessels of commerce and war of all nations without any discrimination whatever in the payment of tolls, may it not be reasonably presumed that the two nations in adopting the rules for the use impressed them upon the Panama Canal? And then, in the twelfth article of the Constantinople treaty, the principle of equality as regards the use of the canal is particularly emphasized, and it seems reasonable that in the use of like language in the Hay-Pauncefote agreement a similar construction should prevail.

There is another principle, applicable alike to municipal and international law, that should be taken into consideration in the solution of this vexed question. The canal is strictly a public-service utility, and much more of the nature of an international public calling than domestic.

By the express terms of the Hay-Pauncefote treaty the United States was authorized to construct the canal at its own cost, or by gift or loan of money to individuals or corporations. Suppose the canal under this stipulation had been constructed by a domestic corporation, would there be any doubt but that exact and equal conditions and tolls would have been exacted from the citizens of this country whether engaged in the over-sea traffic or the coastwise trade? And if the canal had been so built, the duty of treating all vessels, whether American or foreign, on the same basis of entire equality would have been enforced by the United States against every nation, including itself. It is eminently unfair to say that either of the high contracting parties in using the language employed it in any other than in the ordinary signification, or employed it contrary to the rules both of municipal and international law governing like subjects. The treaty was made in days when equality was and still is the only ideal of justice, and most emphatic language should have been employed to show that a rule of inequality was intended absolutely hostile to the words of that convention and the spirit of the times in which it was made. Is it any wonder that President Wilson, on March 5, in his address to the joint Houses of Congress, declared "that everywhere else the treaty is given but one interpretation"?

In the construction to be given to any contract it is well to look to the consideration moving the parties to enter into its stipulations. In this respect the Clayton-Bulwer treaty provided for a joint construction and control of any canal piercing the Isthmus of Panama. The United States could not with that treaty subsisting construct a canal connecting the two oceans. In order to get rid of this obstacle the treaty was superseded by the Hay-Pauncefote convention. Great Britain gave up her right to participate in the construction and control of a canal and the United States gained the exclusive right to its construction, and for the relinquishment of the joint right of construction and control Great Britain certainly received the assurance that the canal should be open to British and United States vessels upon terms of equal treatment.

There is another rule of property peculiarly applicable to the Panama Canal. When an individual or other owner dedicates

property to a public use and the public accepts it for such use, the public thereby requires an easement in the property for such purposes. Only two things are requisite to create such an easement—dedication on the part of the owner and acceptance by the public. This principle is recognized as a rule of international as well as municipal law. A dedication may be effected in various ways, usually by words or acts of the proprietor, or by long-continued use acquiesced in by the owner. The United States for decades has held out to the entire world that any canal across the Isthmus should be dedicated to an international use. It has consistently declared, reiterated, and emphasized such an intent for more than 75 years. The nations of the world, by every act and utterance on our part, have been led to believe that the canal should be dedicated to an international use. Such a rule would not destroy our rights as owner to impose reasonable tolls, or deprive us from making and enforcing reasonable regulations for the protection, preservation, and maintenance of our property, but would impose upon us a positive duty of serving the entire public without discrimination and upon terms of entire equality. I need not repeat the early declaration of Mr. Henry Clay and of the many succeeding eminent Secretaries of State, the resolutions of the Senate and House, the provisions of the Clayton-Bulwer convention, the two Hay-Pauncefote treaties, the Constantinople agreement, and the Colombian agreement, to prove the declared intent on the part of this Government to dedicate the canal to an international use. Another maxim is that where property is once dedicated to a public use, such dedication can not be revoked; and when, as I have shown, the whole world has relied upon our sacred promise and declared intent to dedicate the canal to the world's commerce upon terms of exact equality, how can we now, without stultifying the national honor, revoke our promise and avoid our dedication? Our offer has been accepted and our dedication complete, and both accomplished before the passage of the canal act.

Let us consider this question in the light of rule of another law. The modern tendency is to establish the principle that navigable waters in times of peace must be treated as international waters not subject to exclusive national control. The exception to this rule is that if the navigable water is useful to the commerce of only one or two States through which it passes or upon which it borders, then such States may exercise sovereignty over it. The general rule has arisen out of the fact that water, covering the greatest part of the surface of the earth, is the great medium for international communication. That the waters of the earth should be free to the commerce of the world as a means of communication is so vital to the prosperity of the nations of the world that this principle is universally recognized. The Panama Canal is a waterway vital to the vessels of commerce of all maritime nations. It is a waterway connecting two great bodies of water, both of which are highways of commerce of all nations, and, if it was a natural way, would fall clearly within the rule. Though an artificial waterway, I feel most certain it comes clearly within the principle. Its international use is so paramount and vital to the commerce of the world that its subjugation to the domination of any one nation would be abhorrent to the civilized world.

Much stress is laid in some quarters upon the decision of the Supreme Court in the case of Olsen *v.* Smith (195 U. S., 332). It is claimed that the phrase "upon terms of entire equality" has in this case received a judicial definition, and under its designation we would be at liberty to exempt vessels of our citizens engaged in the coastwise trade through the canal from the payment of tolls. An analysis of the treaty with Great Britain, under which this decision was made, will show conclusively the correctness of the decision, as well as the futility of the contention. This decision was made relative to a treaty between Great Britain and the United States entered into in 1815. Smith was a duly licensed pilot for the port of Galveston under the laws of the State of Texas. Olsen was not so licensed, but offered his services to pilot vessels in or out of the port of Galveston bound to or from foreign ports. Smith sued for damages, and one of the claims relied upon was that the laws of the State of Texas, subjecting vessels of Great Britain to charges of pilotage, was contrary to the express terms of the treaty of December 22, 1815. The State law exempted coastwise vessels from pilotage dues. The Federal Supreme Court held that a law subjecting all vessels, domestic and foreign, engaged in foreign trade to pilotage regulations, but which exempted coastwise vessels of the United States is not in conflict with the provisions of the treaty between the United States and Great Britain to the effect that British vessels shall not be subject to any higher pilot regulations than vessels of the United States

Article 1 provides, "The inhabitants of the two countries shall have liberty freely and securely to come with their ships and cargoes to all such places, ports, and rivers in the territories aforesaid to which other foreigners are permitted to come, to enter the same, to remain, and reside in any port of the said territories, respectively—the merchant and traders of each nation, respectively, shall enjoy the most complete protection and security for their commerce, but subject always to the laws and statutes of the two countries, respectively."

The territories referred to are designated as the territories of the United States and all the territories of His Britannic Majesty in Europe. It will be perceived that the complete protection and security of the merchants and traders of the two countries was always to be subject to the laws and statutes of each country, and this being so the pilotage law of the State of Texas would be expressly exempt by the terms of the treaty.

Article 2 provides that no higher duties or charges shall be made upon articles of export or import of either country than are payable on like articles of any foreign country, thus placing the commerce of each country upon an entire equality with every other nation. It is also provided that no higher or other duties or charges shall be imposed in any of the ports of the United States on British vessels than those payable in the same port by vessels of the United States nor in the ports of British territories than shall be payable in the same ports by British vessels. All foreign vessels entering the port of Galveston were required to pay pilotage dues by the Texas law, and only vessels of the United States engaged in the coastwise trade exempted. At the time of the decisions merchant ships of Great Britain engaged in her coastwise trade were not required to pay these dues, so that the treatment of United States vessels at Galveston was in direct accord with her own policy, and each country was within its rights under the stipulations of the treaty. It is further expressly stipulated that the vessels of the United States shall not engage in the coastwise trade of British territories, and that British vessels shall not engage in the coastwise trade of the United States. In the light of these various provisions of the treaty the Federal Supreme Court could render no other decision than holding that the law of the State of Texas did not violate any of its provisions, but that the pilotage duty was governed by the local law. This is no strained construction, and the advocates of free tolls for the vessels of our nationals engaged in the coastwise trade through the canal can receive little comfort either from the provisions of the treaty or the decision in the Olsen-Smith case.

There is another view of the case to which I wish to call attention. Private property is always subject to the needs of the public. Of course, just remuneration must be made for its taking. But when the public is vitally interested the private owner must yield his property to that demand. I think it must be conceded that the Panama Canal will, from its very nature, be an international waterway. Courts whenever exercising English law have always held that when private property is used in a manner to make it of great public convenience it then becomes clothed with a public use. If effected with a public use, and that use was the innocent commerce of the world, why should it not be opened to all comers upon equal terms? It might be said that a railroad company expending its energy in the construction of its road, spanning rivers and piercing mountains, all upon its own property and with its private funds, should belong to it exclusively to do with it as it pleases; but such a contention can not prevail under municipal law against the necessities of the public. The individual who constructs a hotel with his private means and conducts a business for the accommodation of the public impresses upon his property a public use and must treat all comers upon equal terms. It matters not, then, that the Panama Canal was constructed by American genius never excelled, with American money, and through soil over which the United States has undoubted sovereignty. If the private property of the individual citizen of a State may be effected with a public use so that the State may compel its use upon equal terms to all members of the public, may not the individual property of a State become effected with an international use when the commerce of the world is so vitally interested?

We are not without examples illustrative of this principle. The Straits of Magellan, wholly within the sovereignty of the Republic of Chile, on account of their practicability for the use of the world's commerce have been impressed with an international use notwithstanding the objections of that Republic. The Rhine and the Danube are instances of rivers now devoted to the world's commerce, though not connecting two open seas, but traversing the States having sovereignty over them, that were neutralized for the benefit of the world's commerce, in spite of the opposition of those States. The international use is further evident from the fact that the United States acquired the canal strip from the Republic of Panama to construct a waterway for the use of all nations. It is reenforced from the fact that

the Canal Zone is no part of the coast of the country. It is wholly disconnected from any of the country's coast line, acquired to be devoted exclusively to a waterway connecting the two oceans, and with no intention to devote it to any other purpose. All nations so understood the purpose of this acquisition, and now to divert it to national policies for selfish ends would be a violation of many of the rules we have contended for not only in national but in international affairs. We acquired the fee-simple title to the Canal Zone, built the canal for the benefit of mankind and the extension of civilization, and we must forever hold it charged with an international use for the promotion of humanity, or its usefulness will be largely impaired and the very purpose of its construction defeated.

I have said that the Canal Zone is no part of our coast line. It is a strip of land across the Isthmus of Panama and wholly within the confines of a foreign Government. It was purchased of the Republic of Panama at a cost of $10,000,000, to be devoted to a particular use. That use is defined by the terms of three treaties—the Panaman, Colombian, and the Hay-Pauncefote. The use to which a waterway was to be devoted, constructed under these conventions, was to be for the benefit of the citizens and subjects of all nations on terms of entire equality without any discrimination as to charges for such use.

A great deal of confusion has arisen from the fact that the United States purchased the Canal Zone, and under such purchase it is asserted was given absolute sovereignty over the canal strip. In this there is a misconception. That the United States under the treaty has the fee-simple title to the Canal Zone, I believe there can be no question. But superimposed upon this title are certain conditions enumerated in the treaties I have mentioned. It occupies a similar position to the owner of the title of lands encumbered by a highway. Such owner is vested with the fee-simple title to the lands, may be compelled to pay taxes upon it, and do other things relative to it. In other words, he owns the land subject only to the right of the public to improve it to make it useful for public travel and the public's right to such use. So it is with the Canal Zone; the United States owns the land, and has the right to do with it as it pleases, subject only to the binding covenants of the treaties relating to it, and which run with the enterprise. Every right of title is enjoyed by the United States except such rights as are defined by our treaty obligations. The United States may fortify, police, maintain, and make conditions for the traffic using the canal, and exercise many other acts of ownership, being hampered only by its obligations solemnly entered into. Those who argue from the standpoint of ownership brush aside the covenants which run with the enterprise.

Again, it is sought to apply a principle of international law to the effect that a change in sovereignty taking place after the ratification of a treaty or such a change in conditions may take place as to make the treaty not obligatory upon the parties applicable to the canal situation. As to the latter, no conditions have changed; and as to the former, the framers of the Hay-Pauncefote treaty forestalled any such a contention by expressly providing "that no change of territorial sovereignty or of the international relations of the country or countries traversed by the aforementioned canal shall affect the general principle of neutralization or the obligations of the high contracting parties under this treaty."

So much for the legal sides of the controversy. Let us consider the question from an economic standpoint, and for the sake of argument let us assume that we bought and paid for the Canal Zone and built the canal with our own money, and that it is absolutely nobody's business how we use it, should we adopt the policy of permitting the use of the canal to the traffic of those vessels of American register engaged in the coastwise trade free of charge? As I have said, the purchase of the Canal Zone, the French concessions and material, the construction and fortification of the Canal Zone will cost in excess of $400,000,000, every dollar of which will be paid out of the Treasury. For one I believe the people of this great country should, if possible, be reimbursed for the enormous outlay. That they ever will I have most serious doubts. Those claiming freedom of the canal for the vessels of our citizens engaged in coastwise trade must concede that such citizens are now most highly favored by our navigation laws. In fact, they have a complete monopoly of the coastwise trade. We by law prohibit any vessel not of American register and not flying the national flag from engaging in such trade. We give them material for building ships free of customs duties and favor them in many other respects. Besides this it is conceded by those familiar with the coastwise trade that that business is and always has been upon a healthy paying basis and is a most profitable business. Those being the conceded conditions as to the situation of the coastwise trade, those of our citizens so engaged need no subsidy or recourse upon the National Treasury. That free tolls is in the nature of a subsidy will admit of no doubt.

It is sought to justify the position upon the grounds that our coastwise vessels should have the free use of the canal in order to compete with the transcontinental railroads; that such competition would lessen railroad freight rates and thus benefit the whole people. That there will be competition, and that it will lessen railroad freight rates, I have not the slightest doubt. But without the freedom of the canal such competition will still exist, and such freedom, if permitted, will not augment competition.

The charge as proclaimed by President Taft is $1.20 a vessel ton, or, in other words, $1.20 a hundred cubic feet of vessel space. Those familiar with vessel tonnage estimate that this will amount to about 50 cents a freight ton, or about 2½ cents per 100 pounds. This small charge would make little difference to the ultimate consumer, even if he received the benefit of it. But he would not receive it. This is evident, for the reason that the coastwise vessel owner can pay the small toll and yet carry freight much cheaper than the railroads. Hence it follows that placing the use of the canal into the hands of this already favored class of our citizens is taking their just share of the tolls from the pockets of the people to enlarge their profits.

Our people have been alarmed for years on account of the decadence of our merchant marine. This fact is most deplorable, and the flag, now so seldom seen upon vessels engaged in deep-sea traffic, should be restored to its ancient grandeur in our foreign commerce, so vital to the prosperity of the Nation. The greater part of the vast foreign commerce of the United States, amounting in exports and imports in the year 1912 to $3,857,587,343, should be carried in American bottoms, manned by American seamen, and the great occupation restored to its former prestige. But, sirs, the granting of free tolls to coastwise vessels will lend no incentive to our foreign-carrying trade. Such a policy would not swell the sails of our vessels and send them laden with our products into the ports of all nations and the marts of the world to return to our shores laden with the riches of every clime. It would not add one iota of aid or assistance whatever in rehabilitating our foreign-carrying trade. What will be the charges against the Panama Canal? It is estimated that it will lay a burden of $3,500,000 annually upon the Treasury to operate and maintain the canal, $500,000 to keep the Canal Zone in a proper sanitary condition and for zone government, $250,000 yearly to meet our treaty obligations with the Republic of Panama, a grand total of four and a quarter million dollars. These are the items of necessary expense incident to the conduct of the canal, and must be met by charges or drawn from the Federal Treasury. But in all fairness the people of the United States are justly entitled to interest upon their generous expenditure of $400,000,000 upon this great enterprise. This would add an additional charge of $12,000,000 annually against the tolls received at the canal. Sound business principles would annex to these figures an amortization fund of at least 1 per cent on the cost of the canal, or $4,000,000 yearly, making legitimate charges aggregate the sum of $20,250,000 annually. Prof. Emery R. Johnson, of the University of Pennsylvania, selected by President Taft as special commissioner on Panama traffic and tolls, in his most excellent report estimates that during the year 1915 our coast-to-coast vessels will carry through the canal 1,000,000 tons, while vessels engaged in the foreign trade will carry 9,500,000 net tons, in all a total of 10,500,000 tons. The gross revenue upon this tonnage at $1.20 per ton amounts to $12,600,000, a sum $7,650,000 short of the legitimate charges against the canal. But if the coast-to-coast vessels are to be exempted, to this shortage must be added $1,200,000, making a deficit of $8,850,000 annually. In view of these estimated facts and from an economic standpoint, the coastwise vessels should not be exempted from the payment of tolls. Prof. Johnson also estimates that in the next decade the tonnage carried through the canal by our coastwise vessels will increase to 2,000,000 tons in 1925.

Should there be no lowering of the rate imposed, a thing not improbable on account of the competition of the Suez Canal, the tolls, if imposed upon this tonnage, would amount to $2,400,000 annually, quite a generous sum to donate to those of our citizens who will be engaged in this profitable business. He further estimates that by 1925 the total tonnage passing through the canal will amount to 17,000,000 tons, and if all vessels are treated upon terms of entire equality and charged tolls, the rate remaining the same, the collections at the canal will aggregate $20,400,000, a sum a little in excess of all legitimate charges. But if the coast-to-coast traffic is exempted from the payment of tolls, then there would still be an annual deficit of $2,250,000. These figures clearly exemplify the fact that if the coast-to-coast traffic is to be exempted from the payment of tolls the canal will be a continual burden upon the general taxpayers of the country. If a decade hence the charges at the canal will

not defray the annual outlay for operation, zone sanitation, and government, and the interest upon the money invested and bonds issued for its construction by charging tolls to all in its use, then I submit it is a very bad business proposition to make any exemptions. I believe all will agree with me that the canal should be made, if possible, self-supporting, and not be a draw upon the taxpayers of the country. The interest and principle of this great investment ought to be paid from charges at the canal, and not from general taxes derived from the Federal Treasury. Those who derive an immediate benefit from the use of the canal should be required to pay a reasonable compensation for the benefits enjoyed by them. Such a policy is dictated by every principle of sound methods of public financiering and political prudence.

It sounds euphonious to say that coast-to-coast vessels should be exempted from the payment of tolls in order to effect proper competition with all rail traffic from the Atlantic to the Pacific coast. Let me remind those who so contend that at this very moment the railroads of the country are knocking at the doors of the Interstate Commerce Commission for an increase in freight rates, upon the theory that they can not exist without some relief. It must be conceded that coast-to-coast water transportation will be much cheaper than inland rates by the railroads of the country after the canal is in operation. The difference will be so great that the railroads will be deprived of a great deal of their traffic. Now there is transported from the Pacific slope to the Atlantic coast 1,000,000 tons of fruit annually.

The great bulk of this tonnage will pass through the canal when in operation. The best data obtainable show that it costs to carry this freight across the continent by railroad in the neighborhood of $26 per ton, and that it can be carried by the waterway profitably at a freight charge not in excess of $7 per ton. Here is a margin of $19 per ton in favor of the owner of the coastwise vessel, and the addition of a toll charge of 40 or 50 cents a ton will not destroy his ability to carry in competition with the rail carrier. The land and water freight charges of other merchandise will not differ materially from that of fruits, and it is most palpable that the shipper will add the tolls to the price of his commodities, while neither the producer nor the consumer will profit by free tolls, and the vessel owner will take the toll as an additional profit to his already thrifty business.

It is strenuously insisted by those who favor the exemption that to repeal the clause of the Panama Canal act granting the exemption would be in direct opposition to a long-continued policy of the United States in making free our rivers and harbors and the like. It is true we expend millions upon our rivers and harbors and that they are free to the vessels of commerce, but the difficulty lies in the comparison. Our rivers and harbors are either all inland or coastwise, while the canal is neither, but hundreds of miles distant and constructed through the territory of a foreign Republic. Rivers and harbors are clearly national, while the canal is just as clearly international. I am in favor of the repeal because I am thoroughly convinced that the exemption from tolls of our coastwise vessels is in direct conflict with our treaty obligations, not in harmony with our previous declarations, and contrary to our long-established claims that the waters of the earth impressed with an international use should be free and open upon terms of entire equality to the citizens and subjects of all nations.

I am in favor of the repeal because the exemption is an ingenious grant of a ship subsidy, a doctrine against which the Democratic Party has pronounced time and time again, because methods of public financiering and political prudence dictate such a course, and because such a step will uphold the honor and dignity of the Nation by showing a generous spirit, which prefers the welfare of mankind and the benefits to civilization to the glory or the gain of the Nation.

Mexico and Asiatic Menace.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MURRAY,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, March 27, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. MURRAY of Oklahoma. Mr. Speaker, we are extremely unfortunate in our foreign policy, growing out of a lack of information of the peoples to be dealt with and the subject at hand. Indeed, a foreign policy must needs be as varied and as different as governments must be, both in form and substance, with the differences in peoples. For no system of government or of diplomacy can be founded purely upon the academic or theoretical view. Indeed, government can not be founded upon philosophy. To be practical, wholesome, or permanent it must meet the conditions, the intelligence and heart throbs, the hopes and ambitions, the customs and fashions, the races and religions of the citizens whom such government is to serve. For the most part racial distinction marks the boundaries of governments of the world. I regret to find myself at variance with the President upon his entire international policy, particularly as it applies to Mexico and Panama Canal tolls.

In the framing of a foreign policy I believe in all that the old Democratic doctrine of "free ships, free seas, and sailors' rights" implies. This comprehends the doctrine of free passage of American vessels in all the waters of the Republic, the free right to build those ships anywhere they can be constructed at best advantage, and the protection of the American sailors, as well as other citizens, wherever cruising or sojourning.

On July 22, 1913, I introduced in this House a resolution providing for armed intervention in Mexico, the taking possession of all public property, including the customhouses and ports, the opening up of public schools to prepare the Mexican people for citizenship, and giving full authority to the President to formulate such policy as would break down the landed aristocracy, the creature of plutocracy such as has characterized that Republic under the Diaz régime of paupers on one side and plutocrats on the other. It is the only country in the world whose essence of its civilization is a pure plutocracy, and peace can never be established so long as this system exists, and it can never be broken up by any of the forces existing in Mexico.

That resolution referred to is as follows:

THE MURRAY RESOLUTION.

Whereas the Monroe doctrine, proclaimed in the early history of this Republic, having in view its own perpetuity by vouchsafing that of its neighbors, Mexico and the Central and South American Republics, by prohibiting any part of this continent's becoming subjected to colonization plans of the monarchies of the Old World, which doctrine, being so interwoven with the forces that go for the perpetuity of American institutions, can never be surrendered, but adherence to this doctrine carries with it the moral obligation to aid in the perpetuity of civil government, of law and order, and of the inalienable rights of life, liberty, and the pursuit of happiness. A just regard for the welfare of our own citizens or those of foreign countries, resident or sojourning in these Republics, owning and holding property therein which, if left unprotected or to the vicissitudes of war and banditti revolutionists, some foreign nation, for the protection of its citizens, would intervene. Our failure, refusal, or neglect to carry out these moral obligations contained in the wholesome declaration of the Monroe doctrine as a part of the international law would seem to them to justify such foreign intervention; and

Whereas in the organization of civil government the forces which bind the citizen to the social compact are the inalienable right of life, liberty, and the pursuit of happiness; and when government becomes destructive of these ends it is the right, both of its citizens and its protectorate, to alter or abolish it, founding new administration and adopting other forms of social compact, and that without regard to former dominion, that will reestablish and guarantee these rights; and

Whereas there exists neither law nor government, neither the inalienable rights of man nor peace or order, within the boundaries formerly embracing and known as the Republic of Mexico—revolution liberated that Republic through the guiding genius of Francisco I. Madero, its last President and rightful ruler. Through duplicity, treachery, and murder, Huerta, the usurping marauder now proclaiming himself the rightful ruler of Mexico, has nullified its constitution, destroyed all lawful authority and government, and has committed upon the person of the President and his family a black-handed murder, paralleled in all history only by the pusillanimous cruelty of the dark ages with all its superstitious fanaticism and dastardly deeds of rapine and murder—there remains neither rights of government nor of belligerent powers such as could be respected or recognized in international law; but the rule of Huerta has become a contending mass of brute force, a banditti of incendiarism, rapine, and murder which should no longer be tolerated at our door; and

Whereas there were sojourning and residing in Mexico some 40,000 American citizens, colonized and holding valuable concessions under special invitation and grant of the Mexican Government with the privilege of reserving their citizenship in the United States, under which grants and concessions they have established homes, builded fortunes, established schools and public roads in their several colonies, and begun the first step to a higher civilization—all which has been destroyed by the Mexican revolutionary banditti; and

Whereas many American citizens domiciled in Mexico have been subjected to imprisonment, blackmail, and murder, their homes burned, their property destroyed, the virtue of womanhood and the sacred rights of family violated by first one or another of roving military bands who might gain ascendency within a given community; and

Whereas the United States Government has not, and can not, recognize either as a Republic or Government the assumed and arbitrary brute force of Huerta, or his occupancy of the ancient capital of that Republic, a régime founded upon duplicity, treachery, and murder; and

Whereas we believe in keeping platform pledges and in the declaration of the Baltimore platform, wherein it most solemnly declares: "The constitutional rights of American citizens should protect them on our borders and go with them throughout the world, and every American residing or having property in any foreign country is entitled to and must be given the full protection of the United States Government, both for himself and his property": Therefore be it

Resolved by the Senate and the House of Representatives of the United States of America:

First. That the United States recognize the fundamental principles in the foregoing preamble, and will welcome the reestablishment of

such government, law, and order as will vouchsafe these ends, either comprising the territory of the ancient Republic of Mexico or any part thereof.

Second. That the President of the United States be, and is hereby, authorized by proclamation to give notice, both to the Huerta régime and to all other military leaders or banditti in Mexico, and to all persons whomsoever, that the life, liberty, family, and property of every American citizen, and of every citizen of any foreign nation sojourning in Mexico, shall be respected, and that any violation of their rights or of this order by any band, military rule, or leader of any one of the contending bands of revolutionists constituting the Mexican anarchy shall be punished, and that full, complete, and just compensation shall be paid to such American or any foreign citizen for any and all trespass upon the person or property, or any other violation of his rights, and that any revolutionary leader or other military bandit or any of his associates or followers will be held personally responsible, and that this Government will pursue such offending person to the utter ends of the earth to effect his capture and punishment for such offense, and that the resources of Mexico shall compensate such American or other foreign citizen whose rights have been in any wise violated.

Third. That in the event such proclamation fails to restore order within 30 days, the President of the United States be, and is hereby, authorized to intervene, establish peace, order, and civil government, and take possession of all public property of the former Republic of Mexico, and hold the same until every item of expense and all damages for the deprivation of liberty or the destruction of the property of any American citizen or citizen of any other nation has been fully compensated out of Mexican revenues; and all necessary power to re-establish and rehabilitate government, law, and order, including the preparation of the Mexicans for self-government by the opening of public schools, is hereby authorized; and the President is authorized to use the land and naval forces of the United States for the accomplishment of all such purposes.

EVENTS JUSTIFY MY RESOLUTION.

Since the introduction of that resolution some eight months ago subsequent events have confirmed all I then had in mind.

Again, on November 7, 1913, I delivered an extended speech, argumentative in form, supported by historical references and further examples to justify the course sought, in which I announced that I approved the President's policy with reference to his nonrecognition of Huerta, but that "moral suasion" would not dislodge him; that embargo of arms was an erroneous policy, and should have been raised on the 4th of March; that it was just, proper, and right to protect American lives and property upon the high seas and in foreign lands. Since the delivery of that speech the President has raised the embargo on arms, an admission that "moral suasion," however high and noble be such a course, is impractical in dealing with a semibarbarous people. So much of my prediction has come true. I further said that intervention was inevitable, and that when it came, if we did not intervene then, it would probably come by reason of complications with foreign countries. This almost proved true in the murder of Benton, the British subject, and the excitement growing therefrom. Now, I repeat again, intervention is inevitable, and the quicker it is done and over with the better it will be with all concerned.

In the 7th November speech I pointed out other conditions worse than war, particularly domination of the Anglo-Saxon by inferior races. I pointed to the danger of the oriental problem and the threatened settlement of this continent by Chinese, Japanese, and Koreans, and the necessity for the extension of the Monroe doctrine in line with the Lodge resolution dealing with the Magdalena Bay controversy, to prevent subjecting America not only to colonization by monarchies of Europe but to the colonization schemes of the Asiatics. In this connection I desire to quote a press dispatch of March 10:

A Japanese syndicate, headed by Baron Takahasha, president of the Yokohama Specie Bank, and Baron Matsui, governor of the Bank of Japan, has been formed with a capital of $300,000,000 to exploit Mexico's resources and colonize large sections of the country, according to to-day's issue of El Imparcial.

Two days thereafter, or on March 12, appeared the startling statement, as follows:

Secretary Bryan stated that such a colony did not, in his opinion, violate the principles of the Monroe doctrine. He was assured, Mr. Bryan said, that the Japanese who would settle there are not soldiers of the Mikado's army.

President Huerta of Mexico is in accord with the plan to establish Japanese colonies in his country. Calexico is in the country which Huerta controls.

Ambassador Chinda issued this statement:

"I wish to make it plain that the Japanese Government is not concerned in this matter, except as to the welfare of the Imperial Government."

Secretary Bryan issued a statement which confirmed the interview of Baron Chinda. He stated explicitly that the United States had given permission to Japanese to cross American soil.

It would thus seem that we have a new American policy—that this Government connived at and aided Japanese colonization of Sonora, Mexico, where is found some of the richest lands in the world.

There can be no doubt of this attempt, and I do not use this example of danger like Mr. HOBSON and others, as an argument for a larger Navy. We do not need a large Navy. We need only to control our own continent, to husband the resources at our own door, and to rid ourselves of the Philippines and of foreign expansion, to hold our Navy to a minimum. This done, and our Navy could be sunk to the bottom of the sea and we could yet sustain ourselves against any and all attempts to conquer us, but without this our Navy would prove a pigmy against the overpowering naval strength of Japan. I read in the press dispatches of March 12 the startling statement that Ambassador Page, at the Court of St. James, made sport of the Monroe doctrine by saying, in substance, that its intent was to tell the monarchies of Europe that we did not "prefer" their gaining any more land in America, with the further felicitation of his audience that we had built the canal to aid England more than ourselves, and doubtless this is the purpose of our proposed repeal of free American ships, thus denying ourselves the continued right to control our own private property and admit American coastwise ships free of duty through the gates of the canal, just as we admit them through the Cumberland and Ohio Rivers. I observe that the ambassador has explained his speech by calling this "pleasantry." The Monroe doctrine, and the safeguards and wholesome policy vouchsafed by that doctrine, is too serious to our Republic to permit an ambassador or official representatives to make a "butt of wit" of it or use it in "pleasantry," and such unjustifiable use should not only be condemned but should be grounds for rebuke.

TRUE AMERICAN DOCTRINE.

This foreign policy is in keeping with one fundamental academic, but impractical, doctrine. Such doctrine contemplates the abandonment of the old-time Democratic doctrine—American doctrine—even the doctrine of the Democratic platform at Baltimore, to protect the lives and property of American citizens on the high seas and in foreign lands. I desire to repeat the statement in my 7th of November speech as to the true American policy:

A sound, just, and comprehensive American policy consists in this: A well-equipped and thoroughly trained but relatively small Army and Navy; the extension of American commerce to all seas and ports of the world; peace, honest friendship, and commerce with all nations, entangling alliances with none; adherence to and maintenance of the Monroe doctrine as the sheet anchor of protection of republican institutions in the Western Hemisphere; the protection of American citizens, their property, homes, and families, whether found in America, upon our borders, or in foreign lands throughout the world; the preservation and integrity of the Nation and the glory of the flag; the encouragement of liberty everywhere and the extension of republican governments and democratic institutions throughout the two Americas—all this by peaceful diplomacy if possible, by force if necessary.

This has always been the American doctrine as well as a Democratic doctrine, and although every breeze from the border, every wind that sweeps over the Rio Grande brings to us the unwelcome tidings of fresh outrages upon American citizens—even American home, family, and womanhood are not exempt—how much longer is this "watchful waiting," this beautiful policy for the vultures perched upon the peaks and mountains of Mexico, "watchful waiting" to devour the flesh from the bones of the American dead; but, oh, how distasteful to an intelligent, self-respecting American citizenship.

I find myself disagreeing both with the President and with some of the prominent Republicans upon what should be done in the Mexican crisis. I heartily agree with the President's policy in not recognizing either of the contending banditti, but disagree with his inactivity and lack of an effort to enforce his demands. I conceive that political intervention, such as for months conducted in Mexican affairs, to be less justifiable and more likely to provoke hostility on the part of Mexico and the Latin Republics to the south of us than armed intervention to protect American citizens and their property.

I do not agree with those prominent Republicans who would recognize Huerta, because such recognition would mean a continuation of the Diaz régime of pauperism and plutocracy, with all of the landed estates granted in concessions to foreign syndicates, and would ultimately lead to the colonization and settlement of Mexico by Asiatics.

TEXAS RANGERS.

When the Associated Press dispatches announced the daring deeds of the Texas Rangers—I am fond of that name, "Texas Rangers," organized by Gen. Sam Houston, who gave to us the Lone Star State, and in the early organization of which my father was a member, and I remember how he thrilled me in childhood with the stories of their adventures, privations, and heroism—I was reminded of the teachings of old John H. Reagan, at whose feet I have been fond to sit to learn of the true wisdom of republican institutions. Years gone now and anon some one in Texas would start a propaganda for division of the State. Reagan would immediately respond by urging that the State never be divided, predicting that as nationality would grow beyond proper proportions and become so centralized as to destroy the local self-government of the States, that that nationality would cease to protect the citizen at home or from foreign aggression, but would be used to oppress the individual

citizen, and argued wisely that a great standing Army would, as nationality grew, become larger in time of peace, and that an ambitious and selfish President might attempt to overthrow the Republic or some of its sacred institutions, and that when that time came, Texas, by the very largeness of its boundaries, would be the only State capable of sustaining a great population and thereby becoming a "balance wheel" between the powers of the Federal Government and the interest of the people, and that therefore no true Texan ought ever to countenance a division of the State, even for the temporary advantage of increasing its representatives in the United States Senate.

This invariably ended the argument, and Reagan went to his grave believing the time would come to prove his prediction. How quickly I thought of this when I observe the lack of protection accorded American citizens by this strong nationality—grown too strong by continued effort to usurp State powers already—neglecting the rights of American citizens, their homes, their property, and their families, to see the spirit of old John H. Reagan, through the Texas Rangers, proving true his prophecy. Therefore, I can but applaud their valor and deeds of heroism to protect the American citizens upon our border.

NAPOLEON AND SLEEPING GIANT.

When Napoleon Bonaparte made his quick and successful conquest of the Pyramids and Asia Minor, at Mount Tabor, one of his aides pointed to the east and observed to the man of destiny: "There lies Asia." He quickly responded, wisely saying: "Yes, and there lies a giant asleep in Asia. Don't disturb him. Let him sleep." But we woke up that giant with the making of Perry's treaty with Japan in the fifties, and the opening of her ports with our Navy in 1863, and with the "open-door policy" in China. From that day this powerful giant woke up and became aroused. We must grapple with that giant either across the ocean or permit him to come on our own shores in direct personal competition.

With the religious superstition of Brahmanism against digging in the earth they have left their coal and iron fields, quite as extensive as ours, undeveloped and untouched until the German concession of recent years. In a few years they will be making steel at 9 cents while we make it at $9. So we can not compete with him in the industrial field. The 40 centuries of their civilization with the 4,000 years of history behind them show they have lived in peace, civilized, sustaining themselves upon agriculture alone until they are prepared in the industrial world with hand labor to compete with and overthrow our machine-made goods and American inventive genius. That history further shows that they assimilated every race going among them. Every migration into China has crumbled by assimilation into Chinamen. We can not compete with him in a hand-to-hand conflict, either in the industrial or labor world or in the struggle for supremacy of race. We must grapple with that giant, forcing him to remain upon his own shore, sustaining ourselves by an extension of territory upon our own continent and by a greater development of agricultural production. To permit him to come to our continent or any portion of it, to the extent of controlling the Government, or of becoming the dominant influence by reason of numbers, whether it be Mexico or elsewhere, means the destruction of the Anglo-Saxon American citizen by assimilation and making Chinese of them—all this as surely as fate.

EXAMPLES OF ORIENTAL CHEAP LABOR.

Apropos our power to compete with the oriental races, I quote from a work by F. H. King, formerly professor of agricultural physics in the University of Wisconsin. The title of this book is "Farmers of Forty Centuries, or Permanent Agriculture in China, Korea, and Japan," which work I can recommend to every student of agriculture, of statecraft, or of our sociological needs. On page 118 of that splendid work you find the startling statement that in Shanghai there was constructed, in 1910, an annex to the Astor House. Upon this house there were employed 18 Chinese laborers for a period of 88 days, and the contractor's total cost for this labor was $205.92. With these conditions the engine-driven pile driver could not compete.

THE MACHINE CAN NOT COMPETE WITH THEM.

We also find that in Chekiang Province farm laborers employed by the year receive not over $30 and board. Do you think that the American farm laborer could compete with this? He also says that at Tsingtao a missionary was paying a Chinese cook the highest wage per month, which, including the man for general work and for the cooking, his wife for doing the mending and other family services, and living at home and feeding themselves, all this for $9.03 American money, which included, in addition, the care of the garden and the lawn as well as the work for the house. Think ye that American domestic servants can compete with this? We are also told on page 20 of that work, to quote his exact language:

> Everywhere we went in China the laboring people appeared generally happy and contented, if they have something to do, and showed clearly that they were well nourished. The industrial classes are thoroughly organized, having had their guilds, or labor unions, for centuries, and it is not at all uncommon for a laborer who is known to have violated the rules to be summarily dealt with and even disappear with no questions being asked.

Hence, it is assumed that these people with such control over their labor organizations and the complete masters of their own wage are satisfied. Think ye that American labor can compete with such a wage?

Let us go a little further in this book and ask ourselves the question whether American industry can compete with China. Dr. King says:

> In Chihli, as elsewhere, the Chinese are skilled gardeners, using water for irrigation whenever it is advantageous. One gardener was growing a crop of early cabbage, followed by one of melons, and these with radish the same season. He was paying a rent of $6.45 gold per acre; was applying fertilizer at a cost of nearly $8 per acre for each of the three crops, making his cash outlay $29.67 per acre. His crop of cabbage sold for $103 gold, his melons for $77, and his radish for something more than $51, making a total of $232 per acre, leaving him a net value of $202.53.

That in other crops they go as high as $400 an acre net, which is a greater net earning than produced on any 40-acre tract of land in any State of the American Republic, except in growing alfalfa and some classes of fruits. Can our farmers compete with that?

He further says, on page 344:

> As to the price of labor in this part of China, we learned through United States Consul General Williams that a master mechanic may receive 21.5 cents and a journeyman 7.75 cents gold.

Farm laborers receive from $8.60 to $12.90 per year, with food, fuel, and presents, which make a total of $17.20 to $21.50 cost to the employer a year, which is a great deal less for an entire year than we pay for a month or even sometimes a week to efficient farm labor. He further says that there is relatively little child labor in China, due to the cheapness of other labor. Think ye that American citizens can compete with such conditions? Let us quote again to determine whether an American restaurant keeper can compete with this yellow race. Dr. King states:

> It was on this ride from Moji to Nagasaki that we were introduced to the attractive and very satisfactory manner of serving lunches to travelers on the trains in Japan. At important stations hot tea is brought to the car windows in small glazed earthenware teapots provided with cover and bail and accompanied with a teacup of the same ware. The lunches were very substantial and put together in a neat, sanitary manner in a three-compartment wooden box, carefully made from clear lumber joined with wooden pegs and perfect joints. Packed in the cover we found a paper napkin, toothpicks, and a pair of chopsticks. In the second compartment there were thin slices of meat, chicken, and fish, together with bamboo sprouts, pickles, cakes, and small bits of salted vegetables, while the lower and chief compartment was filled with rice cooked quite stiff and without salt, as is the custom in the three countries. These lunches are handed to travelers in spotless thin white paper daintily tied with a bit of color, all in exchange for 12.5 cents. Thus (with tea) for 15 cents the traveler is handed through the car window, in a respectful manner, a square meal which he may eat at his leisure.

On page 2 of that book we find the following startling facts: That Japan in 1907 had a population of 46,977,003 persons, supported on 20,000 square miles of cultivated field, which is less than one-third of the area of the State of Oklahoma. This is at the rate of nearly 4 people to every acre of land, or 2,349 persons to the square mile. Do any of you believe that the American farmer can compete with the Japanese farm methods? I may call attention to the fact that to-day Japan has nearly 60,000,000 people and about 15,000 square miles more of land capable of being reduced to agriculture, and this after expensive terracing on the mountain sides, just enough to maintain one more generation, after which she must either die of self-competition, commit race suicide, or secure more land, even if she has to fight for it. Do you not imagine that her cabinet now is secretly studying the problem of expansion? Is this not a reason for their furnishing the money for Japanese to buy land on this continent, and can you doubt but that she will get all of the concessions possible in Mexico? Is this not also true of China? You let twenty or thirty million of those Asiatics settle in Mexico under Mexican concessions—a policy succeeding a like policy of Diaz—and they will be in a position to dispute with us every claim for expansion on our own continent, because she could then organize an army on this continent that will keep us busy while she, by the combined use of the merchant marine of China and Japan, can land more soldiers on the western coast of Mexico after they by their combined naval power, now stronger than ours and likely to continue, have destroyed the American fleet. We can only compete with the Asiatics by keeping them on the other side of the ocean. In case of war it is a matter of physical impossibility, with them on the other side of the ocean, to land

soldiery enough even to interest us in a war upon our own land. Should they use the battleships and merchant marine of the world they could not land them faster than we could capture and conquer them with a cordon of American soldiers stretching from Vancouver to Panama even though they destroyed our naval fleet.

LOSS OF BRITISH COLUMBIA.

I grow impatient of a pusillanimous peace policy of "watchful waiting" when I remember from history that which many old men remember from experience—the old ante bellum Democratic cry, "Polk and Dallas 54-40 or fight," meaning 54 degrees and 40 minutes north of forty-ninth parallel or fight for it; when I recall the criminal negligence on the part of an American Secretary of State and Secretary of War, who then said we had no need of any more territory, and when warned by an American trader that the sending to Alberta, Saskatchewan, and British Columbia of a United States flag and 25 soldiers—the same way we acquired Oregon—would have guaranteed to us a strip of territory 5 degrees and 40 minutes farther north than we now own—a territory equal to one-fourth of the continental territory of this Republic and wherein lies the greatest wheat belt in the world and into which upward of 300,000 of the sturdiest Americans have gone annually for more than 10 years—lost forever under a negligent policy under the assumption that we needed no more land. I grant you that 70 years ago we had all the land west of the Mississippi River almost without settlement, and that it did look like we needed no more land, but with that area now settled, what do you think will be needed 70 years hence or even one generation hence? Do you not think we need now or will need quickly every foot of land on the American continent, and especially the rich valleys and plains of Mexico?

When we find farm land selling for as high as $250 an acre in Illinois and Iowa; when we find a quarter section of 160 acres of Oklahoma school land, unimproved, selling at the highest bid at public auction at $19,500; and land elsewhere selling at still higher prices, it is too scarce and too high for a poor man to have a hope of buying a home. The outlet and the opportunity for a poor man can be found by the annexation of Mexico.

I will agree with all of those who advocate getting rid of the Philippines, because a territory not upon this continent will prove a source of military weakness; but possession of Mexico will not only give us land that we need but it will increase our military strength whereby, in case of military competition on the Pacific between us and the Chinese, Japanese, and Koreans, we could throw a cordon of soldiers upon the Pacific slope from Vancouver to the Panama Canal and hold at bay and conquer and capture every shipload of Asiatics as fast as they attempted to land; but once let them get possession of Mexico and settle a few of their millions there, then they will be in a position to dispute with us. Those millions of citizens would respond to resounding of arms and combat with us upon our own soil while their combined navy destroyed every American man-of-war on the ocean. This done, they could land their additional troops on the west coast of Mexico sufficient to conquer us or our posterity.

I state candidly that I am for intervention in Mexico because I know that American citizens will quickly follow the flag and settle its rich domain until it will be as thoroughly American as Arizona and New Mexico and that Old Glory will float there forever, or so long as it waves over this Republic. If we now fail to comprehend and take advantage of our opportunity, the mistake that caused us to lose British Columbia will be insignificant when compared to the crime we commit on posterity by forcing them to compete upon their own soil with these Asiatic races. Whether posterity may be overcome by such catastrophe, that will wreck not alone the Republic but our civilization, depends largely upon what we now do. The Monroe doctrine should not only be continued but should be extended to include the further modern doctrine that the North American Continent shall never become subject to the colonization schemes of the Asiatic races.

CHANGING CENTER OF MAN'S ACTIVITIES.

The student of history will recall that the center of human activity has changed locations since the dawn of civilization. For 3,000 years it was centered upon and around the Persian Gulf, and then was changed to the Mediterranean Sea, remaining there the center for twelve or fifteen hundred years, or until the discovery of America, since which time for 500 years this human activity has been on the Atlantic Ocean. In 1823, when the President proclaimed the Monroe doctrine, that "America should not be subject to the colonization schemes of the monarchies of the Old World," we were then in the midst of republican competition with the monarchal Governments of Europe. Since that time we have grown strong and no such danger is any more imminent. The statesmen of that period of our Republic had the courage and foresight to place us upon a footing of permanent security, but now all has changed. The center of human activity is upon the Pacific Ocean, making necessary the digging of the Panama Canal, and we are brought in direct competition with the Chinese, Japanese, and Koreans, constituting one-third of the entire population of earth, and the menace now upon us is the struggle of race and the threatened destruction of our civilization, which is infinitely more important than the preservation of republican government.

VISIONS OF THE FUTURE.

When I turn mine eyes to the Pacific and the Orient and stare at the dark and shadowy gauze that binds human vision; when I get a glimpse of the beyond, methinks I see groping forms and shadows of millions of Asiatics pouring into Mexico under Huerta grants for settlement and permanent occupancy. I see these millions growing opulent and independent. I read upon the canvas the international disputes that follow, the diplomatic notes exchanged between our future Secretary of State and these Asiatic nations. I read of the ultimatum given and declined—of the declaration of war. I feel the awe of impending race struggle for survival. I hear the command from the Federal Capital for the mobilization of the American Navy. I see the Atlantic Squadron set sail and quickly pass the gates and locks of the Panama Canal. I see them mobilized on the bosom of the Pacific. I see the steady strident step of the future George Dewey of the American Navy as he, with field glasses, sights the horizon to locate the enemy as the combined naval power of China, Japan, and Korea hove in sight. I hear his clarion voice commanding, "Make ready for action!" I witness the first signal for bombardment on each side. For a moment I stand hopeful of the issue in awe-stricken admiration of the unerring marksmanship of the American gunners; but five, six, or a dozen more to one, I feel the terrible inequality of the conflict. I hear the clangor, like an earthquake, as at one moment the allied enemies' long range rapid-firing guns belch forth spontaneously shot and ball that penetrate every arm of the American fleet afloat. I see the fire and the smoke as I witness sinking beneath the waves the entire armament of the American Navy—in one bombardment our military arm and power is swept from the seas. Faint, hopeless, and weary, I turn mine eyes to Mexico. I observe the last man of the Asiatic millions who have poured into those rich and fertile plains for settlement, and now controlling it, responding to the bugle call of war. I see them marching toward the Rio Grande ere we have formed our lines of battle. I see the Asiatic merchant marine impressed into service, landing into Mexico, unopposed by the American Navy, now sleeping at the bottom of the sea, their millions of soldiery, who disembark under the command of "Double-quick, march!" I see them hurried across the border, just as the American commander reviews his battalions and judges their strategic position, ready to swing the old guard of the Republic into line. Just then he discovers coming in the distance the Blucher of the allied Asiatic forces. I see the pallor on his cheek. I see him throw up his hand in despair and murmur, "This is our Waterloo." Not a Waterloo of a general or an army, nor of prince or emperor, but the Waterloo of a Republic; the exile of our civilization; the St. Helena of the Anglo-Saxon race. Would you now preserve posterity by meeting the conflict, as awful as is war, or continue to hug the delusive phantom of "watchful waiting" until it is everlastingly too late?

In conclusion, I warn you this responsibility is upon the Sixty-third Congress. Four centuries of Americans contemplate your action. With mixed emotions of applause and curses, posterity awaits your decision.

Panama Canal Tolls—"Free Ships and Free Seas."

EXTENSION OF REMARKS

OF

HON. WILLIAM H. MURRAY,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 28, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. MURRAY. Mr. Speaker, gentlemen of the House, I can not better explain the whole group of policies—and it involves a group—which I have in mind in opposing the repeal of the clause granting to coastwise vessels free transportation through

the Panama Canal than to say I favor the policy, and all that is implied, from the shibboleth: "Free ships, free seas, and sailors' rights." The meaning of this old-time Democratic Party cry, briefly defined, is the right to construct American ships anywhere to best advantage, free of tariff or other legal restrictions; to give those ships passage free of duty through all rivers, canals, and into all ports and waters of the Republic, or free water trackage for transportation; and to protect the sailors, as well as other citizens, wherever cruising, or sojourning.

The underlying policies intended by this old-time doctrine are consistent with one another, and under this doctrine, in the very infancy of the Republic, and continuing for many years, grew up the largest merchant marine ever known in our history. At that time ships bearing the American flag were found upon every ocean and in every port and harbor of the world, giving greater advantages to the commerce of the American merchant, lower transportation, wider markets, and better comparative prices for the products of the farm and the field. Now, except in our coastwise trade, the American flag and our merchantmen are not seen anywhere in all the world, resulting in higher transportation charges in the carrying of agricultural products to distant mills and factories and markets. What was the cause of this change? The only answer to the inquiry is that we have changed the policy which gave us this large merchant marine. Five statutes upon our law book, together with the abandonment of the old principles of this Government, have driven the American flag and merchant marine off the high seas and out of every foreign port and harbor. Indeed, we have abandoned every detail of this old-time doctrine, except "free seas," or free water transportation, and we are now urged to do that. The policy now sought to be inaugurated by the repeal of the exemption in favor of American coast-line vessels would complete that unwholesome abandonment of policy, driving the only remaining merchant marine thus carrying coastwise trade from off American waters. It has always been the American policy of permitting every American ship and sailing vessel passing through any American canal or river, any lock or dam, or to enter any port free of duty. This is the policy applied to the Columbia River or the Ohio River, or every other river and canal, and every other public water thoroughfare owned, operated, or under the control of this Government. This is also our policy as to travel upon our public roads and turnpikes. Why should we now make an exception as it applies to the Panama Canal? Would it not be wiser to return completely to the old doctrine and give us a larger merchant marine? But I hear the superficial objection of some one saying that a large merchant marine would require a larger Navy. Not so; because during the period of our largest merchant marine we had the smallest Navy, and, indeed, the larger a merchant marine a country enjoys, not only is the trade of that country benefited, but it tends to lower the necessity for a large Navy in time of peace or large, expensive naval establishments. Why is this true? It is true because it gives to America a greater number of men engaged in sea business, inured to the sea, whose services in time of war could be utilized to aid in the operation of a naval fleet. Instead of a large merchant marine making necessary a large Navy the reverse is true. Indeed, it will always require some naval power; this country has never been without a reasonably sized Navy. It never should be and never will be without a Navy. Hence we may as well get the benefits of a merchant marine.

The next great problem, in my opinion, is to increase our merchant marine, and we should enact every law and grasp every policy that will vouchsafe a large merchant marine, except to pay a direct subsidy. I make this exception for the reason that nothing can be permanent that stands upon a subsidy alone for its existence. All we need to do is to return to the policies implied in the old doctrine of "free ships, free seas, and sailors' rights." This will bring us a great merchant marine as it did before. It will bring to us ships that will carry our trade and our agricultural products to all seas and ports of the world. But I hear the reply that "to exempt American ships is a subsidy." If so, then every exemption of duty in the tariff bill is likewise a subsidy. In other words, every item on the free list is likewise a subsidy.

Such statements are but cant. Moreover, these gentlemen who use this sophistry forget that whatever extra charge you place on a common carrier, whether it be a ship or a railroad, must in the end fall upon the people who use the carrier in the transportation or shipment of goods, and that as you make possible the reduction of the expenses of the transportation or transmission company you make possible lower freight and passenger tariffs upon such carriers. I should expect the man making any other claim to contend that the importer paid the tariff.

Free tolls would greatly aid the South, especially the ports of Galveston and New Orleans, while at the same time doing good to the East and ports of New York and Boston. A small sailing vessel such as characterizes the coastwise carrying ships can not afford to pay toll through the Panama Canal and operate between Galveston or New Orleans and the Pacific slope. What would be the result if they did not; or what would be the result of an increased cost of $1.20 per ton? This can be readily analyzed. It would certainly inure to the benefit of the transcontinental railroads, both in the United States and in Canada, who would carry all the goods from the East to the Mississippi Valley and to the Pacific slope, and there would be no competition by water route with these great rail thoroughfares, who, in a measure, do not compete with one another, because they are largely under the same interlocking board of directors and the same management. I do not care to offer a monopoly to the transcontinental railroads in the matter of freight rates by charging $1.20 per ton to American coastwise ships, which constitute the only competition with them.

A ship that does business between any port of the United States and one of a foreign country is known as a ship doing an international commerce. "Coastwise ships" are those which carry goods and passengers through the rivers, canals, and other waters of our own country, or from one port to some other port of our country; and it is these "coastwise" which are exempted under the law from paying tolls on the Panama Canal. Now, suppose a ship from New Orleans, Galveston, or New York or Boston with a cargo going through the canal to San Francisco or some other point on the western coast could carry freight at $5 a ton, and we were to add a charge of $1.20 per ton—the same charge as applied to foreign ships—is there a man who would contend that this ship would not charge the man owning the cargo of goods an extra amount of $1.20 to pay this toll? And he in turn would charge the purchaser of his goods not only the extra amount, but profit on this toll. To argue otherwise would be tantamount to the argument that the importer pays the tariff. So, after all, the people would have this extra toll to pay. Would it not be wiser, since Great Britain, Germany, and other nations pay a subsidy to all of their ships—and they pay the toll directly to the ship owner charged by the Suez Canal—would it not be wiser for the Government of the United States to ascertain the cost of the sanitation, the upkeep, and the governing of the canal, and instead of paying it out of American taxation charge this against foreign ships and let the foreign nations pay it by making such rate as would compensate us therefor?

I am not one of those ready to make of this Nation an eleemosynary institution to dispense charity to other nations and other peoples. All of the elements of charity I want for our own citizens, and I want this Nation retained as an American Nation for American citizens.

I ask, too, is it not a significant fact that Carnegie, who deceives us by calling it the "peace endowment fund," as admitted by his managers, spent more than $23,000, in addition to the use of Senator ROOT's senatorial frank, to carry literature to all the business men, commercial clubs, and commercial organizations, to the farmers and farm organizations, to the laborer and labor organizations, in an effort to deceive the public and convey misinformation upon the subject of Panama Canal tolls? I ask, is this not significant? And about this there can be no dispute, because they admitted it under oath just a few days ago to the Senate committee investigating the question of lobbying. The great body of the people are not furnished with a campaign fund of more than $23,000 with which to promote this old-time American, this primitive Democratic doctrine of "free seas," or free water transportation.

Some days ago the Capital was startled with a statement of Walter Hines Page, Ambassador to the Court of St. James, London, wherein in effect he stated that the Monroe doctrine is not a fixed policy nor urged as a part of international law, but merely a desire on the part of this Government expressed to European countries, and that in the digging of the Panama Canal "it added to the pleasure of constructing that great work to know that it would benefit Great Britain most by its use." I have not been surprised at this expression because of a book this man Page wrote some years ago entitled the "Southerner," wherein he lionizes the negro as compared with the white man, and said that the negro morally, politically, and intellectually was the equal of the Southern white man, and remembering an approval of this statement by Carnegie and the position of Carnegie himself in saying that he intended to devote his life toward uniting the United States with Great Britain, and that he regretted the separation of this country from Great Britain. Considering this statement in connection with proof that his so-

called "peace endowment" had spent $23,000, and had more to spend, to repeal the American ship exemption in the matter of Panama Canal tolls, and further considering the connection Page bears, by affinity, with this group, it would occur to an analytical mind that this statement of Ambassador Page was but inspired, and was in keeping with a fixed policy on their part to wipe out the last vestige of the old-time American doctrine of "free ships, free seas, and sailors' rights," which comprehends the abandonment of the Monroe doctrine, and that we abandon the practice of protecting American citizens "at home and abroad." Is it not pertinent to ask if the book inveighing against the Monroe doctrine written by Prof. Bingham and circulated free to Members of Congress was not paid for out of Carnegie's "Peace Foundation"? In other words, that this country shall become solely a great commercial Nation, not to protect the citizen but to exploit him, and to become an engine of oppression rather than a Nation of protection.

QUESTION OF NATIONALITY.

Aside from the economic, there is a larger and broader view in which to consider this question, and that is the construction in the midst of this controversy to be placed upon the Hay-Pauncefote treaty, and I want to announce in the beginning that rather than repeal this toll, whatever may be urged as economic argument, or whatever other reason whatsoever that could be marshaled in its favor, a wise American policy would be to pass through both Houses of this Congress a resolution construing that treaty, and to say to Great Britain and the rest of the world that in construing the Panama Canal treaty, the Panama Canal Zone is American property, purchased, as was the canal constructed, by American funds, and being the private property of this Nation it is as much subject to our independent control and management under international law as would be the private property of a citizen of this Republic, and under that citizen's control to do with it as he pleases, and that we give the world notice now that we have the fundamental, inherent, and legal right under the treaty and international law to exempt every American ship, and under the treaty that we are subject to but one limitation, and that is to give all foreign nations equal privileges, but as far as the American interest is concerned, we might exempt from toll every American ship, whether coastwise or otherwise, and that we would have the right to blow up the canal or stop passage through it of any ship, whether American or foreign, if the American Government chose to do it.

With the passage of such a resolution as this, while the controversy over its construction is going on, would settle forever the nationality of this question. If we bow now to the demands of Great Britain and to her false construction, we will lose the national control over this canal and it will cease to be the private property of this Republic or future attempt to assert our control would bring upon us an unnecessary war. If we had intended a joint control and a joint operation and the same treatment toward our own interest and our own ships as that to be accorded Great Britain or any other nation, why did we pay every cent of its cost? Why did we construct it at our own expense without inviting England or any other country to aid us? Why did we provide that we should pay to Panama in perpetuity $250,000 annually for the zone through which the canal was dug? Why did we spend four hundred million on its actual construction? Why do we assume the obligation to pay for its sanitation, its government, and its control if we are not to be the beneficiaries of that private property as a Nation the same as an individual in this Nation would have over his own private property?

The treaty of 1850, known as the Clayton-Bulwer treaty, designed a joint ownership in the canal with Great Britain, and in this it was a surrender of the Monroe doctrine; and by reason of this fact the canal in its construction was delayed for half a century. Every President since 1850 has inveighed against digging the canal jointly with England or any other country, so that the treaty of 1901 was made in order that it might be constructed wholly by the United States and owned by her; and the first provision of that treaty, known as the Hay-Pauncefote treaty, provides that the United States shall have all of the "rights incident to its construction." And I might add that two years thereafter when a treaty was made with Panama to buy the land, which we now own and over which we exercise complete sovereignty, that we also have all of the rights incident to ownership; and that therefore the only question that may concern other nations as to its use is the treaty right of "equal privileges" and charges between other nations who have no interest or ownership in it. Nor is its control subject matter for arbitration any more than the use of property by an individual is subject matter for a court. As citizens we appeal to the courts to determine ownership, but never to determine the use to which we put our own property. The right of ownership in the canal in the private property of the American Nation stands on equal footing. I make this reply to those who have said that we must either yield or subject the question to arbitration. Besides, there are some things, whatever may be our peace policy, that ought never to be subject to arbitration. Among these are the Monroe doctrine, the construction of our Constitution, the principles of republican government; and in this connection I reply to those who say that foreign nations are united in their construction against ours on Panama tolls—I say that they are likewise all united against our contention of the Monroe doctrine, and have always been so, as they are united against our form of government. Aside from these considerations it is fundamental that the power who makes rules and charges can not be itself bound by those rules and charges, and it is granted on all sides that the United States alone has the power to make rules governing the canal and to fix charges for going through it.

PROVISIONS OF THE TREATY.

Let us analyze the language of the Hay-Pauncefote treaty of 1901 and the treaty of 1850, known as the Clayton-Bulwer treaty, in the light of the law, the policy, and circumstances at the time they were executed. It will be remembered, by reference to it, that the treaty of 1850 contemplated the possible building of the canal at Nicaragua either by Great Britain or the United States, or jointly, and in a measure this was true of the Hay-Pauncefote treaty; but subsequent to its making the American Government chose to select the Panama route, to buy it and pay for it. In any event, whether it should be constructed by either England or by the United States, it was unnecessary to have placed conditions in the language of the treaty that would inure to either of them who solely undertook its construction. Let me illustrate by an example of personal ownership and control of property. Suppose the Speaker of this House owned a tract of land in a community, and for the convenience and happiness of the community he were to announce to the citizenship of the community: "I will construct a park upon this land, place walks, fountains, shrubbery, flowers, and everything else that will make it attractive and beautiful, and I will agree with all of the citizens of this community that every citizen shall share equal privileges to the park; that whatever rules I make shall be subject to everybody alike." Now, suppose that after the park was constructed too many sought to walk upon the grass plots and pull too many of the flowers, and especially the roses, thereby lessening the beauty and attraction of the park; and suppose the Speaker would then put up a "public notice" that hereafter no person shall walk upon the grass plots in the growing season and no person shall tramp upon the flowers and shrubbery nor pull roses from the park, would anybody contend for a moment that such restriction would apply to the Speaker, who owned the property, and that restriction would prohibit him from pulling the roses when he got good and ready, or from walking upon the grass plots for any reason that to him was sufficient to justify it? Hence, considered in this light, it would have been absurd for the Government of the United States to have placed in the treaty any provision in its own behalf, and subsequent consideration of this treaty by the United States Senate proves conclusively the contention of this argument when an amendment was offered to it by Senator Bard, of California, and it was defeated, as the Senators state and as the RECORD shows, because it was unnecessary to insert such a provision—unnecessary because it was the private property of the United States. The specific language upon which England bases her claim is found in a portion of article 3 of the treaty itself, and I here quote that portion:

> The United States adopts as the basis of the neutralization of such ship canal the following rules, substantially as embodied in the convention of Constantinople, signed the 28th of October, 1888, for the free navigation of the Suez Canal, that is to say: 1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination of its citizens or subjects in respect of the conditions of charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

It is clear from the reading of this language that it was the purpose to prevent discrimination against other nations and not to apply to any favoritism or exemption either of American ships or Navy or any ship doing a coastwise trade, because what is true of the merchant ships must be applied under that language with equal force to "vessels of war," and it would logically follow that if the United States permitted her own war vessels to pass through the canal free that she would be compelled to admit the navy of every other nation to go through free, and if she sought to fortify this canal any other nation would have equal right—and, as a matter of truth, Great Britain does not want its fortification by the United States solely—whether that be a commercial use of the canal or a

strong fortification of it. Let us suppose such a condition arose as would be shown by this illustration should we place this construction upon the treaty at this time: That the United States should carry through the canal her own Navy, and some other nation with whom the Government was expecting war would send her navy immediately to follow ours and should desire to pass through the canal to obtain a strategetic position. Seeing and fearing this, suppose the Government of the United States were to decline to permit that nation's navy to pass through the canal; would not that nation have the right immediately to invoke our construction of the treaty by saying, "We have a treaty right, according to the construction placed upon this treaty by the Sixty-third Congress of the United States when they repealed the exemption clause, because of that construction raised by Great Britain, to pass through it." And suppose the Government would then continue to refuse; would not that nation have the right, and would it not receive the sanction, under such a construction, of the other nations of the world to say, "We have got the treaty right, and we are going through if we have to bombard the gatekeeper or force our way through this canal"? It will require but little thought to determine where such a policy would lead us upon the pure question of nationality. Our only safety lies in the construction that a former Congress has placed upon this treaty. Again, this treaty was made, according to its own terms, as "embodied in the convention of Constantinople, signed the 28th of October, 1888, for the free navigation of the Suez Canal," and since the nations of the world have not considered that they were violating the rules in the use of the Suez Canal by rebating tolls to vessels flying their own flag, and the Japanese Government gives a direct rebate or subsidy to its merchant marine. In the light of these facts, suppose we place this construction upon this treaty now by its repeal, as urged by the President, and it is found later that an economic necessity demand a free toll, the argument would then be used for a direct ship subsidy, and we would be driven to the doctrine of subsidy, which I am sure the American people neither seek nor desire.

SUPREME COURT CONSTRUCTION.

There is another phase to this question. This treaty was made in the light of American law at the time. In 1815 the Government made a treaty with Great Britain, providing that "no higher or lower duties or charge shall be imposed in any ports of the United States on British vessels than those payable in the same ports by vessels of the United States." This was stronger language and a direct restriction against American vessels at a time when we had a merchant marine of great strength, and it appears that subsequent to that time the State of Texas authorized the admission of coastwise vessels into certain ports free of duty, and the Revised Statutes of the United States, section 4444, exempting coastwise vessels from the payment of "pilotage charge," the question was raised in the Supreme Court of the United States as to the violation of this treaty of 1815 which was made with Great Britain that "no greater charge should be made against British vessels than those in the same ports by vessels of the United States," and that decision will be found in the case of Olsen *v.* Smith (195 U. S., 332). The court held that this treaty was not violated. Mr. Justice White, now Chief Justice, in that opinion, said:

> Nor is there merit in the contention that as the vessel in question was a British vessel, coming from a foreign port, the State laws concerning pilotage are in conflict with the treaty between Great Britain and the United States, providing that "no higher or other duties and charges shall be imposed in any ports of the United States on British vessels than those payable in the same ports by vessels of the United States." Neither the exemption of coastwise steam vessels from pilotage result from the law of the United States nor any lawful exemption of coastwise vessels created by the State law concerns vessels in the foreign trade, and therefore any such exemptions do not operate to produce a discrimination against British vessels engaged in foreign trade and in favor of the vessels of the United States in such trade. In substance the proposition but asserts because by the law of the United States steam vessels in the coastwise trade have been exempt from pilotage regulations, therefore there is no power to subject vessels in foreign trade to pilotage regulations, even though such regulations apply without discrimination to all vessels engaged in such foreign trade, whether domestic or foreign.

This decision was rendered because of the fact that the United States law did not and does not now permit any foreign vessel to do a "coastwise trade." This being true there was no discrimination, and likewise there is no discrimination of the verbiage of the Hay-Pauncefote treaty in exempting American vessels doing a coastwise trade, because no other nation under our law can do a coastwise trade, and could not at the time the treaty was made. Hence a literal construction of the treaty made in the light of the American law shows that the contention of a former Congress to make that exemption was a true and correct one. In this connection I desire to quote from extracts from the CONGRESSIONAL RECORD and a public document compiled by the Hon. JOSEPH R. KNOWLAND, of California, as follows:

> The Panama Canal is being built on territory which was purchased by the Government of the United States. We will expend in its construction upward of $400,000,000, and are obligated by treaty to pay the Republic of Panama in perpetuity the sum of $250,000 annually. We occupy the position of sovereign proprietor of the canal and the Canal Zone, a relation that none of the nine powers signatory to the convention of Constantinople sustained with reference to the Suez Canal. The Hay-Pauncefote treaty should be construed in the light of these facts, and when so construed the minority can not escape the conclusion that in signing, ratifying, and proclaiming this treaty to the world we were merely agreeing to the terms and conditions upon which the United States, the sovereign owner of the canal, would permit its use by the other nations of the world, its citizens or subjects.

Hence, in construing the Hay-Pauncefote treaty we must consider it in the light of the law then existing. In 1884 we adopted a statute governing the question of free navigation of American waters, which has always been an American policy, and in section 4 of that statute you will find this language:

> No tolls or operating charges whatever shall be levied upon or collected from any vessel, dredge, or other water craft for passing through any lock, canal, canalized river, or other work for the use and benefit of navigation now belonging to the United States or that may be hereafter acquired or constructed.

Is it possible that we are brought to the humiliating position in our nationality that we are compelled to reverse the policy of this Government of free navigable waters or, as we used to say prior to the Civil War, "free seas," just because Great Britain seeks and desires to gain the greatest possible benefits from the canal? I am unwilling to believe that the American people or that their Representatives in this Congress are willing to violate that policy, to say nothing of the violation of the platform of the Democratic Party adopted at Baltimore. I for one will not subscribe to such doctrine, even at the solicitation or demand of the President. I desire further to quote from the Hay-Pauncefote treaty, as follows:

> Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary, and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service.
>
> No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

VESSELS OF COMMERCE AND WAR.

Now, note and analyse this language: If the contention of Great Britain be correct as to merchant vessels, why is it not also correct as it applies to the British Navy, and would we not be denied, under this provision last quoted, to fortify the canal and in war to "revictual" or "take any stores in the canal," or "disembark troops, munitions of war, or warlike materials," or to do anything else looking to the strength of the canal or the military strength of our Nation in case of war? Such a contention is absurd. It would place us in the position of paying the bill for this canal and then being unable to use it, even for self-defense. In every light in which you analyze this treaty, in the light of the conditions surrounding it, it is absurd to place any other construction upon it than the construction by the former Congress, to the effect that the American Government had the right to make any exception in favor of itself, its citizens, or its sailing vessels.

This Government has always adhered to the policy of not permitting foreign ships to do a coastwise trade, and this is not an exclusive policy of the United States. All nations pursue the same policy. To permit an English ship, a Japanese ship, or any other nation's to sail up the Mississippi, to go through the locks of the Cumberland, the Ohio, or any of the other interior waterways of this Republic would but permit such a Government to take soundings as to the depth and all of the conditions of our interior waterways, so that in case of war they would be absolutely prepared to destroy us. This is the reason why this Government, as well as other Governments, has adhered to the policy of prohibiting any foreign ship to do a coastwise trade or to sail through the interior waterways of the country. I have heard it intimated—not in this House, to be sure, but by men on the outside who did not know—that this causes a monopoly, which is not true; but, to say the least of it, to do otherwise would expose the cities and towns and all of the waterways lying along the river fronts of this Republic to the dangers of foreign aggression.

AUTHORITIES ON CONSTRUCTION.

I desire to quote some of the eminent American public men on this question. Senator LODGE said:

> I took a somewhat active part in the two Hay-Pauncefote treaties, as they are called. I voted against the Bard amendment. I voted against it in the belief that it was unnecessary; that the right to fix tolls, if we built the canal or it was built under our auspices, was undoubted. I know that that was the view taken by the then Senator from Minne-

sota, Mr. Davis, who was at that time chairman of the committee. I certainly so stated on the floor.

Senator Davis, referred to by Senator LODGE, was an eminent authority on international law. A like position was taken by Senator HOKE SMITH on August 7, 1912, and JAMES E. MARTINE, of New Jersey, on January 22, 1913, referring to the exemption of American coastwise trade, says:

I believe that such a policy on the part of this Government with reference to the Panama Canal would rehabilitate our merchant marine, and that within a few years we would command the carrying trade of this hemisphere. * * * As I said heretofore when this question was before this body for consideration, I now repeat that I favor free tolls for American craft, both ocean and coastwise.

On August 7, 1912, Senator JOHN SHARP WILLIAMS said:

I shall vote for the exemption of the coastwise vessels of the United States, because I think we have a right to do it. I think the principle laid down by the Supreme Court is a correct principle in municipal and international law.

Hon. Joseph G. Cannon, former Speaker of the House of Representatives, in a speech May 18, 1912, says:

I was greatly interested and I applauded when he [Representative J. R. KNOWLAND] said that the waterways of the great Republic were without tolls for American ships in the coastwise trade and interstate-commerce trade. I was aware that that was the case, and I am glad it is. They will always be free so far as my vote is concerned.

Senator ALBERT B. CUMMINS, of Iowa, in the Senate, August 7, 1912, said:

I believe, and it can be conclusively shown, that the treaty contains no promise on the part of the United States that it will extend to the other nations of the world the same tolls and the same conditions that we give to our own shipping. There is no such promise in the treaty. There was no such promise in the treaty. It was never intended that there should be any such promise in the treaty.

In a speech on May 16, 1912, the Hon. FRANK DOREMUS, of Michigan, chairman of the Democratic congressional committee of the Democratic caucus of this House, said:

To my mind, this is the most important and far-reaching question that has come before Congress in a generation. The naked issue before the House is whether the Panama Canal is to be run in the interest of the taxpayers and consumers of the United States or in the interest of the transcontinental railroads, that have always opposed the canal and would now destroy its beneficial use to the American people.

In addition to these authorities of eminent statesmen and jurists, made prior to my coming to Congress but at the time this exemption of tolls was up for consideration, I might quote equally as strong and equally as emphatic declarations of the Speaker of this House, the Hon. CHAMP CLARK, and the majority leader of this House, the Hon. OSCAR UNDERWOOD, and the Republican leader, the Hon. JAMES R. MANN, and the Progressive leader, the Hon. VICTOR MURDOCK, all supporting the contention that we place the right construction upon this treaty at the time the former act was passed, and that it would be both detrimental to our economic interest and dangerous to our nationality now to recede from the position then taken. In addition to these American authorities I can but refer you to some British authorities, eminent lawyers of the British Empire, to the effect that the British claim is an absurd claim, not warranted in the treaty or international law. Among these British authorities I name Edward S. Cox-Sinclair, in an article entitled, "The international status of the Panama Canal," in the Law Magazine and Review, published in London; another, under the title of "The Panama Canal act," by C. A. Hereshoff-Bartlett, LL. D. Both of these are eminent British authorities both in British law and international law. I may add to these a statement from the paper read by the Hon. Richard Olney, Secretary of State under President Cleveland, at the annual meeting of the American Society of International Law, Washington, D. C., April 25, 1913, in which he says:

The claim sometimes made that by building and owning the canal the United States engages in a public calling and thereby undertakes to serve all comers without discrimination and at a reasonable rate would seem to have no application to the present case. The principle affects only the users of the public work and only prescribes entire equality as between them; it in no way prevents the owner of the work or those for whom it holds the work in trust, from using it in any way or to any extent that the legal or beneficial owner or owners may determine.

Besides, so far as international law on the subject can be regarded as settled, the rule is that "while a natural thoroughfare, although wholly within the nation that constructs an artificial channel may annex such conditions to its use as it pleases. (3 Moore, 268; The Avon, 18 Int. Rev. Record, 165.)

In the light of all these authorities I see absolutely no argument for a surrender on the part of the American Nation to the interest of Great Britain.

Moreover, gentlemen, aside from these considerations there is a moral political obligation upon every Member of this House, because every political party in its most recent platform declarations has announced a like position.

PRESIDENT WILSON AND PLATFORM PLEDGES.

The Democratic platform adopted at Baltimore contains these words on the Panama Canal controversy:

We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal.

We also favor legislation forbidding the use of the Panama Canal by ships owned or controlled by railroad carriers engaged in transportation competitive with the canal.

As to my duty to the Democratic Party—which I may say is in keeping with my own view on the subject—and as to the economic necessity, together with the benefits to inure to the farmers of Oklahoma, who could ship their products to Galveston and thence through the Panama Canal to the western shores of South America or the Orient, instead of sending them to New York by long-distance rail and thence over the Atlantic, through the Mediterranean Sea and Suez Canal, and on the Indian Ocean to the Orient, I leave President Wilson to make this argument, whose utterance is so clear, language so pure, and logic so convincing that I can not hope to equal his, as made by him immediately following the adoption of the platform and his nomination at Baltimore in 1912 for my reasons for following him then and not following him now.

[From the Philadelphia Record, a Democratic paper, August 16, 1912.]

Gov. Wilson said in part:

"Now, there is another matter. You know we are digging a tremendous ditch across the Isthmus of Panama. It is predicted by the engineers in charge of that colossal enterprise that we shall be able to open it to the ships of the world by the year 1915. What interest have you in opening it to the ships of the world? We do not own the ships of the world. By a very ingenious process, which I would not keep you standing in the hot sun long enough to outline, the legislation of the United States has destroyed the merchant marine of the United States. The chief road by which your crops travel to the Orient is through the Suez Canal. They do not go around by the Pacific. Most of your maps do not show you the short road to the Orient, because they are spread out flat.

"If you will get a globe and draw a circle around the globe, you will see your short road is through the Suez Canal, not across the Pacific, and that the western farmer, therefore, has to ship his crops across the continent in order to reach the ships that are to take that road. And when his crops reach the port, do they find American ships waiting for them? Not at all.

* * * * * * *

"One of the great objects in cutting that great ditch across the Isthmus of Panama is to allow farmers who are near the Atlantic to ship to the Pacific by way of the Atlantic ports, to allow all the farmers on what I may, standing here, call this part of the continent, to find an outlet at ports of the Gulf or the ports of the Atlantic seaboard, and then have coastwise steamers carry their products down around through the canal and up the Pacific coast or down the coast of South America.

"Now, at present there are no ships to do that, and one of the bills pending—passed, I believe, yesterday by the Senate as it had passed the House—provides for free tolls for American ships through that canal and prohibits any ship from passing through which is owned by any American railroad company. You see the object of that, don't you? [Applause.] We don't want the railroads to compete with themselves, because we understand that kind of competition. We want water carriage to compete with land carriage, so as to be perfectly sure that you are going to get better rates around the canal than you would across the continent.

"The farmers of this country are, in my judgment, just as much concerned in the policy of the United States with regard to that canal as any other class of citizens of the United States. Probably they are more concerned than any other one class, and what I am most desirous to see is the farmers of the country coming forward as partners in the great national undertakings and take a wide national, nay, international, view of these great matters, feeling all the pulses of the world that beat in the great arteries of their own life and prosperity. Everything that is done in the interest of cheap transportation is done directly for the farmer as well as for other men. So that you ought not to grudge the millions poured out for the deepening and opening of old and new waterways. * * *

"Our platform is not molasses to catch flies. It means business. It means what it says. It is the utterance of earnest and honest men, who intend to do business along those lines and who are not waiting to see whether they can catch votes with those promises before they determine whether they are going to act upon them or not.

"They know the American people are now taking notice in a way in which they never took notice before, and gentlemen who talk one way and vote another are going to be retired to very quiet and private retreat."

Public Lands—Decision as to Rights of Heir on Death of Entryman.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 10, 1914,

On the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. JOHNSON of Washington. Mr. Speaker, under leave given to me during the debate on the Agricultural appropriation bill, March 10, to extend my remarks, I desire to place in the RECORD a recent decision by the District of Columbia Supreme Court in a mandamus case against the Secretary of the Interior, which is of much interest to homestead entrymen in the West. This decision sets aside a ruling by the last administration in a homestead case, upon which many other cases depended. The department has decided not to appeal from

this decision, but to return to the ruling which obtained for nearly 40 years. I append the decision:

SUPREME COURT OF THE DISTRICT OF COLUMBIA.

United States on Relation of Newton Rule *v.* Franklin K. Lane, Secretary of the Interior.

PUBLIC LANDS; HOMESTEAD ENTRY; DEATH OF ENTRYMAN; RIGHTS OF HEIR.

1. Where a homestead entryman dies within six months after making his entry and without establishing residence on the land, his heirs may complete the entry by proof of cultivation and improvement of the land for the necessary period and without the establishment of residence on the land.

2. In such a case, the heir of the deceased entryman has a vested right in the land, under the long-continued decisions of the Land Department and the Secretary of the Interior, and the law as determined by the courts, and under the statutes, of which vested right he can not be deprived by the action of the Secretary of the Interior in reversing the decisions made by his predecessors in office.

No. 56351. Law. Decided December 31, 1913.

Hearing upon a petition for mandamus against the Secretary of the Interior to compel him to grant a rehearing, and so forth.

Demurrer to Secretary's answer sustained.

Mr. Samuel Herrick, Washington, D. C., for the relator.

Mr. P. C. West, Assistant Attorney General, Mr. C. E. Wright, assistant attorney, and Mr. F. W. Clements for the respondent.

Mr. Justice Barnard delivered the opinion of the court:

THE FACTS.

The relator avers that on June 28, 1904, his son, Highlan N. Rule, made a homestead entry upon the said land, at the United States land office at Alliance, Nebr. That immediately thereafter he commenced preparations to establish his residence on said land; but in the midst of his preparations, and while actually journeying to the land, with his household goods, he became ill, and died on July 29, 1904.

That on September 12, 1904, the relator, as heir of his son, with his family, removed to said land and lived thereon until December 19, 1904. That during the years 1905, 1906, 1907, 1908, 1909, and 1910 he cultivated a portion of the said tract of land, the amount cultivated being increased each year, until in the year 1910 it amounted to 40 acres; and that he used it also for the grazing of stock. That he improved it with a house, barn, fencing, outhouses, corrals, and other improvements, at an expense of more than $1,500; and that on August 15, 1910, he submitted final proof on said entry, as required by the statutes.

That on June 18, 1910, one Allen G. Fisher filed a contest against the said homestead entry, alleging that the entryman had died without establishing residence on said land, and that settlement upon the land had not been made by any person.

That said Fisher refused to pay the fees of witnesses offered by said relator; and notwithstanding the testimony of said witnesses was not taken, the United States local land officers at Alliance, Nebr., decided that the contestant had not proven his case and that the heirs of the entryman had gained title to the land by five years' cultivation, and recommended that the contest be dismissed.

An appeal was taken to the Commissioner of the General Land Office, and he affirmed the said decision on September 27, 1911.

Thereupon appeal was taken to the Secretary of the Interior, and the Assistant Secretary, on February 28, 1913, reversed the said decisions of the local land office and of the said commissioner and held that the death of said Highlan N. Rule before establishing residence on said land terminated the entry and that his heirs succeeded to no right whatever in said land.

That the relator filed a motion for rehearing, and on April 17, 1913, the Assistant Secretary denied the said motion; and on May 2, 1913, the said entry was canceled in the General Land Office.

On May 13, 1913, the relator filed before the Interior Department a petition for relief and presented argument in support thereof, both orally and by brief; and on July 19, 1913, his petition was denied by the First Assistant Secretary of the Interior.

HOMESTEADER'S CONTENTIONS.

That prior to the said decision of February 28, 1913, the Interior Department had, since the year 1875, consistently, continuously, and uninterruptedly held and decided that upon the death of a homesteader within six months after entry, and before establishing residence, his rights passed to his heirs; and that they could complete title and secure patent by cultivating the land without residence upon it; and that these rulings constituted a rule of property for more than 37 years upon which the relator had a right to rely.

He avers that it was the plain, unqualified, absolute, and peremptory duty of the said Secretary, by virtue of his official position, to order a dismissal of the said contest brought against said entry by said Fisher, and to hold the said entry intact by virtue of the relator's compliance with the law since the death of the entryman; and to direct the local land officers at Alliance, Nebr., to issue final certificate and patent upon the said homestead entry and the final proof made thereon, and notwithstanding relator's right to such final entry and patent, said Secretary refuses to order such final entry and patent.

That it was not competent for the said Secretary to entertain or sustain the contest filed against said entry, or to direct its cancellation, or to deny the motions presented by the relator, because the record before him showed that said Highlan N. Rule died only 31 days after making said entry, and while engaged in preparations to establish his residence on said land; and that his heir thereafter cultivated and improved the said land for more than five years, as required by sections 2289 to 2297 of the Revised Statutes.

That it was not competent for the said Secretary to apply a different rule from that followed by the office for nearly 40 years previous, and to make it retroactive so as to deprive the relator of his right to a patent; and he having submitted final proof, and having thereby gained title to said land, and become entitled to a patent, under section 2291 of the Revised Statutes of the United States, it was not competent for said Secretary to cancel said entry, and refuse to reinstate the same.

DEPARTMENT'S CONTENTIONS.

On the filing of this petition, a rule to show cause was issued, and in response the Secretary filed a return, stating that the decision of all such questions is exclusively within his jurisdiction and not reviewable by mandamus. That he, in the exercise of his jurisdiction, and after due notice, exercising his judgment and discretion, decided that the homestead entry by Highlan N. Rule, under which the relator claims, could not, under the law and the facts appearing in the record before him, be allowed to go to patent; therefore he directed the cancellation of said entry, and the same was canceled.

He further says that legal title is in the United States, and that the latter is a necessary party to this or any other suit whereby its title is sought to be devested, and he therefore asks that the rule be discharged.

To this return the relator has filed a demurrer.

COURT'S DECISION.

It does not appear from the return of the respondent to the rule to show cause just what the record was that was before him when he decided that the homestead entry of Highlan N. Rule could not be allowed to go to patent. If, however, this record is different from the facts stated in the petition it should have been inserted in the answer, so that the court might know what was before the respondent at the time. It not having been inserted, the court may properly assume that the facts appearing in the petition are correctly stated.

A long line of decisions of the Land Department has been cited by the relator showing that for nearly 40 years the department has held that the heirs of an entryman were entitled to succeed to the rights of the entryman on his death before the completion of the time in which he was required to reside upon the property in order to secure a patent.

LONG LINE OF RULINGS RE HEIRS.

This line of decisions seems to clearly hold that when a homestead entry is made and the fee is paid the entryman is given a reasonable time to remove to the land, six months having been considered a reasonable time to effect such actual residence; and the question in this case is—

Was the heir of Highlan N. Rule entitled to complete his entry upon his death, after making the entry and payment of fees, but before reaching the land in question to establish actual residence thereon?

It appears that after making the entry the decedent began his preparations to remove to the land, and while in the actual course of moving he was taken sick and died, before reaching the same, leaving his father his sole heir; and that his father, within less than six months from the date of entry, entered upon said land and thereafter cultivated the same, for the time necessary to entitle him to a patent, under the statutes and the then existing rules of the Land Department.

RULE OF PROPERTY ESTABLISHED.

The petition not only shows that a portion of the land was cultivated, as required, but that actual improvements were placed upon it in good faith, amounting to more than $1,500; and the point is now made, that the long line of decisions of the Land Department, awarding the rights of an entryman to his heirs on his death, entitled the relator to take the steps that he has taken to secure this title, and that he has expended his money in good faith, on the strength that these decisions amounted to a rule of property, and that it is now too late for the Secretary of the Interior to change that rule of property and make it retroactive so as to deprive him of his vested rights.

Assuming that he has complied fully with the law as to cultivation and occupation, under the statutes and this line of decisions, it would follow that in equity his title was complete; but the evidence of legal title is the patent which the Government issues to purchasers of the public lands. Assuming that this is true, should the Secretary not direct the patent to be issued, and should he not refuse the contest which has been allowed on the allegations of said Allen G. Fisher?

POWER OF THE SECRETARY LIMITED.

I can find no statute charging the Secretary of the Interior with the administration of all laws, and with the execution of all duties appertaining to the purchase, sale, care, and disposition of the public lands of the United States, as claimed in the return to the rule in this case.

The sole duty of the Secretary is that of supervision and direction. The executive duties of sale, survey, patents, homestead entries, and so forth, are required to be performed by the Commissioner, or other independent officers under the Commissioner and in discharging these duties they act in a judicial character when they hear and decide contested matters.

Mr. Justice Brown, in delivering the opinion of the Supreme Court of the United States in the case of United States *v.* Alabama Railroad Co. (142 U. S., 615), used this language:

It is a settled doctrine of this court that in case of ambiguity the judicial department will lean in favor of a construction given to a statute by the department charged with the execution of such statute, and, if such construction be acted upon for a number of years, will look with disfavor upon any sudden change, whereby parties who have contracted with the Government upon the faith of such construction may be prejudiced. It is especially objectionable that a construction of a statute favorable to the individual citizen should be changed in such manner as to become retroactive and to require from him the repayment of moneys to which he had supposed himself entitled, and upon the expectation of which he had made his contracts with the Government. These principles were announced as early as 1827, in Edwards's Lessee *v.* Darby (12 Wheat., 206–210), and have been steadily adhered to in subsequent decisions. (United States *v.* State Bank of North Carolina, 6 Peters, 29–39; United States *v.* Macdaniel, 7 Peters, 1; Brown *v.* United States, 113 U. S., 568; United States *v.* Moore, 95 U. S., 760–763.)

In the same case the court held that a construction given by the executive department for nine years, through six different administrations of that department, should be considered as decisive, and affirmed the judgment of the lower court on that principle.

TITLE PASSED TO HEIRS.

There are a number of authorities that hold that the substantial title passes to the heirs of the entryman after they have completed the residence or cultivation of the land for the length of time required without the actual issue and delivery of the patent. These show that in such case the land is no longer public land to be sold by the Government to some other party.

In Bernier *v.* Bernier (147 U. S., 242), where a patent was issued to a portion of the heirs of an entryman, it was held, in conformity with well-settled law, that where a patent is issued by mistake, inadvertance, or other cause, to parties not entitled to it, they will be declared trustees of the true owner, and decreed to convey the title to him, thus recognizing the vested rights of those who have earned the patent by fulfilling the conditions of the homestead law.

In the case of Cornelius *v.* Kessel (128 U. S., 456) it was held that an order canceling an entry of public land which was made in accordance with law might be treated as void; and it was held that the Commissioner of the General Land Office, who exercises supervision over the register and receiver of the local land offices, can only exert such supervision when an entry is made upon false testimony or without authority of law, and he can not exercise such supervisory powers so as to deprive a person of land lawfully entered and paid for.

The same argument would apply to the Secretary of the Interior with reference to his supervisory powers over the Commissioner of the General Land Office.

WHEN MANDAMUS LIES.

In the case of Butterworth, Commissioner of Patents, *v.* United States ex rel. Hoe (112 U. S., 50) it was held that the supervision and direction which the head of a department may exercise over his subordinates in matters administrative and executive does not extend to matters in which the subordinate is directed by statute to act judicially.

In that case the Secretary had directed the commissioner not to issue a patent which the commissioner had decided was proper to be issued, and the court held that in such case a mandamus should issue, requiring the patent to be granted, notwithstanding the order of the Secretary to the contrary.

In the case of Garfield, Secretary of the Interior, *v.* United States ex rel. Goldsby (211 U. S., 249) it was held that the acts of public officials which require the exercise of discretion are not subject to review in the courts, but if such acts are purely ministerial, or are undertaken without authority, the courts have jurisdiction, and mandamus is the proper remedy.

Mr. Justice Day said in his opinion, on page 261:

NO PLACE FOR ARBITRARY POWER.

It is insisted that mandamus is not the proper remedy in cases such as the one now under consideration. But we are of opinion that mandamus may issue, if the Secretary of the Interior has acted wholly without authority of law. Since Marbury *v.* Madison (1 Cranch., 137), it has been held that there is a distinction between those acts which require the exercise of discretion or judgment and those which are purely ministerial or are undertaken entirely without authority, which may become the subject of review in the courts.

The subject was under consideration in Noble *v.* Union River Logging Railroad (147 U. S., 165–171), and Mr. Justice Brown, delivering the opinion of the court, cites many of the previous cases of this court, and speaking for the court, says:

"We have no doubt the principle of these decisions applies to a case wherein it is contended that the act of the head of a department, in any view that could be taken of the facts that were laid before him, was ultra vires, and beyond the scope of his authority. If he has no power at all to do the act complained of, he is as much subject to an injunction as he would be to a mandamus if he refused to do an act which the law plainly required him to do."

Again, Mr. Justice Day says, on page 262:

There is no place in our constitutional system for the exercise of arbitrary power, and if the Secretary has exceeded the authority conferred upon him by law, then there is power in the courts to restore the status of the parties aggrieved by such unwarranted action.

The entry in this case was made in pursuance of the act of April 28, 1904 (33 Stats., 547), allowing 640 acres of arid lands, entries to be made from and after 60 days after the approval of said act.

Highlan N. Rule was prompt in making his entry at the earliest moment and seems to have been diligent in attempting to establish his residence on the tract, and the relator was prompt to establish his residence and to cultivate the ground succeeding the death of his son.

PREVIOUS DEPARTMENTAL DECISIONS.

In an opinion given by Acting Secretary Ryan on May 23, 1904 (32 Decisions of Department of Public Lands, 653), these words were used:

It is well settled by a long line of decisions that where a homestead entryman dies within six months after making his entry, and without establishing residence on the land, his heirs may complete the entry by proof of cultivation and improvement of the land for the necessary period and without the establishment of residence on the land.

In this case the Secretary cites Swanson *v.* Wisely's heirs (9 L. D., 31), Stewart *v.* Jacobs (1 L. D., 636), Brown *v.* Naylor (14. L. D., 141).

To the same effect is the decision of Secretary Chandler, on September 2, 1892, reported in Grinnell *v.* Wright (15 L. D., 252).

VESTED RIGHTS.

Under the decisions of the Land Department and of the Secretary of the Interior for many years, and under the law as determined by the courts, and under the statutes, I am forced to the conclusion that the relator had vested rights in the property in question by virtue of the said entry, and his settlement and cultivation and proof thereof such as entitled him to a patent for the said land; and in my opinion the Secretary was mistaken in supposing that he had power to change the ruling of his department reversing his predecessors for so many years, and making his judgment retroactive, so as to deprive said relator of his vested rights; and therefore that the relator is entitled to the relief prayed for in his petition.

HOMESTEADER'S DEMURRER SUSTAINED.

It follows that the demurrer to the return herein must be sustained.

Boston Harbor.

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 26, 1914,

On the bill (H. R. 13811) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. TREADWAY. Mr. Speaker, I desire to submit the following details and statistics relative to development of Boston Harbor undertaken at the expense of the Commonwealth of Massachusetts.

Letter from chairman of the directors of the port of Boston:

BOSTON, *March 23, 1914.*

Hon. ALLEN T. TREADWAY, M. C.,
Washington, D. C.

MY DEAR CONGRESSMAN TREADWAY: Briefly summarized, the situation is as follows:

Commonwealth Pier 5: This is the big Commonwealth Pier, the largest in the country; dimensions, 1,200 feet long, 400 feet wide, which is to cost, with approaches and appurtenances, approximately $3,250,000. All the contracts for this work have been let. Half of the pier has been in use since May 31, 1913, and the whole pier is 90 per cent finished and will be entirely in use before July 1.

Dry dock: Contracts for preparing the site of the dry dock, involving over $400,000, have been let and the work has been in process since September, 1913. The plans and specifications for the dock itself have been prepared by an officer in the Navy Department detailed for the purpose and are now before the board, and bids will be asked for very shortly. The estimated cost of the dock itself, over and above the cost of preparing the site, is $2,800,000. This dry dock is the largest yet built or projected. Its length over all is 1,200 feet and its width 133 feet, large enough to take in any merchant or naval vessel yet built or projected or likely to be built or projected for many years to come.

Commonwealth Pier 1, East Boston: Ten acres of water-front property in East Boston have been taken by right of eminent domain and settlement has been made with the owner of most of the property for $725,000, and plans are being made for a pier 900 feet long with 40 feet of water alongside. Two contracts have been let and work has been in progress since the 1st of January. The total cost of this pier, including land taking, will approximate $2,000,000.

East Boston flats: In another part of East Boston 60 acres of land and flats have been taken by eminent domain to make available for reclamation and terminal development some 600 acres and flats already owned by the State. Settlement has been made for only a small portion of the property taken. It is expected that the property damages will reach $350,000, maybe higher.

You will see by totaling these four headings that the $9,000,000 appropriation of 1911 is entirely committed, and that contracts for the construction work involved either already have been let or are just about to be.

In addition, the State has just completed Commonwealth Pier 6, the fish pier, at South Boston, which is opening for business this week. The State has invested $1,000,000 in this property, and the tenants—the Fish Market Corporation—have invested $2,000,000 in property.

The million dollars invested by the State in this pier was from quite another appropriation from the $9,000,000 appropriation of 1911.

Very truly, yours,

HUGH BANCROFT, *Chairman.*

[Extract from report of directors of port of Boston to the Legislature of Massachusetts for the year ended Nov. 30, 1913.]

NEW STEAMSHIP LINES.

This year witnessed a remarkable increase and improvement in the steamship services at Boston, among which may be enumerated the following:

1. The Hamburg-American Line, under its contract with the directors, instituted in May a direct service twice a month between Boston and Hamburg, calling eastward at Plymouth and Boulogne and westward at Boulogne and Southampton. This service was maintained by the steamships *Cleveland* (16,900 tons) and *Cincinnati* (16,339 tons), also the steamers *Blucher*, *Hamburg*, and *Moltke*. In the spring of 1914 the *Amerika* (22,622 tons) is to be added to the service.

2. The Cunard Line has announced a weekly service for 1914, instead of the fortnightly service operated heretofore between Boston and Queenstown and Liverpool, adding the *Caronia* (19,687 tons) and the *Carmania* (19,524 tons) to the *Franconia* (18,150 tons) and the *Laconia* (18,099 tons). The service through the winter is being maintained by the new steamers *Alaunia* and *Andania* (13,000 tons), built in 1913.

3. The North German Lloyd Line began a service from Bremen to Boston in September, with a sailing every three weeks.

4. The Russian-American Line began in October a monthly service between Libau and Boston.

5. The Navigazione Generale Italiana began in July a monthly service between Italian ports and Boston.

6. During the year the Warren Line to Liverpool fitted out its steamers to carry passengers as well as freight. This line also has two steamers under construction, intended for this service.

7. The Allan Line to Glasgow has placed on the route for the winter season steamers much superior to those employed in previous years, including the *Hesperian* and *Grampian*, and next summer intends to replace the *Numidian* with the *Pretorian*, a steamer twice its size.

8. The first sailing from Gothenburg of the new monthly service of the Sweden-Norway Line, operated jointly by the Norway-Mexico Gulf Line and the Swedish America-Mexico Line to Boston from Gothenburg and Christiania, is scheduled for January 15, 1914.

9. The United Fruit Co. begins a new weekly service from Boston to the Panama Canal on January 1, 1914, with the steamers *Sixaola*, *Carrillo*, and *Tivives*, each of 5,000 tons.

10. The firm of John S. Emery (Inc.) has organized a steamship line to operate through the Panama Canal from Boston to the Pacific coast, with a fleet of eight steamers, including two now building at Boston.

11. The American-Hawaiian Steamship Co. has started a new service from the Pacific coast to Boston, transshipping via Tehuantepec. The first steamer arrived at Boston December 7, 1913.

12. The Savannah Line has improved its Boston-Savannah service by adding the 5,000-ton steamship *City of Atlanta*.

13. The Clyde Line has increased its service between Boston, Charleston, and Jacksonville from weekly sailings to sailings twice a week.

14. The Plant Line to Halifax added the new 5,000-ton steamer *Evangeline* to its fleet.

In addition, other steamship lines have plans not yet fully matured for improvements in their Boston services. The most important of these is the White Star Line, which is planning for material betterments in its services in connection with obtaining increased facilities for its business at Commonwealth Pier No. 5.

THE YEAR'S COMMERCE.

The tonnage of shipping entering the port during the calendar year 1913 recorded a satisfactory increase. Entrances in the foreign trade were 3,196,233 net tons, against 3,061,733 net tons for 1912, an increase of 134,500 tons.

Entrances in the coastwise trade were 12,374,664 gross tons, against 12,258,030 gross tons in 1912, an increase of 116,634 tons.

The value of the foreign trade for the fiscal year ending June 30, 1913, showed a substantial gain. The value of foreign trade, domestic imports and exports only, was $216,149,640, against $198,985,187 in 1912, an increase of $17,164,453. Including the Canadian in-transit business, the value of foreign trade for the year ending June 30, 1913, was $260,482,097, against $234,918,975 in 1912, an increase of $25,563,122, and the largest figure in the history of the port.

The total trans-Atlantic passenger movement through the port eastbound and westbound combined was, for the calendar year 1913, 134,315, against 105,663 for the year 1912, and 96,262 for the year 1911.

Restriction of Immigration.

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 4, 1914.

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States, and for other purposes.

Mr. SABATH. Mr. Speaker and gentlemen of the House, in that brave band of mariners that sailed with Christopher Columbus on his memorable voyage there were men representing nearly all the nations of southern Europe, but after scanning the list from top to bottom I fail to find such names as Burnett, Gardner, Dies, or Austin.

The gentleman from Alabama may have had more and better opportunities to investigate this than I have, and therefore it may not be out of place for me to inquire of him how many of the gentlemen from his State or the adjoining States whose sentiments he seems to express can trace their ancestry to these courageous adventurers who risked their lives in the discovery of the Western Hemisphere.

Strange as it may seem, I am unable to find among the names of the men in charge of the various expeditions in the 30 or 40 years following the discovery of this continent any that would indicate that the ancestors of the gentleman from Alabama had anything to do with the early colonization of our country. However, I do find the names of men coming from nationalities which the gentleman from Alabama [Mr. BURNETT], as well as some of the other gentlemen who are supporting this measure, have seen fit to class as undesirable, and whose admission to this country they are seeking to prevent.

Mr. Speaker, I wonder whether it was the intention of Queen Isabella and those others who assisted in financing these expeditions which resulted in the discovery of a new world, that the lands so discovered should remain dormant for centuries and centuries because of a lack of people to till the soil. Was it not, on the contrary, their aim to urge the migration of people to these shores and give an equal opportunity to all those who desired to come and make this country their home? Were not the Pilgrims, the Puritans, the Huguenots, and the Quakers all seeking to escape oppression, and did they not search out a country where they would be free from persecution? Yet we find to-day men so narrow-minded and so bigoted that they would deny admission to thousands of honest, hard-working immigrants of this day and age, who, for similar reasons, are leaving the countries of their birth and coming to our shores. They would refuse these immigrants admission merely because they have been so unfortunate as to be raised in a country which denied them an opportunity to receive an education.

I am inclined to believe that if the gentleman from Alabama had been present at the drafting of the Declaration of Independence he would have insisted that in our struggle for freedom we should refuse the aid and assistance and the advice and counsel of such despicable foreigners as Alexander Hamilton, Lafayette, Rochambeau, Von Steuben, Pulaski, Kosciusko, and those thousands of others who came here to battle so valiantly in our behalf during our struggle for freedom and liberty. Doubtless he would also have insisted that no matter in what dire financial straits we might find ourselves we should accept no assistance from such "undesirables" as Morris, Levy, and the many others of foreign birth who nobly placed their fortunes at the disposal of those in command when the outlook was so dark and when it was nearly impossible to secure sufficient funds to continue the struggle. It is indeed gratifying to know that the gentleman from Alabama does not voice the sentiments of the great mass of the American people.

Mr. Speaker, I feel confident that no one who has studied the growth and development of this country can deny that to the foreign-born people and their descendants belong the credit for

our progress. But, even had they not contributed so much to our country's welfare, should we not extend a welcome to those who seek freedom and emancipation from governmental oppression and despotism? Our Government guarantees, under and by virtue of the Constitution, liberty; and liberty is the goal which the alien strives to reach and which, when reached, serves as an incentive for improvement. He is ideal material for American citizenship, and it is only a short time until he becomes one of us, second to none in his loyalty and patriotism.

Mr. Speaker, the gentleman from Alabama has stated that the organized labor of this country demands this restrictive legislation, and I am satisfied that others in their advocation of this unreasonable, unfair, unjust, and un-American measure will appeal to your loyalty to the cause of labor. They will, as did the gentleman from Alabama, maintain that immigration is detrimental to the labor of this country and inimical to the best interests of our Nation.

I have the honor to represent in part the greatest manufacturing city and the greatest labor center in the world, and the strongest labor-union city in the United States, and yet I have not heard a single labor organization of my city advocating the passage of this bill. For nearly seven years I have been a Member of Congress, and during that time I have worked for and voted for every measure that I believed would better the conditions of the laboring people of this country. During my 12 years on the bench I demonstrated that I was not unfriendly to organized labor; in fact, many labor organizations have passed resolutions approving of my views and commending my stand in their behalf. I can say, without fear of successful contradiction, that my record in behalf of organized labor will stand out more prominently than the record of any gentleman who is advocating the passage of this bill on the grounds of friendship for that cause; so it can not be said that I am opposing this measure because I am a foe of organized labor.

If I thought for one moment that immigration was detrimental to our country or to the interests of the laboring people of our country, I would rather resign my seat, yes, I would rather lose the power of speech, than to advocate the defeat of this measure; but I am fully convinced that immigration has been and is of inestimable benefit. Are not labor conditions better to-day than they were 20 or 30 years ago; are not wages higher, have not living conditions improved, does not the laboring man work shorter hours?

The gentleman from Alabama has frequently quoted from the testimony of Mr. Morrison, the secretary of the American Federation of Labor, as adduced at the hearings before the Immigration Committee some few weeks ago. I will now read a few questions that I asked Mr. Morrison during these hearings, and the answers he gave:

Mr. SABATH. Has the standard of living of the laboring man in this country improved any in the last 10 years?

Mr. MORRISON. Oh yes; in the last 10 or 15 years the conditions have improved with their shorter hours and better wages, those that secured them; yes, sir.

Mr. SABATH. In general the conditions are much better to-day, living conditions and standards of living, among the laboring people of this country than 10 or 15 years ago, are they not?

Mr. MORRISON. Yes.

Mr. SABATH. Notwithstanding that the immigration is the greatest in the history of the United States the conditions of labor have improved, have they not?

Mr. MORRISON. The organized workers; yes, sir.

Mr. Morrison's statements are substantiated by the statistics compiled by the Bureau of Labor, and some of these I will now read. The following table shows, by percentage, the decrease in hours of work and increase in wages, from 1890–1912, in several prominent lines of industry.

	Decrease in hours, 1890–1912.	Increase in wages, 1890–1912.
	Per cent.	*Per cent.*
Silk goods	5.8	18.8
Lumber manufacturing	3.8	29.0
Millwork	5.0	33.4
Furniture manufacturing	7.3	34.4
Boot and shoe manufacturing	6.4	34.8
Hosiery and knit goods manufacturing	7.9	36.1
Woolen and worsted goods manufacturing	6.3	49.7
Cotton goods manufacturing	8.1	61.5
Average	6.3	37.2

Now, let us compare the daily wages of the railroad employees for 1911 with those of 1892. In 1892 we find the section foremen received $1.76; in 1911 they received $2.07. The carpenters were then receiving $2.08; now they receive $2.54. Other shopmen were paid $1.72 in 1892; in 1911 we find them receiving $2.24. Trainmen formerly were paid $2.29; now they are getting $2.88. The firemen formerly worked for $2.08 a day; now they receive $2.94. Machinists formerly were content with $2.08; now they receive $3.14. Enginemen were paid $3.08 in 1892; in 1911 we find their average daily compensation amounting to $4.79; and, lastly, conductors who formerly worked for $1.90 are now receiving $4.16.

At the Thirty-ninth National Conference of Charities and Corrections Mr. Cyrus L. Sulzberger, of New York, delivered an exceedingly interesting address, entitled "Is immigration a menace?" and because of the valuable information which it contains with regard to the effect of immigration upon labor conditions I take the liberty of reading a portion of this address. Mr. Sulzberger said:

During the last 20 years, covering the period of high immigration of the so-called undesirable races, this country has undergone an economic development so tremendous in its character and importance that the mind staggers in the attempt to grasp the figures. During that time the population of the country has increased about one-half. The production of coal, which is the measure of economic activity, is almost three times what it then was. In other words, the economic growth of the country has been six times as great as its numerical growth. The output of our factories has increased in 10 years from $11,000,000,000 to over $20,000,000,000, and the number of wage earners engaged in producing that output increased from 4,700,000 to 6,600,000. During precisely the period when the so-called undesirable immigration was greatest wages advanced most rapidly. The average wages in all industries in 1880 were $344. According to the census of 1910, taken the year previous, when the effects of the panic of 1907–8 were still felt, average wages had advanced to $518, being an increase of exactly 50 per cent. That the immigrant is a factor in lowering wages is an argument that can not be sustained by any ascertainable figures.

Continuing, Mr. Sulzberger said:

In Illinois average wages in 1909 were $588; in New York, $555; in North Carolina, $275; in South Carolina, $282; and in the whole United States, $518. That is to say, in Illinois wages are 14 per cent above the average for the whole country; in New York they are 5 per cent above the average; in South Atlantic States they are 30 per cent below the average; in the south Central States they are 20 per cent below the average.

Also, in this connection, I desire to insert some figures compiled by the Hon. O. P. Austin, Chief of the Division of Statistics, Bureau of Foreign and Domestic Commerce, which appeared in an article by Mr. Austin, entitled "Progress of American commerce and industries, 1870 to 1912."

Statistical statement comparing conditions in 1870 with those of the latest available year.

	1870	1911
Population	38,558,371	95,410,503
Wealth, estimated (latest official figures)	$30,068,518,000	$130,000,000,000
Money in circulation	$676,284,427	$3,276,786,613
Per capita	$17.51	$34.26
Individual deposits in all banks	$2,182,512,744	$15,906,274,710
Deposits in savings banks	$549,874,358	$4,212,583,599
Depositors in savings banks	1,630,846	9,597,185
Imports, total	$435,958,408	$1,653,426,174
Exports, total (domestic and foreign)	$392,771,768	$2,204,222,088
Manufactures for use in manufacturing, exported	$13,711,708	$309,151,980
Manufactures ready for use, exported	$56,329,137	$98,367,352
Manufactures, total (except foodstuffs) exported	$70,040,845	$907,519,841
Farms	2,659,985	6,361,502
Farms and farm property, value of	$8,944,857,749	$40,991,449,090
Farm produce, value of	$1,958,030,927	$8,417,000,000
Manufactures produced, gross value	$4,232,325,442	$20,672,051,870
Wages paid in manufacturing	$775,584,343	$3,427,037,884
Spindles in operation in cotton mills	7,132,000	29,623,000
Coal mined, gross tons	29,496,054	447,853,900
Petroleum produced, gallons	220,951,290	8,801,354,016
Pig iron produced, gross tons	1,665,179	23,649,547
Iron and steel manufactures exported	$13,483,163	$230,725,352
Railways, mileage in operation	52,922	249,992

It can readily be seen from these statistics that the wonderful development which this country has undergone is due to a great extent to the large numbers of people who have come from other countries to establish themselves in the United States. Should we now enact legislation which would halt our progress as a nation?

Mr. Speaker, let us consider further the claim that immigration is detrimental to organized labor. To whom does organized labor owe more for its existence than it does to that wise and fearless leader, Samuel Gompers, for many years the president of the greatest labor organization in the world, and pray, tell me, was he not an immigrant? Was not John Mitchell, who has devoted his life to the cause of the miners of this country, born in Wales? Was not the Secretary of Labor born in Scotland? The majority of the executives of the American Federation of Labor were immigrants, and not only the officers of that great organization, but fully 50 per cent of its members are of foreign birth or foreign parentage. If credit were given to those who deserve it, we would find that immigrants have been instrumental in the organization and development of practically all of the great labor organizations of this country.

Mr. Speaker, for years I have heard gentlemen on the floor of this House demanding the passage of bills similar to the one we now have under consideration, and I notice that, with very few exceptions, the gentlemen who plead the hardest for the passage of these measures, which they claim will so materially benefit the cause of labor, have no labor problems to contend with in their districts, have no immigrants in their districts, and not only are not in a position to judge as to the merits of this legislation, but would not be affected by it were it enacted. These gentlemen point to the overcrowded conditions in the large centers, the congestion in such cities as New York, Chicago, Philadelphia, Boston, St. Louis, Baltimore, Pittsburgh, and the far-away San Francisco. Oh, what great solicitude do these gentlemen display for the residents of these cities!

Have you ever heard any Representative from the cities that I have mentioned, or from any of the other large cities, demand the passage of these restrictive measures? I have not. Why, then, do these gentlemen from the rural districts take such a great interest in this question, when in fact the passage or defeat of this measure would in nowise affect them; is it because they are such humanitarians? Oh, no, Mr. Chairman; for if they were they would be pleading for the elimination of the hardships to which the poor immigrants are now subjected, instead of seeking to impose still greater ones upon them and subjecting them to tests which will make it impossible for thousands upon thousands of the most deserving to gain admission to this great country.

Mr. Speaker, I honestly and sincerely believe that the labor organizations which have declared themselves in favor of this legislation have been misled, and that they are being taken advantage of by designing forces that have but little in common with them; forces that for years and years have endeavored to secure the passage of laws that would close the doors of our country to the thousands and thousands of honest men and women who come to our shores fleeing from oppression and persecution and seeking refuge and liberty. These forces were active long before the existence of organized labor in this country. In years gone by the people banded together with this object in view were called the Know-Nothings, later on they bore the title of the American Protective Association, and now in order to mislead the American people they are parading under the name of Junior Order of American Mechanics. There is another order founded and maintained for the same purpose, and this is known as the Patriotic Order of Americans, while we have also the Immigration Restrictive League and the American Farmers' Union.

For years these organizations have maintained a paid lobby in the Capital for the purpose of conducting a campaign in favor of restriction, and they have stopped at nothing in their efforts to create prejudice in the minds of the American people, not only against immigration but against the foreign-born citizens of this country as well. Unfortunately these organizations and these individuals have been fairly successful in their efforts to create a false conception of the results of immigration, and I regret to say that many statesmen, who through lack of time have been unable to give this vital question the study that it deserves, have been led astray by these false and misleading articles and now stand ready and willing to enact legislation which must appear to any sound-thinking and unprejudiced man as ridiculous.

Mr. Speaker, upon a careful study of this subject we find that 100 years ago the same arguments were interposed in support of restrictive measures as we find advanced by the men advocating the passage of the Burnett bill, for the immigration restrictionists of those days classed the people coming to this country then as undesirable and favored their exclusion. The same arguments were made as to the tendency of the immigrants to congest in the cities, and it was maintained that the effect of immigration was to reduce wages and lower the standard of living.

The report of the Immigration Commission quotes the following from Nile's Register of 1817:

> The immigrants should press into the interior. In the present state of the times we seem too thick on the maritime frontier already.

Consider that statement carefully, gentlemen, for you must remember that it was made when there were only about 5,000 immigrants coming to our shores each year.

Again, the commission's report quotes from the Second Annual Report of the Managers of the Society for the Prevention of Pauperism in New York City, 1819:

> As to the emigrants from foreign countries, the managers are compelled to speak of them in the language of astonishment and apprehension. Through this inlet pauperism threatens us with the most overwhelming consequences.

In the year following this report there were only 8,385 immigrants who came to make this country their home, and yet we find these men speaking of this immigration in language of "astonishment and apprehension."

It would seem, as years went by, it was discovered that, after all, no difficulty had been experienced in the assimilation of these immigrants that had been the cause of such great apprehension, and therefore they were immediately classed as "desirables," whereas those seeking admission a few years later were still regarded as a menace. In a paper entitled "Imminent Dangers to the Institutions of the United States of America through Foreign Immigration," and so forth, published in 1835, the author compares the immigration of earlier years with that of his day and says:

> Then we were few, feeble, and scattered. Now we are numerous, strong, and concentrated. Then our accessions of immigration were real accessions of strength from the ranks of the learned and the good, from enlightened mechanic and artisan and intelligent husbandman. Now immigration is the accession of weakness, from the ignorant victims of the priest-ridden slaves of Ireland and Germany, or the outcast tenants of the poorhouses and prisons of Europe.

Remember, these are the sentiments expressed in the year 1835, when there were less than 50,000 people admitted to this haven of refuge.

At a meeting of the delegates of the Native American National Convention, held in Philadelphia on July 4, 1845, there was published an address in which occurs the following statement:

> It is an incontrovertible truth that the civil institutions of the United States of America have been seriously affected, and that they now stand in imminent peril from the rapid and enormous increase in the body of residents of foreign birth, imbued with foreign feelings, and of an ignorant and immoral character.
>
> The almshouses of Europe are emptied upon our coast, and this by our own invitation, not casually or to a trivial extent, but systematically and upon a constantly increasing scale.

In 1845, the year this address was delivered, there were some 114,000 immigrants who came to make this country their future home.

All of the above articles, from which I have quoted, refer to a class of immigrants which to-day even the most rabid restrictionists refer to as "desirable." It would seem that, as at one time in our history, the dead Indian was regarded as a good Indian; the restrictionists have only regarded as good immigrants those that did not seek admission to this country.

The birth of the Republic and the inception of the agitation for the exclusion of immigrants were coeval. The demand has been insistent, unreasonable, and unsubsiding. Born of prejudice, this desire to shut out foreigners grew up with eyes closed to the light, blindly ignoring all knowledge that would demonstrate the folly of its reasoning. In the earlier days its advocates stubbornly refused to read with unprejudiced eyes a single page of the country's history upon which was chronicled a patriotic deed or which recited an achievement of any character that was the contribution of the class marked for their disfavor. Impelled by motives that were completely out of harmony with the fundamental principles of the Republic, this element never gave thought nor consideration to the economic effect of exclusion or restriction of immigration, but persisted with a zeal that bordered upon the fanatical in its attempts to foist upon the country views that were narrow and ill-advised. Statesmen of every decade of our national life have been confronted with this question, but to their everlasting credit, those clothed with power and exercising influence in shaping legislation have turned deaf ears to the prayers and threats of the exclusionists and continued the liberal policy adopted by their forefathers.

Mr. Speaker, some of the supporters of this bill have maintained that our country is becoming too thickly populated, that we have already within our borders nearly all the people we can accommodate, and that for this reason it is imperative that immigration be restricted. This statement, like so many others, emanating from the opponents of immigration, is most misleading. The fact of the matter is that in 1910, according to the Bureau of the Census, the density of population of the United States, or, in other words, the average number of people per square mile throughout the United States, was only 30.9. Contrast this average density with that of some of the individual States, such as Illinois, with a density of 100.6; Ohio, with a density of 117; Maryland, with a density of 130.3; Pennsylvania, with a density of 171; Connecticut, with a density of 281.3; and Massachusetts, with a density of 418.8. They talk of this country being overcrowded. Why, 125 years ago the density of population of Maryland was greater than that of the United States to-day, and in 1810 there were six States whose density of population was greater than that of the United States to-day. These restrictionists rave about our country becoming too thickly

settled. Let us consider some of the European countries. In the German Empire we find there are approximately 312 people to every square mile; in Italy, 315; and in the United Kingdom, 374. Just think, gentlemen, with a population of only 300 per square mile this country could support over 900,000,000 people. Is it not the height of absurdity to claim that immigration should be restricted because we have not room for these people?

Mr. Speaker, it has also been stated by those favoring the passage of this measure that the incoming immigrants all flock to the large cities, there to increase the present congestion. This is not true. It may be a fact that these immigrants go first to the cities, but their residence there is only temporary. Gentlemen, I state without fear of contradiction that there is nothing closer to the heart of the incoming immigrant than his desire to become possessed of a piece of land which he can call his own, and he does this at his very first opportunity. Hundreds—yes, thousands—of these people are leaving the cities each year and settling on farms. The statistics will show that a large percentage of the people residing in the rural districts of the northern, western, and northwestern sections of our country are of foreign birth or foreign parentage.

I have before me figures taken from a report of the Bureau of the Census which show that in 1910 in the States of New York, New Jersey, and Pennsylvania 31 per cent of the rural population was of foreign birth or foreign parentage; in the States of Ohio, Indiana, Illinois, Michigan, and Wisconsin 32 per cent was of foreign birth or foreign parentage; in Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas 40 per cent of the people residing in the rural districts were of foreign birth or foreign parentage; in the States of Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, and Nevada we find the parentage the same—40 per cent of the rural population is foreign born or of foreign parentage; and lastly, in the States on the Pacific coast—Washington, Oregon, and California—we find that over 42 per cent of the people who are making their homes on the farms are of foreign birth or of foreign parentage.

Now, Mr. Speaker and gentlemen of this House, I ask you if this is not conclusive proof that the immigrant does go on the farm; that he does not remain in the large cities; and that he is one of the pioneers in the "back-to-the-land" movement?

For the further edification of the gentlemen who are of the opinion that this influx of immigrants is harmful to our country, I wish to read some additional statistics taken from a report of the Director of the Census, which show that in the States of Ohio, Indiana, Illinois, Michigan, and Wisconsin 75.4 per cent of the farm land is improved, whereas in Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida you will find but 46.7 per cent improved. In the States of Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas you will find 70.6 per cent of the farm land improved, as contrasted with 53.9 per cent in Kentucky, Tennessee, Alabama, and Mississippi.

You will find that in those States where there is a large percentage of the farm land improved there is also a large percentage of the rural population composed of these same "undesirable" foreigners, as my friends from the South choose to call them, while in the Southern States, which have such a large percentage of native-born whites, you will find a very small percentage of the farm land improved.

This again emphasizes the fact that wherever you go you will find that the farmer of foreign birth or foreign parentage is thrifty, industrious, and a willing worker. He should be considered a national asset of inestimable value. Before immigration commenced millions and millions of acres of land in the Middle West, Northwest, and West were dormant and unproductive. These lands could have been purchased then for $2 or $3 an acre; now one hundred times that will not buy them. The thousands upon thousands of honest, thrifty, and industrious immigrants who amid untold hardships settled upon the prairies and swamps of this country have converted these lands, heretofore useless and of practically no value, into veritable gardens, and large and enterprising cities have sprung up almost overnight. Our country has unlimited resources, which it will take centuries to develop, and we have thousands upon thousands of acres of land lying idle now for lack of sufficient people to till them.

Mr. Speaker, I am satisfied that the gentleman from Alabama [Mr. BURNETT], the gentleman from Mississippi [Mr. HARRISON], and the gentleman from Tennessee [Mr. AUSTIN] are expressing the views of a certain element in the South which is opposed to immigration, but I am glad to know that there are some southerners who recognize the value of immigration. Only a few months ago the Southern Commercial Congress convened in Washington, and I will now read short extracts from the remarks on immigration of some of the gentlemen attendant upon this convention. We find Gov. William E. Glasscock, of West Virginia, stating that:

> Perhaps this mixture of the various branches of the Aryan family may bring forth the finest race that civilization has yet known, and who knows but what the people we are now wont to call the dregs of Europe may not add to that civilization some element not to be found in the so-called stronger nations.

A careful investigation developed the fact that in the 16 States represented by the committee there were 200,000,000 acres of unimproved farm lands and nearly one-half as much more of so-called wet lands, which are reclaimable by drainage for agricultural purposes. Therefore about one-half of the unimproved farm lands in the United States are in these 16 Southern States. In fact, the unimproved farm lands of the South are of greater area than the improved farm lands. Having this in mind, Mr. F. H. La Baume, agricultural and industrial agent of the Norfolk & Western Railway Co., said:

> We must educate the South to the advantages that are to be obtained through foreign immigration. * * * The South, due to its small foreign population, is not familiar at all with the foreigner.

This conference finally adopted resolutions to—

> Recommend to the several States of the South the urgent necessity of establishing in each State a State immigration bureau for the purpose of disseminating reliable information regarding the resources, the possibilities, and opportunities of the South, to be supported by the State's machinery and money under the indirect supervision of the governor of each State, with a good, practical business man in charge, whose duties shall be to cooperate with the United States Government, the transportation companies, the commercial bodies, the real estate men, the press, and the Southern Settlement and Development Organization in placing the country properly before the people of the world; and that said State bureau, if found expedient and practical to do so, add to its functions a farm labor department, with a further view of placing good, able-bodied men and women, who are experienced farmers, upon the land, to the end that we may produce more food for the nonproducer and aid the welfare and happiness of the people.

Now, Mr. Speaker, in the past this prejudice against immigrants has not been confined to the South. Only three years ago 20 Bulgarian farmers, between the ages of 18 and 31, all in perfect health, were denied admission by Mr. Keefe, who was then the Commissioner of Immigration, on the grounds that they were "undesirables." Yet, within the past year or so the world has looked with awe and admiration on the remarkable battle waged by these people in their struggle for liberty and freedom from religious oppression. Will anyone to-day claim that these people, although strange to us, are "undesirables" and that they should be denied admission to our shores?

These inhabitants of southern and southeastern Europe surely deserve our sympathy rather than our condemnation. It goes without saying that some of them are guilty of criminal offenses, but you will find in these races as great a proportion of law-abiding citizens as in any others. Humanity was never destined to be perfect, and we must allow for a certain percentage of weaklings in any nationality. Every nation numbers among its citizens a certain proportion of criminals, while statistics will show that there is less crime in the districts where foreign-born citizens reside than in sections tenanted almost entirely by our so-called "pure" Americans. I desire to quote in this connection some pertinent statistics contained in a special report of the Census Bureau, published in 1907:

White prisoners of known nativity.

	Per cent native.		Per cent foreign born.	
	1890	1904	1890	1904
Continental United States	71.6	76.3	28.3	23.7

These figures are based upon investigations which were made in 1904, and conclusively demonstrate that the percentage of foreign-born inmates of our reformatory and penal institutions has been constantly decreasing, for they show that while the foreign population has increased, the percentage of offenders has decreased. On the other hand, the percentage of native prisoners has increased. And this report shows that the crimes of a grave nature committed by foreign-born prisoners is extremely small, most of the convictions being upon minor charges, usually the infraction of municipal ordinances. I have frequently heard certain gentlemen before our committee charge that the present immigration is below the standard of the immigration which we received prior to 1890; that it fills our charitable and penal institutions. These are but bare statements, unsupported by facts, and are easily disproven by the statistics prepared by the Bureau of Immigration, and in proof of my assertion I desire to quote here some figures taken from

the report of the Commissioner General of Immigration for 1912, showing that the deportations for the fiscal year 1911–12 were as follows:

African (black)	16
Armenian	1
Bohemian and Moravian (Czech)	6
Bulgarian, Servian, and Montenegrin	4
Chinese	11
Croatian and Slovenian	18
Dalmatian, Bosnian, and Herzegovinian	3
Dutch and Flemish	22
East Indian	3
English	138
Finnish	19
French	42
German	152
Greek	33
Hebrew	90
Irish	56
Italian (north)	20
Italian (south)	138
Japanese	4
Lithuanian	6
Magyar	20
Mexican	109
Polish	81
Portuguese	2
Roumanian	4
Russian	14
Ruthenian (Russniak)	15
Scandinavian (Norwegians, Danes, and Swedes)	46
Scotch	18
Slovak	14
Spanish	9
Spanish-American	3
Syrian	8
Turkish	4
Welsh	1
West Indian (except Cuban)	6
Other peoples	6
Total	1,142

This is conclusive proof that the opposition to the present-day immigration, as voiced by the professional restrictionists and my Republican friends HAYES, GARDNER, and AUSTIN and my Democratic friends BURNETT and DIES, is unjust and unfair, for the percentage of deportations among immigrants regarded by the restrictionists as belonging to the so-called "desirable" races—the English, French, etc.—is far in excess of that among the races that are classed by the gentlemen whom I have just named and other restrictionists as belonging to the "undesirable" races.

The prejudice against the immigrant from southern and southeastern Europe which now asserts itself is identical with that which was prevalent in the early days of German and Irish immigration; restrictive legislation is being urged by that selfsame element which in the past leaped to conclusions without familiarizing itself with pertinent facts and data. The good qualities of these immigrants were not known at that time, but to-day who can deny that the Germans and the Irish possess the very best qualifications for American citizenship? Within the last 50 years, since the inception of Bohemian and Polish immigration, these people have conclusively demonstrated their worthiness of American hospitality. Five years ago I succeeded in overcoming the prejudice and bias which had previously been exhibited toward Bohemian immigrants by showing that they are far above the average in education, industry, and thrift.

I dare say that no one can successfully contradict the assertion that the Germans, the Irish, the Bohemians, the Poles, Swedes, and Norwegians, and the Danes are desirable immigrants. They have all proven beyond doubt their worthiness, and their citizenship has given us eminent satisfaction. Every student of economics knows that Jewish immigration has greatly aided and benefited our country by opening and enlarging our commercial marts and finding new markets for our products. The progressiveness of the Jewish immigrant has in numerous other ways resulted advantageously to the entire country.

Then there is the Polish immigrant, ever loyal, sincere, and industrious. Long before the emigration of the Pole to America was his worth and desirability demonstrated, for in the days of the Revolution those eminent and valiant Poles, Gen. Thaddeus Kosciusko and Count Casimir Pulaski, whose statues were unveiled in this city a few months ago, together with many of their countrymen, fought by the side of the immortal Washington for our freedom from the despotism and oppression of England.

Mr. Speaker, the problem of immigration is one which settles itself. Our present laws are strict enough in every respect. We now exclude idiots, imbeciles, feeble-minded persons, epileptics, insane persons, paupers, persons likely to become a public charge, professional beggars, persons afflicted with tuberculosis or a loathsome or contagious disease, persons mentally or physically defective, persons who have been convicted of a crime or misdemeanor involving moral turpitude, polygamists, anarchists, prostitutes, contract laborers, assisted aliens, and, at the discretion of the Secretary of Labor, children under 16 years of age unaccompanied by one or both of their parents.

As an example of the increasing severity of our laws, let me state that, while in 1892 only 1 alien out of every 600 was barred, to-day we find that 1 alien out of every 52 is denied admission, an increase of nearly 600 per cent. This, too, notwithstanding the fact that the examinations conducted prior to their embarkation are much stricter than formerly.

Mr. Speaker, the Democratic Party—the party that has survived since our independence—the party that stands for justice and freedom, for progress, and for personal, civil, political, and religious liberty, was nearly continuously in control of our Government from the time of our independence until 1860, and, although many efforts were made by the various political parties to pass restrictive legislation, especially between the years of 1820 and 1860, the Democratic Party stood firm for broad and liberal policies. It stood then, as it should stand to-day, for the fundamental principles of our free Government. We have been, and I hope we will continue to be, in favor of the policy that this land of ours should ever be a refuge for the oppressed and persecuted of every nation.

In upholding the sacred traditions of the country and of the Democratic Party, the Democratic platform of 1884 contained the following:

We oppose sumptuary laws, which vex the citizen and interfere with individual liberty

In reaffirming the declaration of the Democratic platform of 1856 that the liberal principles embodied by Jefferson in the Declaration of Independence and sanctioned in the Constitution, which makes ours the land of liberty and the asylum of the oppressed of every nation, have ever been cardinal principles in the Democratic faith.

And in the platform of 1892 we had the following:

We condemn and denounce any and all attempts to restrict the immigration of the industrious and worthy of foreign lands.

Are we now to renounce the broad and liberal attitude that we have assumed and enact a measure which will bar from our shores countless thousands of worthy and deserving immigrants?

When, some years ago, a measure similar to the one which is now before us, was presented to that great statesman and illustrious Democrat, Grover Cleveland, for his signature, he returned it without his approval, and I wish to read here the message which accompanied it:

MARCH 2, 1897.

To the House of Representatives:

I hereby return without approval House bill No. 7864, entitled "An act to amend the immigration laws of the United States."

By the first section of this bill it is proposed to amend section 1 of the act of March 3, 1891, relating to immigration by adding to the classes of aliens thereby excluded from admission to the United States the following:

"All persons physically capable and over 16 years of age who can not read and write the English language or some other language; * * *."

A radical departure from our national policy relating to immigrants is here presented. Heretofore we have welcomed all who came to us from other lands except those whose moral or physical condition or history threatened danger to our national welfare and safety. Relying upon the zealous watchfulness of our people to prevent injury to our political and social fabric, we have encouraged those coming from foreign countries to cast their lot with us and join in the development of our vast domain, securing in return a share in the blessings of American citizenship.

A century's stupendous growth, largely due to the assimilation and thrift of millions of sturdy and patriotic adopted citizens, attests the success of this generous and free-handed policy which, while guarding the people's interests, exacts from our immigrants only physical and moral soundness and a willingness and ability to work.

A contemplation of the grand results of this policy can not fail to rouse a sentiment in its defense, for however it might have been regarded as an original proposition and viewed as an experiment, its accomplishments are such that if it is to be uprooted at this late day its disadvantages should be plainly apparent and the substitute adopted should be just and adequate, free from uncertainties, and guarded against difficult or oppressive administration.

It is not claimed, I believe, that the time has come for the further restriction of immigration on the ground that an excess of population overcrowds our land.

It is said, however, that the quality of recent immigration is undesirable. The time is quite within recent memory when the same thing was said of immigrants who, with their descendants, are now numbered among our best citizens.

A careful examination of this bill has convinced me that for the reasons given, and others not specifically stated, its provisions are unnecessarily harsh and oppressive, and that its defects in construction would cause vexation and its operation would result in harm to our citizens.

GROVER CLEVELAND.

Mr. Speaker, in my humble way I have endeavored to prove by my arguments and by the statistics I have submitted that immigration has been of great benefit to our country. I believe that, notwithstanding all of the charges and accusations which have been made against the immigrant and against immigration, I have produced enough evidence to convince any unprejudiced man that my contentions are correct. I have shown that the wages in the last 10 years have been materially increased, hours

of labor decreased, the standard of living improved, and the standard of citizenship maintained on its high level.

The enemies of immigration claim that the educational test will keep out the ignorant, and they maintain that these illiterate aliens do not assimilate as quickly as the literate. I believe that the statistics will show that the gentlemen are in error as to this conclusion, for it is a well-known fact that there is a higher percentage of literates among the children of illiterate parents of foreign birth than among the children of literate immigrants or even among the children of the native born.

It is maintained that the literacy test will keep out between 25 and 30 per cent of the immigrants. For the sake of argument I will admit that this estimate is a fair one; but I ask you gentlemen if it is just to endeavor to accomplish indirectly what could be brought about directly. If you desire to restrict immigration, why hide behind the subterfuge of the literacy test? Why not come out openly and declare that you are opposed to immigration and that you propose to limit it in some way? Is it fair, is it equitable, to discriminate against a class of people merely because, through no fault of their own, they have been prevented from securing an education in their own countries? Is it right that we should say to them that because, on account of political and religious oppression in their countries, they have been denied the advantage of an education they shall not enter our shores?

But, Mr. Speaker, why should I argue on the merits of the literacy test when I have before me the statements of the greatest men in this country, men whose opinions should and will carry much greater weight than mine?

A few moments ago I read the message of President Cleveland vetoing a bill containing the literacy test. Now I desire to read an extract from President Taft's veto message last year, when he returned the Burnett bill without his signature. President Taft said:

I can not make up my mind to sign a bill which in its chief provision violates a principle that ought, in my opinion, to be upheld in dealing with our immigration.

When asked as to his views on this question, Cardinal Gibbons made the following statement:

I am not in favor of any educational test as applied to immigrants desiring to enter the United States. Such a law, if passed, would, in my opinion, work great harm, for illiteracy is by no means always ignorance. If the immigrant is industrious and thrifty he will make a useful citizen, whether he be literate or illiterate. The educated schemer is in more ways than one more dangerous than the honest workman, even though he be illiterate.

Secretary Nagel, in his letter to President Taft advising him to veto the bill, directs his attention to the fact that—

The people * * * are frequently illiterate because opportunities have been denied them. * * * Frequently the attempt to learn to read and write the language of the particular people is discouraged by the Government, and these immigrants in coming to our shores are really striving to free themselves from the conditions under which they have been compelled to live.

Prof. Emily Greene Balch, Wellesley College, at a meeting of the American Economic Association at Washington, D. C., expresses herself as being opposed to the literacy test, and, further, says:

I believe that it is a fact that most Americans have an entirely false conception of the real significance of peasant illiteracy, which need not connote a lack of either energy or intelligence.

At a hearing before the Immigration Committee, Miss Grace Abbot, of Chicago, widely known as a deep student of sociology, testified that—

The literacy test is no guaranty of character, and it seems to me its adoption would be a departure from American traditions which would not be beneficial to the American industrial situation.

Herman Stump, former Commissioner General of Immigration, delivered himself of the following views on the subject of immigration when testifying before the industrial commission:

A young, able-bodied man who comes from a foreign land to settle here, with energy and willingness to work, is an acquisition to the country, and while we do not want him to occupy the positions which education would enable him to occupy, we want him to occupy the positions where it does not matter much whether he knows his A B C's or the simple rule of three or anything else.

Not only have prominent individuals throughout the country gone on record as being opposed to this unjust and unreasonable test, but various newspapers and periodicals have contained strong editorials urging the elimination of this provision. I now propose to quote extracts from some of these editorials.

The New York Christian Work had the following to say:

There could hardly be a more deceptive test of real worth. * * * The test of immigration should be health and morality.

We find this in the editorial columns of the Philadelphia (Pa.) Telegraph:

We have a cure for illiteracy in our public schools, and in every immigrant family there is a passionate desire to embrace that opportunity. Exclude the physically and morally unfit, if you will, but do not put up the bars against the untaught of Europe, who still look to America as a land of refuge and opportunity.

The New York Sun made the following comment upon this test:

Keep out, as far as human sagacity will do it, the criminal, the crazed, the diseased, the defective. Will, energy, industry, honesty, these are not dependent on spelling out aloud or sprawling a few words with a pen. * * * Men, women, and children who can work and save, these are always needed, and no pedantry of Congress should keep them cooling their heels at the gates.

The following I quote from the Washington Post:

It would be poor national economy to turn healthy white immigrants back from our ports simply because they can not read or write. Most of them realize what they have lost in having had no opportunities for education in their own country, and they inculcate in the minds of their children the realization of the inestimable benefit of education. Some of our finest stock would be lost to us if the literacy test ever became effective.

Now I read from an editorial in the Chicago Examiner:

The errors committed in efforts to regulate immigration spring usually from an entire misconception of the worth of the immigrant as a factor in our progress. * * *

Our Nation was founded by immigrants, though we call them more politely "Pilgrim Fathers" or "first settlers." It has been maintained and built up by the steady inflow of the eager and ambitious of every nation. To change the policy by which this great annual contribution of humanity has been made welcome is dangerous.

I also quote below extracts from a translation of an editorial appearing in the Jewish Morning Journal, of New York City:

The hundreds of thousands of immigrants who are already here control the tide of immigration much better than it could be done by law, because they come into constant personal relations with those who want to come here, and they inform the would-be immigrants when there is work for them here, when the country really needs immigrants. Those who arrive at present come to relatives or friends, and they come only when their American friends understand that the conditions at the place where they live can bear an increase in population through immigration. When times are bad in a certain locality or in the entire country fewer immigrants come to our shores. When the tide of immigration is large, that in itself indicates that there is a great demand for the kind of work which these immigrants do. If these conditions were not true, our country would not be able to absorb so easily a million immigrants in one year. The economic argument against additional restrictions is stronger now than it was at the time when a great number of the newcomers had no friends to whom to turn the first day they came. * * *

We all know that the question of illiteracy is nothing but an excuse. No one is foolish enough in Washington or elsewhere to believe that a man who can not read or write can not be a painstaking and useful workman or that he can not become a useful citizen. Everybody agrees that the literacy test is only an excuse, a means to reduce immigration in general. Were it only practicable, an attempt would be made to exclude red-haired or brown-eyed people. Every exclusion of a considerable number of people under such a subterfuge must enrage the entire foreign-born population, and this time their rage will take a more definite political course than has been possible on former occasions.

Time will not permit of my reading all of the numerous resolutions, petitions, and letters which I have received protesting against the passage of this bill, but I will quote brief excerpts from a few of these.

The resolution adopted by the Workmen's Circle says in part:

Whereas it is a violation of the moral law to exclude any human being from the opportunity of escaping from economic, political, or religious oppression, * * * Now, therefore, be it

Resolved, That the Workmen's Circle, representing over 45,000 members in good standing, protests against the Burnett immigration bill (H. R. 6060) as an unjust measure which militates against the best ideals of this Republic.

The following is from a letter addressed to me by the Italian Journal, a large Italian newspaper in New York City:

The Italian Journal, voicing the sentiments of all of the Italians in the United States, favors the enactment of stringent laws for the exclusion of criminals, but maintains that the Burnett bill, while not improving to any extent the existing provisions against the immigration of criminals, will prevent the admission of healthy, industrious, and law-abiding immigrants whose useful labor would be a considerable contribution to American prosperity.

The president of the American Association of Foreign Language Newspapers, in expressing the views of this national association, says:

This bill is calculated to place a restriction upon desirable immigration and is based upon a test false in its purpose and iniquitous in its effect. * * * Strong and healthy immigrants (so sorely needed to continue their fundamental labor in developing the great resources of this country) would be debarred by this inappropriate and unjust literacy test.

I received a protest from the German-American State Alliance of Ohio and the German-American State Alliance of Kentucky, assembled in joint session, representing 60,000 American citizens, and this is what they have to say with regard to this legislation:

We are of the opinion that the men and women engaged in the labor of producing and upbuilding the wealth of our Nation do not require an educational test. What we need are physically well-built men and women, desirable immigrants, who on account of their moral worth would improve the citizenship of our country.

The board of commissioners of Cook County adopted resolutions strongly protesting against the passage of this bill, and from these resolutions I now quote:

Whereas the conditions in some of the countries of Europe are such that moral, honest, and industrious men and women can not secure an education, and seek to come to this country in the hope of improving themselves under the beneficent influence of free institutions and our free Government: Therefore be it

Resolved, That we hereby cheerfully give testimony to Members of Congress, before whom the new restrictive immigration measures are pending, that the foreign-speaking citizenship of our community is a most desirable element, and that neither the paupers nor disturbers come from the moral, honest, and industrious peasant, artisan, or craftsman of Europe, who, although they may not be sufficiently schooled to pass educational or literacy tests, come here and make worthy and desirable citizens.

The United Lithuanian Societies of Chicago, representing 50,000 Lithuanian Americans of Illinois, in their protest say:

Whereas we feel convinced that the educational or so-called literacy test is not a true test of character, integrity, or general fitness of the individual who may seek admission to this country: Therefore be it

Resolved, That we protest against the enactment of an immigration law requiring an educational test.

The citizens of Cincinnati were so aroused over this proposed legislation that they assembled in a mass meeting, and I quote below a brief extract from the resolutions which they adopted:

Be it resolved, That all legislation restricting immigration beyond keeping out the criminal and the diseased is both unjust and unwise, and in flagrant contradiction to the principles laid down in the Declaration of Independence.

The Polish National Alliance, representing 110,000 Polish Americans residing in the United States, in its protest says:

We feel convinced that literacy or educational tests would and do in no wise indicate morals, conscience, honesty, integrity, and industry of those that desire to come to our land from foreign shores. * * *

The present immigration laws and restrictions * * * are sufficient to keep out of our country all unhealthy, vicious, and undesirable elements.

Mr. Speaker, as the chairman of the Immigration Committee has said, the passage of this bill would not to any great extent affect the class of people in whom I am directly interested. I venture to say that the people whom I represent would suffer very little, as I have no Italians, no Sicilians, no Greeks in my district. The majority of the people there come from a section of the country that statistics will show has only a small percentage of illiterates. Only a little over 1 per cent of the Bohemians are illiterates, and the same thing is true of the Germans, the Irish, the Swedes, and the Hollanders. There may be a larger percentage of illiterates among the Jewish and the Polish people, I can not give the exact figures as to these races.

My motive for presenting the cause of these people before you arises purely from a desire to see justice and fair play. The literacy test provided in this bill will not serve to keep out the viciously inclined, the criminal, or the really undesirable alien, and I certainly believe that it would be a grievous mistake to place an embargo on willing hands and brawny muscle. How much more desirable it would be to increase the efficiency of our existing machinery for distributing the arriving aliens, so that the supply might reach our vast and scattering demands.

Before I conclude I wish to emphatically deny the truth of certain statements which have been made with regard to the stimulation of emigration by the foreign Governments. Several times it has been charged that the foreign countries, especially Austria-Hungary, Germany, and Italy, are encouraging and aiding emigration to this country. Those accusations, like many others made by the restrictionists, are not based on facts.

The truth of the matter is that these Governments are using every effort to prevent emigration, and they have been especially active during the past six months. Several steamship companies which were charged with being instrumental in stimulating immigration have had their agencies closed and have been compelled to stop soliciting business. These Governments claim that the majority of the able-bodied men and women are emigrating, and that only the weak, the feeble, and the aged remain at home, and therefore they are doing all within their power to reduce this emigration to a minimum, recognizing that through it they are losing their most desirable citizens. A careful examination of the report of the Commissioner General of Immigration will show that during the last 10 years 88 per cent of the immigrants that came to this country were between the ages of 14 and 45. In other words, we are getting the very cream of the other nations, and yet of these picked immigrants there were over 16,000 debarred during the fiscal year of 1911-12.

Mr. Chairman, in conclusion I can but repeat my assertion that the passage of this bill will mean the closing of our doors to thousands upon thousands of honest, industrious, law-abiding immigrants who would make citizens of which any nation might well be proud. It is sincerely to be hoped that the Members of this House will vote to continue this country as the haven of refuge for the oppressed and persecuted of all nations.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. CLAUDE L'ENGLE,
OF FLORIDA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. L'ENGLE. Mr. Speaker, I desire to extend my remarks in the RECORD by inserting a copy of a letter written to one of my constituents in explanation of my position relative to the repeal of the free-tolls provision of the Panama Canal act.

Letter to Hon. J. J. Dickinson, Sanford, Fla.:

MARCH 31, 1914.

Hon. J. J. DICKINSON,
Sanford, Fla.

MY DEAR SIR: I have your letter of the 28th relative to my position on the Panama Canal tolls question, and I thank you for writing me, because it gives me the opportunity to present the matter to you as I see it.

I am going to begin by admitting that your statement to the effect that I am in bad company is somewhat true, because I have felt rather guilty when I saw that most of the plute papers of the country were for the first time on my side. A number of other progressive Democrats, who think as I do on public questions, are in the same company with me. But the fact that some men with whom I have seldom agreed upon public questions view this question as I do would not deter me from doing what I conscientiously believe to be right.

I do not think the people of Florida would have elected me to Congress had they not thought I had at least some ability to think for myself and judge right from wrong. I have consistently and unfalteringly upheld the President upon every question coming before Congress up to this time, and, except in cases like this that violate the Democratic platform, I shall continue to support the progressive Democratic policies which he is endeavoring to enact into the laws of our country.

The effort of the yellow journals to create the impression that we Democrats who are opposing free-tolls repeal are endeavoring to split the Democratic Party is absolutely unfounded. When this question is settled you will find myself and other Democrats who voted against the President on this question falling back in line and supporting every worthy measure.

When I became a candidate for Congress before the Democratic primaries in Florida, I took a solemn oath that I would support the Democratic Party, both national and State. There was also an implied oath that I, as a Democrat, would adhere to the Democratic principles as promulgated in the platform adopted at Baltimore. That platform says: "We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal. We also favor legislation forbidding the use of the Panama Canal by ships owned or controlled by railway carriers engaged in transportation competitive to the canal."

A specific and later declaration like the above can not be annulled or abrogated by a former declaration of general principles.

Speaking of this provision in the Democratic platform, President Wilson, at Washington Park, N. J., on August 5, 1912, said:

"One of the great objects in cutting that great ditch across the Isthmus of Panama is to allow farmers who are near the Atlantic to ship to the Pacific by way of the Atlantic ports.

"Now, at present there are no ships to do that, and one of the bills pending—passed, I believe, yesterday by the Senate as it had passed the House—provides for free tolls for American ships through that canal, and prohibits any ship from passing through which is owned by any American railroad company.

"You see the object of that, don't you? We don't want the railroads to compete with themselves, because we understand that kind of competition. We want water carriage to compete with land carriage, so as to be perfectly sure that you are going to get better rates around the canal than you would across the continent.

"Our platform is not molasses to catch flies. It means business. It means what it says. It is the utterance of earnest and honest men, who intend to do business along those lines and who are not waiting to see whether they can catch votes with those promises before they determine whether they are going to act upon them or not."

The President is but human; he changed his mind; but I believed in that plank of the Democratic platform when it was adopted and I believe in it now. I do not think that because one man changes his mind that another should be expected to do so.

Years ago I adopted as the motto of my paper: "If it is right, we are for it." I believe I am right in this, and I believe my judgment will be backed by the opinion of the country when the question is fully understood. Nor will you want to have your Representative in Congress violate the pledge on which he was elected at the dictation of any man, even though he be the President of the United States. I do not believe that you would want your Representative in Congress to violate the principles of the platform on which he was elected, still believing that those principles are right.

In 1908 the Republican platform specifically declared for downward revision of the tariff. A Republican President and Republican Congress violated that provision of their platform, that solemn contract with the American people upon which they were elected. The result you well know. When they came before the people they met with a well-merited rebuke.

William Jennings Bryan, whom I have always considered the greatest exponent of true Democracy living, is quoted as having said:

"If a man after election finds that his platform contains something which he can not honestly support, what ought he to do? * * * He should resign and let the people select a man to do what they would have him do. * * * A platform is binding upon every honest man."

Representative HENRY, of Texas, who was the lieutenant in the House of the President in this fight, relative to violating platform promises, said:

"A party that violates its platform pledges is unworthy and deserves the scorn of honest men. * * * When my party acts, whether its actions be right or wrong, so long as I remain a member thereof, I shall steadfastly support its platform demands."

President Wilson on this same subject says:

"Our platform is not molasses to catch flies. It means business. It means what it says. It is the utterance of earnest, honest men, who intend to do business along those lines and who are not waiting to see whether they can catch votes with those promises before they determine whether they are going to act upon them or not."

John Hay, Secretary of State when the Hay-Pauncefote treaty was signed, says there is nothing in that treaty denying the United States the right to exempt its coastwise vessels from the payment of tolls.

The Supreme Court of the United States, the highest judicial authority in this country, says the same thing.

Able lawyers throughout the country hold the same views.

England contends that we have no right under the Hay-Pauncefote treaty to exempt our own vessels from payment of tolls, but England did not always so construe this treaty, because as late as July, 1912, the accredited representative of Great Britain wrote to our Secretary of State as follows:

"If the trade should be so regulated as to make it certain that only bona fide coastwise traffic which is reserved for United States vessels would be benefited by this exemption, it may be that no objection could be taken."

But even if it was a question and the Hay-Pauncefote treaty did deny us the right to control our waterways constructed with our own money, I contend that honor, like charity, begins at home. The first duty of the American Government is to the American people. The Democratic Party pledged the American people that if elevated to power it would give the American coastwise vessels free passage through the Panama Canal. When the American people at the polls elevated the Democratic Party to power the contract was completed. It was signed, sealed, and delivered. It became a more binding obligation than any treaty with any foreign power.

For many years the Government has been spending money to deepen and open and make navigable the St. Johns River in Florida, in order that the people of Sanford and other cities down in Florida might receive the benefits of lower freight rates. When Congress is asked to make appropriations for the improvements of our waterways, there is no charge that the improvement is being made for any shipping trust, any steamboat combine, even though I believe only one steamboat line runs vessels regularly upon the St. Johns River as far as Sanford.

The assertion is made that free tolls on American ships is a subsidy and a special privilege. If I thought this was true, I might be tempted to violate the Democratic platform or any other thing to destroy a special privilege. I regard the obligation of every man representing the people to destroy special privilege as paramount. I have said many times on the stump and elsewhere that special privilege is the greatest evil that the people of this country are afflicted with.

But it is not a subsidy or a special privilege to grant free tolls to United States owned ships, because everybody in the United States can own ships and get the benefit of this exemption. In order to be a subsidy or a special privilege, it must be confined to a class of citizens. This exemption is open to all American ships owned by American citizens which by competition will destroy the monopoly now said to be enjoyed by the alleged Ship Trust.

As long as Congress sees to it that everybody has the same chance under every law passed, Congress does its duty to the people. And this free-tolls exemption does apply to every citizen of the United States.

It is estimated that American coastwise vessels, if required to pay tolls passing through the Panama Canal, will contribute to the National Treasury about $20,000,000 a year. There can be no question in any man's mind but that the transcontinental railways will take advantage of this charge and just $20,000,000 more will be charged the American people in freight rates by these railroads.

In discussing this phase of the question, Speaker CLARK said:

"Who would be the chief beneficiaries of this repeal bill? The same transcontinental railroads—the Canadian Pacific and the Tehuantepec National Railway heading the list. It would be many millions of dollars in their capacious pockets annually. To do a thing to enable them to hold up their old rates is altruistic generosity run mad and an outrage on the American people. I refuse to indorse any such program."

No one contends that the United States Government does not have the right to control and fix rates upon any canal dug by it through any State or Territory, and the Panama Canal is just as much the property of the United States as the St. Johns River, the Mississippi, or any other great waterway or canal.

I have not written thus at length with the expectation of winning you to my viewpoint. I concede to you the right to every honest opinion upon every public question. I ask the same concession in return. I hope that you will find yourself able to agree with me in view of the light that I now give you.

Very truly, yours,

CLAUDE L'ENGLE.

Panama Toll Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM M. CALDER,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. CALDER. Mr. Speaker, I propose taking advantage of the leave to extend my remarks on the subject of the Panama toll bill by printing in the RECORD the following resolutions adopted by the Democratic Association of New York County. The resolutions were introduced by County Clerk William F. Schneider, a well-known Democrat of New York City, and recently elected county clerk of New York County on the fusion ticket:

Resolutions adopted in favor of free canal tolls, adopted by an organization representing 100,000 independent Democrats, who voted for President Wilson, were forwarded to the White House to-day.

The action was taken at a meeting held in the rooms of the Cleveland Democracy, No. 1939 Madison Avenue. The resolutions reaffirm the Democratic platform relative to exempting coastwise American ships from canal tolls.

The meeting was called by Chairman Selden, of the Democratic Association of New York County, and the resolutions were introduced by County Clerk Schneider and seconded by Gustavus A. Rogers.

"We represent over 100,000 independent Democrats who voted for President Wilson," said Mr. Schneider in offering the resolutions, "and we believe that internal-commerce regulations should not be read into treaty obligations."

The resolutions follow:

"Whereas Congress has passed a regulation exempting American ships employed in coastwise trade from paying tolls on passing through the Panama Canal, and under an act of Congress no ships but those owned by citizens of the United States are allowed to engage in coastwise trade; and

"Whereas the territory through which the Panama Canal passes is a part of the United States, acquired by treaty and purchase; and

"Whereas the Panama Canal was purchased and built by the United States with its own money and is now under the control and supervision of the War Department, an administrative department of the Federal Government, we consider that such exemption is nothing more than an interstate regulation, similar to railroad regulations, and no more subject to treaty regulations with foreign powers than any other departmental order; and

"Whereas the Democratic delegates, in convention assembled, at Baltimore, Md., in June, 1912, adopted the following paragraph relative to exemption of tolls, reading as follows: 'We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal'; and

"Whereas our loyal and sincere support of the candidates of the Democratic Party contributed largely to their election; and

"Whereas President Wilson in his campaign speeches reaffirmed again and again the principles of the Democratic platform, and particularly that section relating to the Panama Canal: Be it

"Resolved, That we, independent Democrats of the county of New York, reaffirm the principles of the Democratic platform as adopted by the Democratic national convention at Baltimore in June, 1912, and subsequently indorsed by President Wilson, particularly that paragraph reading as follows: 'We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal'; be it further

"Resolved, That a copy of these resolutions be sent to the President, the Democratic Senator from New York, the chairman of the national Democratic committee, the chairman of the State Democratic committee, the governor of the State, and the press."

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CARY,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. CARY. Mr. Speaker, the amendment to the Panama Canal act, introduced by "Executive plea," approved by high-brow toryism, and forced to hasty consideration in this House, is the most offensive piece of legislation that has been brought before this body in the memory of men now living.

The arguments against the repeal of the free-tolls provision of the Panama Canal act are so numerous that a mere recital of them would fill a volume; they are so plain and simple that the veriest tyro in political, national, and international history can not fail to understand them; and they are so entirely unanswerable that it is hardly necessary to state them.

It is, however, a certainty, apparently, that the repeal bill will be passed. The old, old spirit of mugwumpery is still with us, and although the House now sitting holds its majority by reason of a nation-wide protest against gag rule and boss domination, it appears evident that a sufficient number of Members will bend to the whip of the master and "sneeze when he takes snuff."

The three great parties who contended for control of the Government two years ago differed on many issues. They differ to-day on many questions, and will continue to differ on policies and issues, but on any issue affecting the honor of our country, the absolute sovereignty of our right to govern what is our own, the three great parties did not differ one iota two years ago, do not differ now, and never will differ as long as parties are controlled by American men with American minds and souls.

The Progressive Party, the Republican Party, and the Democratic Party platforms declared in unmistakable terms that they favored the exemption from tolls of American ships engaged in coastwise shipping passing through the Panama Canal. The American people of every party in every section of the country indorsed and applauded this declaration, and there is not a case on record in the history of this country where the whole country indorsed a backdown on any question, and they are not going to do it this time.

And now, without any reason for so doing, with no argument at all, we are asked to give our support in "ungrudging measure" to an abject surrender of American rights, to a humiliating confession that we can not or will not take care of our own property or manage it as we see fit, but need help from outside sources. Have you forgotten history? Is it possible that America is decadent and that we have bred a race of degenerates? Is it possible that the America that forced the Monroe doctrine down the unwilling throats of combined Europe when we were only a handful of people will now yield to a single country that we licked before we were out of short pants?

I do not believe it for one moment; nor do I believe that the American people will countenance this reversal of all our past policies, all of our glorious traditions, and all of our recent platform promises.

I hear gentlemen prate of the honor of our country. Is it honorable to break a solemn promise made to the people? The present Secretary of State stated:

If a man after election finds that his platform contains something he can not honestly support, what ought he to do? * * * He should resign, and let the people select a man to do what they would have him do. * * * A platform is binding on every man.

The President himself stated:

Our platform is not molasses to catch flies. It means business. It means what it says.

Yet now the administration asks us to reverse our own honest opinions, to dishonor the pledges we all, aye, every one of us of every party who was true to his party, made and help him shatter not only his party platform, but ours as well. A majority perhaps will help him do this deed of shame and dishonor, but there are some left here of every party who are willing to be counted on the other side. We may be beaten, but in the words of an inspiring little poem I read some time ago—

And if you are beaten to earth, what's that?
Come up with a smiling face,
'Tis no shame to you to be knocked down flat,
But to lie there, that's disgrace.
The harder you're thrown, the higher you bounce,
Be proud of your blackened eye,
For it isn't the fact that you're licked that counts,
But how did you fight, and why?

Every kind of foul abuse has been heaped upon the men who are standing out for our country's honor and our country's right. We are told that the shipping interests control us; that it is a Wall Street move. Do the really intelligent Members of this House believe you can make the people swallow such palpable bosh as that? Do you think that the people of the West, the farmers who ship grain and hogs, the plain people who pay the high cost of living and know where most of the profit goes have never heard of the transcontinental railroads? Do you think for one moment that everybody in the Northwest does not hear daily of the Canadian Pacific Railroad, the ships it controls now, and the ones it is building for the Panama Canal trade, whose tolls will be paid by the British Government?

Abraham Lincoln's famous saying, "You can fool most of the people some of the time, and some of the people all the time, but you can't fool all of the people all of the time," is very pertinent to this question, and when the people have the next chance to make themselves heard on this question they will give no "ungrudging measure of support" to a policy dictated by the financiers of London nor the American Tories who humbly do their bidding here.

The American people are known as a people who are intensely practical. They are justly celebrated as being possessed of what is popularly known as "horse sense," and I submit that there is about as much sense in allowing English capital and English political power to dictate how we should manage a canal built by American labor, on soil bought and paid for by American money and controlled by American law, as there would be in England making rules and regulations to govern traffic on the Three Rivers in Milwaukee.

I have said the American people are a practical people, but those who know them are also fully aware that the average American citizens are also a sentimental people. Their hearts still beat in rythmic time to the "Battle Cry of Freedom." American eyes still moisten when the Stars and Stripes flutter in the breezes that blow on God's own country, and in spite of the millions that have been spent by his lordship of Skibo in libraries and colleges to teach America that our most bitter enemy is our best friend, Americans still remember Bunker Hill and Yorktown Heights; they still remember the desecration of the United States Capitol, the *Alabama*, the attempt to block the Alaska purchase, the bribery of Indians in the Northwest, the countless snobbish sneers of British visitors who accepted American hospitality and repaid it with boorish abuse.

The hypocritical interests back of this unspeakable bill may fool some statesmen, may possibly deceive some sections of the country, but the people of Milwaukee remember the saying of Bismarck, "Speech is silvern, silence is golden, but to say one thing and mean another is Britannia metal."

Back of all the sanctimonious talk of treaty obligations and our honor with the rest of the world is the sinister desire of the nation who desires to control the commerce of the world, to crush the most dangerous rival she has, and make Old Glory trail behind the Union Jack on the oceans of the world. I vote against this proposed repeal; I vote against it for American economic reasons, for American political reasons, and above all for American patriotic reasons.

American commerce, American agriculture, American manufacture, and above all American honor demand a stubborn and unyielding opposition to this and any other attempt to coerce us by outside pressure.

The precedent that this repeal would establish would be a blow at American prestige in the eyes of the world that it would take years to wipe out. Unborn generations will blush with shame at the action of this House to-day, and I make a most solemn prediction that any Member who casts his vote for this repeal of free tolls will in after years regret his action.

Panama Canal Tolls.

EXTENSION OF REMARKS

OF

HON. BENJAMIN I. TAYLOR,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. TAYLOR of New York. Mr. Speaker, my vote for the repeal and against free tolls is predicated upon two distinct grounds: First, that free tolls in favor of our coastwise shipping is a violation of a solemn treaty we, as a nation, made with all the nations of the world, as it is a "discrimination against any such nation or its citizens or subjects." Second, legislation granting free tolls to our coastwise shipping is in violation of one of the basic principles upon which our Government is founded, in that this is a Government of the people, by the people, and for the people, and not one of the interests, by the interests, and for the interests.

Under article 3 of the Hay-Pauncefote treaty, signed by Mr. Roosevelt as President, you will find general language employed which reads as follows:

1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

2. The canal shall never be blockaded nor shall any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military policy along the canal as may be necessary to protect it against lawlessness and disorder.

You will observe that very general language has been used in these sections. It is commonly understood that this was a treaty with Great Britain. In the first line of section 1 you will note these words are used: "The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality." From this language it is clear that this is a treaty made for the benefit of every nation on earth, giving and granting to them the right to use the canal "on terms of entire equality." If the words "all other nations" had been employed, then the United States would have been excepted, but "all nations" surely includes the United States, as it is a nation.

Granting free tolls to our coastwise shipping gives them a preference. In this respect "the vessels of commerce of all nations" are not given the right to use the canal "on terms of entire equality." This language is bad enough, but let us con-

tinue—"so that there shall be no discrimination against any such nation or its citizens or subjects, in respect of the conditions or charges of traffic or otherwise." Again, very general and liberal language is used. Can anybody contend that granting free tolls to our coastwise shipping is not "discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise"? Surely this is a discrimination against any such nation, because it is a discrimination in favor of our shipping and consequently in favor of our subjects. Again, general language was used, which militates against us, as follows:

Such conditions and charges of traffic shall be just and equitable.

Tolls charged for the use of this canal will be so regulated that the Government should charge and receive money enough to pay all interest, maintenance charges, and so forth, incurred from year to year. If our coastwise shipping goes through free, then the foreign ships will be required to pay tolls sufficient to pay the entire cost of maintaining the canal, cost of construction, and so forth. What they really say to us is this:

We are willing to let you violate the treaty—let your coastwise vessels go through the canal free—but the tonnage of each ship going through free must be measured and paid for by the Government or somebody—we do not care who—so that we will receive credit on the toll rates we pay for this tonnage.

In the second section of this article, you will observe, we have no right to fortify the canal. All we can do is to put police there. We have fortified the canal, even in the face of this treaty, and nobody said a word about it.

We are now confronted with this serious question: All the nations of the world claim that in view of the broad language used this treaty is for their benefit, and have understood that, as far as toll charges are concerned, it should be lived up to. What is President Wilson going to do under these conditions? Is he going to throw down the glove and say we will fight the world, or is he going to take the position that this is a written agreement made by his predecessor in office, Mr. Roosevelt, and we are bound by it? Remember he did not make this treaty. It was made by Mr. Roosevelt. If any rights were given away and our use of the canal curtailed, those rights were given away and this use curtailed by Mr. Roosevelt when he signed this agreement. Why should President Wilson be blamed for what Mr. Roosevelt did?

When it is stated we spent $400,000,000 upon this canal, and therefore should do as we like with it, bear in mind that this agreement was signed and proclaimed to the world before we spent one penny of it. In this common crisis, when all nations of the world are making demands upon us, should we not have respect for the President of our country and stand by him? What kind and manner of men are we? Has all sense of decency gone from us? Are we but slaves to prejudice and partisanism? We should at this, of all times, in the hour of trial, stand by the President and proclaim to the world that he is our leader.

Now, let us discuss this proposition from a taxpayer's standpoint.

I look upon the canal as a business venture, in which the Government has embarked. In order that this canal should be built, the United States has been or will be bonded for about $400,000,000. These bonds must be paid, with interest, at maturity. In order to pay these obligations, together with the cost of maintaining the canal, it will be necessary for us to either collect money in tolls from the ships or collect the money in taxation from the American people. As it is a business venture, I believe the Government should conduct it as such, and charge every ship, except our warships, that have occasion to use it.

It is estimated that each coastwise vessel, if charged tolls, will pay about $4,000 every time it goes through the canal. There being about 250 of these vessels, one trip of each through the canal free of charge would mean a loss to the American people of $100,000,000, or a yearly total of about $2,500,000. What reason is there for me, as a Representative, to vote the taxpayers' money away in this manner? What excuse can I give? I may as well propose to allow the Standard Oil Co. the free use of the mails, which is a Government business. What difference is there between letting this combine use the mails free and allowing these ship and railroad combines to have free use of the canal?

Great Britain makes about $13,000,000 a year out of the Suez Canal. Of this sum she pays $9,000,000 to her shipping as a subsidy. If we make a profit out of this canal, then let us go to the American people and say, "We want to create a subsidy, to subsidize our ships, and are going to pay a portion of our profits from the canal to our ships." No one could find fault with this position. What I object to is the attempt to take this money out of the taxpayers' pockets in this indirect manner.

It can not be argued that we are building up our merchant marine by allowing this money to go to these ship combines, for the simple reason that only American ships can engage in this coastwise trade, and therefore they are not subject to foreign competition. It is proposed that we give our ships engaged in foreign trade a subsidy so as to counteract the difference between the wages paid our seamen and the small wages paid seamen on foreign vessels. If this is the case, then let us give the taxpayers' money in the form of a subsidy to our ships engaged in foreign trade, but do not be foolish enough to give it to our domestic shipping, that now has a monopoly of the trade and no foreign competition.

I believe we should have the friendship of all the world, and the only way to acquire it is to be open and aboveboard.

We are manufacturing to-day more than we use. In an agricultural sense we are producing less than we consume, which means that we must deal with foreign countries—buy their products and sell to them our manufactured goods. We want to break into the South American trade and compete with the English and Germans, who now have full control there. That is the reason we sent Mr. Bryan, Secretary Knox, and why Mr. Roosevelt is traveling through South America now. We want to get their friendship. How under the sun can we ever get it if we are going to be dishonorable ourselves and squabble over little things? I am sure you would not do business with a man you did not trust, and whom you knew was going to break his honest obligations every time he had a chance. How are we going to instill confidence of other countries and their people in us if we are going to do the little thing?

The canal was constructed outside of the boundaries of the United States. The world assumed, according to the wording of Mr. Roosevelt's treaty, that when we constructed it everybody was to have the right to use it, provided they paid a fair toll for this privilege.

No one disputes our right to fortify the canal, which we have done at a cost of $20,000,000, meaning thereby that we can keep our enemies out and have control over it. No one disputes the right to have our warships go through the canal free of charge.

How thoughtlessly we proclaim our patriotism and express the desire to turn loose the dogs of war.

The violation of this treaty means that either we shall back down or all the nations of the world shall humiliate themselves at our feet. It must be remembered that the financial interests of the nations of the world who expect to use this canal are just as greedy and persistent as those in this country, and that they stand as ready to force the issue as the interests in our country. We may be young, strong, and ambitious, but have we strength enough to battle with the world? Would it not be an unjustifiable sacrifice of the flower and youth of our country and a destruction of our property and wealth to enter upon a struggle in which we are wrong at the beginning? The Civil War, which cost us millions of our young men and millions of dollars in property, hindered the growth of this country beyond the comprehension of man.

The position we hold, after all, is one of responsibility equal to that of the President of the United States, in view of the fact that he has placed that responsibility up to us. Shall we be real patriots and do the right thing, and say to the world in clear, bold words we have made an agreement and we are honorable and manly enough to stand by it? After all, is this not true patriotism and is it not the spirit we should all manifest?

Panama Canal Tolls.

EXTENSION OF REMARKS

OF

HON. M. E. BURKE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal, and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. BURKE of Wisconsin. Mr. Speaker, the Panama Canal tolls bill, so called, now pending and under debate in the House of Representatives, is a most important measure, filled with the greatest consequences. In my humble opinion it is one of the most important measures presented to the American Congress

for its consideration since the Civil War. The consequences that are bound to flow from whatever decision is rendered by this Congress will be weighty, far-reaching, and continuing through generations to come. To its study and solution we must devote our most diligent and patriotic effort. With patriotic hearts and serious minds we must confront it; with a high spirit of Americanism, clear judgment, and conscience we must face it. Anxious and expectant millions of our countrymen are watching our action and awaiting our decision. Let us do our duty as intelligent, farseeing, and patriotic Americans.

MY PREVIOUS VOTE.

In the second session of the Sixty-second Congress, the House Committee on Interstate and Foreign Commerce reported a bill providing for the opening, maintenance, protection, and operation of the Panama Canal, and the sanitation of the Canal Zone. This committee was composed of 14 Democrats and 7 Republicans. The bill as reported contained no provision for allowing American coastwise vessels to pass through the Panama Canal, free of tolls. The majority report was signed by a majority of the Democrats on that committee, while a majority of the Republicans signed the minority report.

During the debate or discussion upon that bill in the House, the gentleman from Michigan, Mr. DOREMUS, still a Member of this House, proposed an amendment to the fifth section of that bill, worded in the following language:

No tolls shall be levied upon vessels engaged in coastwise trade of the United States.

On the 23d of May, 1912, by a vote of 147 in favor of this amendment, to 128 against the same, the amendment was adopted, and was retained in the bill until it became a law on the 24th of August, 1912. On this vote 90 Democrats of the House of Representatives voted against the Doremus so-called free-tolls amendment, and 70 Democrats in favor. The amendment was adopted, however, by reason of a large majority of the Republican Members, voting for it.

I then voted against the so-called Doremus free-tolls amendment, and my vote is recorded on page 7019, volume 48, of the CONGRESSIONAL RECORD for the Sixty-second Congress, second session. My vote on that occasion was not an indifferent, or haphazard vote. At that time, as now, I had absolutely no expression of their sentiments, from any of my constituents upon that subject, either by petitions for or remonstrances against, by letter, or by any other means of communication. My constituents then, as now, seemed to be indifferent. At least, not a single one of them has manifested his or her wishes, choice, or interest in the matter. Then, as now, I gave the subject the best study and thought that I was capable of; then, as now, I considered that the granting of free tolls to American coastwise vessels in passing through the Panama Canal, did not violate the spirit, or letter of the Hay-Pauncefote treaty. Then I cast my vote against free tolls solely upon economical grounds or reasons. Now I shall cast my vote for the repeal of the provision in the Panama Canal act which grants free tolls to such American vessels. The questions to be considered in the discussion of this bill are now the same as then, excepting that now a new complicated international question is added.

RESPECT FOR OPINION OF CONSTITUENTS.

My constituents have given me no instructions, or directions respecting this all-important bill. Not a line has been received by me from a living soul relating to it. They have left me to my own resources and judgment. If they had expressed their sentiments one way or the other, my task would be easier to fulfill and my responsibility lighter. A year and ten months have elapsed since this matter was voted on in the House. A new and important feature has been added to the situation since then. To endeavor to avoid any mistake, and to test the opinion which I formed before casting my previous vote, I have again completely restudied, rereviewed, and reconsidered all the facts and circumstances relating to the questions presented by this bill to us, that have been accessible to me.

Now, I find that there are four important problems to be considered in arriving at a decision. They are:

First. Economic reasons or grounds.

Second. Effect of a free-tolls provision for American coastwise vessels upon the Hay-Pauncefote treaty.

Third. International complications arising since my previous vote.

Fourth. A plank in the 1912 Baltimore Democratic platform declaring in favor of free tolls.

Again, I find, after restudy, review, and reconsideration, that my views and convictions upon this question, from an economic standpoint and from the standpoint of the alleged violation of the Hay-Pauncefote treaty, are the same as those I entertained previously.

FREE-TOLLS PLANK IN THE BALTIMORE PLATFORM.

After I voted upon this question on the 23d of May, 1912, and on the 2d of July in that year, the Democratic Party, in national convention assembled at Baltimore, placed in its national platform a plank relating to the subject of free tolls, and it was unanimously adopted by that great Democratic national convention. Its language is as follows:

We favor the exemption from tolls of American ships engaged in coastwise trade passing through the canal. We also favor legislation forbidding the use of the Panama Canal by ships owned or controlled by railroad carriers engaged in transportation competitive with the canal.

The provision in this platform prohibiting the use of the canal by ships owned or controlled by competitive railroad carriers is not now in controversy. The administration does not intend—neither do any of the great political parties—to repeal or modify this provision relating to railroad-owned ships, but it is proposed directly by the bill before us to disregard and ignore that part of the Baltimore platform which says:

We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal.

It is proposed to reverse our position upon that important platform plank.

I have always, do now, and will continue to think that every plank in a party's platform upon which the candidate makes his appeal to his constituents, and upon which he is elected, is a contract with the people and made to be kept and not disregarded. I have time and time again, in and out of campaigns, advocated a strict adherence to every plank in our party platforms while the platform is in force. I allow no man to excel me, in my devotion to my party's creed as promulgated in its national platforms; yet I am called upon as a member of the Democratic Party to disregard and ignore that plank declaring in favor of the exemption from tolls of American coastwise ships using the Panama Canal. The President calls solemnly and seriously upon my Democratic brethren and myself to sever our adherence to that plank and to follow him. He, too, was aware of this plank in our platform when he was a candidate for President in the last campaign, for he spoke to the people of the great benefits which he expected would be derived by the American people from the enforcement of such a law; yet he has not been expressly authorized by the national convention to change any plank in its platform.

BY WHAT RIGHT?

By what right are we called upon to forsake our allegiance to that plank in the Democratic national platform? By what right and authority are we called upon to reverse our positions, and to refrain from putting in force the principles of free coastwise shipping through the canal which we declared for?

If we read and study his message upon this subject delivered in the House of Representatives on the 5th of last March, we will learn. We find from that message that he calls upon us to forsake our allegiance to that important plank and to reverse our campaign attitude, not as the candidate or leader of the Democratic Party, but he calls upon us in the name of his high office.

He is by the Constitution exclusively clothed with the power to deal solely with our international problems; he has by the voice of the American people been empowered with the guardianship of our welfare, our flag, and our international relations. He is not only Commander in Chief of the Army and Navy forces of our country, but he is peculiarly and solely the guardian of our foreign affairs. He is, in all international affairs, the representative of American sovereignty. Whatever from a foreign source threatens the welfare, dignity, and sovereignty of our Nation, he is the sole representative of all the American people, regardless of parties and party platforms. His great authority is not a coincidence or a collateral issue of the Presidency, but he is expressly charged by our Constitution with the guardianship of all our international affairs. By that same Constitution all foreign affairs are first brought to his attention, and not to the Senate or House of Representatives. He is by that Constitution made the sole judge of making public or keeping secret the mighty international affairs and problems, which may confront or embarrass the Nation, and, in my humble opinion, the fathers of the Constitution wisely concentrated the duty and power over these matters in whoever should be President and the head of the Nation.

WORLD PROBLEMS.

These great complicated world problems sometimes suddenly and unexpectedly arise to confront the life of a nation. So long as human ambition, greed, and passion is what it is, and it is now what it has been from time of earliest human history, so long there will be danger of the sudden appearance of these great problems. They can not be foreseen, hence political parties in

their national platforms can not provide for them. They sometimes arise so suddenly and unexpectedly and travel with such force that they may create an international emergency which will throw out of place and render inadvisable the best planks of the wisest platform builders. These international emergencies arise at not infrequent periods and perplex the wisest statesmanship of every nation. They can no more be foretold and provided against in party platforms than the weather man can foretell and provide against tornadoes and cyclones for a period of four years. The history of all the world has shown at times these international clouds of danger. Every intelligent and thinking person who is familiar with history and who gives the subject thought and study realizes that sudden and unexpected international storms will arise, in the face of which a plank in a party platform or in all party platforms will be no protection against or guidance through impending crises, but, on the contrary, may invite and impel them on the Nation.

The national platforms of our political parties during all of the Nation's history have never attempted to prescribe a rule by which these unforeseen and unexpected international emergencies can be controlled or solved. There is, and there always has been, and there always will be about every national platform an implied license and command to the party candidate in case he becomes President of the United States to discharge the duties and responsibilities of his great office in a manner most advisable, in the presence of any international emergency confronting him, and an intelligent public so reads and understands our party platform declarations.

Neither the Democratic, Republican, or Progressive Parties in their last national conventions foresaw or prophesied the development of the great international emergencies that now surround and envelop our Nation. These disturbing conditions have arisen not on account of any act of omission or commission of the present administration, but in spite of them, and most of them had their origin in a previous administration.

PLATFORMS DO NOT PROVIDE FOR UNFORESEEN EMERGENCIES.

In 1896 neither the Democratic nor the Republican national platforms contained any plank or provision directing the course of their respective parties in relation to the Cuban rebellion. When the explosion of the *Maine* occurred, instantaneously the whole Nation arose and demanded that Congress proceed to defend the dignity and honor of the Nation. The Republican administration at that time could find nothing in its platform of 1896 to direct and guide it upon that subject, although for years previous to their 1896 platform, hundreds of Americans had lost their lives in Cuba, and millions of their property were wantonly destroyed. What did the Republican Party do then? Did it say we can do nothing, because there is no plank in our last national platform guiding and directing us upon this international question? No. On the contrary, they exercised the implied license which every national platform gives the successful party the right to do, namely, to act without directions and instructions in the face of the international emergencies and dangers which had arisen. Neither did they call together their Republican brethren in convention to outline a policy for them, but with their President at the head they proceeded to defend the honor of the Nation. They then realized, as every party in power must realize, that when such complications arise the administration is impliedly empowered to do what is necessary for the safety and protection of the country, regardless of political platform planks.

The same conditions existed at the outbreak of the Civil War. Neither the Republican nor the Democratic platforms of 1860 directed what their candidate should do in case he became President, in case of secession being attempted by any State. There was an implied license in the Douglas and Republican platforms that in case secession was attempted, the President should exercise all the great power invested in him by the Constitution in time of war. According to all the practices of nations from time immemorial, no rule or law will be permitted to embarrass or hamper the will of the Nation in its efforts of self-preservation.

It may be admitted that these illustrations are true, but that they are not applicable to the present situation. Let us see. Let us close our eyes upon all our outside and foreign national matters excepting those we have seen in poor distracted Mexico during the last two years. There we have seen revolution, murder, and anarchy; we have seen revolution follow revolution; we have seen hope after hope of that nation extinguished; we have seen our people residing there harassed, outraged, murdered, and their property destroyed by the millions; we have seen the care and caution with which the President has tried to protect our people in that unfortunate land; we have seen him strenuously endeavoring to preserve the Monroe doctrine as to Mexico during her days of turmoil and distress; we have seen with what care and caution the administration has moved so as to maintain peace between the two nations during this exciting period; we have seen opposition to his policy gradually grow until now in many sections of the country it is vigorously assailed, and even on the floor of this House, criticism is made by partisan Members.

It has become apparent to a large portion of the fair and intelligent American citizens that the time is not far distant, when we must intervene in Mexico to prevent disturbance, murder, and revolution and to restore to the Mexican people a civilized and just form of government. Such an intervention, however, will call for the services of hundreds of thousands of American soldiers, and the sacrifice of scores upon scores of thousands of American troops, besides the expenditure of great sums of money; and everyone admits that when that dark hour comes there will be no way of withdrawing from Mexico, until we have sacrificed thousands of lives and spent millions of dollars, and have kept our troops for a long time in that land.

When we shall have intervened, then let us open our eyes and take a panoramic view of our international affairs, and what do we find? We find on the one hand all of the commercial interests and Governments of Europe disappointed and dissatisfied, rightfully or wrongfully, with that provision in the Panama Canal act which grants discriminating rates, by way of free tolls, to the American coastwise trade. We find England, with the most powerful fleet in the world, acting as spokesman for Europe. We turn to the other side, and what greets our gaze? The Japanese Empire offended, resentful, and revengeful, because of the treatment which her citizens have received in portions of our country. She has protested loudly, forcibly, and repeatedly to the present occupant of the White House against such treatment. The President has done his utmost to pacify the people of California and other portions of the country, for such length of time as might be necessary to secure an alteration of the treaty between this country and Japan; but unthinking, prejudiced, passionate Americans have not listened to his words of counsel, discretion, and wisdom. They have disregarded them, and proceeded as if they could act regardless of our foreign treaties and affairs. It is easy for them to do so, so long as they can call upon the Nation at large to defend them against the Japanese revenge, which has been provoked by their provocation. Every living and observing man realizes that Japan is eager and ambitious to extend her dominion, and ready to take advantage of the first opportunity to seize the Philippines, and such other of our lands and possessions as are easiest of conquest. She has made repeated vigorous protests and demands against the treatment that has been accorded her citizens on the Pacific coast. We have protested against her colonizing in Mexico.

Now, let us remember that Europe is in a state of hostility arising from the Panama Canal controversy. I do not believe for one moment that the people of England would ever knowingly permit their country to engage in war with America, but with Japan in the striking attitude and revengeful mood that she is now in, and with more than a year to elapse before the Panama Canal can be fortified or finished, so as to permit the passing of our war vessels from one ocean to the other, and with our Army generally unprepared for war operations, and besides intervening in Mexico to restore peace, with all of those mighty troubles on our hands, all that England's high authorities have to do is to give the wink to Japan. When that is done, the full force of her navy and army will fall upon the Philippines, Alaska, and perhaps our own western coast before we are able to make the necessary preparations to defend ourselves. This threatening situation can clearly be seen by everyone who has paid close attention to our international affairs during the last two years. This threatening situation must be clear and apparent to the President. He sees the threatening clouds carrying death to thousands of our people, waste to millions of our property, and humiliation to the Nation. To avoid these threatening international dangers and to solve international emergencies, he calls upon the Representatives in Congress, regardless of party, as the President of the whole people, to follow a course which will avoid the impending dangers and complications, by repealing the Panama Canal tolls exemption, which is without doubt one of the most dangerous, provoking causes of our present international complications.

Let us ask ourselves, if the Baltimore platform makers could foresee the present threatening situation? It must be evident to every person of intelligence that they did not. Does any patriotic citizen think for a moment that the President is not to act at all upon threatening international situations unless his

party platform directs his course? Must he fold his hands behind him and stand mute, because his party has not spoken of such situations in its platform, simply because the platform in another part has directed him to do a thing which is one of the most provoking causes of our Nation's troubles? Shall he perform the smaller things, upon which the party in its platform has spoken, and leave undone the immense things he should do, because the party in its platform has not directed his course upon such unseen emergencies?

I believe I hear the patriotic and intelligent citizens of the United States, millions in the majority, cheering the President forward in the discharge of his constitutional duties, in this serious international situation.

He is so situated by virtue of his high office as to obtain the best information. He submits it to his counselors—the Cabinet members. It is of such a serious nature that it is incompatible with the public interests to make it public, for the reason, among others, that by so doing every nation with whom complications exist will know and see his hand. The American people placed him in this all-important position to guard our welfare, dignity, and our flag. He is our sole leader in these foreign matters, and if we follow him, we will be saved. If we follow a leader, we will be led to victory; and if we follow more than one leader, we are liable to be led astray. In one leader there is unity, harmony, and strength. As God steadied the arm, and guided the brain of the immortal Lincoln through the dark and gloomy years of the Rebellion, so God has been, is, and will continue to steady the arm and guide the brain and judgment, in all international affairs, of every man whom the American people shall elevate to the Presidency. In those peculiar and important matters, the armor of heaven protects each occupant of the presidential chair from disloyalty and treason. Such occupants are invulnerable to sentiments, and thoughts of disloyalty and treason.

Some of the President's ways and sayings may be, or seem to be, mysterious to us. To some of us he may seem to be asking a great sacrifice in the repeal of the free-tolls provision, but I believe that what he asks for is imperatively necessary. Whatever threatening it is that he sees, it is of such gravity and importance that in his honest wisdom and judgment he does not consider it wise to make it public at this time. Its great importance and serious nature is conclusively proved by the fact that he appeals to this Congress for support, regardless of parties or political platforms. He appeals as an American President and not as a party President. I believe that he is to the core sincere and truthful when he tells us that this repeal is necessary to his foreign policy. I am sure that he would not imperil the bright prospects of his party, if he did not think that the success of this bill was necessary for the happiness and protection of the Nation. I can see most of his reasons. I can see most of his way, and I, for one, am going to trust and follow him the rest of the way by voting for this bill, providing for the repeal of exemptions of the American coastwise vessels from payment of tolls in passing through the Panama Canal. International necessities and emergencies excuse our observance of the plank, in the Baltimore platform, calling for free tolls.

From my viewpoint, if this bill passes, we do not foreclose our right in the future, when experience may show the wisdom of that course, to provide exemptions for American coastwise vessels from the payment of tolls. It is a question which can be reopened at any time, if we find it necessary or prudent. I believe that down in the President's heart it is his intention to only temporarily repeal this provision, and to let the future take care of itself. It is to avoid the present emergencies. It is to give us time to finish the Panama Canal, so that we can pass our war vessels from the Atlantic to the Pacific and back, and thereby double the effectiveness of our naval power. He does not by his message commit this Nation to a permanent policy of levying tolls upon our coastwise vessels passing through the canal. It can be solved in the future as our experience suggests.

Let us apply to the present international crisis confronting the Nation the principle expressed in the motto, "Discretion is the better part of valor," for this is true, not only when applied to men, but when applied to nations. Only temporary relief of a short duration is necessary at the present time. If with discretion and sound judgment, the President fails to overcome the obstacles confronting him, then it will be time enough to incur the risk of war. Let me assure those who honestly differ with us upon this question, or who prefer to twist the lion's tail instead of using discretion, that when discretion and sound judgment fail, we who now advocate this repeal bill will be found moved by as much genuine patriotism as those who favor free tolls. If sacrifice of lives, blood, and treasure becomes necessary, we shall be found shoulder to shoulder, and breast to breast with them, in facing our country's foes.

HAY-PAUNCEFOTE TREATY.

About December, 1898, the Governments of Great Britain and the United States appointed and authorized representatives to enter into a treaty relating to the construction and use of a canal, connecting the Pacific and Atlantic Oceans through the then Province of Panama. They met and prepared such treaty, which was submitted to their respective Governments. This treaty was ratified by the Senate of the United States about November 18, 1901, and on the 22d of February, 1902, President Roosevelt issued his proclamation making such treaty effective, at a time when we had a Republican President and a Republican majority in both branches of Congress. Whatever imperfections or disadvantages have been impressed upon our country by this treaty, are chargeable to the Republican Party alone, and it does not now lie in the mouth of that party to make a political issue of this question.

Before casting my vote upon this question previously, and now, and without the light of others' views, I became convinced that the granting of free tolls to American coastwise vessels was not in itself a violation of that treaty. This question is to me quite plain, and I venture to say that a majority of lawyers of average experience in this country will without hesitation interpret the language and meaning of that treaty to be such as to permit the passage of coastwise vessels free through the canal without causing a violation of the treaty. The language of the Hay-Pauncefote treaty, so far as it pertains to this discussion, is as follows:

HAY-PAUNCEFOTE TREATY BETWEEN THE UNITED STATES AND GREAT BRITAIN TO FACILITATE THE CONSTRUCTION OF A SHIP CANAL.

Signed at Washington, November 18, 1901.
Ratification advised by the Senate, December 16, 1901.
Ratified by the President, December 26, 1901.
Ratified by Great Britain, January 20, 1902.
Ratifications exchanged at Washington, February 21, 1902.
Proclaimed, February 22, 1902, by the President of the United States of America.

A PROCLAMATION.

Whereas a convention between the United States of America and the United Kingdom of Great Britain and Ireland, to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end to remove any objection which may arise out of the convention of the 19th April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the "general principle" of neutralization established in article 8 of that convention, was concluded and signed by their respective plenipotentiaries at the city of Washington on the 18th day of November, 1901, the original of which convention is word for word as follows:

"The United States of America and His Majesty Edward the Seventh, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, and Emperor of India, being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end to remove any objection which may arise out of the convention of the 19th April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the 'general principle' of neutralization established in article 8 of that convention, have for that purpose appointed as their plenipotentiaries:

"The President of the United States, John Hay, Secretary of State of the United States of America;

"And His Majesty Edward the Seventh, of the United Kingdom of Great Britain and Ireland, and of the British dominions beyond the seas, King, and Emperor of India, the Right Hon. Lord Pauncefote, G. C. B., G. C. M. G., His Majesty's ambassador extraordinary and plenipotentiary to the United States;

"Who, having communicated to each other their full powers, which were found to be in due and proper form, have agreed upon the following articles:

"ARTICLE 1.

"The high contracting parties agree that the present treaty shall supersede the aforementioned convention of the 19th April, 1850.

"ARTICLE 2.

"It is agreed that the canal may be constructed under the auspices of the Government of the United States, either directly at its own cost or by gift or loan of money to individuals or corporations, or through subscription to or purchase of stock or shares; and that, subject to the provisions of the present treaty, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

"ARTICLE 3.

"The United States adopts, as the basis of the neutralization of such ship canal, the following rules, substantially as embodied in the convention of Constantinople, signed the 28th October, 1888, for the free navigation of the Suez Canal; that is to say:

"1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

"2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military

police along the canal as may be necessary to protect it against lawlessness and disorder.

"3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary, and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service.

"Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.

"4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials, in the canal, except in the case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

"5. The provisions of this article shall apply to waters adjacent to the canal within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time, except in case of distress, and in such case shall depart as soon as possible, but a vessel of war of one belligerent shall not depart within 24 hours from the departure of a vessel of war of the other belligerent.

"6. The plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal shall be deemed to be part thereof for the purpose of this treaty and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents and from acts calculated to impair their usefulness as part of the canal.

"ARTICLE 4.

"It is agreed that no change of territorial sovereignty or of the international relations of the country or countries traversed by the before-mentioned canal shall affect the general principle of neutralization or the obligation of the high contracting parties under the present treaty.

"ARTICLE 5.

"The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by His Britannic Majesty, and the ratifications shall be exchanged at Washington or at London at the earliest possible time within six months from the date hereof.

"In faith whereof the respective plenipotentiaries have signed this treaty and thereunto affixed their seals.

"Done in duplicate at Washington the 18th day of November, A. D. 1901.

"JOHN HAY. [SEAL.]
"PAUNCEFOTE. [SEAL.]"

And whereas the said convention has been duly ratified on both parts and the ratification of the two Governments were exchanged in the city of Washington the 21st day of February, 1902:

Now, therefore be it known that I, Theodore Roosevelt, President of the United States of America, have caused the said convention to be made public, to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this 22d day of February, A. D. 1902, and of the Independence of the United States the one hundred and twenty-sixth.

THEODORE ROOSEVELT.

[SEAL.]

By the President:

JOHN HAY, *Secretary of State.*

I have not, however, relied upon my own experience, judgment, and conscience in construing and interpreting this treaty. I have read and had the aid of the opinions of several noted international lawyers upon the proper interpretation of this treaty. Time and space do not permit and it is not necessary for me to present my own views in detail. I will, however, set forth herein several of the many views, and opinions of counselors noted for their skill and experience in the construction of international treaties. Therefore I omit my own views and present an extract from the opinions of a few authorities upon international subjects of this character:

Ex-Secretary of State Olney's opinion of our rights under the Hay-Pauncefote treaty has been expressed in clear and concise terms. In an address upon the Panama Canal tolls legislation, and the Hay-Pauncefote treaty, read before the American Society of International Law at Washington, D. C., on April 25, 1913, he said:

On the grounds, and in view of the considerations above stated, the United States may contend, and it is believed can rightfully contend, that the Hay-Pauncefote treaty of November, 1901, does not, as justly interpreted, prevent the United States from exempting its coastwise shipping from the payment of tolls for the use of the Panama Canal.

This is the construction that was given it by ex-President Roosevelt, by Mr. Taft when he was President, and by Mr. Knox when he was Secretary of State.

Mr. Butte, an experienced German international jurist, in an article published at Heidelberg, at every point upholds the American contention. Summing up the respective claims, he says:

From the standpoint of abstract justice, the pretention of Great Britain that she should be put on the same footing as respects the use and enjoyment of the Panama Canal as the United States seems presumptuous.

Equally strong is a well-written article by an able English jurist, Edward S. Cox-Sinclair, in the London Law Magazine and Review. Summing up, he says:

The United States can support its action on the precise words of the material articles of the treaty; its case is strengthened by reference to the preamble and context, and its case is difficult to challenge on the grounds of natural justice.

Another English jurist, Mr. C. A. Hereshoff Bartlett, in discussing the question, says:

There is no evasion of the rule of equality where all foreign vessels are subject to the same duties and liabilities under similar circumstances. The treaty could never have been intended to prevent the Federal Government from arranging and regulating its domestic or coastwise commerce and in the use and enjoyment of its own property as it saw fit. No such restriction could have been in view in adopting "as the basis for neutralization" a rule that the canal should be free and open to vessels of commerce and of war of all nations on terms of entire equality. It would be absurd for the United States to solemnly declare that its own vessels of war might openly and freely navigate its own landlocked waterways and enjoy the privileges that belong to the nation as a sovereign power in the use of its own territory. The use of the words "vessels of war" shows plainly that the word "vessels" as used refers only and exclusively to those of all nations other than those of the United States, and that the word "nations" was restricted to foreign nations; that is to say, nations foreign to the United States.

Count Reventlow, a noted German international authority, says:

The canal bill interprets the Anglo-American treaty from a certain view point, but is in no sense an evasion thereof. That the United States had a right to construe the treaty as Taft did can not be doubted.

Ex-President Roosevelt, about a year ago, voiced the following sentiments in relation to this treaty when he said:

I believe that the position of the United States is proper as regards this coastwise traffic. I think we have a right to free bona fide coastwise traffic from tolls. I think that this does not interfere with the rights of any other nation, because no ships but our own can engage in coastwise traffic, so that there is no discrimination against other ships when we relieve the coastwise traffic from tolls. I believe that the only damage that would be done is the damage to the Canadian Pacific Railways.

In all history I do not believe you can find another instance when as great and expensive a work as the Panama Canal, undertaken not by a private corporation but by a nation, has been as generously put at the service of all the nations of mankind.

When the Hay-Pauncefote treaty was made and submitted to the President and Senate of the United States, the territory through which the canal was to be built was foreign territory. Dr. Hannis Taylor wrote on the question. No one doubts his claim as an authority on international law. I call your attention to his words, spoken in April, 1913:

The conclusion is irresistible that by the radical changes wrought in conditions existing at the time the Hay-Pauncefote treaty was made, through subsequent purchase of the Canal Zone by the United States, the treaty as a whole became voidable. Or, to use the words of Prof. Oppenheim, that the vital change wrought by the subsequent purchase of the Canal Zone rendered an otherwise "unnotifiable treaty" notifiable. Under the universally accepted rule of construction, so luminously expounded by the greatest of the recent English publicists, we have the right and Great Britain has the right to call a diplomatic conference in order to make such modifications in the terms of this voidable or notifiable treaty as either party may desire.

None of the land or territory through which the United States proposed to construct a canal at Panama belonged to the United States at the time of the completion and ratification of the Hay-Pauncefote treaty. It was nearly two years afterwards, in 1903, that the Province of Panama revolted from Colombia and established an independent Republic of its own. Then it ceded, for a valuable consideration, this Panama Canal Zone to the United States, and the moment it became ours there attached to it that sovereign power which goes with ownership; and the nation which challenges our right says to us: "We want to limit your sovereignty and impose a servitude upon the territory which belongs to you."

Various other authorities and American statesmen, too numerous to mention, support this view.

AMERICAN COASTWISE VESSELS.

Since 1817 there has been upon our statute books and in force, a law prohibiting all foreign vessels from engaging and competing in American coastwise trade; that is, the trade between one American port and one or more or all other American ports. This prevents Great Britain and all other nations from participating in such shipping trade. It is apparent, therefore, that there can be no competition between American coastwise vessels and English vessels engaged in American coastwise trade, for the reason that such English and foreign vessels are not allowed to carry on a shipping business in American coastwise trade. Such being the case, there could be no competition between American coastwise vessels and English ships in passing through the Panama Canal, for the reason that there is and can be no competition between foreign ships and American coastwise ships where the foreign ships are not permitted to engage in such coastwise trade. Time and space, however, forbid me from pursuing the alleged violation of the Hay-Pauncefote treaty further.

ECONOMIC REASONS FOR PASSING THIS REPEAL BILL.

By the time that the Panama Canal is finished it will have cost this Nation about $400,000,000. Every section of the Nation contributed its share of money to this vast enterprise. The coast and Gulf sections will receive a direct and positive benefit

from the construction of that canal. Other sections, like the great north half of the Mississippi Valley and Great Lakes regions will receive no appreciable advantage from its construction and use. Such is the situation of the district or constituency which I have the honor of representing. My constituents will not receive any benefit, direct or indirect, from it and can not hope to whether American coastwise vessels are permitted to pass through the canal free of toll charges or whether the statutory fee per registered ton of $1.20 is collected from them. This would be true, even if there were no restriction by trusts and other unlawful methods of water freight charges or rates.

Let us, however, for the sake of argument admit that that provision of the Panama Canal act, which prevents the use of the canal by vessels operated in violation of the Sherman anti-trust act, will be enforced, and that there will be full, free, and natural ship competition between the Atlantic and Gulf coasts on one side and the Pacific coast on the other; yet there is no way in which my constituents nor the people of the great Northwest will be benefited, even to the extent of one cent.

Now, if the free-tolls exemption for such vessels passing through the canal is not repealed, the revenue derived from the use of the canal will not be sufficient to pay the cost of operating and maintaining the canal, and in that case the deficiency must be paid out of the Treasury of the United States from money to which my constituents, and those situated like them in the great Northwest and Great Lakes regions, have contributed their share. But from this economical standpoint I could easily overlook and dismiss from consideration the fact that we receive no benefit from this canal, if it were not for certain other important facts which I will refer to later.

Our opponents contend that with free tolls the American coastwise vessels will be enabled to carry freight from the Atlantic and Gulf coasts to the Pacific coast, and back for $1.20 per registered ton cheaper than with tolls, and that when such vessels carry on free trade, without the payment of canal tolls, that the consumer gets the direct and full benefit of free tolls. They further contend that it will cause the transcontinental railway lines to reduce their freight rates on all their lines. This would be a good and sufficient reason for voting for free tolls if it were true. We can not, and do not deny that theoretically and naturally, the result of free tolls would be to benefit a majority of the consumers of the country, but the practice in recent years has been the reverse, because the 85 lines carrying on an American coastwise trade are in a monopoly, conference, and other combinations which screw up and maintain exorbitant freight rates. By giving such shipping combinations and monopolies, the benefit of free tolls they would be reaping the entire benefit of the remission of $1.20 per ton, and would continue to fix their freight rates at a figure just below the railway rates, so as to enable such ships to secure all the water freight they can carry the year around. By imposing a toll of $1.20 a ton, as now fixed by United States law, for passage through the Panama Canal these vessels would still have a wide margin of profit, and the $1.20 per ton will be applied by the Government to the payment of cost of operating and maintaining the canal.

Expert rate authorities have figured, that even with the payment of tolls upon coastwise traffic, that vessels engaged in that traffic can carry the average freight from the Atlantic and Gulf coasts to the Pacific and return for one-third of any self-sustaining minimum rate, which the transcontinental railway lines may charge, and pay a reasonable profit on their investment.

Great boasts and bright prophecies are made by our opponents of the immense benefit that is to be derived by the American people by reason of permitting the American coastwise vessels to pass through the Panama Canal free of tolls. I am a member of the Committee on Merchant Marine, which has had under consideration for the past two years the so-called Shipping Trust, and of necessity I know something about their methods. The committee has completed its investigation and made its report to this House. That report is the unanimous report of the committee. Let me read a few lines from this report, which is not yet in general circulation but which has just been filed by our committee, to show who will be the beneficiary of free tolls.

TOLLS AND FREIGHT.

The question of freight involves the transportation interests of the farmers, manufacturers, producers, and consumers of the Middle West and Great Lakes region, and they will not look favorable upon a policy that discriminates in favor of the Atlantic, Pacific, and Gulf coasts of the country against the middle of the country.

Dr. Emery R. Johnson, who was appointed special commissioner of Panama traffic and tolls by the Secretary of War under President Taft and upon the recommendation of Col. George W. Goethals, Corps of Engineers of the United States Army, and chief engineer of the Isthmian Canal Commission, governor of the Canal Zone, and president of the Panama Canal Railroad Co., because of his profession and of the extended and exhaustive study that Dr. Johnson had already given to the subject, in his report on the Panama Canal traffic and tolls, says:

It is earnestly argued by those who favor relieving American shipping of Panama tolls that the policy should be adopted in order to give further aid to the American merchant marine. When subjected to analysis this argument loses force. Our shipping employed in the foreign trade needs assistance, but our coastwise marine has a monopoly of the coastwise trade and does not need further aid. In 1911 there were 3,537,750 tons of American ships enrolled for the domestic trade on the Atlantic, Gulf, and Pacific seaboards. The increase during the preceding decade had been 38 per cent. There is thus a relatively large and healthy increasing tonnage of coastwise shipping, and the opening of the Panama Canal will undoubtedly bring about a large addition to the coastwise fleet. Our coastwise marine is now given sufficient aid and protection by our navigation laws. (P. 199.)

1. In managing the Panama Canal and in fixing tolls the usefulness of the waterway to commerce and industry should be given first consideration. The policy as regards tolls and revenue should not be allowed to limit the traffic usefulness of the waterway.

2. The Panama Canal should be made commercially self-supporting. Tolls based upon the value of the service rendered by the canal are justifiable. Those who use the waterway may justly be required to make some compensation for the benefits received. Tolls, not unduly restricting the commercial usefulness of the waterway, may be levied that will yield revenue enough to meet operation, maintenance, sanitation, government, annuity, and interest charges.

3. The same rate of toll should be charged upon American as upon foreign vessels, because—

(a) The omission or repayment of tolls on American shipping would be of assistance mainly to our coastwise shipping, which does not need aid and would be of but little help to American vessels engaged in the foreign trade.

(b) Such subsidies as are given the American merchant marine should be paid to vessels employed in our foreign trade; but the remission or repayment to vessel owners of Panama tolls on American ships in the foreign trade would be an ineffective subsidy that might invite retaliatory measures by foreign Governments.

(c) The exemption of coastwise shipping from Panama tolls would inure mainly to the benefit of the coastwise carriers and only partially to the benefit of shippers and consumers. Neither the rates of the steamship lines nor the charges of the rail carriers will be appreciably higher if tolls are charged on coastwise shipping than they will be if such shipping is relieved from the payment of tolls.

4. The United States should adhere to business principles in the management of the Panama Canal. The Government needs to guard its revenues carefully. Present demands on the general budget are heavy and are certain to be larger. Taxes must necessarily increase. Those who directly benefit from using the canal, rather than the general taxpayers, ought to pay the expenses of operating and carrying the Panama Canal commercially.

5. The tolls at Panama should be such as to enable the canal (a) to divert from the Straits of Magellan all the traffic of the Pacific coast of South America, (b) to prevent the use of the Cape of Good Hope route by the commerce between the Atlantic-Gulf coast of the United States and Australia, (c) to divert from the Suez Canal the trade between the eastern seaboard of the United States and the Orient east of Singapore, and (d) to compete with the Suez Canal for a portion of Europe's commerce with the Far East. (Page 201.)

Of the 4,000,000 tons of freight annually carried back and forth across the United States the Middle West furnishes a large share.

On each coast there is what is known as a competitive zone, or region extending back into the interior of the country from the ocean and Gulf coasts in which water-carried freight competes with rail-carried freight. Of course under honest competition within this zone, the consumers will be benefited by freight carried in coastwise vessels through the Panama Canal. This zone, however, on the east does not extend any farther west than to about Pittsburgh, and does not extend any farther east from the Pacific coast than Salt Lake City, and on the Gulf coast no farther north than St. Louis. It is an unjust policy for the Government to discriminate by special favors to special interests against some sections of our country in favor of other sections of our country by enlarging the area of trade for some parts of our country and diminishing the area of trade for other parts of our country. Here is one of these statements:

OUR ATLANTIC AND GULF AND COASTWISE TRADE.

On this leading water highway of American commerce practically all the large regular steamship lines are either controlled by railways or are subsidiaries of one of two large shipping consolidations, the Eastern Steamship Corporation and the Atlantic, Gulf & West Indies Steamship Lines. Exclusive of some very small and purely local lines, 28 lines, representing 235 steamers with a total of 549,821 gross tons, handle practically all of the traffic along the entire Atlantic and Gulf coasts. Of the 235 steamers and 549,821 gross tons referred to, the lines controlled by the railroads represent 54.5 per cent and 61.9 per cent, respectively; the lines of the Eastern Steamship Corporation, 11.3 per cent and 10 per cent; and the lines of the Atlantic, Gulf & West Indies Steamship Lines, 18.2 per cent and 22 per cent. In other words, the steamers of the railroad-controlled lines, combined with those of the Eastern Steamship Corporation and the Atlantic, Gulf & West Indies Steamship Lines, number 199, or 84.7 per cent of the above-mentioned

total for the 28 lines, and represent 516,055 gross tons, or 93.9 per cent of the foregoing total gross tonnage.

Not only do the railroads and the two shipping consolidations dominate over nine-tenths of the tonnage, but it is significant that very few of the principal routes on our entire Atlantic and Gulf coasts are served by more than one regular steamship line. (Page 369 of the report.)

It is estimated that these shipping combinations will secure as a gift from the Government by reason of free tolls not less than $2,000,000 a year. Let us read a little further from that committee's report upon this subject, and we find the following language used:

The foregoing chapters discuss the control of regular-line services in the most important divisions of this country's domestic commerce. With the exception of the Pacific coast trade proper, it was shown that the line traffic is handled by comparatively few companies, and that these are largely controlled by railroads and shipping consolidations. Thus, in the entire Atlantic and Gulf coastwise trade, exclusive of all inland-waterway and purely local carriers, 28 lines, representing 235 steamers, of 549,821 gross tons, furnish the line service. Of this number of lines 10 are railroad owned and represent 128 steamers of 340,084 gross tons, or 54.5 per cent of the total number of steamers in the trade and 61.9 per cent of the tonnage. Seven lines operating 71 steamers of 175,971 gross tons in the coastwise trade belong to the Eastern Steamship Corporation and the Atlantic, Gulf & West Indies Steamship Lines, and represent in the aggregate nearly 30 per cent of the total number of steamers and 32 per cent of the tonnage. Combining the two interests, it appears that the railroads and two Atlantic coast shipping consolidations control nearly 85 per cent of the steamers and nearly 94 per cent of the gross tonnage engaged in the entire Atlantic and Gulf coastwise trade. Attention may be called again to the fact that very few of the routes between any two ports on the entire Atlantic and Gulf coasts are served by more than one line. (Page 403 of report.)

Under these conditions there can be no question but that free tolls will result in a direct gift of $2,000,000 a year to be covered into the pockets of the shipping combinations, and that but little, if any, benefit will be derived from a gift of free tolls to such vessels by the people of the country. The Democratic Party has always been against subsidies of every kind, and in my opinion free tolls to American coastwise vessels would be an indirect subsidy. Besides, some reliable authorities estimate that the exemption from the payment of tolls of such vessels will cause an annual deficit of the revenue necessary for the operation of the canal of $2,250,000 a year. In justice the American people should derive from the Panama Canal, in addition to the operation and maintenance expenses, the interest upon the $400,000,000 which they have invested in the canal. This interest alone would add an additional charge of $12,000,000 annually. If this canal were to be operated upon strict business principles, it would be necessary to increase the rates of tonnage so as to produce $12,000,000 more annually so as to pay the interest upon the amount invested by our Government.

It is estimated by Prof. Emery R. Johnson, of the University of Pennsylvania, selected by President Taft as special commissioner on Panama traffic and tolls, in his official report, that during the year 1915 our coast-to-coast vessels will carry through the canal 1,000,000 tons, while all vessels engaged in the foreign trade will carry through the Panama Canal 9,500,000 tons, in all a total of 10,500,000 tons. The gross revenue upon this tonnage at $1.20 per ton amounts to $12,600,000, a sum $7,650,000 short of the total legitimate charges against the canal, composed of interest, $12,600,000; operation, fortification, protection, and guarding the canal and miscellaneous expenses, $7,600,000; total, $20,250,000.

But if the coast-to-coast vessels are to be exempt from the payment of tolls, to this amount must be added $1,250,000, making a shortage of $8,850,000 annually. In view of these reliable estimated facts, and from an economic standpoint, the coastwise vessels should not be exempt from the payment of tolls. Prof. Johnson also estimates that in the year 1916 the tonnage carried through the canal by our coastwise vessels will increase 2,000,000 tons.

Should there be any lowering of the rates imposed, which is quite likely to be the case, in view of probable competition with the Suez Canal, the tolls, if imposed upon this increase of coastwise tonnage, would amount to $2,400,000 annually.

He further estimates that at the end of 10 years the total tonnage passing through the canal will amount to 17,000,000 tons, and if all vessels are treated upon terms of entire equality of charged tolls, the rates remaining the same, the collections at the canal will aggregate $20,400,000, a sum but little in excess of all legitimate charges. But it must be remembered that this is the estimate for 10 years from now. So if the coast-to-coast traffic is exempted from the payment of tolls, then there would still be an annual shortage of $2,250,000. These figures clearly show that if the coast-to-coast traffic is to be exempt from the payment of tolls, the canal would continue to be supported in part by the general taxpayers of the country, and while some taxpayers would receive indirectly a benefit from this exemption, if coastwise traffic were carried on honestly, yet whether carried on honestly or dishonestly, our people in the north half of the Mississippi Valley and Great Lakes region can under no circumstances receive any benefit, but must under all circumstances contribute to the support of the canal in case of free tolls.

There is no question but that freight can be carried by ship from the Atlantic to the Pacific coast much cheaper than by rail, but our contention is that the benefit goes into the pockets of the shipowners, and not into the pockets of the people.

As showing the ability of such shipowners to pay this toll of $1.20 per registered ton, let us, for example, take the case of transporting fruit from the Pacific slope to the Atlantic coast. There is each year, by all kinds of freight, about 1,000,000 tons of fruit transported to and from the Pacific coast to the Atlantic coast and return. Whether such transportation is subject to the payment of tolls or not, the great bulk of the same will pass through the canal when in operation. The best data available show that it costs to carry this freight across the continent on an average $26 per ton, and that it can be carried by water profitably at a freight charge not to exceed $7 per ton. Here is a margin of $19 per ton in favor of the owner of the coastwise vessels, and a toll charge of $1.20 per registered cubic ton will not destroy his ability to carry in competition with the rail carrier. The land and water freight charges of other merchandise will not differ materially from that of fruit, and it is most clear that the shipper will add the amount of tolls to the price of his commodities, while neither the producer nor the consumer will profit by free tolls, and the vessel owner will take the tolls as an additional profit to his already thrifty business.

TRANSPORTATION ON THE GREAT LAKES.

There are now situated between the United States and Canada, between Lake Superior and Lake Huron, two canals known as the American Soo Canal, belonging to America, and the Canadian Soo Canal along the side of it, belonging to Canada and upon Canadian soil. There is also a canal extending west of Niagara Falls, connecting Lake Erie with Lake Ontario, known as the Welland Canal. The Canadian Government is now actually engaged in widening and deepening the Welland Canal to a depth of 30 feet, thus making it available for use by most all of the largest ocean and lake going vessels.

The Canadian Government has also completed a survey and plans for the construction of a canal from Georgian Bay southeast across lower Canada to Montreal, on the St. Lawrence River. It is intended that this proposed canal shall be 30 feet in depth and large enough to accommodate the largest lake and most of the ocean-going vessels. Many of the moderate-sized vessels on the Great Lakes often pass with cargoes down through Lake Erie, through the Welland Canal, Lake Ontario, and the St. Lawrence River to the ocean, and at times moderate-sized ocean vessels carry cargoes from the ocean ports down the St. Lawrence River, through Lake Ontario, the Welland Canal, Lake Erie, and to their destination. By a treaty between Great Britain and the United States, since 1871 the American shipping interests on the Great Lakes enjoy the privileges of the Welland Canal, located upon Canadian territory, upon an equality with British vessels. It would appear that the American Soo Canal is not at times large or deep enough to accommodate the American trade, and that it is necessary during the open season for many American vessels to pass back and forth through the Canadian Soo Canal. Both the Canadian and American Soo Canals are covered by a like international agreement providing for equal terms for both American and Canadian vessels. Last year, according to statistics, American ships carrying 38,000,000 tonnage passed through the Canadian Soo Canal upon the same terms as the Canadian vessels. Nearly all of the great north one-half of the Mississippi Valley and Great Lakes regions are directly interested in and benefited by lake shipping. The Canadian Welland and Soo Canals are of the greatest importance to the American shipping interests on the Great Lakes. Yet we of the Northwest must when we pass through the Canadian canal pay tolls, and Canada when passing through our Soo Canal must pay tolls to us. But the people of both nations are treated upon an entire equality. The amount of tonnage upon the Great Lakes is enormous. The crippling of any portion of our commerce upon those lakes would be seriously felt by the farmers of the Northwest. The amount of tonnage which was necessarily sent through the Canadian Soo Canal last year was as large as that which will pass through the Panama Canal in the first year. This shows that all of our people in the Northwest are directly interested in preserving an equality of treatment at the Soo and Welland Canals with Canada.

WHAT WILL HAPPEN?

What would happen if the American coastwise vessels were permitted to pass through the Panama Canal free of tolls, regardless of whether we can in justice and equity to our treaty obligations permit it to be done? We will then in a way be discriminating against certain English and Canadian vessels. What will the result be? Every impartial and intelligent man will at once answer: Why, of course Great Britain and Canada will abrogate the treaty between that nation and the United States granting the American ships on the Great Lakes equal privileges with Canadian ships in Canadian canals and waters. That would spell ruin to a majority of the Great Lakes commerce, and it would also spell reduction in value and profits to the farming and business interests of the West.

Last year the Canadian Soo Canal carried nearly 38,000,000 tons of American freight. It carried more American freight than was carried by our own American Soo Canal, because it is a little deeper. Last year the Welland Canal carried nearly 1,000,000 tons of American freight. But the new 30-foot Soo Canal will carry more freight and the new 30-foot Welland Canal will also carry more American freight, and Canada is preparing her locks at the Soo for future sea traffic from the Lakes to the Atlantic, and has completed surveys for another 30-foot canal from Georgian Bay, on the north of Lake Huron, to the St. Lawrence River near Montreal.

There will undoubtedly be much commerce from the west coast of Canada through the Panama Canal to the American ports on the Gulf and Atlantic coasts, carrying freight in competition from the west ports of Canada to the American ports on the south and east. If we discriminate against Canada at the Panama Canal, Canada will claim the right to discriminate against us; and if Canada discriminates against us, every bushel of grain, iron ore, lumber, and other freight shipped east from the northwest section of the United States through Canadian canals will bear its share of the burden of that discrimination in payment of increased freight rates, and every acre of land in that section will be reduced in value. When the farmers of the Middle West begin to count the cost to themselves of free tolls to subsidized special interests they may not be over in love with the Representatives from that section who vote for free tolls at the Panama Canal, thereby causing such discrimination.

AMERICAN COASTWISE VESSELS NOT IN NEED OF FREE TOLLS.

President Wilson, on the 5th of February, 1914, in a letter written to William A. Marbury, of Baltimore, stated in part:

With regard to the question of canal tolls my opinion is very clear. The exemption constitutes a very mistaken policy from every point of view.

It is economically unjust. As a matter of fact, it benefits—for the present at any rate—only a monopoly.

Upon this subject President Wilson, in advocating the repeal of that part of the law which provides for free tolls to American coastwise vessels passing through the canal, said in part in his message to Congress, delivered in person on the 5th day of March, 1914:

I have come to ask you for the repeal of that provision of the Panama Canal act of August 24, 1912, which exempts vessels engaged in the coastwise trade of the United States from the payment of tolls and to urge upon you the justice, wisdom, and the large policy of such a repeal with the utmost earnestness of which I am capable.

In my own judgment, very fully considered and maturely formed, that exemption constitutes a mistaken economic policy from every point of view * * *. But I have not come to urge upon you my personal views. I have come to state to you a fact and situation * * *.

Under the laws of the United States vessels constructed, owned, and operated by American citizens are given a monopoly of our coastwise trade. The Panama Canal is considered as a part of the coast of the United States. Other vessels, both foreign and those operated by United States citizens in the foreign trade, are prohibited from engaging in the coastwise trade or any part of it. (Rev. Stat., 4347.)

Therefore the coastwise carrying corporations and vessels have an absolute monopoly of all the coastwise business, and the farmers of the country and all the business interests of the great Northwest will scarcely approve of a policy that will tax them still further to pay a subsidy to an already prosperous monopoly. Public attention can not be diverted by waving the flag and twisting the lion's tail, from the fact that when we deprive the Government of revenue with which to operate the canal, and give it to a monopoly that it will force the people to make up the difference by taxing themselves.

The canal will cost the people of the United States for operation, maintenance, protection, and interest on investment fully $25,000,000 a year. Free tolls to American coastwise vessels it is estimated will reduce freight rates by water from coast to coast from 25 to 50 per cent. A toll rate fixed at $1.20 per net registered ton will amount to only 40 or 60 cents for a cargo ton, or from 2 to 3 cents a hundred pounds. It is doubtful if any consumer residing within the coast zone, where there may be water and rail competition, will be able to buy any commodity one cent cheaper by reason of free tolls to coastwise vessels. On the other hand, it is certain that if our enormous coastwise tonnage were permitted to go through the canal free, the American people would make up the loss on the canal income by taxation.

We often hear expressions of regret that our merchant marine is so weak and inconspicuous upon the seas; but these remarks are not directed to that part of the merchant marine which is engaged in American coastwise traffic, but refers solely to that part of the American merchant marine which is engaged in foreign traffic. That part of our merchant marine really needs assistance, and if the proposition were to give free tolls at the Panama Canal to that part of the American merchant marine it might be justifiable.

Paying $400,000,000 to build the Panama Canal, and operating and defending it at the rate of $25,000,000 a year for all time, and then permitting the Shipping Trust, which now has a monopoly by law of the coastwise trade, to use it free of tolls, does not appeal to either the pocketbook, the wisdom, or the patriotism of my constituents. The average citizen feels that we have done enough when the Nation has put up the capital to construct a canal for the use of shipping interests that reduces the average voyage of the coast-to-coast trip about 8,000 miles, without having to pay the expense of conducting their ships through the canal. On the other hand, the shipping interests must have an insatiable appetite, after we have shortened the coastwise trip 8,000 miles on the average voyage, to ask the people to pay the expenses of conducting their vessels through the Panama Canal by the granting of free tolls.

SURRENDER OF SOVEREIGNTY.

When our opponents are argued into a corner on the wisdom of passing the pending repeal bill, their final resort is to denounce this bill as surrendering the sovereignty of the United States in part, over the Panama Canal. This contention does not even rise to the dignity of the weakest kind of argument. It is pure assertion, without foundation in fact or law. There is no dispute between this country or any other country about the right of all nations' vessels of commerce and of war to use the Panama Canal. The claim of Great Britain, however, extends a little further in that she claims by the Hay-Pauncefote treaty there shall be no discrimination in favor of any kind of American vessels, whether of commerce or war, as against the vessels of commerce or war of Great Britain or any other nation. Grant, for the sake of argument, that Great Britain's construction or interpretation of that treaty is correct, then all the right that she has in the Panama Canal is a right to insist that there shall be no discrimination in rates charged for the passage of the vessels of war and commerce of the world, including the United States, through that canal. If this be a surrender of a part of our sovereignty over the Canal Zone that is worth complaining about, then, indeed, we are in a sad plight; then, indeed, the American people have been blind all these years, for the President and their Senate have continually sanctioned from the foundation of our Government such part surrender of sovereignty. Not only that, but in the past history of our Nation we have induced other nations to surrender as great a part of their sovereignty to the United States.

Since the earliest history of our Nation, down through all the years to the present time, and now, we have granted, by international treaties, the right to ships of foreign nations to make use of the bays, ports, sounds, rivers, and waters of the United States upon the same terms as our own ships. The bottom of our rivers, the bottom of the oceans and Gulf to a distance of 3 miles from shore, and the waters submerging the same, and many of our bays and sounds are under the exclusive sovereignty of the United States, excepting as surrendered conditionally by treaty in giving the vessels of foreign nations the right to use such waters as ourselves, excepting in the coastwise trade. Under these treaties all foreign vessels have a right to enter our ports, anchor, load and unload, repair, equip, and do such other things as may be necessary for their successful and safe navigation. Our Nation enjoys like rights in the ports of other nations by virtue of treaties. If this be a surrender of sovereignty in part, then history proves that such surrenders have been of mutual benefit to all nations, including our own. It is utter nonsense to contend that the use of the Panama Canal on terms of equality by vessels of all nations, including our own, is a surrender of sovereignty in part. No British or

other flag will fly from the ramparts of the Canal Zone fortifications. The flag of Great Britain and of every other nation, on vessels passing through the canal will dip to the Stars and Stripes, and the Lion will bow to the Eagle.

If the United States has an entire and exclusive sovereignty over the Panama Canal Zone, why have we entered into an agreement with, and to pay as annual rental $250,000 to the Republic of Panama?

For these and other reasons, which time and space forbid me from presenting at this time, I shall stand, not only with the President, but for those national and domestic policies which will result in the greatest good to the greatest number of our citizens, by voting for this bill.

Panama Canal Tolls.

EXTENSION OF REMARKS
HON. HENRY BRUCKNER,

OF

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 30, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. BRUCKNER. Mr. Speaker, it is about 350 years ago since the idea of a canal which would connect the two great oceans—the Atlantic and the Pacific—was first discussed. Ever since then until it became a reality idealists have dreamed while men of affairs and statesmen have labored to bring about its realization. All kinds of difficulties have been encountered. Financial in the first place, for to finance a project of this kind required immense sums of money, and after the money could be had, then came the political barriers, which have been such a stumbling block in the road which led to the final achievement. The United States and the Republic of Panama finally made a treaty which removed all the political and legal obstacles in the way of beginning this great work, which was to change the map of the world, and open a waterway by which all the water routes of the world were to receive benefits, and the wildest dreams of our forefathers were to be realized. Then the United States Government went at this enterprise only as Americans can. It is the work of the United States alone—no other nation has aided in its creation.

This, the greatest engineering feat of mankind, a work that will go down in history as a monument to American skill, enterprise, ingenuity, and pluck, is the $400,000,000 Panama Canal, paid for entirely by the American people. In a few months it will be opened to the world; vessels of commerce will pass through from the Atlantic to the Pacific. Experts declare that within a year after its opening 10,000,000 ton, net tonnage, will use the canal, and that about one-fourth of this tonnage is engaged in the American coastwise trade.

Under this new condition the Panama route will have almost absolute control of the traffic of the west coast of North and South America, with perhaps the extreme southern part of South America. The distance between New York on the east coast and San Francisco on the west coast of the United States by a water route will be shortened about 8,000 miles, while the distance between New York and Australia will be one-half the present routing. Thus the saving of time and money to those engaged in the world's commerce by the use of the Panama Canal can not be calculated.

Since the dawn of civilization the countries of the world have been fighting the battle for the control of commerce. The prosperity of a people or a country largely depends upon its commerce. The countries that have forged ahead and taken their places with the great powers of the world are those who have strained every nerve and fiber to develop and expand their trade.

Cheap transportation is the great secret that develops the trade of a nation. Unreasonable charges for transportation have often destroyed the commerce of a nation and placed it at a distinct disadvantage, so that it was on an unequal basis and unable to compete with those nations that have endeavored to place their rates at the very lowest.

The American merchant marine to-day is only a shadow of what it formerly was. Why? Because we are at a disadvantage. Our standard of tonnage is about 20 per cent higher than that of other countries. All the other countries of the world have a uniform standard which is lower than ours. If our vessels go into foreign ports, the port charges, based on the tonnage, are 20 per cent higher than all other competitors.

You may ask why not regulate our tonnage according to the port when our vessels are docking in foreign ports? This can not be done, for the reason that the charges are fixed according to the certificate issued by the Government under which the vessel is registered, and these charges must be paid accordingly. Hence you can readily see what a distinct disadvantage we are placed in.

Ninety-two per cent of our imports are brought to this country in vessels flying foreign flags. England's ships in the foreign trade more than outnumber ours 10 to 1. Did anyone in their wildest moments imagine that we built this canal for our foreign trade? Would it have been wise to go to this enormous expense for this trade? With our merchant marine reduced to almost nothing, could anyone think that we built this canal for anything but our coastwise trade, in which no other but an American vessel can engage? When we glory in American pluck, enterprise, and progressiveness, surely we have not our merchant marine in mind. How can we remedy this condition? How can we place the American flag on the high sea of commerce, to attain that proud position it occupied in years gone by? Why not let us begin at home, Mr. Speaker?

Of all the great questions that have come before the American Congress to be discussed and acted upon, I do not think there is one that has so engrossed the public mind as this great question of the Panama Canal tolls. In the office, factory, on the highways, and in the press it is the main topic.

I have read every line that is available on this all-important subject. I have listened attentively to the arguments for and against the exemption of our coastwise vessels from the payment of tolls, and my mind is clear on the subject. I shall vote against repeal and in favor of the exemption of American ships passing through the canal from the payment of tolls. I think that every American who has the interest of his country at heart should do likewise. The Panama Canal belongs to the people of the United States. It was built with their money and it will be maintained at their expense. It was built on their property, and the people of the United States are entitled to such benefits as should accrue from its ownership.

Having constructed the canal through our own territory at an enormous cost, and undertaken such a lasting burden, this country naturally assumed that as an attribute of ownership we were entitled to deal with it as we thought best, so far as its use pertained to our internal and domestic affairs. And so, having in mind the benefits that might accrue from such a course, Congress enacted legislation exempting from the payment of tolls on their passage through the canal American ships engaged in the coastwise trade.

You may raise the issue of violating treaty rights—which, I admit, is a very delicate question—but let me ask whether the condition concerning the treaty is any different to-day than it was in 1912, when this law was passed?

President Roosevelt, who was the Chief Executive of the Nation at the time the Hay-Pauncefote treaty was signed, does not interpret it as the men who are to-day advocating the repeal of this law; and his opinion on the matter is entitled to consideration in view of the fact that Mr. Hay was the Secretary of State in his cabinet at the time. He said:

> I believe that the position of the United States—as to the Panama Canal—is proper as regards this coastwise traffic. I think that this does not interfere with the rights of any other nation. No ships but our own can engage in coastwise traffic, so that there is no discrimination against other ships when we relieve the coastwise traffic from tolls. I believe that the only damage that would be done is to the Canadian Pacific Railway. * * * We are benefiting the whole world by our action at Panama, where every dollar of expense is paid by ourselves. In all history I do not believe you can find such great and expensive work as the Panama Canal, undertaken not by a private corporation, but by a nation, as generously put at the service of all mankind.

President Taft, in his message of August 18, 1912, written after the receipt of the first formal British protest against tolls exemption, after the passage of the bill by the House of Representatives, said:

> After full examination of the treaty and of the treaty which preceded it, I feel confident that the exemption of the coastwise vessels of the United States from tolls and the imposition of tolls on vessels of all nations engaged in the foreign trade is not a violation of the Hay-Pauncefote treaty.
>
> I am sure that it is not the intention of Congress to violate the Hay-Pauncefote treaty or to enact anything inconsistent with its provisions, and that it certainly is not its purpose to repeal, by subsequent enactment, the treaty in so far as it represents the law of the land.

The cry has been raised by some that if we do not repeal this law the Shipping Trust will be the only beneficiary by the completion of the canal; that the Shipping Trust and the railroads are one combine.

But do not overlook the fact that section 2 of the existing canal law prohibits all trust and railroad owned, or controlled,

vessels from using the canal at all. If this law is enforced—and we must assume that it will be—how can the trusts and railroads benefit by free tolls? What better way could be devised to break up a shipping trust, so far as the coastwise trade is concerned? If no trust-owned ships could use the canal, how could the Shipping Trust benefit by it?

If this great canal was built, as has been stated upon the floor of this House, for the use of a private monopoly, then what a bunco game has been played on the American people.

What a pity that some one did not state that fact 12 years ago, when this great project was started, and we were providing for the expenditure of an unlimited sum of money on a great waterway to benefit a Shipping Trust.

To my mind, the one great object of the canal was to secure competition with the railroads; and now, after 10 years of hard work, worry, and sacrifice, we are told by those who favor repeal that there is to be no competition.

It is claimed by the proponents of this bill that even if we do give free tolls to our own coastwise ships the people will not get the benefit. They shout loudly against the Shipping Trust.

To talk about a Shipping Trust upon a transportation route that is free to all our ships is ridiculous. You might as well talk about an automobile trust on the highways of the country. There has been no Shipping Trust on the Great Lakes, the Sault Ste. Marie Canal, nor upon our great rivers. Why, then, should there be one on the Panama Canal? The freer it is the surer it is that no such trust can ever be maintained, as it is less liable to create a monopoly.

An instance that shows how we have been trying to build a merchant marine is the clause that this Congress put in the present tariff law, a provision giving a 5 per cent rebate on the duty imposed on foreign goods when such goods are carried in American bottoms. The ships engaged in our coastwise trade are not in competition with the ships of other nations. Our coastwise traffic is limited to American ships. The vessels of no other nation can engage in this trade. It is ours alone.

A vessel taking on a cargo at New York and sailing for San Francisco, or vice versa, whether that ship goes by the way of Cape Horn or through the canal, is engaged in domestic commerce just as much as if the same cargo was loaded on freight cars at New York and carried across the continent by one of the transcontinental lines.

What is the treatment that the ships of the world receive at the Suez Canal, which is owned by a stock company and practically controlled by Great Britain? This canal was opened in 1869 and is about 100 miles long, requiring about 17 hours to pass through it.

The Panama Canal is a little over 50 miles long, and it takes about 12 hours to pass through it. The Suez is about 28 feet deep, while the Panama is about 40 feet deep.

In 1910 the stock of the Suez Canal paid a dividend of about 50 per cent. The tolls on the canal are $1.30 per net ton on ships with cargo, while that of the Panama Canal will be $1.20 per net ton.

Up to 1910 the expenditures of the Suez Canal amounted to about $127,000,000; the Panama Canal cost $400,000,000. We give better service, passing a ship through in less than 12 hours as compared with nearly 18 hours to pass through the Suez Canal.

Surely no country in the world can complain of the charges, and all must admit that they are much cheaper than those of the Suez.

Free tolls is a doctrine of the Democratic Party, because it was believed that it would make food cheaper and otherwise benefit consumers by cheapening the rates of transportation between the Pacific coast and the Atlantic seaboard.

One of the primary objects in building the canal was to develop water competition with the transcontinental railways.

If a vessel of 5,000 tons burden, bringing food supplies from southern California to New York, is charged $6,000 tolls in going through the canal, that $6,000 will not only be added to the price of every ton of food but a ratable addition will be made to the price of every ton of food transported by the railroads across the continent, because the water rate will be fixed by the land rate.

It has been claimed that if we do not repeal section 5 of this act we will be charged with not keeping faith with the nations of the world.

Who has ever questioned the honor or integrity of the United States? Is there an act of the past that can be questioned? Why question our honor now?

Because we do not see things as some would like to have us see them, is that breaking faith?

I am in receipt of resolutions from civic organizations in my congressional district on this question which I beg to insert as a part of my remarks:

The North Side Board of Trade of the City of New York, which is the chamber of commerce of the borough and the county of The Bronx, with a membership of 625, representing the commercial interests of 600,000 people, at a regular meeting held in their building at Third Avenue and East One hundred and thirty-seventh Street, on the 25th day of March, 1914, adopted the following resolutions:

BOROUGH OF THE BRONX, N. Y., *March 26, 1914.*

At a regular monthly meeting of the North Side Board of Trade held on Wednesday evening, March 25, 1914, the following resolution was adopted, and the secretary authorized to send you copy of same:

"Whereas the question of tolls for American vessels is now before Congress:

"*Resolved*, That the North Side Board of Trade favors the exemption of American coastwise vessels from such tolls on the Panama Canal when going to or between American ports; and be it further

"*Resolved*, That a copy of this resolution be forwarded to our Representatives in Congress at Washington, D. C."

Yours, very truly,

[SEAL.] CHARLES E. REID, *Secretary.*

Resolutions unanimously adopted at a regular monthly meeting of the Bronx County Property Owners' Association (Inc.), at their headquarters in the Courtlandt Casino, No. 597 Courtlandt Avenue, Borough of the Bronx, New York City:

Whereas the Panama Canal has been built solely with American money and by American mechanical and engineering genius through territory over which the United States exercises the rights and sovereignty; and

Whereas the exemption from the payment of tolls in said canal of American vessels engaged in the coastwise trade does not discriminate against any foreign nation, because such nation can not engage in our coastwise trade; and

Whereas such exemption violates no treaty, but, on the contrary, is a measure tending to the upbuilding of our seaports, our commerce, our naval power, and our national strength: Therefore be it

Resolved, That the Bronx County Property Owners' Association (Inc.) hereby protests against the repeal of said exemption, commends and thanks Congressmen JOSEPH A. GOULDEN and HENRY BRUCKNER for their votes cast against the repeal of said exemption, and respectfully urges the Hon. ELIHU ROOT and the Hon. JAMES A. O'GORMAN, Senators in Congress from New York State, to vote against said repeal when the question comes before the Senate. And be it further

Resolved, That a copy of this resolution be forwarded to Hon. JOSEPH A. GOULDEN, Hon. HENRY BRUCKNER, Representatives in Congress, and to Hon. ELIHU ROOT and Hon. JAMES A. O'GORMAN, Senators from New York State.

A true copy.

Attest:

[SEAL.] H. B. TENET, *Secretary.*

Die Vereinigte Deutsche Gesellschaften der Stadt New York, an organization in the city of New York composed of 110 societies and a membership of 11,000, at a meeting of its executive board passed resolutions, a copy of which was sent me with a letter from the president:

NEW YORK, *March 28, 1914.*

Hon. HENRY BRUCKNER, M. C.,
Washington, D. C.

MY DEAR CONGRESSMAN: I was gratified to see you recorded against the "gag" rule, which I consider the second blunder committed by the President and his advisers.

I beg to inclose a copy of resolutions passed by the above-named organization by a vote of 66 to 3. This organization is composed of 110 societies, with a membership of 11,000. Although most of the delegates present are German-born citizens and were informed that Germany was not in favor of free tolls and would benefit by the repeal, they almost unanimously supported the American position in this vital question.

I trust you will be found upholding the Democratic position; and as a Democrat who has never voted any other ticket, I would urge you to use your personal efforts to defeat the attempt to repeal free tolls, because I consider such free tolls fraught with danger to the Democratic Party.

If free tolls are repealed, it is not unreasonable to prophesy that President Roosevelt will welcome it as an issue upon which to go before the people in the November elections. With an election cry that the Democratic Party had surrendered American rights to Great Britain, Mr. Roosevelt would crystallize the outspoken and the latent position to England in every part of this country and sweep the Democratic Party from power. I can say for myself that I would support him in this fight and for the first time forsake the Democratic Party, and I am not saying too much when I declare that thousands would follow my lead.

This would be deplorable, but it is better to have a party turned out of power than a country losing its self-respect and surrender its rights to a foreign nation. With best wishes.

Sincerely, yours,

A. G. KOELBLE.

Whereas the Panama Canal has been built by Americans with $400,000,000 of American money upon American soil and is therefore an American waterway, through which American vessels engaged in domestic trade should be as free from tolls as are any other American ships using any other American inland waterway; and

Whereas the right of American coastwise ships to free tolls has been upheld by Roosevelt and Taft, Republican Presidents; by two Senates and three Congresses; by Olney, Democratic, and Knox, Republican, Secretary of State; by the United States Supreme Court; by high American authorities; and even by a note of the British legation in 1912; and

Whereas Congress in 1912 exempted American coastwise ships from tolls and the three great political parties and 13,000,000 voters approved such exemption; and

Whereas Hon. Woodrow Wilson, as a candidate for President, standing upon the Democratic platform and individually, pledged himself to free tolls; and

Whereas the British Government alone protested against such exemption, the country which has violated every treaty it ever had with America or any other nation, and whose interpretation of any treaty should, in the light of history, be viewed with distrust and suspicion:

Resolved, That while we do not question the good faith of our President, we, as American citizens, declare for an American and against a British interpretation of the Hay-Pauncefote treaty.

Resolved, That we call upon the President of the United States to withdraw his appeal to Congress to repeal the free-tolls provision and afford the people of this country, who unanimously declared in favor of the American interpretation of the Hay-Pauncefote treaty, an opportunity at the November elections either to reverse themselves or redeclare their approval of the American interpretation of the Hay-Pauncefote treaty.

Resolved, That in any event we call upon all the Members of Congress, and specifically upon those of the State of New York, to uphold the American interpretation of that treaty and so prevent a misguided though well-meaning President from inflicting a loss to national dignity upon this country and from surrendering American rights to our traditional British enemy.

It is claimed that the national honor is at stake, and I grant you that it is, but not along the lines laid down by the most vociferous shouters for the national honor. It is just the opposite, for the national honor can only be degraded by a surrender of American rights and not by a manly adherence to the principles and policies which have up to this time governed this country in her dealings with foreign nations, to permit no meddling with our purely domestic affairs. American commerce, American agriculture, American manufactures, and, above all, American honor, demands a stubborn and unyielding opposition to this or any other attempt to coerce us by outside pressure.

I am as jealous of the honor of my country as any man on this floor, and do not yield to any man in my loyalty and devotion to the Stars and Stripes. I will do my duty as I see the right, which compels me to differ with some of my party. I will vote against repeal and in favor of allowing vessels in the American coastwise trade to pass through the canal free of tolls.

Un-American Surrender of Our Panama Canal Rights.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. JOHNSON of Washington. Mr. Speaker, in the permission granted me to extend my remarks I desire to present 10 concisely stated reasons why Congress should not forever surrender at Great Britain's demand our Panama Canal. These reasons are added as an appendix. I desire to call especial attention to the great patriotic speeches made to-day by Speaker CHAMP CLARK and by the Republican floor leader, Hon. JAMES R. MANN, against this un-American surrender. I desire to say that if any of my constituents desiring to read in full the speeches of these two able statesmen will write to me, I will see that copies of both speeches are mailed to them.

Mr. Speaker, in this time of stress and storm and disputation over the question of what the Hay-Pauncefote treaty means and does not mean it is in order to consider what John Hay thought it meant.

It will be recalled at the time of the Hay-Pauncefote negotiations that Mr. Hay submitted a treaty which the Senate rejected. Then a second treaty was negotiated and presented to the Senate for ratification. It is the present much-mooted treaty.

STATEMENTS OF SECRETARY HAY.

In submitting it to the Senate Mr. Hay said:

In the new draft of treaty the provision superseding the Clayton-Bulwer treaty as a whole was made the subject of an independent article and presented as the first article of the treaty.

And as to management, control, and defense Mr. Hay, in a memorandum to the Senate Foreign Relations Committee, said:

The whole theory of the treaty is that the canal is to be an entirely American canal. The enormous cost of constructing it is to be borne by the United States alone. When constructed it is exclusively the property of the United States and is to be managed and controlled and defended by it.

And as to American responsibility:

The United States alone, as the sole owner of the canal, as a purely American enterprise, adopts and prescribes the rules by which the use of the canal shall be regulated and assumes the entire responsibility and burden of enforcing, without the assistance of Great Britain or of any other nation, its absolute neutrality.

STATEMENT OF SECRETARY OLNEY.

Hon. Richard Olney, formerly Secretary of State, in a paper read before the American Society of International Law, April 25, 1913. After quoting the clause which promises that the canal shall be open on equal terms to the vessels of all nations observing these rules, Mr. Olney says:

The words under construction are, in substance, the first of a set of six rules adopted by the United States as the basis of the neutralization of the canal.

But the other five certainly apply only to parties other than the United States, so that there is the strongest reason for holding that the first of them is to be given a like application.

And if the British construction be correct, instead of liberating the United States from all foreign control of the canal and from all duties to foreign powers in respect of its use—except not to discriminate between them—the Hay-Pauncefote treaty compels the United States to reverse its established policy and to devise a plan for subsidizing its own vessels in order that they may have such free and other use of the canal as the United States may decide to be demanded by United States interests.

BRITISH ADMIT OUR RIGHTS.

All should read the oft-quoted note of A. Mitchell Innes, of the British Embassy—

Admitting at that time our right to exempt the coastwise trade from the payment of tolls, but doubting our ability to frame regulations that would confine the benefits of the exemption to the coastwise trade.

OF MORE VALUE TO ALL OTHER NATIONS THAN TO UNITED STATES.

Mr. Speaker, the canal, if the administration's policy goes into effect, will be of infinitely more value to every other large nation in the world than it will be to the United States. Indeed, in many ways it will give foreign nations a larger advantage over this country than they now enjoy.

It will be of no practical value to our shipping in the foreign trade, for the very good reason that we have no such shipping and are not likely to have so long as it costs 50 per cent more to operate an American ship in the foreign trade than it does a foreign ship, and Congress refuses to do anything to compensate for that difference.

It will be of no value in our domestic trade, because that trade is to be deliberately handicapped for the benefit of foreign countries. The imposition of tolls upon American coastwise shipping will add little to the revenues of the canal, because the tolls imposed will operate to keep American coastwise shipping out of the trade.

In November, 1913—

Says Robert Dollar—

three great liners sailed from San Francisco on the same day. One of them was a Pacific Mail ship. One was a Spreckel's ship. These two were American. The other was a ship of a Japanese line, which has a subsidy of a million and a quarter a year for carrying the Japanese mails. The two American ships beat the Japanese ship to Asia. But the Japanese vessel carried the United States mail. That company has the contract, given to it by the authorities at Washington. Congress gives away the mail contracts and tries to balance up the loss by offering a little 5 per cent discount under conditions which no shipowner can accept.

OUR FOREIGN COMMERCE DONE IN FOREIGN BOTTOMS.

Do Americans realize that foreign commerce of the United States for the fiscal year ended June 30, 1913, totaled in value $3,857,587,344, of which $3,431,470,423 was carried by sea, and of which American vessels carried less than 10 per cent—imports and exports of a value of but $323,451,565—leaving to foreign vessels the carrying of over 90 per cent, of a value of $3,109,018,858, and that your Government has expended for the building of this canal some four hundred and fifty million good American dollars?

For what purpose?

That the charity of this splendid Nation to foreign steamship interests may go on, increase, and multiply.

TEN REASONS WHY CONGRESS SHOULD NOT YIELD OUR PANAMA CANAL AT GREAT BRITAIN'S DEMAND.

First. If Congress repeals the act granting American domestic commerce free use of the Panama Canal, the only power in the world hampered and shackled as to the use of the canal will be our own country that alone built and owns the canal. Any foreign power may remit the tolls paid by its own ships. Spain has already decided to do so. England, Japan, and Germany pay enormous subsidies to their shipowners.

Second. The Clayton-Bulwer treaty has no bearing on the controversy. The Anglo-American canal contemplated in that treaty was never built, for the simple reason that England never fulfilled her part of the understanding. The Hay-Pauncefote treaty 51 years later superceded and abrogated the earlier treaty. The Panama Canal then became an exclusively Ameri-

can enterprise. The only reason for the Hay-Pauncefote treaty was the repeal of the older one.

Third. Article 2 of the new treaty says that the United States shall enjoy all the rights of ownership except as indicated in the treaty, shall enjoy exclusive control and power over the canal, and shall make all rules and establish the rates. This article is never quoted by the advocates of Great Britain's claims. But it is controlling. The next article (3) provides:

The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation in respect of the conditions or charges of traffic or otherwise. Such conditions and charges shall be just and equitable.

In other words, the United States adopts the rules, and it guarantees equality not with itself to all other nations, but equality of all the nations obeying its rules. The "discrimination" between the United States and other nations, i. e., the difference between the tenants and the landlord, is in the terms of the treaty itself.

Fourth. If the contention of Great Britain that it is not an American canal, but an Anglo-American canal, is true, then it must necessarily follow that the warships of the United States are upon exactly the same footing as the warships of Great Britain, because the treaty provides that "vessels of war of a belligerent shall not revictual nor take any stores in the canal." If it is true, the United States is at once reduced to the rank of mere gatekeeper and toll collector of the Panama Canal and is not its rightful owner.

Senator HENRY CABOT LODGE has stated that if such an interpretation as Great Britain now makes—supported by President Wilson—had been expressed at the time, he would never, as chairman of the Senate Committee on Foreign Relations, have reported the Hay-Pauncefote treaty to the Senate, and it could never have been adopted.

Fifth. Free tolls to our coast-to-coast shipping does not discriminate against foreign ships, because no foreign ships are permitted to engage in that trade. No foreign ship can clear from any American port with a cargo for any other American port.

Sixth. One of the primary objects in building the canal was to develop water competition with the transcontinental railroads.

Seventh. Great Britain has never interpreted her own treaties regarding equality of rates and port charges as she now seeks to compel the United States to interpret the Hay-Pauncefote treaty.

Eighth. The United States has always held that "vessels of a nation," or even "vessels," as used in treaties, by long-continued custom and acquiescence are universally accepted as not embracing vessels engaged in the coasting trade. See treaty between the United States and Denmark.

Ninth. The provisions of the treaty of 1815 have already been judicially interpreted by the Supreme Court of the United States. See opinion written by Justice White in Olsen v. Smith (195 U. S., 344.)

Tenth. Even as late as the Hay-Pauncefote treaty, in 1901, it was expected that an interoceanic canal would be built by private enterprise under the protection of the United States Government. A Wall Street syndicate, headed by Morgan, with Frederick Cromwell as counsel, was then organizing to do this work as a private enterprise. But private enterprise proved unequal to it. The United States Government took up the task. Instead of being a mere guardian of neutrality, the United States became itself the sole owner and sovereign of the soil over which this great waterway is built. By treaty and purchase the United States acquired the land and the 10-mile strip of territory across the Isthmus of Panama. Even if one did not approve the method by which that strip was acquired, it is today as much United States territory as is Alaska or Texas or the Gadsden strip.

WHAT THE PRESIDENTS HAVE SAID.

Concerning an isthmian canal, all of our Presidents of recent years have spoken. Gen. U. S. Grant's words were:

I commend an American canal, on American soil, to the American people.

President Hayes, in March, 1880, said:

The policy of this country is a canal under American control. The United States can not consent to surrender this control to any European power. It is the right and duty of the United States to assert and maintain such supervision and authority over any interoceanic canal across the Isthmus that connects North and South America as will protect our national interest.

President Harrison, referring to an Atlantic-Pacific waterway, said:

Our national policy, now more than ever, calls for its control by this Government.

President Roosevelt, in December, 1901, said to Congress:

In this treaty the old Clayton-Bulwer treaty * * * is abrogated. It (the new one) specifically provides that the United States alone shall do the work of building and assume the responsibility of safeguarding the canal, and shall regulate its neutral use by all nations on terms of equality without the guaranty or interference of any outside nation from any quarter.

In January, 1913, Col. Roosevelt said:

I believe that the position of the United States is proper as regards this coastwise traffic. I think that we have the right to free bona fide coastwise traffic from tolls. I think that this does not interfere with the rights of any other nation, because no ships but our own can engage in coastwise traffic, so that there is no discrimination against other ships when we relieve the coastwise traffic from tolls.

President Taft said, in December, 1912:

After full examination of the Hay-Pauncefote treaty and of the treaty which preceded it, I feel confident that the exemption of the coastwise vessels of the United States from tolls and the imposition to tolls on vessels of all nations engaged in the foreign trade is not a violation of the Hay-Pauncefote treaty.

In July, 1912, the Democratic national platform said:

We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal. We also favor legislation forbidding the use of the Panama Canal by ships owned or controlled by railroad carriers engaged in transportation competitive with the canal.

On August 15, 1912, Hon. Woodrow Wilson, governor of New Jersey and candidate for President, said to an audience of farmers at Washington Park, N. J.:

One of the great objects in cutting that great ditch across the Isthmus of Panama is to allow farmers who are near the Atlantic to ship to the Pacific by way of the Atlantic ports.

Now, at present there are no ships to do that, and one of the bills pending—passed, I believe, yesterday by the Senate as it had passed the House—provides for free tolls for American ships through that canal and prohibits any ship from passing through which is owned by any American railroad company. You see the object of that, don't you? We don't want the railroads to compete with themselves, because we understand that kind of competition. We want water carriage to compete with land carriage, so as to be perfectly sure that you are going to get better rates around the canal than you would across the continent.

On March 5, 1914, the same Woodrow Wilson, now President of the United States, appeared before a joint assembly of the two Houses of Congress with a short and sharp command to Congress to repeal the free-tolls clause of the Panama Canal act. His message was in part as follows:

I have come to ask you for the repeal of that provision of the Panama Canal act of August 24, 1912, which exempts vessels engaged in the coastwise trade of the United States from payment of tolls.

In my judgment, very fully considered and maturely formed, that exemption constitutes a mistaken economic policy from every point of view, and is, moreover, in plain contravention of the treaty with Great Britain concerning the canal concluded on November 18, 1901.

The Hay-Pauncefote treaty of 1901 says:

The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

Candidate Wilson in August, 1912, must have believed free tolls for American coastwise vessels were not in violation of that clause. The United States has paid out almost four hundred millions and will expend two hundred millions more, and such expense must in some way be equalized in order to have charges "just and equitable," as called for in the treaty.

WOULD VINDICATE AMERICAN DIPLOMACY.

I desire to quote from a newspaper report of the speech of Hon. FRANK E. DOREMUS, of Michigan, author of the repeal bill in the Sixty-second Congress, and at present chairman of the Democratic national congressional committee.

Mr. DOREMUS said that the Carnegie Peace Endowment, with a $500,000 income from Steel Trust bonds, "was most active in rescuing the national honor by promoting the repeal of the law that Great Britain had admitted we had a treaty right to enact.

"There are no doubt some estimable gentlemen connected with the Carnegie Peace Endowment," said Mr. DOREMUS, "but as an institution it does not justify its right to exist by antagonizing our own Government in an international controversy."

Mr. DOREMUS devoted considerable attention to the transcontinental railroads and the necessity of competing with them by water transportation through the canal. If tolls are paid at the canal, he argued, they will be but added to the freight rate paid by the American people. He disagreed that free tolls meant "subsidy."

"Our merchant marine in the foreign trade is very weak, and, if we accept the British interpretation of the Hay-Pauncefote treaty, it always will be," said Mr. DOREMUS, in conclusion. "While Great Britain will not hesitate, if occasion requires, to subsidize her ships using the canal by direct appropriations, our national prejudice against subsidies will prevent us from adopting that policy. If we can not grant free transit to our ships through the canal, its benefits will accrue to England and not to ourselves.

"I do not believe that by the treaty we bartered away to Great Britain the constitutional power of Congress over interstate commerce through the canal. If the American people had suspected that the treaty gave Great Britain equal rights with us in the Panama Canal, not a shovelful of dirt would have been turned on the Isthmus. I stand for a construction of the treaty that vindicates American diplomacy and safeguards our sovereign rights."

"CHANGING AMERICA."

LONDON, *March 30.*

Speaking on "Changing America" before a distinguished audience last night, S. K. Ratcliffe, an eminent English sociologist, warmly eulogized President Wilson, whom he characterized as a cultivated gentleman thoroughly steeped in English law, history, and politics, and "who at heart is an English whig."

On the immigration question, he declared "America is not a melting pot, but a pot of varnish. The one unmistakable product of immigration is a vast new proletariat living under conditions which repeat and intensify the industrial serfdom of Europe."

Rural Post Roads.

SPEECH

OF

HON. TIMOTHY T. ANSBERRY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 7, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 11686) to provide that the United States shall, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. ANSBERRY. Mr. Chairman, the evolution of this great country of ours from feeble colonies in revolution against the mother country has been the marvel of the age. In the short space of 138 years we have traveled farther in most directions than all the nations of which history has preserved the record. It is true we have sat as humble learners at the feet of the civilization of Europe and we have imbibed much of value by reason thereof, but we have paid our tuition with interest in the new application of old ideas, so that all the countries of the world have been the gainers by the intercourse.

Our rapid growth, the pressing need of the absolute necessities for our individual and national wants kept us for most of our career very busy in providing these necessities, and indeed this is not to be wondered at, for it is but the repetition of the history of every new country, with the exception as first stated by me, that none have gotten out of their swaddling clothes in such a short period of time. It would seem that the subject under debate might be properly classified as a necessity, for good roads are necessary for that intercourse and communication between communities and individuals that makes for true progress, but our necessities of a more pressing character prevented us from making provision as a Nation until this day for national participation in road construction. There are those who maintained that it was not the province of the Federal Government to concern itself with the construction of good roads, and while they did not seriously maintain that the Federal Congress had not the right to provide for road construction by Federal legislation, still they argued that by reason of the fact that the railroads did most of the transporting of the mails that provision of the Constitution which authorized the Federal Government to provide for post roads had in effect been carried out and was being carried out by the construction and operation of railroads. This seemed to be a reasonable construction to place upon that section of the Constitution, but in view of the fact that we now have thousands of miles of State and county roads over which the mails are being transported, it would look as though we were coming back to a place where we could utilize that provision as it was intended to be utilized by the framers of the Constitution. It is said that we have over a million miles of Rural Delivery Service in this country, and more than 156,000 miles of star routes that would be affected by one of the sections of this bill, under the provisions of which the post roads of the United States are divided into three classes, and the amount of money that can be expended on these roads depends upon the state of their improvement. So that in a measure the States which heretofore have improved their roads will be granted a reward in getting the larger share of this $25,000,000 which this bill carries.

It is said that France, Germany, and other countries of Europe have the best roadways in the world, and anyone who has been over them or who has traveled much in France or in Germany will subscribe to this proposition. I have been over many of the roads in both France and Germany, and in traveling more than 2,500 miles by automobile I did not find a single stretch of roadway in either country that could be called bad. Of course, the difficulties which we have relative to good roads are not met with in France, because of our dual form of government; but Germany is a federation of States, with both imperial and local governments, so that this is not an insurmountable obstacle to the construction of good roads. In passing I want to suggest a thought that occurs to me as I recall the beautiful roads in Europe. It is the practice—at least in France—to plant shade trees on both sides of the road, so that in the heat of summer the wayfarer is protected from the rays of the sun, and these trees, when from age or because of storms have become uprooted, are carefully husbanded for their timber. We do not feel the pressing need of being economical with our wood timber in this country as yet, and I trust that we will be foresighted enough so that the need will never be pressing, and many thousand feet of wood timber can be utilized from the waste that would result from the timber which would grow along our roadsides if we were to borrow the French idea, to say nothing of the comfort that travelers would derive in journeying under the protection of their shade. Some one with a mind for mathematics has figured out that the cost of transporting a ton per mile over the roads of France and Germany from the farm to the market is about 12 cents per ton per mile; whereas in the United States, where on the average our roads are not highly improved, it costs the farmer to haul his products from the farm to the market about 28 cents per ton per mile.

Of course, statistics can be quoted to prove anything, but there can be no dispute but that the cost of transportation over the roads of France and Germany is considerably less than the cost for the same service in America; and when you come to consider that, at some stage or other, everything we eat and everything we wear is transported by wagon or some other vehicle over the roads between the farm and the market or the farm or the factory, it needs no philosopher to discover that good roads would greatly decrease the cost of living, and in doing so would not decrease the profit of the farmer or anyone else who stands between him and the ultimate consumer. This difference in cost now is but a dead loss, which benefits no one. However, there is no need to marshal facts to prove to anyone the economic value to the whole people of good roads. Everyone concedes this proposition, and, in view of the fact that they are constructed and paid for by the public, it seems that it is only a question of bookkeeping whether the Federal or the State Government should pay the cost of construction. But this bill provides that the roads already constructed by the State and other political subdivisions thereof shall participate in the distribution of the $25,000,000 provided for in this bill in proportion as their roads have been improved and as they are used by the National Government in the distribution of the mails. This may not be an ideal way to distribute this money. However, the bill has another section, under the provision of which State and National cooperation for the improvement and building of good roads can be effected. And this seems to be the desired end; that is, that both National and State governments shall participate in this good work. The Democratic Party has been in control of the Federal Government and responsible for legislation for a little more than 11 months, and during that time it has placed upon the statute books constructive legislation which should guarantee their possession of the Government for many years. The most notable legislation of this character, of course, is the tariff and currency legislation. The Alaskan railway bill should be included in this category, to say nothing of the half million dollars appropriated for the prevention and cure of hog cholera.

In addition to this legislation to which I have referred much other beneficial legislation has been enacted. And there can be no question but that this bill, whose aim is to produce cooperation between the State and Federal Governments in the construction of better roads for this great country of ours, to the end that we can transport ourselves and our products with the maximum of comfort and time at the minimum of cost, is entitled and will rank high as constructive legislation when the story of the achievements of the Democratic Party during this administration is being written. It will not do for gentlemen to say that this legislation is class legislation because it is wholly in the interest of the farmer, when every thoughtful person knows that the farmer is by no means the only beneficiary of this legislation. I have pointed out before that to the cost of everything we eat and everything we wear is added the cost of transportation from the place where it is raised to the place it is loaded aboard the cars or delivered to the market. It follows, of course, if we can materially decrease the cost of this transportation we will materially decrease the cost of these necessities to all who must purchase them, and that means, of course, practically to all of our people.

Because of these reasons I shall cast my vote for this bill, and in doing so I do not feel that I would be doing my full duty to the good people whom I have the honor to represent if I did not rise in my place and give expression to my views with reference to this bill. As I said before, I do not claim, neither do I think the men who framed this legislation think, that this is ideal or that it could not be improved upon; it is a departure, and from time to time this and succeeding Congresses can correct or add to this legislation. The point is that we have inaugurated a policy which commits the Federal Government to the expenditure of a part of its income on internal improvements beneficial to the whole people.

Spanish-American War Widows.

REMARKS
OF
HON. JOHN A. M. ADAIR,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, April 1, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 13044) to pension widows and minor children of any officer or enlisted man who served in the War with Spain or the Philippine insurrection.

Mr. ADAIR. Mr. Speaker, I have always favored a generous and liberal pension policy toward those who fight the battles of our country. On the floor of this House two years ago I had charge of the most liberal pension bill affecting the soldiers of the Civil War that was ever enacted into law in our Nation's history, and now I come to you asking that this bill granting pensions to the widows and minor children of soldiers of the Spanish-American War be placed upon our statute books in justice to the men who fought not for the protection of their homes, not for conquest, but for the cause of humanity the world over.

The bill under consideration provides a pension of $12 per month for a widow of a Spanish-American War soldier who served 90 days and was honorably discharged, provided such widow is without means of support other than her daily labor and without an actual net income not exceeding $250 per year. It also provides a pension of $2 per month for each minor child while under 16 years of age.

Mr. Speaker, our Government has been good and generous to the soldiers of the Civil War and their widows, now let us do our duty to those who fought the battles of the War with Spain. While the soldiers of the Civil War endured great hardships and suffered from all kinds of exposure, the soldiers of the Spanish-American War not only risked their lives in defense of their country, but were exposed in an extraordinary degree to suffering and death in fever-stricken swamps and foul miasmatic jungles of the Tropics. While not a great many were killed or wounded in battle, practically all returned with their constitutions undermined by diseases peculiar to the climates in which they served and will go through life physical wrecks. Although handicapped by broken health these brave boys will care for their wives and children while living, but when they are gone, it is the duty of the Government they served to care for their widows and children.

Mr. Speaker, we are a rich and powerful Nation. We can well afford to provide a liberal policy toward those who sacrifice home, health, and everything for our Nation's good. I am more than glad to vote liberal pensions for those who served in the Spanish-American War and just as glad to extend such benefits to the widows and children of such soldiers. It was the first time our soldiers ever served in the Tropics under climatic conditions unusual to them. They were paid no bounty or substitute money and were not drafted for service. To not provide pensions for the widows and children of these men would be an unjust discrimination and a disgrace to our Government.

Mr. Speaker, I am in hearty sympathy with the purposes and provisions of this bill. The men who served in the War with Spain are entitled to this consideration. Let us pass it without a dissenting vote and show the world that the American Nation is made up of a grateful people. Let us do this in behalf of as brave and patriotic a soldiery as ever lined up on the field of battle.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. HORATIO C. CLAYPOOL,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. CLAYPOOL. Mr. Speaker, it is indeed true that men equally honest and possessing practically the same facts often, by different processes of reasoning, arrive at very different conclusions. But when, in addition to the different processes of reasoning just mentioned, we add different motives we make it practically impossible to arrive at an agreement.

Those who favor charging all who use the canal a reasonable toll defend their position, first, because we solemnly agreed in the Hay-Pauncefote treaty to do so, and second, because even aside from said agreement they believe as an economic proposition the American people, having invested in the canal $400,000,000 and will be called upon annually for $25,000,000 more for its maintenance, there is no plausible reason for permitting vessels the free use of it whether they belong to a Shipping Trust or a foreign nation.

All the talk about America "truckling" to England is simply "jingoism" run to seed, and is the assumed argument of those who can define no legitimate reason for robbing the American people for the benefit of special privilege and who desire to arouse national prejudices and thus conceal their true motives and gain a political advantage. Listening to the speeches of those jingoists one would suppose England had actually threatened to fire on American ships or fortifications, and that for the sake of peace President Wilson had hauled down the American flag.

But what are the facts? Instead of even suggesting war England has in the most friendly manner called attention to the written agreement between the two nations known as the Hay-Pauncefote treaty. They call attention to the provision of that written agreement wherein we join in saying the canal shall be open to the vessels of commerce and war of all nations observing certain rules on terms of entire equality. They go one step further and say if the words "terms of entire equality" need be construed, let us submit our cause to The Hague and let that decision be final. Why do we not submit our cause to an unbiased and disinterested court do you ask? Simply because the written words of our agreement with England, "terms of entire equality," admit of but one construction, and we find it more honorable to recede from our former position than to be ignominiously defeated in the court of nations.

Let any fair-minded American read clause 1 of article 3 of said written agreement between the United States and England and see what a reasonable construction of the language is. That clause is as follows:

> That the canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or its subjects, in respect of the conditions and charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

Can we misinterpret the language used in our written agreement with England? Could the "terms of entire equality" be more concise? Dare we contend that to permit coastwise American vessels go free while charging all others toll is complying with the above agreement? Those who contend for the exemption dare not face these facts, and as a subterfuge shout in thunder tones, "We are taking down our flag to England." Dare they face any American audience with such a pretense of argument? When the advocates of free tolls declare the canal is ours and we have a right to do what we please with it they overlook the fact that the canal was not built on American soil but on foreign land acquired for the express purpose of building a canal thereon and accepted with certain express restrictions. For illustration, when we acquired said property rights we agreed with Panama as follows: The canal, when constructed, shall be open upon terms provided in the Hay-Pauncefote treaty. Again agreeing in express terms that its use by all nations shall be upon terms of entire equality.

I wish to call your attention to one further fact which seems to be overlooked in the heat of argument. The ground upon

which the canal is built, as well as the canal itself, has been paid for by the American people. But are these vessels, for which some are now asking the free use of the canal, the property of the American people? Not by any means. They are the property of speculators who do business for profit and charge for freight all that competition will justify.

But there is one other feature to which I must call your attention. By the Hay-Pauncefote treaty, which is simply a written agreement between the United States and England, the American people, as a nation, were not obliged to take the money out of the Treasury with which to build the canal. They had several options. One was that our Government might permit corporations to construct the canal. Suppose we had done so; would anyone contend that those corporations had a right to grant free use to some corporations and charge toll to others, thus plainly discriminating against some vessels while favoring others, in violation of the express terms of the agreement above quoted? And if these corporations had thus discriminated and the offended nation had complained, would those same jingoists have still shouted, "We are truckling to England"? But suppose it were Holland that complained; you would not have heard one word from those same advocates of free toll. Not at all. But as a political proposition it looks good to raise a shout against England, just as schoolboys do after reading an account of Lexington and Bunker Hill, except for a very different purpose. In this matter they are hoping to divert the attention of the American people from the Shipping Trust while they favor them with free tolls and gain a political advantage on the other hand by arousing American hatred against England, and thus obtain votes.

And, again, it is contended that the American marine needs the encouragement of free tolls. Let me call your attention to the further fact that none are permitted to engage in coastwise trade but our American ships, thus giving them an absolute monopoly of the very trade in question. Then shall we give them a further advantage of free tolls which amounts, in fact, to a ship subsidy? And when, I ask you, did the Democratic Party ever indorse ship subsidies?

But there is another phase of this question which lies close to the American people. Through their agents they have invested $400,000,000 in the Panama Canal. They anticipate being called on annually for an additional amount to maintain and operate it. It is estimated that these vessels now asking exemption, if required to pay toll will be called on annually for about three millions, for the canal must be maintained and operated. Now, this three millions must be collected either from the vessels engaged in coastwise trade or from the American people. Now, let me put the question squarely to you: Who should pay this three millions now being considered—the Shipping Trust, who use the canal and collect the profits of their enormous business, and who by use of the canal are saved thousands of miles by avoiding the Cape Horn route, or the American people, who have already made an enormous investment, and who will be called on to pay the freight bills, and whose savings derived from the canal will be so small as never to be perceptible? Answer that question for yourselves and you will forget the cheap declarations of war against England made by some wordy politician who quietly visits a battle field long after the war is over and reads the names of the fallen heroes inscribed on the monuments. If we were to propose to build a transcontinental railroad from New York to San Francisco, and after completing it at a cost to the American people of $400,000,000 say to some railroad magnates, "Place your rolling stock on our road and use it free of charge, and, in addition, we will keep the road in good repair," how many American people would indorse that proposition? But no doubt some "spellbinder" would insist that all this is necessary in order that an American company may successfully compete with a Canadian railroad which parallels our proposed road from the Atlantic to the Pacific. In all these propositions the fellow who works with his hands six days in the week and who is seldom thought of pays most of the freight. But in this Panama deal let us be fair to him and insist that the great steamship lines pay their small portion, at least, and not evade the real issue by indulging in an imaginary war with England, who has not even frowned, but quietly stood upon her rights, as recorded in our written obligation, of which there can be no dispute.

But, Mr. Speaker, it has for long years been extremely popular in legislative circles to raise a hue and cry against railroads. Those who assume the guardianship of the interests of the Coastwise Shipping Trust first resort to a mimic war with, and surrender to, England. But lest they fail in this subterfuge they couple with it a secondary war against railroads. They feel morally certain that if they fail in the war cry against England they will be at least able to draw public attention to their pretended war against railroads long enough to allow the Shipping Trust to steal from the people's pockets $3,000,000 annually for all time in the free use of the Panama Canal, which all the American citizenship has built and paid for.

Mr. Speaker, I represent the eleventh district of Ohio. We are situated 500 miles from the Atlantic seaboard and more than 2,000 miles from the Pacific. Our congressional district has practically one million of hard-earned money to-day invested in the Panama Canal, enough money which, if properly spent, would have given us one of the best public-road systems in the world. We are not complaining that you have taken this money away from us and invested it 2,000 miles to the south, but you must pardon our frowns when you threaten to turn over our investment to the free use of those engaged in a Shipping Trust who attempt to attract our attention by their cries of war on England and the railroads while they rob the American people.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. WILLIAM R. GREEN,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. GREEN of Iowa. Mr. Speaker, when the proposition to make the Panama Canal free of tolls was first submitted to this House I voted against it and I have heard nothing in this discussion which leads me to change the views which I then entertained. At that time the subject was not befogged by false issues, by appeals to prejudice and passion, and by considerations of political advantage. While free tolls were then adopted, no one heard or thought that if they had been refused that the sovereignty of the canal was involved, or our right to fortify it, and in case of war against our country to maintain belligerent rights therein could in any way be affected.

But I shall not stop now to consider why on this occasion new questions have been raised where no doubt before existed, and new difficulties found which the most discerning could not see before. I shall content myself with setting forth the real issues joined, which are so simple and plain that he who runs may read, if his attention is not distracted by scare heads in relation to matters as to which there never has been any question or which have long since been settled.

There are two, and only two, questions involved in this bill before the House to repeal the provision in exempting our coastwise vessels from canal tolls. These questions are:

First. Is this exemption economically wise and proper?

Second. Is the exemption permissible under our treaty with Great Britain?

As to the first proposition, I have yet to meet a person outside of the regions which it is thought would be benefited by this subsidy who claimed it was economically wise or defensible in practice. Does the distinguished gentleman from Illinois [Mr. MANN], who has so ably presented the arguments against the bill, claim that free tolls as an independent proposition is justifiable? No. Does our distinguished Speaker make any such claim? No. He says that the bill repudiates the Democratic platform, a matter which has no bearing on my vote. I might go through the list of the prominent advocates of free tolls and, save and excepting those from the coast States, not one has ever attempted to justify the proposition standing by itself. Their arguments are on other grounds, which I shall consider later. Nor is it strange. Our American vessels are given the sole privilege of carrying on the coastwise trade. The law forbids foreigners to engage in it. This law, in effect, makes this trade a highly subsidized monopoly; but those concerned in it have not been satisfied with the special privileges thereby granted them. The steamship lines concerned in it are not under the control of the Interstate Commerce Commission, and fix rates at their will. The testimony taken before the committees of this House shows without controversy that our coastwise trade is in the hands of a combination the members of which neither compete with each other nor with the railroads, but cheerfully, everywhere and upon all occasions, pile on all

the charges which the traffic will bear. I respectfully submit that it requires an amount of gall and nerve, found only in circles where this kind of business is thought legitimate, to ask that the people of Iowa be taxed to add to the swollen fortunes of the owners of this shipping. The most imaginative and flamboyant supporter of this subsidy can not conceive how Iowa would receive a grain of benefit from this exemption. If anything, it would have a tendency to raise our railroad rates. The railroads will, in any event, lose all the slow freight from coast to coast.

The great transcontinental lines that cross our State must make up for this loss in some direction. They have this traffic at present and it adds largely to their business and revenues, yet they are insisting that they ought to be permitted to raise their rates, and if the reports are correct the Interstate Commerce Commission seems inclined to agree with them. We knew all this when we provided for the building of the canal, but Iowa did not hesitate. Her Congressmen voted the $400,000,000 necessary to construct it, of which the share of my State is many millions. The canal will not begin to pay interest and expenses connected with it, even if all pay tolls. Iowa must help make up the shortage. Is not this enough? We have given the coast cities millions for their harbors and added millions for the rivers of the coast States, while we in Iowa have been getting nothing worth mentioning, and still they come for more.

In reality there is no reason to expect that the shipping monopoly will lower its rate one cent below a point necessary to take the heavy freight from the railroads, and it will be able to do this easily and pay tolls. The remission of tolls will benefit no one and simply enable the combination to secure an extra profit of $2,000,000 annually, which is the amount generally estimated as due from them if they paid the same rates as others. If it were proposed in this House to grant the owners of these lines an annual subsidy of $2,000,000, how many votes could it obtain? Very few, I imagine, and I do not believe that such a proposition would be supported by a solitary voter among my constituents; yet there is not the slightest difference in effect, either as to the shipowners or the United States Treasury, between the proposition to grant them a subsidy of $2,000,000 and the provision for the remission of canal tolls. I am not in favor of such a subsidy and can not cast my vote for it.

While the economical conditions that I have set forth are sufficient in themselves to cause me to support the present bill, I shall briefly refer to the provision of the treaty which applies to the subject under consideration. Article 3, section 1, of the treaty is as follows:

> The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

I have not the time to enter into a full discussion of this section in its legal phases and shall not undertake to present them. I can only say that the words "entire equality" have always seemed to me to admit of but one meaning, and my study of the question in all its bearings as a lawyer has only served to confirm my view that this language meant what it said. I shall, however, refer to one matter which, in my judgment, determines what construction we ought to put upon the treaty in order that it may be said that we make no demands upon other nations which we would not ourselves concede. We have had for many years a treaty with Great Britain relative to the canals and channels of the Great Lakes. In that treaty Great Britain granted to the United States the use of the Canadian canals on "terms of equality" just as the United States by this treaty granted to Great Britain the use of the Panama Canal, and in the same words. Great Britain and Canada at first contended that this provision did not apply to their coastwise trade, but we insisted that these words included all vessels no matter in what trade they were engaged, and after some years of contention we finally obtained the concession which we had demanded. The canals to which these words applied were built upon Canadian soil with Canadian money. In every way the circumstances were similar. Shall we now, after having made this demand and obtained by virtue of the construction which we ourselves put upon these words a most important concession—far more important than anything now involved—shall we now say that the language in the treaty means one thing when it is in our favor and the opposite when it is against us? Do any of us do business in this manner personally and can any nation survive that will thus conduct its foreign relations? What name would be applied to the private individual who conducted his business in this way and what name do we deserve if we so conduct our transactions with other nations?

It ought to be understood in this connection that the treaty rights which we have in the Canadian canals have been of immense value to the Middle West by reducing the rates on grain, and that with the completion of the Georgian Canal, connecting Lake Huron with Lake Ontario—a canal which will carry more traffic by far than will ever move over the Panama Canal—still greater benefits will be received. Inevitably, if we deny British vessels an equality in the Panama Canal, we must expect similar treatment on the Canadian canals, to the great loss of a section which has paid so much toward the construction of the Panama Canal without any possibility of receiving any benefit therefrom.

It has been asserted that the questions involved in this repeal are far-reaching and of highest importance. I agree, because I believe that nothing is of greater importance than national honor; but I am at a loss to understand how the right to grant a subsidy to the interest now most favored of all in this country can be for a moment weighed in the balance against our reputation for consistency, integrity, and fair dealing. What is this great privilege that we are to give up and this wonderful concession that we are to make, as some would have us believe? We are merely depriving ourselves, if you consider it a deprivation, of the privilege of making a donation of $2,000,000 to an odious monopoly, and for this privilege gentlemen say, bombastically, they are willing to go to war, if need be, with any nation. This is too much. There will be no war, as everyone knows. There is no occasion for hurling defiance at anybody. We are in no more danger of war with Great Britain over this matter than we are with the inhabitants of Mars, and everyone knows it. Great Britain has never intimated anything of that kind. There would not be the difference to England in a decade that a day's war would cost. It required some courage when we were a young and struggling Republic to defy the greatest power of Europe, but now that our riches and resources, in money and men, exceed that of any other nation, it is the part of a braggart and bully to talk about defying nations which merely peaceably protest against what they believe to be a violation of their rights

I know there are some who say that we are yielding up the sovereignty and control of the canal by this repeal. If these statements were not made by some gentlemen high in position and place, they would not receive a particle of attention. If there is anything that is settled internationally, it is that we have both in right and in fact the sovereignty and control of Panama. Nobody has ever questioned it, unless it be these gentlemen who are now making such suggestions. The only other party to our contract, Great Britain, has expressly admitted it, and we have settled the proposition forever by fortifying the canal and announcing that we would defend it, while not a voice in the wide world has been raised in protest, nor is our right to so do disputed. It might as well be said that we are in danger of losing New York Harbor because British vessels are granted certain privileges therein. It is true that our sovereignty over New York Harbor was conceded by England more than a century ago, and in this respect it has precedence of our control of the Canal Zone, but this is the only advantage. Let me ask these gentlemen who say that by conceding to England equal privileges as to canal tolls at Panama we will lose the sovereignty and control of the canal to say whether, when Canada conceded us the right of equal tolls in the "Soo," St. Lawrence, and Welland Canals—built, as I have said, on Canadian soil and with Canadian money—she thereby yielded to us the sovereignty and control of these canals? To this inquiry I invite the prayerful consideration of gentlemen who have been making these amazing declarations, for I do not expect an answer.

It is said that if we put upon the treaty a construction forbidding free tolls that we must also concede that the other provisions of the treaty would prevent our Navy, in case of war with any other power, from using the canal for belligerent purposes; but such a claim ignores a fundamental of international law that treaties are abrogated in case of war. It would be as reasonable to say that because we have a treaty with England admitting British ships to our ports under certain conditions, that in case of war with that power we were still bound to admit them. The rule of international law is settled beyond controversy as to this point. It is that in case of war treaties are abrogated between the powers at war, and of necessity this rule would apply to any nation claiming a right under a treaty whether or not it was a contracting party. On this question there never can be any dispute among lawyers. And here again the only party with whom we have any contract has conceded and fully admitted our belligerent rights in the canal in case of war with any other power; and like the claim of loss of sovereignty, the suggestion that we might lose our belligerent rights

in the canal in case of war comes singularly enough from gentlemen of this House. No foreigner of any standing has ever asserted it.

I voted against the rule which cut off debate upon the bill and forbade any amendments to be offered, because I believe that a full and free discussion ought to be permitted and that amendments should be allowed.

As the matter stands, the only change that can be made is through a motion to recommit, and only one motion of that kind is permitted. I am informed that such a motion will be made, but I have been unable to learn what form it will take. I will gladly vote to add to the bill a declaration that our present action is not to be taken as a construction of the treaty, and that any difference as to tolls upon the coastwise trade should be submitted to arbitration, because I admit that there is room for argument as to how the treaty should be construed, although satisfied that it is a mistaken policy to grant this subsidy. I will not, however, vote to make a declaration that we have the sovereignty and control of the canal. The publication of such a statement would be to admit that there had been some question or dispute as to our rights in this respect. I do not admit this, but deny it. That we have the complete sovereignty and control over the canal, subject only to our treaty obligations, I am certain, and no one has ever disputed our right thereto. If our sovereignty and control is to be questioned, it will remain for the gentlemen who introduced such a motion containing this declaration to question it for the first time. I am aware that a partisan advantage might be derived by supporting such a proposition, but I will not subordinate my principles to party profit, or endanger the honor and sovereignty of my country by making an assertion of a power in a manner which makes it seem that there are some who doubted or disputed it.

The matter before us is one upon which it is easy to excite passion and stir up feeling by appeals to old prejudices. My vote may not be a popular one, but it involves the duties and principles of myself as a Congressman and of our people as a nation, and upon such a question I can not hesitate or falter.

Panama Canal Tolls.

EXTENSION OF REMARKS

OF

HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 30, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

THE QUESTION IN A NUTSHELL.

Mr. GARDNER. Mr. Speaker, two years ago we passed a law which provided that all foreign vessels and all American vessels engaged in the foreign trade must pay certain traffic charges called "tolls" when they journey through the Panama Canal. That law exempted American steamships in the coastwise trade from paying any tolls. In other words, we arranged it so that foreign steamships and ocean-going American steamships and the American taxpayer must pay the entire cost of maintaining and operating a canal, while our great, prosperous coastwise steamship lines get off scot free.

Now comes President Wilson and says that the arrangement was a foolish one anyway. What is far more important, he declares that we never had a right to pass any such law, because it violates an agreement which we made with Great Britain. The agreement which we made with Great Britain before we began to dig the canal was called the Hay-Pauncefote treaty. This is the contract which we made:

Article 3, rule 1. The canal shall be free and open to the vessels of commerce and war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic or otherwise.

It is hair splitting to say that the expression "all nations" in rule 1 does not include the United States. We made a bargain. We ought to live up to it. That is all there is to the business.

WHY NOT EXEMPT THE STEAMSHIP LINES FROM TAXATION?

When all is said and done our coastwise shipping is highly protected anyway. No foreign vessel is permitted by law to enter our coastwise trade. It is a thriving business. It does not need any more special favors and exemptions. I should just as quickly vote to relieve our coastwise steamships from their taxes as from their tolls. Why should not those great coastwise steamship companies pay their share toward the cost of maintaining and operating the Panama Canal, I should like to know?

What ails us? Are we afraid that some one will think us bought up by the railroads or toadying to England, or some rubbish of that sort?

IN THE NAME OF THE CONSUMER.

To be sure, it will cost the steamship companies 60 cents less to carry a ton of flour from San Francisco to New York if we are kind enough to operate the canal at the people's expense, without charging tolls to our coastwise trade. How much of that saving of 60 cents per ton do you suppose that the consumer will get after the steamship companies and all the middlemen have taken their shares?

Panama Canal Tolls.

EXTENSION OF REMARKS

OF

HON. LADISLAS LAZARO,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. LAZARO. Mr. Speaker, we all realize that the Panama Canal tolls question now before this Congress is one of great importance to the American people. Whether the exemption clause of the Panama Canal act violates the Hay-Pauncefote treaty or not, I shall not attempt to say that I know. I do know, however, that some of the greatest constitutional lawyers of this country are divided on the question.

The President of the United States told us in his message a few days ago that he had not come before us to inject his personal views, but had come as the representative of our people, to say to us that all the other nations of the world were unanimous in their interpretation of the treaty, and that is that the free-tolls clause is a violation of our treaty, and that the United States could not afford to ignore a world protest against what the world regards as a breach of our obligation; and he appealed to us to uphold his hands, so that in the future he would be in a position to go forward in his dealings with the nations of the world for the welfare and prosperity of our people.

Mr. Richard Olney, former Democratic Secretary of State, in a letter to Hon. ANDREW J. PETERS, Representative from Massachusetts, says:

I have your favor of the 25th instant, asking my views as to how a Representative in Congress should vote on the bill to repeal the free-tolls provision of the Panama Canal act.

If I were in your position, I am very certain I should feel that I ought to stand by the President.

The situation is peculiar. Here is a treaty unquestionably obscure and susceptible of two opposite interpretations, as conclusively shown by the conflicting views of two Presidents of the United States and by the irreconcilable differences of opinion among eminent lawyers, without regard to their political affiliations. Recognizing this situation, and though he might have proposed arbitration, the President, in effect, declares that the merits of the issue are immaterial, and that the repeal of the act which raises the issue is absolutely essential to our good standing with the great powers of the world and to the proper conduct of our foreign relations. He makes this declaration as President and as that branch of the National Government especially charged with our foreign relations, and takes the responsibility of assuring Congress and the country that, as compared with the results to be gained by repeal, all other matters involved are of slight account. Now, this declaration of the President must be accepted as made in good faith, with absolute sincerity, and with an intimate knowledge of foreign relations that Congress can not pretend to know. What else, therefore, is there to do but follow the President's lead upon a matter upon which he is entitled to lead, both by reason of superior acquaintance with the subject and because our frame of government requires him to lead? It must be borne in mind that for Congress not to support such an urgent appeal as the President has made in this instance is not merely to defeat a measure which may be, and which he deems to be, required both by the honor and the well-being of the Nation. It is to discredit him for the future, it is to weaken and prejudice him in his subsequent intercourse with foreign nations, it is to give them notice that he is rather a figurehead than a real factor in the National Government, and that dealings with him are hardly to be regarded as very serious affairs.

Other pertinent considerations leading to the same result might be mentioned, but in the precise situation now confronting Congress they may, I think, be safely passed over, because those already given ought to be regarded as decisive.

This is the first reason given why we should vote with the President; and I believe, with Mr. Olney, that weighty consideration should be given to the President's lead in this matter.

It is said by some that, in following the President, we violate the plank in the Democratic platform which declares for free tolls to American ships engaged in coastwise traffic. In reply to this, an overwhelming majority of the Democrats quote another plank of the same platform, which reads as follows:

We believe in fostering, by constitutional regulation of commerce, the growth of a merchant marine which shall develop and strengthen the commercial ties which bind us to our sister Republics of the south; but without imposing additional burdens upon the people, and without bounties or subsidies from the Public Treasury.

These two clauses—one opposing ship subsidy in clear terms, and the other favoring ship subsidy disguised and concealed in the cloak of free tolls—are inconsistent declarations. Both can not be given effect; one must stand and the other must fall.

And this brings us to the economic side of the question. While this is not a direct subsidy, nobody will deny that it is an indirect subsidy, pure and simple. It makes no difference whether payments are made from the Treasury of the people, or payments which are due the Treasury of the people are not collected; the result is the same upon the Treasury, the same upon the private interests to be benefited, and the same upon the taxpayers of the country; in principle and in fact they are the same. In other words, free tolls is a ship subsidy in disguise, and disguised in a way to secure the indorsement of what had always been condemned by our Democratic Party.

In considering this question let us not forget the fact that these so-called American ships do not belong to the American people, but that they belong to a few shipowners who constitute one of the most gigantic monopolies in the United States. Let me call your attention to the report made recently by Judge ALEXANDER, chairman of the Committee on Merchant Marine, of which I am a member, which shows that 94 per cent of all the Atlantic and Gulf coastwise shipping is owned directly by railroads or shipping combinations, and that this combination has eliminated all competition and controls our coastwise shipping absolutely. Some claim that if we let this monopoly pass their ships free of charge through the Panama Canal it will enable them to lower the transportation rates, and thereby bring competition against the transcontinental railroads, and in that way be of benefit to the people. But the only way to judge the future is by the past, and judging from the past, as shown by the recent investigation of the Shipping Trust, it is absurd to believe that this shipping monopoly would lower their freight rates as a result of free tolls, when we know that they work hand in hand with the railroads for their own selfish gains.

We spent $400,000,000 in the construction of the canal, and the interest on this debt will amount to ten millions every year. This interest charge will be added to an expenditure of ten millions more to maintain an army on the Isthmus, four millions for the operation of the canal, one million to maintain it, and $250,000 rent to the Government of Panama; and it is nothing but fair that all ships passing through the canal should pay tolls so as to make it self-supporting, and in that way reimburse the American people in a measure instead of being a continued additional burden on them for the benefit of the Shipping Trust. I see no reason why this monopoly operating coastwise ships should be given privileges that no other American can enjoy. It violates the old Democratic doctrine of "equal rights to all and special privileges to none."

When the Hay-Pauncefote treaty was before Congress for ratification, an amendment in the Senate exempting American coastwise vessels from tolls was defeated by a sweeping vote. Subsequently, under the Taft administration, the bill for the remission of tolls to such ships was passed. But when this Panama Canal act exempting these ships from the payment of tolls was passed in the Sixty-second Congress, a majority of the House Democrats voted against it. I propose to vote with the majority of Democrats in this House now to repeal it.

Panama Canal Tolls and the World's Peace.

EXTENSION OF REMARKS
OF
HON. CLEMENT BRUMBAUGH,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914.

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. BRUMBAUGH. Mr. Speaker, the Panama Canal tolls proposition, now under discussion before this House, furnishes the most difficult question with which this Congress has had to deal. I have had more difficulty in arriving at a conclusion as to how I should register my vote on this proposition than on any other question and, I might add, on all other questions combined that have come before the entire Sixty-third Congress.

MY FIRST IMPULSE.

My first impulse was to register my vote against the proposition. I suppose my German-Swiss-Irish combination naturally gave me this impulse; and I may add that if, after careful consideration of this entire subject and after hearing all that has been said both for and against this proposition, I thought for one moment that the United States was yielding to a demand of any foreign nation or yielding any of our national sovereignty over the canal, I would not hesitate to vote against this proposition, regardless of our President's request notwithstanding, much as I respect his judgment and believe in his patriotism and much as I naturally should hate to take such a course. Furthermore, no one who knows of my effort in the past in the Ohio Legislature in behalf of the Boer Republic or my position in regard to home rule for Ireland will accuse me of truckling to British demands.

MUCH MISLEADING JINGO TALK.

Mr. Speaker, there has been much misleading jingo talk in this debate. Every candid man in the United States will realize that the most of it has been put forth for political effect. It is singular, indeed, that the most rancorous jingo talk and savage criticism of the President has come from our Republican friends, who two years ago voted the other way and now reverse themselves and hold the President up to ridicule and even question the sincerity of his motives.

THE FACTS OF THE SITUATION.

The true facts of the situation, Mr. Speaker, are easily and readily discernible, however much some of us may be inclined to regret them; nevertheless they exist, and we, having become one of the parties to a treaty contract, can no more honorably disregard our contract and obligations, which we thereby agreed to, than any honorable, honest man could disregard his contract, which he had entered into and agreed to. An individual may afterwards regret the terms of a contract, but when his fist is to it and his name has been signed to it his honor compels him to stand by it. This Nation made a treaty contract. We put our fist to it, we signed it, and our honor binds us to it. That is all there is to the situation, regret it however much we may.

Furthermore, we asked for the treaty contract; we even suggested the nature of the treaty contract; we were anxious to have it to enable us to obtain the opportunity to begin the construction of the canal. We may regret the contract, but I do not see how we can in honor repudiate it.

I can not in the short time allotted me discuss all the treaties leading up to the Hay-Pauncefote treaty, but the whole thing is boiled down and told in two short paragraphs, which recently appeared in one of the great Ohio daily newspapers—the Ohio State Journal—and I here incorporate the editorial in said paper, with the brief comments relating thereto from one of Ohio's greatest newspaper editorial writers, who is not only a student of history, but a veteran of the Civil War, and happens to be a Republican in politics. The editorial is as follows:

THE FACTS ABOUT TOLLS.

The section of the Hay-Pauncefote treaty that has caused all the toll turmoil is as follows:

"The canal shall be open to the vessels of commerce and war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic."

Several years after this treaty was signed by the United States and Great Britain, the United States Congress, in 1912, enacted a law discriminating against other nations by exempting our vessels operating in the coastwise trade from the payment of tolls. All other nations regarded it as a violation of the treaty. England wanted to refer it to The Hague, but that we would not consent to. Then President Wilson went before Congress and asked the repeal of the law. Here is what the President said:

"I have come to state to you a fact and a situation. Whatever may be our own differences of opinion concerning this much-debated measure, its meaning is not debated outside the United States. Everywhere else the language of the treaty is given but one interpretation, and that interpretation precludes the exemption I am asking you to repeal. We consented to the treaty; its language we accepted, if we did not originate it; and we are too big, too powerful, too self-respecting a Nation to interpret with too strained or refrained a reading of words of our promises just because we have power enough to give us leave to read them as we please."

These two quotations, the treaty and the message, give to the candid reader all that he needs to know to form a correct opinion of the matter. The President's statement is an insurmountable argument in behalf of repeal.

MY ATTITUDE AND MY VOTE.

Mr. Speaker, although, as above indicated, I am casting my vote against my somewhat natural inclination in the matter, still, when I view this question from our treaty obligations, which we entered into, and also from the standpoint of the larger good to be obtained, it is plain to me that I should vote

to sustain the President and to grant his request, which he so earnestly implored this Congress to grant him.

OBLIGATION TO PARTY.

If I view this question from a strictly party obligation, my duty remains the same. I was elected to this Congress as a Democrat, to support the policies of a Democratic President, and it has been a pleasure to me to follow and support our great President in all of his wise, constructive, and progressive policies of the past. With all of these policies I have been in entire accord and have given them willing support. To be in a position to do this, I have been here constantly since Inauguration Day, March 4, 1913. I have believed in the past that the footsteps of our great President and our great Secretary of State will lead us in the right direction, and I sincerely trust that it may prove true in this case. [Applause.]

SUBSIDY AND PLATFORM.

There are many arguments on both sides of this proposition. In passing I want to very briefly refer to but two. First, expense of upkeep of the canal and ship subsidy. Second, the plank in the Democratic platform.

It cost practically $400,000,000 to dig the canal. It will cost $25,000,000 yearly to pay the interest on the bonds and to take care of the canal. The cost of building the canal and the $25,000,000 every year expense on the canal must be met in some form of taxation. If we charge no tolls, then the people in all parts of the United States, who never use the canal and will never be directly benefited by the canal, must pay the cost and yearly expense for those who use the canal and will make great profit out of the canal. Is this fair? If it is, then they should pay no tolls. If it is not fair, then those who use the canal should pay some toll for the upkeep of the canal.

THE COASTWISE SHIPPING TRUST.

Again, the coastwise ships have for many years been one of the most powerful trusts and monopolies in the world. The ships that operate only along the coast and do not cross the seas are termed coastwise ships. The coastwise shipowners, by uniting, own and control the docks, ports, harbors, and wharves on the Atlantic and Pacific coasts, and have been able to form and operate one of the most oppressive and exclusive monopolies in the United States. They have swept out of existence and kept out of existence all rivals and competitors. Even when lumber was plentiful in the United States they so controlled the shipping rates that they made lumber high to the home builders all over the United States, and they have kept coal and fuel high in the same way. By sworn testimony it is stated that their income is more than 18 per cent on their stock, and it is claimed that it is watered stock, at that. These coastwise vessels, therefore, forming this Shipping Trust and monopoly, now earning possibly 20 per cent and more, desire to be exempt from paying tolls to pass through this canal built by taxing all the people $400,000,000 to build it, and which must be kept up by taxing all the people $25,000,000 a year—this Shipping Trust wants to use the canal free of tolls. Is it right; is it fair; is it just to the people of the inland States? The toll proposed to be charged is only $1.20 displacement ton, or for each 100 feet cubic capacity. Every time a ship goes through this canal, counting the average ship capacity at $1.20 per ton displacement capacity, the ship would pay into the Treasury to help meet the $25,000,000 expense on the canal from $5,000 to $10,000 in tolls. If these tolls are remitted and the ship goes through toll free, then this gift or subsidy to the Shipping Trust must be met by taxation on all the people of the United States. Is this fair; is it just?

CANAL EXPENSE FOR EACH CONGRESSIONAL DISTRICT.

Take a simple illustration of the great expense of the Panama Canal. Divide the expense to dig the canal and also divide the $25,000,000 expense per year to maintain the canal by the number of congressional districts in the United States, and each congressional district in the United States has invested about $1,000,000 in the construction of the canal and will spend about $60,000 per year each year in the future to maintain the canal.

In other words, Franklin County, or the twelfth congressional district, has about $1,000,000 invested in the construction of the canal and will be called on each year to furnish about $60,000 to support and maintain the canal. Should the citizens of Franklin County pay all this and let the ships belonging to the coastwise Shipping Trust use the canal free of toll and pay nothing toward the yearly expense for operating and maintaining the canal?

I do not think there is a single citizen in my district who is in any way connected with the shipping interests that will use this canal. Should I vote to tax him $10,000 every time a ship goes through this canal and take the money out of his pocket by taxing him and give it to a ship subsidy and monopoly that is now making over 20 per cent on its more or less watered stock? I do not believe I would be voting in the interest of my constituency to do this.

THAT PLANK IN THE DEMOCRATIC PLATFORM.

Just a brief notice concerning the charge that we are repudiating a plank in the Democratic national platform.

Mr. Speaker, this plank that we are charged with repudiating needs a word of explanation. First, How did it get in the Democratic platform?—because it is stray timber and in strange company. Moreover, it is in violation of all the planks in our Democratic platforms for a hundred years. This plank, declaring for exemption of tolls for coastwise vessels, was inserted after a 10 days' nerve-racking, mind-exhausting national convention, and it violated another plank in that same Democratic platform which pledges us against all forms of taking money out of the pockets of the people by taxation for any sort of subsidizing. It is strange that Democrats do not look to this old, seasoned Democratic plank that has been in all our platforms of the past that forbids subsidizing, rather than to look to this new, strange plank of spurious, worm-eaten, subsidizing foreign timber. A careful reading of the platform is earnestly commended by anyone having any doubt as to this matter and by all who talk about the repudiation of the Democratic platform.

When we vote against this ship subsidy and its free tolls for coastwise vessels we are keeping the faith of the fathers and voting in line with all the Democratic platforms from Thomas Jefferson down to the present time, although in so doing we may be removing this new spurious plank in a Democratic platform which crept in without due consideration in the turmoil accompanying the close of the exhaustive 10 days' national convention at Baltimore.

The Baltimore national platform of 1912, as stated above, contains two planks on the same subject, and they flatly contradict each other. The first plank, declaring against subsidy for any purpose, is genuine, Democratic doctrine and is in line with all past Democratic planks in Democratic platforms of the past on this subject. The second plank is spurious and was stealthily inserted, declaring for subsidy for the coastwise shipping monopoly, being in direct conflict with the Democratic plank in the same platform preceding it and violating the doctrines of the Democratic Party from the beginning of its history. No man in Congress or out of Congress can vote on this subject without repudiating one or the other of these two planks. I have been talking and voting against trusts and monopolies for years, and I propose to vote that way now. I propose to vote against this spurious, stealthily inserted, undemocratic, subsidizing plank, and to vote in accordance with the old Democratic plank in the same Democratic platform that rings true to all the Democratic platforms of the past on this subject—that keeps the faith of the fathers and that contains one of the cardinal principles upon which Democracy is founded, as expressed by Jefferson, the founder of the party, "Equal rights for all and special privileges to none." [Applause.]

MISLEADING TALK ABOUT SURRENDERING THE UNITED STATES SOVEREIGNTY OVER THE CANAL AND YIELDING TO GREAT BRITAIN.

Mr. Speaker, there has been much misleading talk about surrender of United States sovereignty over this canal and about yielding to the demands of Great Britain. Those who are loudly talking about this should remember that there was nothing surrendered in our recent vote the other day that was not surrendered years ago by our solemn treaty agreement contract in the Hay-Pauncefote treaty and ratified by our Republican friends. All that took place before I was elected to Congress or before this Congress convened.

THE PLAIN FACTS.

What are the plain facts of the situation? Back, prior to 1850, we began talking about digging a canal to connect the Atlantic and Pacific Oceans. On May 22, 1850, we made a treaty with Great Britain known as the Clayton-Bulwer treaty. I quote one clause of that treaty:

> The Governments of the United States and Great Britain hereby declare that neither the one nor the other will ever obtain or maintain for itself any exclusive control over said ship canal, agreeing that neither will ever erect nor maintain any fortifications commanding the same, or in the vicinity thereof, or occupy or fortify, or colonize, or assume or exercise any dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America.

Under this treaty, so signed and ratified, nothing was done for many years by either Government, but the Spanish War and the trip of the *Oregon* made the canal question a vital issue in American politics, and the United States, through its then Secretary of State, John Hay, took the initiative to bring about a modification of the Clayton-Bulwer treaty. We desired it, of course, modified in our interest. As a result a new treaty was

made, known as the Hay-Pauncefote treaty, one clause of which reads as follows:

The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

If ever language was clear, this language is clear. If this clause does not mean what it says, it means nothing. Until the coastwise shipping monopoly saw a chance to grab millions of dollars per year at the expense of the National Treasury no one ever pretended that it meant anything else than what it plainly said. [Applause.]

Hay is dead and Lord Pauncefote is dead, but Joseph H. Choate, who at the time was our American ambassador to Great Britain and who helped to negotiate the treaty, is still alive. No other living man is so well qualified to give testimony as to the meaning of this provision, and this is what Mr. Choate says:

I venture to say that in the whole course of the negotiations of this particular treaty no claim, no suggestion, was made that there should be any exemption of anybody.

The whole civilized world expects the United States to abide by its treaty. If we do not do so, then, as Senator LODGE says, we are threatened with the stigma of an outlaw nation which has no respect for its solemn word or its solemn pledges. The President of the United States, in urging Congress to repeal the special canal privilege granted to coastwise monopoly in violation of our treaty contract, has said:

I ask this of you in support of the foreign policy of the administration. I shall not know how to deal with matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure.

KICKING UP A DUST TO HIDE THE REAL ISSUE.

All this talk of British influence and surrender to Great Britain is no more than so much dust kicked up to hide the real issue and to prevent the people from seeing that they were to be taxed millions every year for the benefit of the Coastwise Shipping Trust.

Great Britain owns the Canadian Soo Canal, the Welland Canal, and the Suez Canal. Because of a treaty contract our ships go through these three British-owned canals on exactly the same terms as do the ships of Great Britain. Will anyone be so foolish as to argue that Great Britain by this reason surrendered any national sovereignty to the United States thereby, and if we keep the terms of our solemn treaty contract obligations and let British ships pass through the Panama Canal on terms of equality with our ships, just as Great Britain does with us in her three canals and as we agreed to do in the Hay-Pauncefote treaty, why should anyone be so unfair as to argue that thereby we surrender any national sovereignty over the Panama Canal to Great Britain? Are not the two cases exactly similar and parallel in every way?

On this point the Secretary of State, Mr. Bryan, has well said:

The friends of free tolls gave conclusive proof that they were conscious of the weakness of their position when they attempted to appeal to prejudice rather than to reason. Every time our party has attempted to reduce the tariff we have been confronted with the charge that in lowering the tariff we were surrendering our markets to foreign manufacturers. "The-surrender-to-England" argument is being used now just as it has been used in the past for the benefit of the same selfish interests, and now that the people have secured tariff reduction they can no longer be frightened by this subterfuge.

SHALL WE GIVE THE PEOPLE'S MONEY GOTTEN BY TAXATION TO THE COASTWISE SHIPPING TRUST AS SUBSIDY OR SHALL THE COASTWISE SHIPPING TRUST HELP PAY FOR THE USE OF THE CANAL?

Mr. Speaker, it is plain that $25,000,000 for the expense of this canal must be raised every year. Shall we take the people's money by taxation to this extent from all parts of the United States to meet this expense and let the Shipping Trust use the canal without bearing any part of this expense, or shall we charge this Shipping Trust that uses the canal a small toll as proposed, which shall go into the Public Treasury to help meet the $25,000,000 yearly expense on this canal? I should think the Shipping Trust would feel that the people at large in the United States were generous enough to them when they spent $400,000,000 to dig this canal, and that the Shipping Trust would be glad to show its appreciation by paying this toll fee.

It should always be remembered that this toll exemption so fiercely demanded is not to be given to all American ships, but only to those American ships doing a coastwise business; only those ships belonging to the American Shipping Trust. American ships that go through the canal and carry the produce of our farms and factories to foreign markets, and thereby give us a market for all sales abroad, are not exempt from payment of tolls, but must pay tolls the same as foreign ships. There could be no quibble on this point. Why should this distinction and favor be shown to a certain class of American ships? Are not these American ships that cross the seas with American produce also built with American money, owned by American citizens, manned by American sailors, and fly the American flag?

If we are to have free tolls and the taxpayers of the country are to foot the bills, then let us have free tolls for those American ships that carry the produce of the farms and factories across the seas and thus give us a market and outlet for the products of the farm and factory. Surely free tolls would at least be as justifiable for these American ships that increase and widen the trade and commerce of the United States, and thus benefit and serve all the people of the United States, as free tolls to the ships belonging to the coastwise Shipping Trust. [Applause.]

BETTER USE OF THE PUBLIC MONEY THAN SUBSIDIZING A SHIPPING TRUST WITH FREE TOLLS.

Let the Shipping Trust pay this toll money into the United States Treasury and we can use it to good account. The United States Treasury needs it. We need it to help in our system of building good roads for the benefit of all our citizens. The United States Treasury can better expend its money in promoting our contemplated system of building good roads for the benefit of all the people, and in building fortifications along our rivers and harbors to prevent floods and overflows and to protect the lives and homes of our people, rather than in subsidizing a shipping trust and paying out the people's money to make a present of free tolls to a shipping trust that is now making more than 20 per cent on its investment.

THE LARGER GOOD—THE PEACE OF THE WORLD.

No one who heard the President in his great plea to both branches of Congress on this matter could fail to note the intense earnestness and the serious manner in which he made that plea to Congress to grant his request. No one understood the facts of the past concerning this question more fully than did the President, and no one could understand so fully the serious necessity of the future as could the President. In his solemn judgment he considered it absolutely necessary, and he pled with us to grant his request. Under all the surrounding circumstances I do not feel that I would have been justified in voting to refuse to grant the President's request.

The President spoke seriously and solemnly of the larger good to be accomplished. If by granting his request and thereby proving to the nations of the world our due regard for treaty obligations solemnly entered into by us, we shall be able to have that concerted action upon the part of the friendly nations of the world that will enable us to accomplish those things by peaceful means that otherwise would compel this Nation, under our construction and obligation of the Monroe doctrine, to wage a bloody war to accomplish—if it shall turn out in the future that that larger good shall prevent the sands of Mexico from being dyed with the blood of American youth, if it shall keep from our fair land the horrors of war, who shall then say that the President did not act wisely, nobly, and well? [Applause.]

While we all recognize that war to maintain our Federal Union, to repel invasion, to defend our liberties, our honor, and our flag, as well as war for humanity's sake, is, when necessary, justifiable war, yet, Mr. Speaker, at no time in the history of the world should war between Christian nations be so impossible and so unnecessary as at this time. This Nation has its face set toward the morning of the dawning of peace—world-wide and universal. It would be a monumental calamity to turn about and face the dark night of bloody war.

Recently this Congress had under consideration a naval holiday proposition or a suspension of naval construction program. On Saturday, December 6, 1913, I addressed the House on this proposition, and the remarks made by myself on that date I desire to herewith incorporate as a part of this discussion.

SUSPENSION OF NAVAL CONSTRUCTION PROGRAM.

SPEECH OF HON. CLEMENT BRUMBAUGH OF OHIO, IN THE HOUSE OF REPRESENTATIVES, SATURDAY, DECEMBER 6, 1913.

The House had under consideration House resolution (H. Res. 298) to authorize the President to cooperate with the United Kingdom of Great Britain to the end that naval construction may be suspended for the period of one year.

Mr. BRUMBAUGH. Mr. Speaker, this occasion seems to me to be a most opportune time to consider and to vote upon this great resolution. We have recently listened to, and there is yet fresh in our minds, one of the greatest presidential messages ever delivered by any President of these United States. [Applause.] A message that will have a far-reaching effect for good, a message that will live in history, a message that in its human side wherein it deals with man's obligations to his fellow men, to quote the President's own words uttered on another occasion, "seems like a breath out of God's own presence."

Mr. Speaker, it is surely a matter of congratulation to the country and to us all, regardless of political affiliations, to observe how grandly and with what consummate ability our great President is meeting and measuring up to every delicate emergency. He is leading the thought of the world to higher planes and better things. I believe that in the future our school readers will contain, and the youth of the land will commit to memory, his great speeches for their classical diction, their literary eloquence, and their patriotic inspiration, just as they now commit the speeches and sayings of the immortal Jefferson and the immortal Lincoln.

It is a strange observation to note that when Lincoln delivered his great Gettysburg oration it took the country some time to appreciate it, and we came to know it in its full force and beauty only after the great magazines of the country had pointed out to us its grandeur and sublime eloquence.

The magazines of the country are beginning to point out to us that President Wilson's recent great oration at Gettysburg is a fitting companion piece to Lincoln's immortal oration delivered there 50 years ago. They form the milestones of 50 years that mark the Nation's loftiest thought and purest aspirations.

Mr. Speaker, this resolution seeks to have the great nations of the world agree to suspend naval operations for one year; or, in other words, to take a naval holiday. I shall most gladly support this resolution, because it points to the beginning of that better day for which prophets have prayed, poets have sung, and humanity has longed for; that day when we can beat our swords and implements of warfare into plowshares, and when men shall learn the trade and art of war no more forever. That grand and sublime condition of human brotherhood among all God's children is a consummation devoutly to be wished.

There has not been, nor do I think there can be, any real justifiable argument presented against the grand and almost holy purposes of this resolution.

The horrors of war all admit; the burdens of war in blood and money fall upon all, but are necessarily heaviest on the unoffending, the innocent, the laborers, the workingmen, and the poor.

Think of it, $15,000,000 to build and equip just one battleship. With that great amount of money spent for just one battleship the Nation can build a good-roads highway of trade and commerce from ocean to ocean and, better still, thus preferring to build, would be building a highway of righteousness through the hearts of all mankind.

With that money spent for just one battleship we can succor and support every worthy old man or old woman, in their sunset of life, in the United States. But, my friends, the stupendous waste and folly is only apparent when we stop to ponder that it is not just one battleship, but two or four, per year; and, as the matter now stands, in this insane, wicked waste and folly we must build in the future not 1 but 24 battleships to equal either of our great rivals—England or Germany. And then keep going on.

Not only is the cost of a single battleship stupendous, but the cost to equip and maintain it while it floats in idleness the seas to challenge quarrels is enormous. I speak not of the wages paid the poor sailors. These are too low and are only a small pittance compared with other expenses.

Look at these figures as furnished by the Navy Department of the Government. We have the battleship, itself costing from $12,000,000 to $15,000,000 each. Just stop and think how much money that is and what different good and mighty things we could do with $15,000,000. But $15,000,000 is the cost of only one battleship. We are told that we should have 24 more battleships in addition to what we already have.

On each and every battleship we must have ten 14-inch 45-caliber guns. The cost of each gun, manufactured at our own navy yard, is over $51,000. These guns can be fired only about 175 times each; then the gun must be relined at a cost of $15,000 per gun. Every time one of these guns is fired in target practice the ammunition costs $240 per gun. Every time one of these guns is fired in battle the ammunition costs $780 per gun. The cost to fire 10 guns one round in battle is about $8,000.

We now have 12 battleships of the first line, 19 battleships of the second line, 10 armored cruisers, 10 monitors, 31 destroyers, 27 gunboats, 28 torpedo boats, 22 submarines, besides tugs, cruisers, converted yachts, transports, and other boats; a grand total of 323 ships, of which only 26 are unserviceable for war purposes.

All this cost in the past to meet this enormous expense has been taken from the pockets of the people—the laboring people, the farmers, the merchants, the day laborers, the mechanics, and the producing class of all kinds—by taxation through our past unjust and unequal tariff laws, and a study of these facts will go far to explain why our taxes are so high and why the armor-plate and Steel Trust concerns still want more battleships built, to be paid for through taxation out of the pockets of the people.

How long will labor and the people stand to be thus taxed to make up such stupendous tax burdens and wicked folly?

The amount of money expended for war preparations among the nations of the world, even while they are now at peace with each other, is appalling to contemplate. In the United States the amount expended for battleships and maintaining a warlike preparation exceeds the amount expended in support of our schools and colleges, our courts and public roads, the support of our churches and the promulgation of the gospel in foreign lands.

I make no reference to the Nation's pension expense account, because the Nation's pension expense account is the Nation's debt of honor and of gratitude to its defenders, and must always be sacredly paid; and this national debt of honor should not be associated with the character of such expense as we are considering here. [Applause.]

The amount of money expended among the nations of the world at large is not only appalling to contemplate, but staggers the imagination. Forty-two billions of dollars is the sum placed upon the backs of labor and the poor to equip and maintain the navies of the nations of the earth. The interest on this tremendous sum at 4 per cent amounts to more than one and one-half billions yearly, which equals the wages of more than 3,000,000 workingmen at the rate of $600 per annum.

Nations are like men. One goes armed, the other feels that it must go armed. One nation builds four battleships, the other nation feels that it must build four battleships. And so the rivalry in building instruments of death and destruction goes on. These battleships, we are told, only last four or five years until they are obsolete, out of date, and only fit for the junk pile, and new, more costly, and more deadly battleships take their place.

Some of the nations of the world are now approaching bankrupty and national-debt repudiation. Every nation on earth feels its heavy burden and great drain in taxation, which rests most heavily upon the laboring people and the poor. This rivalry in battleship building must stop some time—why not now? [Applause.]

It has been argued that this resolution, Mr. Speaker, can do no good. It is sufficient answer, I think, to say that it can do no harm, and yet I do believe that it will in the end do great good. I believe we will so arrest the thought and attention of the world by this resolution and discussion that this agitation will go on, and I would not be surprised to see, and in fact I expect to see, the great political parties in the next convention, in 1916, incorporate a plank in the party platform dealing with this same great resolution. It has been argued that this resolution might lead to some humiliation to us from some quarters. It is sufficient answer to say, Mr. Speaker, that no real humiliation can come to any man or nation for attempting to do the right thing at any time or any place. As Lowell has so well put it:

Not failure but low aim is crime.

[Applause.]

It has been argued, Mr. Speaker, that this proposition has been withdrawn by Mr. Churchill. If that be true, then all the more reason why we should start it anew and be the pioneers in this laudable undertaking. It is not simply the ministers of the gospel and the reformers who are interested in this great matter. The men on the farms—the place where liberty has its home and patriotism its abiding place—are deeply interested in this proposition. The laborers and the labor organizations of the country are also deeply interested in this proposition. The farmers and laborers in factory, shops, stores, and mines make up the bone and sinew of our country, and they are all deeply interested in this proposition, because when war comes they furnish the blood and pay the taxes and carry the burden.

It has been argued, Mr. Speaker, that this might throw some men—the men employed in armor-plate factories—out of employment, and some are very solicitous upon that score. Why, that same argument can be advanced in favor of any proposition that we might want to discontinue. One speaker asked, What will we do with the wood and the steel now used in the construction of battleships? How will we use all of these articles? We can easily find use for the wood in construction of homes; use for the steel in building steel cars on our railroads for the comfort and protection of the traveling public and the safety of the people. We could easily pension every man engaged in the manufacture of armor plate with a magnificent pension and then save large sums of money. The cost of one or two battleships would pension every man engaged in this industry for the balance of his life; and as for employment

of the men themselves, we can use them in our great undeveloped domain in the United States or in that great wonderland of Alaska, the country that holds the future coal supply of the world, the country that has eight times more cultivable acreage than Norway and Sweden, which support a population of from 12,000,000 to 15,000,000. We can use them all in developing that great country.

Mr. Speaker, we are getting over some of the old shibboleths of the past. Why, it used to be argued that even dread war was necessary for civilization and the education of the people. A great soldier once said that a little bloodletting now and then was a good thing. I thank God we are getting away from such ideas as that. [Applause.]

Mr. Speaker, it was long ago said by a wise man that "war is a game which, were their subjects wise, kings could not play at." It is not necessary in arguing this question to claim that all of the wars of the past were unnecessary, but it will be a sad commentary upon the efficacy of our education and our religion if future wars shall be necessary in our dealings with our fellow men. I will not say, Mr. Speaker, that there are those now who would favor war simply for the thrill of famous victories or to be the heroes of those famous victories, but that, we know, was the low plane upon which many of our wars of the past were fought. No one has so fittingly described that low plane as the poet Southey, and if I can recall his lines I want to repeat them, for they show how fickle and unjustifiable are often the alleged grounds for war. The poet tells it thus:

It was a summer evening,
Old Kaspar's work was done,
And he before his cottage door
Was sitting in the sun,
And by him sported on the green
His little grandchild Wilhelmine.

She saw her brother Peterkin
Roll something large and round,
Which he beside the rivulet
In playing there had found;
He came to ask what he had found
That was so large and smooth and round.

Old Kaspar took it from the boy,
Who stood expectant by;
And then the old man shook his head,
And with a natural sigh,
"'Tis some poor fellow's skull," said he,
"Who fell in the great victory.

"I find them in the garden,
For there's many here about;
And often when I go to plow
The plowshare turns them out,
For many thousand men," said he,
"Were slain in that great victory."

"Now tell us what 'twas all about,"
Young Peterkin, he cries;
And little Wilhelmine looks up
With wonder-waiting eyes;
"Now tell us all about the war,
And what they killed each other for."

"It was the English," Kaspar cried,
"Who put the French to rout;
But what they killed each other for,
I could not well make out;
But everybody said," quoth he,
"That 'twas a famous victory.

"My father lived at Blenheim then,
Yon little stream hard by,
They burnt his dwelling to the ground,
And he was forced to fly;
So with his wife and child he fled,
Nor had he where to rest his head.

"With fire and sword the country 'round,
Was wasted far and wide;
And many a nursing mother then,
And newborn baby died;
But things like that, you know, must be
At every famous victory.

"They say it was a shocking sight
After the field was won;
For many thousand bodies here
Lay rotting in the sun;
But things like that, you know, must be
After a famous victory."

Yes, this is the cost of famous victories, but it is yet more than this. War stalks the earth to the music of widows' moans and orphans' sighs. It means broken homes, orphaned children, distracted country, and an embittered land. It has been fittingly described by the great soldier, Gen. Sherman, as hell let loose on earth, and the sad thing about it all is this: That those who are so willing often to plunge the countries and nations of the world into war are usually far removed from deadly shot and bursting shell, and that it so often happens that it is the weak, the innocent, and the unoffending who are the real sufferers.

The strong, brave, contending soldiers are not the only sufferers of war. There are other wounds than those made by shot and bayonet. The wives, the mothers, the fathers, the sisters—these necessarily are the keenest sufferers. No comradeship of tent or field, nor music of fife or drum can steal away their pain or heal their aching wound. [Applause.]

The maid who binds her warrior's sash
And, smiling, all her pain dissembles,
The while beneath the drooping lash
One starry teardrop hangs and trembles,
Though Heaven alone records the tear,
And fame shall never know her story,
Her heart has shed a drop as dear
As e'er bedewed the field of glory!

The wife who girds her husband's sword,
'Mid little ones who weep or wonder,
And bravely speaks the cheering word,
What though her heart be rent asunder,
Doomed nightly in her dreams to hear
The bolts of war around him rattle,
Has shed as sacred blood as e'er
Was poured upon the field of battle!

The mother who conceals her grief
While to her breast her son she presses,
Then breathes a few brave words and brief,
Kissing the patriot brow she blesses,
With no one but her loving God
To know the pain that weighs upon her,
Sheds holy blood as e'er the sod
Received on Freedom's field of honor.

Mr. Speaker, it has been said of old that it is braver and better to dry a tear than to make a wound, and that is what this resolution will attempt to do. [Applause.]

If we do away with armed conflict—which God grant in His own good time we may—let none lament that courage will decline in the hearts or lives of men.

We will have need for all our bravery and courage on other battle fields—the battle fields of life, where the hot flashes of injustice and inequity and wrong dance along the nerve tracks of pain. If with an honest purpose we strive on these battle fields, we can be assured of this: That angel hands out of the skies will fan the weary brow, and the blessings of the Christ of peace will thrill our souls. [Applause.]

Mr. Speaker, with me the world's peace is not an iridescent dream. I believe firmly that the world will yet be ruled by the principles of Jesus of Nazareth, and that that peace which the angels sang to shepherd ears on Judean hills of peace on earth, good will toward men, shall yet come true. Through the dark night of the past we can see hope's constant star, and through the storm clouds of war we can see the rainbow of promise bathed in the sunlight of universal peace. [Applause.]

Mr. Speaker, this resolution is appropriately before the attention of the whole world at this season of the year, the season when the bells will soon be ringing out to all the land the story of Bethlehem. May we not hope that here now by this resolution we may begin a movement that shall be like a new star of Bethlehem, whose influences for good shall go round the world ringing and singing the old new song of peace on earth, good will to men, until righteousness shall look down from heaven and peace and justice and love shall cover the earth as the waters cover the sea? [Loud applause.]

Agricultural Appropriation Bill.

SPEECH

OF

HON. JOHN A. MAGUIRE,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 14, 1914,

On the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. MAGUIRE of Nebraska. Mr. Speaker, the Committee on Agriculture, of which I have the honor to be a member, recommended this bill making annual appropriations for the Department of Agriculture for the next fiscal year. The bill was prepared only after exhaustive hearings. The Secretary of Agriculture and all bureau and division heads who might supply us with information on the administrative features or research work were before the committee. In fact, all others who might be able to furnish information or suggest the needs of the country were welcome, and in many cases appeared. These hearings are printed in a limited number, and, taken in connection with the rather fully explained "departmental estimates," the House is in possession of quite a full supply of information.

The bill carries $18,327,232 and an additional $620,000 for miscellaneous items, making a total for the department of $18,947,232. The following table, taken from the committee

report, shows the distribution of this amount among the various bureaus and offices:

Appropriations, 1915, United States Department of Agriculture.

Bureau or office.	Appropriation, 1914.	Bureau or office estimate, 1915.	Department estimate, 1915.	Reported by House committee.
Office of the Secretary	$303,820	$337,236	$332,380	$329,830
Weather Bureau	1,707,610	1,673,660	1,670,270	1,668,270
Bureau of Animal Industry	2,031,193	2,968,476	2,380,406	2,245,026
Bureau of Plant Industry	2,667,995	3,087,815	2,713,655	3,053,975
Forest Service	5,399,679	5,531,402	5,543,256	5,543,256
Bureau of Chemistry	1,058,140	1,307,940	1,116,481	1,076,481
Bureau of Soils	334,020	513,440	358,440	359,235
Bureau of Entomology	742,210	931,670	813,660	792,560
Bureau of Biological Survey	170,990	380,860	265,090	220,090
Division of Accounts and Disbursements	104,170	78,670	59,920	61,320
Division of Publications	184,660	190,290	189,840	189,240
Bureau of Agricultural Forecasts	243,680	301,230	300,680	274,180
Library	43,520	130,620	45,360	45,360
Miscellaneous expenses, Department of Agriculture	106,066	110,000	110,000	106,000
Rent in the District of Columbia	98,329	115,829	115,829	108,329
Office of Experiment Stations	1,901,260	2,055,670	1,912,535	1,901,020
Office of Public Roads	279,400	575,890	394,390	353,060
Total, Department of Agriculture, for routine and ordinary work	17,376,945	20,274,194	18,322,192	18,327,232

By including other items of permanent annual appropriations and special acts, which should be recognized as going toward agriculture, it would be necessary to include the permanent item of $3,000,000 for meat inspection and an item for printing which will be included in the sundry civil bill and for which an estimate of $515,000 is made. An amount of $50,000 a year is also paid direct from the Treasury to each State and Territory in aid of colleges of agriculture provided for in the laws of 1890 and 1907, and amounts in all to $2,500,000. The acts of 1887 and 1906 of $15,000 each for each State and Territory for the United States experiment stations amounts to $1,440,000.

In so far as the Federal Government carries on the investigations into agriculture it operates through the machinery and under the direction of the Department of Agriculture. Our Government looked very little to the needs of agriculture till along in the eighties, when the conditions and tendencies revealed the necessity of examination into the needs of our agricultural resources. Up to that time there was no real need for any public agency looking to the approaching problems of this industry. The fields of virgin soil were either at hand or to be found on the areas just beyond on the frontier, inviting the farmer to settle and till the soil and turn loose his herds on the boundless pastures. Through most of our period of development up to the present time the policy of the Government has been to encourage settlement on the public lands, and in consequence of this policy the older settled regions were going through a process of abandonment by the movement to the West.

The program of the Government in its relation to agriculture up to the present time has been one of investigation and scientific research into the problems of the farm. But we as a people have progressed and developed so rapidly that we find ourselves suddenly face to face with the problems of the "new agriculture." A new era is opening upon us in which the conditions demand not alone investigations in the scientific laboratories, but also the demonstration on the farm. The application of knowledge is always the most difficult, and that is the task now inseparably connected with our successful and continued agricultural development. Research is carried on by scientists, but the application and more complete extension of results must have the cooperation of both scientists and the millions who are actively engaged in the great field of agriculture. The discoveries in agricultural science are in no measure complete till the results are actually brought to the farm and field and home.

What benefit is it to the citizen and the public if the scientific results are to remain in the heads of investigators or in the numerous public laboratories and experimental workshops? This applies not alone to the Government, but to the schools, great universities, and other institutions of learning. The scientific information is available now only to a limited number. Why not make the reservoir of information the asset of all and for the use of everyone. The Government should not only cope with the theories of to-morrow, but likewise apply the available information of to-day. The next logical step is the bringing of the discoveries of the scientific laboratories and workshops to the farm and herd and make them the common knowledge of all. The numerous scientists and investigators employed by the Government in the Department of Agriculture confidently believe in the results of their own research; still the public know little of the scope of the research and have a doubting faith in its effectiveness.

The next step is therefore farm and field demonstrations through practical farm demonstrators trained in the scientific field of preparation. In other words, they might be called county agriculturists. There were some 200 of those county demonstrators scattered over the United States in the past year, and the increasing demand for such field work is greater than the supply of well-prepared men. The practice is to have these county demonstrators located in some central point in the county the whole year and travel over the county much of the time demonstrating, investigating, consulting with farmers, and in touch with everyday farm life. He should always be at the command of the people under some immediate local authority.

The Committee on Agriculture reported and the House passed a bill a short time ago, known as the Lever agricultural extension bill, looking to the gradual application of the best farm practices. Perhaps the farm is overstocked and undercropped or in many other ways clear out of line with what might be termed well-balanced farming. An experienced farm demonstrator might readily offer suggestions which would increase profits. Breeds of stock may not be well graded or dairy herds may be made up of milch cows which ought to be excluded from dairy purposes. This could be easily revealed by a few milk tests for butter fat; or perhaps some of the animals may be afflicted with tuberculosis and the symptoms could be detected by a trained observer. Stock judging offers a very wide field looking to the culling and redirecting of herds and improvement of breeds and the general toning up of mixed farming. The general quality of domestic animals is taking on a radical improvement under such standarizing and tests. While the agricultural colleges are doing much along this line for those who actually attend, still the stock experts are not numerous enough to fully direct the improvement of the herds to a high-grade basis.

Congress has provided means and the department has put forth every effort to get the available information disseminated through agricultural bulletins and publications, and while much is being accomplished, still the results are incomplete. The publications furnish the printed information based on a given set of conditions and the principles that guide, but they fail in the actual diagnosis and application of remedies to varied farm problems. Of course, the new program will not be taken on rapidly at first, and cooperative demonstration will take on form only after the farmers and demonstrators approach a common working understanding. The every-day problems, of course, will continue difficult and often perplexing, but of the ultimate benefits to the farmer of wider cooperation there can be no doubt. Much of the theory, of course, will have to be discarded and only that information employed which is applicable.

A very good illustration of what can be done along a single line is found in the bill which the Committee on Agriculture favorably reported and the House passed a short time ago, appropriating $500,000 for demonstrating the efficacy of serum in the treatment of hogs for cholera. Experts and demonstrators will go to single counties to apply the serum where necessary, with a view of stamping out the disease, while others will be assigned to the several States to cover in a more general way the work of cooperation and inspection. The general public will soon be informed and the results of such treatment will soon become the every-day knowledge among the hog raisers.

The investigational energies of the Department of Agriculture for a long time were confined primarily to problems of farm production and its increase, but it became apparent at once that closely related to production at nearly every point is the problem of food nutrition and consumption. The conservation of our food supply and its best uses are at once interdependent on food production. The food production and supply promises to become one of increasing importance, and therefore the extension of this helping arm of the Government is justified in the investigations of both production and consumption. While the farmer was first a producer in the ordinary sense, still he is likewise coming more each year to be classed as a very large consumer.

While up to the present time the department and the Government dealt mainly with the problems of agricultural production and somewhat with the subject of food supply and consumption, still the problems of distribution seem now to loom up very large. Methods or failure of methods of transportation and distribution are seriously hindering the advantages of increased farm production, and to the extent of a nation-wide magnitude. A concrete example is before us in the form of large amounts of wasted perishable farm products, wide difference of prices received by farmer and those paid by the consumer, with resulting

loss to both and a waste of productive energy for the whole country.

The bill last year carried $50,000 for an office of markets in the Department of Agriculture, and it is here increased to $200,000 in response to a very strong demand for an enlarged field of work. The demand is that the Government should further investigate and impartially furnish information on markets and market conditions, supply and demand, packing of products for shipping, storage and warehouses, routing of products, and related fields. The total received by the producer of farm products is more than doubled when the consumer pays for it. In other words, the farmer receives less than half of that paid by the consumer of these products. Frequently vegetables, fruits, poultry, dairy products, and other products of the farm are, through failure of information, headed into some central or terminal market by the producers when that market is glutted and perhaps has no warehouse or storage conveniences. The resulting loss might have been avoided by the shipment of such products to another point where there was a heavy demand. Several consignments without knowledge of each other by shippers are routed to the same market when information supplied would distribute part of the shipments to some other markets.

Then, there is a very encouraging field of investigation looking to the better preparing and packing of fruits, vegetables, eggs, poultry, garden truck, and other farm products, in order to better and more profitably conform to the best shipping conditions, market regulations, and trade requirements. Of course the jobbers and wholesalers and exchanges are now in possession of this information, but the general public is not. Many large producing associations in the field of fruit and truck gardening are now cooperating in securing this information. The farmers' cooperative organizations offer quite a field of mutual self-help, which becomes impossible when attempted individually.

The purpose of the department is to investigate market conditions and furnish to the public, particularly the producing public, the information now confined to a few. The information could be made available more particularly to small shipping points and local markets. The local telephone systems could be put to good use as a means of conveying this information. Some of the market conditions, for example, on general demand for certain products, storage, warehouses, railroad trackage, could become general information for a larger period, while information on shifting conditions would have to be more frequently secured.

That the wide range between the producer and consumer of these products could be very much narrowed with advantage of higher prices and more profits to the producer and lessened cost to the consumer, is not in doubt. The whole field of investigation and scope of work will have to be approached step by step with intelligent direction and a comprehensive knowledge of a wide range of industrial and economic conditions. It is not, by any means, an easy field of solution, but it does offer a reasonable measure of results for intelligent and well-directed efforts. The field of its limitations is perhaps as important as that of its extension. In the scope to be covered there ought to be reasonably well-defined boundaries over which the Government should not go. The field of investigation should be along the line of market conditions and related subjects, and the supplying of that information in a practical way to the public.

Agricultural colleges and experiment stations are carrying on an effective and well-directed program of investigations and the dissemination of knowledge within their respective States. They are meeting the public expectations and following the purposes of the acts creating them. Of necessity a large amount of duplication is being carried on in the investigational work in these colleges, but with a closer cooperation and coordination between these several institutions much of the lost energy will disappear. Through farmers' institutes and rural courses of study, they are directing and extending information into the farming localities with a large measure of success.

Intelligent and well-directed efforts are being put forth by these colleges, State universities, and other schools looking to the general dissemination of knowledge on domestic science, household economics, and problems affecting home life. It is indeed encouraging to find that young women are in large and increasing numbers attending these schools and taking the courses of study.

Well-arranged courses are offered in cooking, sewing, care of sick, household sanitation, dairying, poultry raising, gardening, floriculture, landscape gardening, home architecture, and allied subjects. These, of course, are properly combined with courses along very much different lines of training. Such combinations of studies are beginning to be recognized among the essentials in the training and preparation of a rounded education for one who presides over a home, and more and more each day contributes to the civic and social welfare. The earlier idea of education looked more to the mental training, but to-day a well-balanced society requires that the heart, the hand, and the mind be trained. The physical and applied sciences are coming more and more into the everyday welfare of the average man, woman, and child. To this extent the purely cultural training must yield to the larger utilitarian demands of our social and industrial readjustments.

Problems of soil fertility and soil depletion are beginning to be of first consideration. Impoverished soil means certain and perpetual low-grade agriculture. Soil surveys are being made by the Department of Agriculture, in cooperation with local authorities, to learn of the character and needs of the soils and supply the public with the information.

The nations of history that have deteriorated in agriculture have quite uniformly lost in power and wealth at home and prestige abroad through neglect or ignorance of the soil itself and failure to conserve its fertility. The soil is a rightful heritage of the future, and in the large conception only its use is ours and not its destruction. The nations and peoples of modern Europe, however, are no longer overlooking the conservation of the soil, but are making a desperate effort to recuperate and enrich it as the surest foundation for the present food supply and in justice to the generations to come.

For us in the past the question of soil fertility did not arise, for we had an abundance and wealth of soil in its original fertility, but our soil problems have begun to take on a magnitude which threatens our economic and industrial welfare. At the beginning of our development there was a new and undeveloped country of almost boundless agricultural possibilities. The early settler along the Atlantic seaboard took from the soil its fertility and the succeeding generations, as they passed on westward in the conquest of the wilderness, did likewise. There was all the time bountiful virgin public land just beyond on the frontier inviting the settler, but now our available public land is practically gone. We must, therefore, out of justice to ourselves as a people, stop long enough to take an inventory of our soil and farm conditions. The spirit of the pioneer of onward over mountain and valley and prairies must find itself arrested and directed to the problems of intensification and conservation of soil wealth. The courage and optimism and dominant spirit of that epoch, now somewhat blending into the later development, must be turned to the new agriculture with the same zeal and determination that characterized the pioneer and early settler in the winning of the wilderness.

Agriculture is beginning more and more to play a larger part in our urgent needs. The disappearance of our public lands, the comparative increase of city over rural population, and the occupational movement into industrial life other than farming, makes the question of farm products and food supply of great importance. Probably no other occupation has so broadened into the many-sided life of our industrial welfare, not alone in production but consumption and distribution as well.

We hear much of the "back-to-the-farm" movement, but it is more of a hope than a realization. A "stay-on-the-farm" slogan ought also to be added But the difficulty probably lies deeper than can be reached by the offering of advice. We will have to get back to the economic and social causes which contribute to the tendency. The attractions, inducements, and, in many cases, the opportunities of the city centers must in a measure be made a part of the country life, and this we must realize is in only a small measure possible. The returns on labor in the city are quicker, with more certain demand the year round for those who follow trades. The original home activities, such as baking, laundering, butter making, and other activities, are more and more carried on away from the home and in village or city centers, and labor therefore of necessity follows. In the economic and industrial readjustment it seems that our country life ought to be compensated in some way looking to the increase in the productive powers of agriculture for the benefit of the whole country.

Perhaps a reference to some of the figures would show our tendency and indicate the need of a greater production on the farms. In 1890 our urban population was 22,000,000 and rural 40,000,000, while in 1910 the totals shifted to 42,000,000 of urban and 49,000,000 of rural population. The city population in 20 years increased 20,000,000, while the rural increased but 9,000,000. The value of our farm property in 1890 was $16,000,000,000, and in 1900 it was $20,000,000,000, while in 1910 it had increased to $40,000,000,000. While the farm wealth and farm production shows flattering returns, still the farm production is yielding a constantly diminishing return. For example, the

value of farm property increased 100 per cent from 1900 to 1910, while the farm production yearly increased from $5,000,000,000 to $9,000,000,000, or about 80 per cent increase in the same period. Wealth of farms increased about 10 per cent a year, while production increased only 8 per cent. In other words, the profits or returns from the farms each year during that period are proportionately decreasing.

The staple articles of food for the average American citizen in most common use are worked out of the farm products—corn, wheat, cattle, hogs, sheep, dairy cows, poultry and poultry products, fruit, and vegetables, including potatoes. The production of corn from 1890 to 1910 increased about 3 per cent yearly, and wheat through the same period increased about 2½ per cent yearly. During the period 1900 to 1910 cattle, hogs, and sheep all showed a decreasing tendency. Out of these products come the pork, the beef, the mutton, and bread in its varied forms. The increase of butter production of late years was very favorable, while with milk the production does not show up so well. An examination of the production of poultry and eggs shows up very favorably, more than in keeping with the increase of population. The production of potatoes and also fruits, with the exception of the falling off in apples, makes a good showing. In getting a further basis of comparison we find that the population for 1900 of continental United States was about 76,000,000, and for 1910 about 92,000,000, or over one and a half millions a year increase.

I call attention to these figures on population and production because they seem to have a rather important bearing in the examination and deductions we are making. These are the main products of our food supply. From these come the supply of the breakfast table of the workingman as he starts out on his daily toil; from these come the supply of the average American home, with its daily routine of food.

All of this leads us very readily to an examination of the deeper and more far-reaching problems of the unbalancing conditions and tendencies between production and consumption. Production is falling behind with the increase of population and with the amount of wealth invested in the industry of agriculture. The average American citizen lives better and has a higher standard of living than the people of any other nation on the globe, and rightfully so. His conveniences are more numerous, his food and clothing and shelter better, and his multiplied activities and advantages are more common. He is a real part of the progress of our civilization. This all makes of him a greater consumer and increases his drafts on production. But agricultural production is not making increases to correspond with these heavy consuming demands. This is probably more forcefully seen in the examination and comparison of production and consumption of food than in any other way.

It is entirely proper for us as legislators to take notice of these conditions and tendencies and treat them as proper subjects of national consideration. The food supply of our farms becomes our greatest asset not alone in times of peace but is more powerful than armies and navies in times of war. Stop the plow and the millions in American homes would soon clamor for the bread line. Let a general drought come, and not alone the food supply would disappear but the anvil would cease to ring and the wheels of industry would become silent. Let a famine or a plague strike at the herds and flocks on the farms and the meat supply would soon minimize the capacity and power of every wage earner and every citizen. Stop any industry and, of course, the effect would be felt; but strike at the productive power and stop the production on the American farm, and you have not alone paralyzed every other industry and occupation but you have struck at the vitality, the power, the happiness of every citizen and every home. Agriculture holds a fundamental and unique place in our social, industrial, and economic welfare because it supplies the food for the world.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. CLARENCE B. MILLER,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,
Monday, March 30, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. MILLER. Mr. Speaker, we have reached the completion of the greatest engineering feat in all human history—the Panama Canal—and are now confronted with questions affecting its operation and maintenance. The part performed by America in this gigantic project must excite the admiration of the world and stir patriotism in the breast of every American. The part America is about to play in the operation of the canal must not be such as to turn applause to censure, pride to shame. In constructing the canal American genius was on trial; in operating it American honor is involved.

We must, in determining whether or not to exempt our coastwise shipping from the payment of tolls, look squarely at a few things. The first that confronts us is the fundamental American principle that the seas of the world shall be open to the ships of the world on terms of equality. That was one of the first principles America ever announced as a national policy and one which she has ever since maintained with tremendous vigor. Every schoolboy knows how the nations of the world sought to maintain jurisdiction over certain seas, channels, and ocean areas. We contended that waterways should be open to the ships of the world. We asserted this often with vehemence and backed it up with armed force. In fact, the first 40 years of our history were occupied largely in fighting for and securing open waterways for our ships. When Jefferson sent a squadron to annihilate the Barbary pirates—a glorious feat of nerve and dash that still thrills the American youth—he simply wrote one of many chapters in the history of this fundamental American contention.

We have lived to see this principle now the controlling one in the policies of all nations respecting the seas. This viewpoint it is necessary that we keep in mind in order to understand the American attitude always maintained respecting the control of any canal across the Isthmus.

In 1849 gold was discovered in California. A tremendous rush of people to that region immediately followed. To cross the Great Plains west of the Mississippi was an undertaking so difficult that thousands paid for the effort with their lives. Some other route was sought. Panama attracted attention. A railroad was soon built across the Isthmus, and we began to think of a canal. But England had also for many years been thinking of a canal. She had extensive possessions in the West Indies, immediately adjacent, and had acquired certain important rights to the entire Mosquito Coast. She had plans for a canal. She had certain rights acquired over the zone through which the canal would run. America did not want England to construct as a governmental undertaking a canal across the Isthmus. We started negotiations, and in 1850—very promptly, indeed—there followed the treaty between England and the United States known as the Clayton-Bulwer treaty. This did not contemplate that either England or America should construct the canal, but that it should be built by some private concern. England there and then gave up her right to dig the canal and gave up certain of her claims. She certainly gave a consideration for the treaty. Our main interest to-day in this treaty is in its historical aspects and in its enunciation of the long-asserted American doctrine of equality and freedom. In this connection freedom, of course, means absence of any discrimination in favor of the ships of one nation as against the ships of the other nation. In other words, freedom, when applied to the canal, clearly means equality.

Article 5 of the Clayton-Bulwer treaty contains the following:

So that the said canal may forever be open and free, and the capital invested therein secure.

Again, in article 6 is the following:

And the contracting parties likewise agree that each shall enter into treaty stipulations with such of the Central American States as they may deem advisable, for the purpose of more effectually carrying out the great design of this convention, namely, that of constructing and maintaining the said canal as a ship communication between the two oceans for the benefit of mankind, on equal terms to all, and of protecting the same.

At the very end of the treaty occurs this renunciation of the principle of equality:

And that the same canals or railways, being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other State which is willing to grant thereto such protection as the United States and Great Britain engage to afford.

From the above we clearly see the kind of canal it was proposed to be constructed across the Isthmus. It was the kind of canal America had ever fought to secure elsewhere in the world.

No canal was ever constructed under this treaty. After the lapse of 50 years conditions had so changed that the United States desired to build the canal as a governmental undertaking. But there had never been any change in the American idea of the kind of canal it should be, as regards equality of treatment of the vessels of all nations. In 1881 Mr. Blaine, then Secretary of State, took up with Great Britain the negotia-

tion of a new treaty under which a canal could be built. No treaty was then made, but Mr. Blaine then clearly expressed the historic American principle as the one upon which America desired to dig the canal. In his instructions to our ambassador to Great Britain, Mr. Blaine said:

Nor does the United States seek any exclusive or narrow commercial advantage. It frankly agrees and will, by public proclamation, declare at the proper time in conjunction with the Republic on whose soil the canal may be located, that the same rights and privileges, the same tolls and obligations for the use of the canal shall apply with absolute impartiality to the merchant marine of every nation on the globe.

This is the American spirit tersely expressed. It is an emphatic enunciation of the American principle. Furthermore, it is the exact principle controlling throughout the treaty which thereafter we did make, the Hay-Pauncefote treaty of 1901.

The War with Spain in 1898 taught us several things. One was that, as a military necessity, a canal must be built. The long voyage of the *Oregon* around South America convinced us that we needed a canal across the Isthmus. Negotiations were again opened, and there was made the treaty with England ever since known as the Hay-Pauncefote treaty, finally agreed to in 1901.

That treaty is a remarkably short document. It supersedes the Clayton-Bulwer treaty with the express reservation that the "general principle" of neutralization, as provided in that treaty, shall not be impaired. The main paragraph of the treaty is the following, and it is about the whole thing in this controversy:

The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

If the English language means anything at all, there is no room for debate over the meaning of that paragraph. Whether we like the language or whether we do not, that is the language of the treaty. It is the language of our treaty. We made it deliberately. It is our contract. We must stand by it.

It is the embodied spirit of America's claim for the high seas during the early years of the infant Republic; it is the embodied spirit of the instructions given by one of the most ardently patriotic Americans that ever lived—James G. Blaine.

This paragraph means we shall not discriminate in favor of any vessels of any nation observing the rules to govern the canal. The words "vessels of commerce and of war of all nations" must and do include vessels engaged in the coastwise commerce of the United States.

Further light is thrown upon the matter by an incident that occurred when the Senate of the United States was considering the ratification of the Hay-Pauncefote treaty of 1900, which contained this paragraph. Senator Bard, of California, when the treaty was being considered, offered the following amendment:

ARTICLE 3.

The United States reserves the right, in the regulation and management of the canal, to discriminate in respect of the charges of traffic in favor of vessels of its own citizens engaged in the coastwise trade.

Here is an amendment offered to the proposed treaty covering our identical proposition. California then, as now, desired coastwise shipping to be favored in the matter of tolls. This amendment was presented. What happened to it? It was voted down by the Senate of the United States, and voted down emphatically, there being 27 in favor of it and 43 against it.

No refinement of distinction, no sophistry of reasoning can distort the treaty as adopted to permit a discrimination in favor of coastwise trading vessels. It is not a question of doing what we please with our own canal; it is a question of living up to our treaty, of maintaining inviolate the contractual obligations of the United States. Some of the advocates of this exemption have sought to gain support to their cause by closing their eyes to the treaty, ignoring it, and shouting patriotism. Most unfortunate move! American patriotism never has consisted, and it should not now consist, in urging America to commit a monumental wrong. Rather does it consist in maintaining the honor of America, in keeping sacred her obligations. The utter coward is the one who is afraid to do right. He who would do wrong because he has the power is both a coward and a bully. The brave man is he who does the right, and the true patriot is he who shields his country from dishonor. If I enter into a contract with my neighbor I can not and I should not repudiate it at my pleasure. If my country enters into a solemn contract she should not repudiate it, and were I to vote for that repudiation I would cover myself with shame and dishonor.

Independent of the treaty, Mr. Speaker, and entirely apart from it, I do not believe in exempting coastwise traffic from payment of tolls. To do so is unsound economy. This canal has been a huge undertaking. It has cost a tremendous sum. Four hundred million American dollars have been used in its building. To operate the canal heavy expense will necessarily occur. Without regard to securing interest on our investment in tolls, we will doubtless not secure enough to pay the ordinary operating expenses and upkeep for at least a great many years to come. Even if every ton of coastwise trade pays tolls, the cost of operation will not be met at first. Common sense, then, requires that we impose the tolls on all boats using the canal.

It has been asserted that freight rates will be reduced by exempting coastwise trade from tolls. A look into the facts shows the claim to be ridiculous. Boats engaged in coastwise trade using the canal are not going to charge just as low freight rates as they possibly can. No transportation company on earth ever did any such thing. They will charge as high as competition will permit. They will be in competition with transcontinental railroads, but on all through freight there will hardly be competition. It costs by railroad to send a ton of freight from one coast to the other from $16 to $28. Boats can carry a ton of freight from New York to San Francisco, using the Panama Canal, for about $7. Plainly and emphatically, any remission of tolls will be absorbed by the ships and will never appear in reduced freight rates. We have given to our vessels a monopoly of our coastwise trade. Foreign ships can not engage in it. That is the only monopoly ever created by law in the United States. It is now proposed to grant to this legalized monopoly a distinct subsidy, for a remission of tolls is nothing but a thinly disguised subsidy.

Parties interested in the granting of this subsidy have sought to conceal the real purpose of the moment by raising a cry of false patriotism. But the American people are not unthinking children. Through the dust that is raised they can see the fat figure of monopoly greedily grasping for subsidy.

Thus, Mr. Speaker, does the situation present itself to me. Our own internal affairs, our own economic interests, are squarely opposed to the coastwise exemption. It is un-American from every aspect and should be vigorously voted down.

It is squarely prohibited by a treaty which we made and by the whole course of American history. To repeal the exemption is demanded by every principle of national honor, by every consideration of economic welfare, and should be supported by every patriot who would shield his country from disgrace, who would hand his country's name down to posterity as spotless and unsullied as he received it.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. PETER G. GERRY,
OF RHODE ISLAND,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914.

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. GERRY. Mr. Speaker, there can be no doubt that that section of the Panama Canal bill exempting some of our coastwise shipping from the payment of tolls should be repealed if it conflicts with the Hay-Pauncefote treaty, and arguments based upon the pecuniary loss that the United States may suffer from such action cannot be considered as of weight in the scales when a matter like this, touching our national honor, is in the balance.

The Hay-Pauncefote treaty is as follows:

HAY-PAUNCEFOTE TREATY—1901.

The United States of America and His Majesty Edward VII, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, and Emperor of India, being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end to remove any objection which may arise out of the convention of the 19th April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the "general principle" of neutralization established in article 8 of that convention, have for that purpose appointed as their plenipotentiaries:

The President of the United States, John Hay, Secretary of State of the United States of America;

And His Majesty Edward the Seventh, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, and Emperor of India, the Right Hon. Lord Pauncefote, G. C. B., G. C. M. G., His Majesty's ambassador extraordinary and plenipotentiary to the United States;

Who, having communicated to each other their full powers, which were found to be in due and proper form, have agreed upon the following articles:

ARTICLE 1.

The high contracting parties agree that the present treaty shall supersede the aforementioned convention of the 19th April, 1850.

ARTICLE 2.

It is agreed that the canal may be constructed under the auspices of the Government of the United States, either directly at its own cost or by gift or loan of money to individuals or corporations, or through subscription to or purchase of stock or shares, and that, subject to the provisions of the present treaty, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

ARTICLE 3.

The United States adopts as the basis of the neutralization of such ship canal the following rules, substantially as embodied in the convention of Constantinople, signed the 28th October, 1888, for the free navigation of the Suez Canal; that is to say:

1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary, and the transit of such vessels through the canal shall be effected with the least possible delay, in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service.

Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.

4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in the case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

5. The provisions of this article shall apply to waters adjacent to the canal, within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time, except in case of distress, and in such case shall depart as soon as possible; but a vessel of war of one belligerent shall not depart within 24 hours from the departure of a vessel of war of the other belligerent.

6. The plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal shall be deemed to be part thereof, for the purpose of this treaty, and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents, and from acts calculated to impair their usefulness as part of the canal.

ARTICLE 4.

It is agreed that no change of territorial sovereignty or of the international relations of the country or countries traversed by the beforementioned canal shall affect the general principle of neutralization or the obligation of the high contracting parties under the present treaty.

ARTICLE 5.

The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by His Britannic Majesty, and the ratifications shall be exchanged at Washington or at London at the earliest possible time within six months from the date hereof.

In faith whereof the respective plenipotentiaries have signed this treaty and thereunto affixed their seals.

Done in duplicate at Washington, the 18th day of November, in the year of our Lord one thousand nine hundred and one.

JOHN HAY. [SEAL.]
PAUNCEFOTE. [SEAL.]

You will notice in the preamble in referring to the Clayton-Bulwer treaty it says:

Without impairing the "general principle" of neutralization established in article 8 of that convention.

Here is the article 8 referred to:

CLAYTON-BULWER TREATY (1850), ARTICLE 8.

The Governments of the United States and Great Britain having not only desired, in entering into this convention, to accomplish a particular object, but also to establish a general principle, they hereby agree to extend their protection, by treaty stipulations, to any other practicable communications, whether by canal or railway, across the isthmus which connects North and South America, and especially to the interoceanic communications, should the same prove to be practicable, whether by canal or railway, which are now proposed to be established by the way of Tehuantepec or Panama. In granting, however, their joint protection to any such canals or railways as are by this article specified, it is always understood by the United States and Great Britain that the parties constructing or owning the same shall impose no other charges or conditions of traffic thereupon than the aforesaid Governments shall approve of as just and equitable; and that the same canals or railways, being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other State which is willing to grant thereto such protection as the United States and Great Britain engage to afford.

When we read this section of the Clayton-Bulwer treaty in conjunction with paragraph 1, article 3, of the Hay-Pauncefote treaty, how can we construe the words "that the canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality," and so forth, as meaning anything else than that the United States is included in the words "all nations"? As further proof that this interpretation was intended and understood in the Senate at the time when the treaty was ratified I refer to an amendment offered by Senator Bacon, of Georgia, on December 16, 1901, which was to strike out certain words of the preamble, viz, "without impairing the general principle of neutralization established in article 8 of that convention." This was not agreed to, and the following amendment, offered by Senator Bard, of California, was also rejected:

That the United States reserves the right to the regulation and management of the canal, to discriminate in respect to the charges of tariff in favor of vessels of its own citizens engaged in the coastwise trade.

It thus seems very clear that there was no misunderstanding at the time as to the meaning of the words in the treaty and there need be no such misunderstanding now if people are willing to admit what is said in plain English. Having these convictions, there can be but one course for me to pursue, to vote for the repeal of the free-tolls section, and this I intend to do.

It is said that to vote for this Sims bill will be to break a pledge in the Baltimore platform. The plank referred to is this:

We favor the exemption from toll of American ships engaged in coastwise trade passing through the canal.

From its very wording it is not a pledge but the approval of a policy, the recommendation of a program that the party is to follow, but from the nature of the question matters over which we had no control could intervene. Much, therefore, was necessarily left to discretion, and a statement of the wishes of the convention was made. The President, however, found that our actions were being misconstrued in Europe, and that our refusal to comply with the treaty was injuring us with all foreign nations, making them believe that we were a Government without honor, incapable of living up to our agreements, and, under these circumstances, considered it wise that the policy of free tolls be abandoned.

To show how little consideration was given this plank, it is only necessary to refer to another plank under the same section, which reads:

We believe in fostering by constitutional regulation of commerce the growth of a merchant marine which shall develop and strengthen the commercial ties which bind us to our sister Republics of the south, but without imposing additional burdens upon the people and without bounties or subsidies from the Public Treasury.

It is impossible to consider the exemption from Panama tolls which certain of the coastwise traffic was to receive in any other light than a subsidy, in a very thinly veiled form, if veiled at all. We therefore have two policies in direct contradiction of each other. Which are we to follow? The one against subsidies should certainly have precedence of seniority, for it is a very old Democratic doctrine; but it does not seem to me that this question has to be decided, for the disregarding of the toll plank is not breaking a party pledge, it being, as I have said before, clearly only a recommendation, and therefore can be disregarded if the exigencies of the case are sufficient to demand it, even if it were not in conflict with other statements in the platform.

There is unquestionably much doubt as to the soundness of the contention that the American people would profit greatly by free tolls, for this exemption would affect only certain coastwise shipping and would increase the amount that would have to be paid by our ships trading in foreign countries, and this would mean another rock in the path of our ocean-going merchant marine, which we hope to build up by removing the legislative restrictions now throttling it. Our present coastwise ships are protected by law, for no foreign vessels are allowed to compete with them. Is it wise to give them this additional aid at the expense of our other future shipping? Are the American people as a whole going to get commodities cheaper from foreign countries if the ships in whose bottoms they are carried have to pay a higher toll? It is not conceivable to think so. Even as a matter of economics it is doubtful if the doctrine of free tolls is sound.

There has been an attempt made to befog the issue by crying that we were giving way to English coercion, and that we lacked courage. But, Mr. Speaker, I have no doubt as to what the verdict of the American Nation will be in this matter, for I know that the sterling qualities of independence, honesty, and belief in the doctrines of fair dealing to all mankind, which were the moving forces of our forefathers in 1776, still exists to-day, and that the people, when this free-tolls provision is repealed, will feel that a stain has been wiped from their shield, and that they will again go forward like an upright man, rejoicing that they have upheld their honor, not because of any coercion or any fear, but because of their belief in doing what was right.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. AUGUSTINE LONERGAN,
OF CONNECTICUT,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. LONERGAN. Mr. Speaker, since it became known that Congress was to deal with the matter of the repeal of toll exemptions, as provided in H. R. 14385, an act to amend section 5 of the act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone, I have keenly felt the great responsibility that devolves upon me in my representative capacity. I assure you that I approached this highly important question with caution. No act of my lifetime has given me such concern. I have carefully studied the subject during the past few weeks, and have been constantly in attendance upon the sessions of the House during the able discussions by the gentlemen who have taken the floor in favor of and against the proposed legislation.

It appears to me that the vital question involved is whether or not the United States Government has violated a treaty agreement with Great Britain. In my judgment it has not; therefore I shall vote against the pending bill.

I regret that in so doing I find myself in disagreement with our great and beloved President, who as our Chief Executive has astonished the world by his masterly achievements in the enactment of constructive legislation. Realizing, as we do, his broadness of view and his keen sense of justice in considering the views of others, irrespective of whether or not they are in accord with his own conclusions, we can say, with confidence and pride in our Chief Executive, that he would be the last man to expect anyone to cast a vote against his conscience on any matter, and especially on a matter of such supreme moment as the Panama Canal toll question.

I hold that under the solemn oath which I took before the bar of this House that my first duty is to my conscience. Any other action would not be in conformity with what is expected of a Representative in the great American Congress.

The bill now under discussion in this House provides in section 1:

That the second sentence in section 5 of the act entitled "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation and government of the Canal Zone," approved August 24, 1912, which reads as follows: "No tolls shall be levied upon vessels engaged in the coastwise trade of the United States," be, and the same is hereby, repealed.

In the consideration of this bill we must look carefully into the provisions of the Clayton-Bulwer treaty of 1850, the Hay-Pauncefote treaty of 1901, and the Panama treaty of 1903.

HISTORICAL.

A brief history of the Panama Canal negotiations is proper at this time. The United States and Colombia entered into a treaty in 1846 under which a right of transit over the Isthmus of Panama from sea to sea was granted to the United States. As a result of the treaty the Panama Railroad was completed nine years after the treaty was signed.

A treaty between the United States and Nicaragua was entered into in 1849, and this treaty provided for the construction of a ship canal from Greytown, San Juan, on the Atlantic coast, to the Pacific coast by way of the Lake of Nicaragua.

The Atlantic end of the canal would have been in the territory of the Mosquito Indians. Great Britain claimed a protectorate over these Indians, and insisted that it alone should name the conditions under which the canal could be opened. This claim of the British involved complete disregard of the Monroe doctrine, and an official protest was made by the United States minister at London. Later, Secretary of State Clayton (of President Zachary Taylor's Cabinet) and Sir Henry Bulwer, the British minister at Washington, entered into negotiations, and in 1850 concluded the Clayton-Bulwer treaty.

This treaty stipulated that neither Great Britain nor the United States should ever obtain or maintain for itself any exclusive control over the canal or erect fortifications upon it, nor occupy or exercise any dominion over any part of Central America; and that in event of war the vessels of Great Britain and the United States must be permitted to pass unmolested, and that both nations would guard the canal and preserve its neutrality. This treaty was very unsatisfactory to the United States, for its terms made the building of the canal by the United States an absolute impossibility.

The unsatisfactory Clayton-Bulwer treaty continued in force until 1901, when it was superseded by the Hay-Pauncefote treaty—the treaty which figures so prominently in the canal tolls discussion.

The Hay-Pauncefote treaty sets forth the desire of the United States and Great Britain to bring about the construction of a ship canal by such route as may be considered expedient. The second article refers to the constructing and financing of the canal under the auspices of the United States, and specifies that this country "shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal."

In 1903 the Senate of the United States ratified the Hay-Herran treaty, between this country and Colombia. The plans at that time contemplated a payment of $10,000,000 to the Colombian Government, with an annual rental of $250,000. Later, the Colombian Government sought to repudiate the promise of its representatives, yet indicating that it would ratify the treaty if it were paid $25,000,000. Indignant at prospects of losing the benefits sure to accompany the construction of the canal, the people of Panama revolted against the Colombian Government, and Panama seceded from Colombia and established a provisional government.

The United States, Great Britain, and France quickly recognized the new Republic of Panama. In 1903 the treaty of Panama was ratified, and under this treaty there was granted to the United States in perpetuity a zone of land and land under water for the construction, maintenance, operation, sanitation, and protection of the canal of the width of 10 miles, beginning in the Caribbean Sea and extending to and across the Isthmus of Panama into the Pacific Ocean, with the exception of the cities of Panama and Colon. In addition, there were grants of certain other territory and islands.

This treaty grants the United States "all the rights, power, and authority" within the zone mentioned "which the United States would protect and exercise if it were sovereign of the territory within which the said lands and waters are located, to the entire exclusion of the Republic of Panama of any such sovereign rights, power, and authority." Article 5 of this treaty grants to the United States in perpetuity a monopoly for the construction, maintenance, and operation of any system of communication by means of canal or railway across its territory between the Caribbean Sea and the Pacific Ocean. In return, the United States agrees to maintain the independence of the Republic of Panama and to pay Panama $10,000,000, and from nine years after the date of the treaty to make an annual payment of $250,000 while the treaty remains in force.

It will be noted that in the preamble of the Hay-Pauncefote treaty it is provided that the United States of America and the Kingdom of Great Britain, "being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end to remove any objection which may arise out of the convention of the 19th April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the 'general principle' of neutralization established in article 8 of that convention, have for that purpose appointed their plenipotentiaries."

The proponents of this bill claim that the expression "without impairing the general principles of neutralization in article 8 of that convention" impairs the right of the United States to control the Panama Canal. Article 8 of the treaty of 1850 sets forth the following provisions:

The Governments of the United States and Great Britain, having not only desired in entering into this convention to accomplish a particular object, but to establish a general principle, they hereby agree to extend their protection, by treaty stipulations, to any other practicable communications, whether by canal or railway, across the isthmus which connects North and South America, and especially to the inter-oceanic communications—should the same prove to be practicable, whether by canal or railway—which are now proposed to be established by the way of Tehuantepec or Panama. In granting, however, their joint protection to any such canals or railways as are by this article specified, it is always understood by the United States and Great Britain that the parties constructing or owning the same shall impose no other charges or conditions of traffic thereupon than the aforesaid Governments shall approve of as just and equitable, and that the same canals or railways, being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other State which is willing to grant thereto such protection as the United States and Great Britain engage to afford.

It is admitted that this is the only article of the Clayton-Bulwer treaty which affects the construction of the Hay-Pauncefote treaty. How? Can it affect the subject of tolls,

traffic, or regulation of the canal by the United States? Clearly not. As to the question of "general principle of neutralization," the canal was about to be built by the United States Government and it was to be free and open to the commerce of the world, both in peace and in war. If the canal is so opened, will not the principle of neutralization mentioned in article 8 of the Clayton-Bulwer treaty be complied with? I think so.

The clear statement of the gentleman from Michigan [Mr. DOREMUS] covers this point. In further support of my contention that the Hay-Pauncefote treaty does not guarantee to Great Britain equal rights with the United States in the canal, I call attention to the significant fact that the words of the Clayton-Bulwer treaty declaring that the canal shall be "open to the citizens and subjects of the United States and Great Britain on equal terms" disappear in the later treaty. Can there be any doubt that if the Hay-Pauncefote treaty was intended to give Great Britain equal rights with the United States in the Panama Canal the intention would have been expressed in the same clear and unequivocal terms that are found in the Clayton-Bulwer treaty? The language of that treaty guaranteeing equal rights to both countries had constituted a continuing contract for half a century. It was before the respective representatives of the two Governments when they negotiated the Hay-Pauncefote treaty, and the failure to incorporate the language in the new treaty is significant, to say the least.

In their report accompanying this bill the majority of the Committee on Interstate and Foreign Commerce, following the interpretation of Sir Edward Grey, contend that the "general principle" of neutralization in article 8 of the Clayton-Bulwer treaty, which was not impaired by the later treaty, guarantees equal rights to Great Britain in the canal.

A careful reading of this article in connection with the other provisions of the Clayton-Bulwer treaty will disclose that it lays down no principle of neutralization at all, but merely applies the rules of neutralization established in the preceding articles for the Nicaragua Canal to routes that were at that time being proposed via Panama and Tehuantepec.

In other words, the principle of neutralization was made general by applying it to all interoceanic communications across the Isthmus, but the principle was established in the articles that preceded article 8. The neutrality guaranteed by the Clayton-Bulwer treaty undoubtedly meant that the canal should be protected from interruption, seizure, or unjust confiscation, as stated in article 5 of the Clayton-Bulwer treaty, so that the canal should forever be open and free and the capital invested therein secure. The United States and Great Britain having engaged with each other to guarantee that neutrality, they provided in article 8, as a condition of such guaranty, that the canal should be open to the citizens and subjects of both countries upon equal terms, and also provided that it should be open on like terms to the citizens and subjects of every other State which was willing to unite with the United States and Great Britain in a joint protectorate over the canal. To assert that the general principle of neutralization established in the Clayton-Bulwer treaty refers to a system of equal tolls, which in that treaty was conditional upon joint protection, does violence to the meaning of the word "neutralization" as it has been understood from time immemorial.

In Moore's International Law Digest "neutralization" is defined as follows:

> Strictly speaking, the term "neutralization" when applied to a canal refers to a condition under which the canal would be closed to the ships of war of belligerents. The term, however, has come to be used in a broader sense than this, so as to include an arrangement whereby protection is sought to be guaranteed against hostile attack or hostile interruption, while the same freedom of use is sought to be assured in war as in peace.

Unless the word "neutralization" is to be given a new and strange meaning, the general principle established by the Clayton-Bulwer treaty has not been impaired by the act of August 24, 1912. The canal will be free and open on terms of entire equality to the vessels of commerce and of war of all nations that observe the rules the United States has laid down for the neutralization of the canal.

To support their claim that Great Britain has equal rights with the United States in the Panama Canal, the opponents of free tolls are obliged to change the plain and well-understood meaning of words, read into the new treaty the language of a superseded convention, and ignore the fundamental rights of the United States as the sovereign proprietor of the canal and the sole guarantor of its neutrality.

Whatever differences may exist as to the right of the United States to exempt its foreign shipping from the payment of tolls, I do not see how other nations are concerned in any preference we may give to our coastwise trade. For nearly a hundred years that trade has been reserved by law to vessels of the United States, and no foreign ship can engage in it. In his note of November 11, 1912, Sir Edward Grey, in trying to demonstrate the inability of this Government to confine the exemption to the coastwise trade, used the following illustration:

> To take an example, if cargo intended for a United States port beyond the canal, either from east or west, and shipped on board a foreign ship, could be sent to its destination more cheaply through the operation of the proposed exemption by being landed at a United States port before reaching the canal and then sent on as coastwise trade, shippers would benefit by adopting this course in preference to sending the goods direct to their destination through the canal on board the foreign ship.

Without discussing the question whether such a practice as Sir Edward Grey suggested would ever be adopted, the point was well met by Secretary of State Knox in his note of January 17, 1913, when he said that it rested upon conjecture as to what may happen rather than upon approved facts. If the practice of unloading foreign goods at an American port at either side of the canal and reloading them upon an American vessel for passage through the canal as coastwise trade were attempted, there is no doubt of the ability of this Government to frame regulations that would effectually stop the practice. The mere suggestion, of course, that such a thing might be attempted is not an argument showing or tending to show that the present law violates the treaty, nor does it afford any justification for its repeal.

Sir Edward Grey is apprehensive that the remission of tolls to our coastwise trade would violate the rule that the tolls levied shall be just and equitable by requiring foreign shipping to pay an unjust share of the cost of the upkeep of the canal. He holds, therefore, that his Government is entitled to demand that all vessels passing through the canal, whatever their flag or character, shall be taken into account in fixing the amount of the tolls. It would seem to be a complete answer to this argument that all vessels were taken into account in fixing the amount of the tolls. It would also seem to be a complete answer to this argument that all vessels were taken into account in fixing the maximum toll in the Panama Canal act of $1.25 per net registered ton.

Subdivision 1 of article 3 of the Hay-Pauncefote treaty provides:

> 1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against such nation, or its citizens or subjects, in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

This rule simply says that all those nations observing the rules laid down by the United States will be treated without any discrimination, the one against the other. This is in harmony with the "general principle" contained in section 8 of the Clayton-Bulwer treaty. The United States is the only Nation upon which any obligations are imposed in connection with the construction, operation, protection, and maintenance of the canal. All other nations are free from any obligations of any kind, and according to that "principle" the nations without obligations are to be treated alike, while the nation with obligations may receive different treatment.

It seems to me there is no room for argument and no room for construction.

While the meaning of this article and of this rule must be arrived at from the language used, the construction that I have given to it is confirmed by what would result from any different construction. If we are to hold that the United States can show no preference to American vessels, then we must say to the people of this country that their money has built the canal; they must maintain it and operate it at their own expense; they must protect it from disorder, from lawlessness, and from damage; they must maintain its neutrality at the possible expense of blood and treasure; and, notwithstanding all this, the vessels of war of the United States can not go through the canal except upon the same conditions, with the same restraints, and the same charges which the vessels of war of any other nation must bear and pay, and that the vessels of citizens of the United States can not go through the canal without paying the same charges that are paid by the vessels of the citizens of other countries who have no obligations and who have been to no expense in connection with the canal.

For the first time in American history it is proposed to hold up at a tollgate an American vessel engaged in interstate trade and exact from it the same tribute we demand from a foreign vessel flying a foreign flag.

Former President Taft, in an effort to place upon the Hay-Pauncefote treaty a construction which would make it adaptable to the changed conditions which have resulted since the acquisi-

tion of the Canal Zone by the United States, treated the words "all nations," used in subdivision 1 of article 3 of the Hay-Pauncefote treaty, as excluding the United States.

The fundamental fact in reference to which the Hay-Pauncefote treaty was made was that the canal was to be constructed in territory alien to the United States. The Hay-Pauncefote treaty did not even definitely decide upon the Panama route, but provided for the construction of a ship canal to connect the Atlantic and Pacific Oceans "by whatever route may be considered expedient." The treaty contemplated merely that the canal should be constructed "under the auspices" of the United States, not in the territory of the United States. That the United States did not contemplate the actual acquisition of the territory in which the canal was to be constructed is conclusively evidenced by the fact that the Senate ratified the treaty with Colombia, which merely provided for constructing the canal "under the auspices" of the United States, and did not contemplate the cession of territory to the United States. The failure of Colombia to fulfill the promise of its accredited representative, the bitterness and spirit of revolt which that refusal engendered among the people of the State of Panama, led to the revolution which resulted in the secession of Panama from Colombia.

The United States having been betrayed by Colombia, President Roosevelt took the action which resulted in the United States securing the grant from Panama. Under that grant the Canal Zone became part of the territory of the United States and subject to its sovereignty, and the United States from that time on possessed the same exclusive rights over it that it possessed in reference to any other territory which it acquired by cession or conquest.

In that, since 1817, the law has been that no foreign vessels can engage in coastwise trade in the United States, where is the discrimination against foreign vessels when they are charged a toll? If our vessels of commerce are to pay toll, will not our vessels of war have to pay toll? "The canal shall be free and open to the vessels of commerce and of war of all nations," and so forth, being subdivision 1 of article 3. The language applies to both. Therefore I ask do the words "all nations" apply to the United States? I think not. Is it seriously contended that the United States Government must pay tolls on its war vessels, or on other vessels, for that matter? Such a claim can not be sustained, and yet other Governments using the Panama Canal are obliged to pay such toll. It was not the passage of ships of commerce that moved this country to action. The dominant thought was one of military strategic importance. The power to build the canal rests in the war power of the United States. It was not the question of commerce, but the question of protection for our country. The Nation knew how helpless it would be if, with its Navy in the eastern waters, it were attacked upon the Pacific coast. But with her Navy in the Panama Canal and the northern waters a great element of strength would be added to our power and usefulness and ability in the line of self-defense. We are a peace-loving Nation, Mr. Speaker, but we must be prepared to defend our rights and possessions.

The inland lake of the canal provides a harbor of refuge for our Navy, which may attack at either ocean. It is perfectly clear that if we can not prefer vessels of commerce we have no authority to keep a war vessel in time of war with any other country within 3 marine miles of either end of the canal. If during war with a foreign power we find an enemy's man-of-war in the canal, we can not drive it out; and if it leaves, we must wait 24 hours before following. If engaged in war, our ships must leave the canal within 24 hours.

If the reasoning applied to vessels of commerce must be applied to vessels of war, of what value is the canal to the United States in time of war if such a contention is sustained? Its value is lost. That no such thing was contemplated may be determined by reading article 2 of the Hay-Pauncefote treaty.

Article 3 of the Hay-Pauncefote treaty provides that:

The United States adopts as the basis of neutralization of such ship canal the following rules, substantially as embodied in the convention of Constantinople, signed the 28th of October, 1888, for the free navigation of the Suez Canal; that is to say—

And so forth.

You will note the omission of reference to Great Britain in that paragraph. To my mind that is significant. We therein agreed not to use the canal to favor any other country, the rules to be applied by and to other nations as the condition under which we will allow them to use the canal.

We have the exclusive right of providing for the regulations and management of the canal.

A highly important phase of the situation are the rights and obligations of the United States in the treaty of November 18, 1903, known as the Hay-Bunau-Varilla treaty. This was entered into nearly two years after the Hay-Pauncefote treaty was signed, the United States being represented in both instances by Secretary Hay.

The voice of Great Britain was not raised in protest. The Republic of Panama granted to the United States all the rights, power, and authority within the zone mentioned and described in article 11 of the treaty, and within the limits of all auxiliary lands and waters mentioned and described in said article 11 which the United States would possess and exercise if it were the sovereign of the territory within which said lands and waters are located to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority.

Every true American is supremely proud of the accomplishment of the United States in successfully constructing the Panama Canal. The work is one of the greatest engineering achievements of mankind. It is a monument to the industry, resourcefulness, and skill of the Nation which constructed it. And it represents an expenditure of the enormous sum of $400,000,000. It is estimated that within a year of the time it is opened a net amount aggregating 10,000,000 tons will pass through the canal. The Panama route will have a monopoly of the traffic of Hawaii and of the west coast of North and South America, with the exception of a small part of the trade of southern Chile. The canal will cut down the distance from New York to San Francisco about 8,500 miles, and from New York to Australia about 4,000 miles. A 9-knot vessel going from New York to Chile will save 23 days. The saving of time and money which will result to those engaged in the world's commerce by the use of the Panama Canal will be indeed difficult to estimate.

Our sovereignty over the Canal Zone is complete. Therefore, the Panama Canal is constructed through our territory and becomes a part of our coastwise highway—connecting the Atlantic and Pacific. The question of our absolute exclusive control of coastwise traffic admitted, what is there at issue that can be construed as anything but of a national character? I can see nothing.

Then may we ask, how is a foreign power concerned? As is our right we can and will deal with regulation and management of the canal, so that there shall be no discrimination against any other nation observing the rules prescribed by the United States for such regulation and management of the canal without violating any treaty or surrendering any rights as a Government, and yet retain the exclusive right to manage, control, and operate as part of our own territory, for our own benefit, without impairing the general principle of neutralization established in article 8 of the Clayton-Bulwer treaty and without violating the Hay-Bunau-Varilla treaty.

Originally it was contemplated that corporations, and not governments, should build the Panama Canal. Examination of the reports of the debates in the United States Senate on this question affords a vast quantity of enlightening information, and those who consequently believe that there is no violation of the Hay-Pauncefote treaty find in these Senate debates the strongest kind of support for their conclusions.

It has been urged that the transcontinental railroads and other private interests have from the beginning been eagerly welcoming discord over the tolls question. It is clear that the higher the water rates will be, the higher the rates by rail, and the converse is also true. It is urged that the consumer will get the benefit of free tolls, for the reason that all freight rates are charged against the commodities transported.

The platform promises of the Democratic Party regarding free tolls for the Panama Canal are to be sustained, unless we have violated our treaty with Great Britain, which I do not believe we have done. Therefore, I think that the action of the Sixty-second Congress providing for free tolls should not be undone.

I note that my predecessor, Mr. Henry, voted affirmatively for the resolution for free tolls.

It is provided by law that no railroad-owned or trust-controlled ship can use the canal. The Democratic Party will be able to cope with the situation in event of attempted abuse of this provision.

A VIGOROUS AMERICAN CANAL POLICY ADVOCATED BY FORMER PRESIDENTS OF THE UNITED STATES.

PRESIDENT PIERCE.

It would be difficult to suggest a single object of interest, external or internal, more important to the United States than the maintenance of the communication by land or sea, between the Atlantic and Pacific States and Territories. It is a material element of the national integrity and sovereignty. (President Pierce, in message to Congress, May 15, 1856.)

PRESIDENT BUCHANAN.

The Government of the United States can never permit these routes to be permanently interrupted, nor can it safely allow them to pass under the control of other rival nations. It can never consent to be made tributary to their use to any European power. (President James Buchanan, in message to the United States Senate, Apr. 5, 1860.)

PRESIDENT HAYES.

The policy of this country is a canal under American control. The United States can not consent to the surrender of this control to any European power or to any combination of European powers. * * * The United States must exercise such control as will enable this country to protect its national interests. * * *

An interoceanic canal across the American Isthmus will essentially change the geographical relations between the Atlantic and Pacific coasts of the United States and between the United States and the rest of the world. It would be the great ocean thoroughfare between our Atlantic and our Pacific shores, and virtually a part of the coast line of the United States. Our merely commercial interest in it is greater than that of all other countries, while its relations to our power and prosperity as a nation, to our means of defense, our unity, peace, and safety, are matters of paramount concern to the people of the United States. No other great power would, under similar circumstances, fail to assert a rightful control over a work so closely and vitally affecting its interest and welfare.

Without urging further the grounds of my opinion, I repeat, in conclusion, that it is the right and the duty of the United States to assert and maintain such supervision and authority over any interoceanic canal across the Isthmus that connects North and South America as will protect our national interests. This, I am quite sure, will be found not only compatible with but promotive of the widest and most permanent advantage to commerce and civilization. (President Rutherford B. Hayes, in message to Congress, Feb. 10, 1880.)

PRESIDENT GRANT.

In accordance with the early and later policy of the Government, in obedience to the often-expressed will of the American people, with a due regard to our national dignity and power, with a watchful care for the safety and prosperity of our interests and industries on this continent, and with a determination to guard against even the first approach of rival powers, whether friendly or hostile, on these shores, I commend an American canal, on American soil, to the American people. * * *

During my administration of the Government I endeavored to impress upon the country the views I then formed, and I shall feel that I have added one more act of my life to those I have already recorded if I shall succeed in impressing upon Congress and the people the high value as a commercial and industrial enterprise of this great work, which, if not accomplished by Americans, will undoubtedly be accomplished by some one of our rivals in power and influence. (Signed article by former President Grant, appearing in the North American Review, February, 1881.)

PRESIDENT ARTHUR.

The questions growing out of the proposed interoceanic waterway across the Isthmus of Panama are of grave importance. * * * This Government learned that Colombia had proposed to the European powers to join in a guaranty of the neutrality of the proposed Panama Canal—a guaranty which would be in direct contravention of our obligation as the sole guarantor of the integrity of Colombian territory and of the neutrality of the canal itself. My lamented predecessor felt it his duty to place before the European powers the reasons which make the prior guaranty of the United States indispensable and for which the interjection of any foreign guaranty might be regarded as a superfluous and unfriendly act. (President Arthur, in message to Congress, Dec. 6, 1881.)

PRESIDENT M'KINLEY.

That the construction of such a maritime highway is now more than ever indispensable to that intimate and ready intercommunication between our eastern and western seaboards demanded by the annexation of the Hawaiian Islands and the prospective expansion of our influence and commerce on the Pacific, and that our national policy, now more imperatively than ever, calls for its control by this Government, are propositions which I doubt not the Congress will duly appreciate and wisely act upon. (President McKinley, in message to Congress, Dec. 5, 1898.)

PRESIDENT ROOSEVELT.

I believe that the position of the United States is proper as regards this coastwise traffic. I think that we have the right to free bona fide coastwise traffic from tolls. I think that this does not interfere with the rights of any other nation, because no ships but our own can engage in coastwise traffic, so that there is no discrimination against other ships when we relieve the coastwise traffic from tolls. I believe that the only damage that would be done is the damage to the Canadian Pacific Railway. Moreover, I do not think that it sits well on the representatives of any foreign nation, even upon those of a power with which we are, and I hope and believe will always remain, on such good terms as Great Britain, to make any plea in reference to what we do with our own coastwise traffic, because we are benefiting the whole world by our action at Panama, and are doing this where every dollar of expense is paid by ourselves. In all history I do not believe you can find another instance where as great and expensive a work as the Panama Canal, undertaken not by a private corporation but by a nation, has ever been as generously put at the service of all the nations of mankind. (Extract from letter of Theodore Roosevelt in Outlook, Jan. 18, 1913.)

PRESIDENT TAFT.

I am very confident that the United States has the power to relieve from the payment of tolls any part of our shipping that Congress deems wise. We own the canal. It was our money that built it. We have the right to charge tolls for its use. Those tolls must be the same for everyone. But, when we are dealing with our own ships, the practice of many Governments in subsidizing their own merchant vessels is so well established in general that a subsidy equal to the tolls, or an equivalent remission of the tolls, can not be held to be a discrimination in the use of the canal. (President Taft, in message to Congress, Dec. 21, 1911.)

THE TREATIES.

Following will be found the full text of the various treaties relating to the Panama Canal:

CLAYTON-BULWER TREATY.

Convention as to ship canal connecting Atlantic and Pacific Oceans, 1850. (Clayton-Bulwer treaty.) Concluded April 19, 1850; ratification advised by the Senate May 22, 1850; ratified by the President May 23, 1850; ratifications exchanged July 4, 1850; proclaimed July 5, 1850. (Treaties and Conventions, 1889, p. 440.)

ARTICLES.

1. Declarations as to control of canal, occupation of territory, and commercial advantages.
2. Neutrality of canal in case of war.
3. Protection of construction.
4. Mutual influence to facilitate construction.
5. Guaranty of neutrality.
6. Cooperation of other States.
7. Mutual encouragement to speedy construction.
8. Protection to other communications.
9. Ratification.

The United States of America and Her Britannic Majesty, being desirous of consolidating the relations of amity which so happily subsist between them, by setting forth and fixing in a convention their views and intentions with reference to any means of communication by ship canal which may be constructed between the Atlantic and Pacific Oceans by the way of the River San Juan de Nicaragua and either or both of the Lakes of Nicaragua or Managua to any port or place on the Pacific Ocean, the President of the United States has conferred full powers on John M. Clayton, Secretary of State of the United States; and Her Britannic Majesty on the Right Hon. Sir Henry Lytton Bulwer, a member of Her Majesty's Most Honorable Privy Council, Knight Commander of the Most Honorable Order of the Bath, and envoy extraordinary and minister plenipotentiary of Her Britannic Majesty to the United States, for the aforesaid purpose; and the said plenipotentiaries having exchanged their full powers, which were found to be in proper form, have agreed to the following articles:

ARTICLE 1.

The Governments of the United States and Great Britain hereby declare that neither the one nor the other will ever obtain or maintain for itself any exclusive control over the said ship canal; agreeing that neither will ever erect or maintain any fortifications commanding the same, or in the vicinity thereof, or occupy, or fortify, or colonize, or assume or exercise any dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America; nor will either make use of any protection which either affords or may afford, or any alliance which either has or may have, to or with any State or people for the purpose of erecting or maintaining any such fortifications, or of occupying, fortifying, or colonizing Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America, or of assuming or exercising dominion over the same; nor will the United States or Great Britain take advantage of any intimacy, or use any alliance, connection, or influence that either may possess with any State or Government through whose territory the said canal may pass, for the purpose of acquiring or holding, directly or indirectly, for the citizens or subjects of the one, any rights or advantages in regard to commerce or navigation through the said canal which shall not be offered on the same terms to the citizens or subjects of the other.

ARTICLE 2.

Vessels of the United States or Great Britain traversing the said canal shall, in case of war between the contracting parties, be exempted from blockade, detention, or capture by either of the belligerents; and this provision shall extend to such a distance from the two ends of the said canal as may hereafter be found expedient to establish.

ARTICLE 3.

In order to secure the construction of the said canal, the contracting parties engage that if any such canal shall be undertaken upon fair and equitable terms by any parties having the authority of the local Government or Governments through whose territory the same may pass, then the persons employed in making the said canal and their property used, or to be used, for that object shall be protected from the commencement of the said canal to its completion by the Governments of the United States and Great Britain from unjust detention, confiscation, seizure, or any violence whatsoever.

ARTICLE 4.

The contracting parties will use whatever influence they respectively exercise with any State, States, or Governments possessing or claiming to possess any jurisdiction or right over the territory which the said canal shall traverse, or which shall be near the waters applicable thereto, in order to induce such States or Governments to facilitate the construction of the said canal by every means in their power; and, furthermore, the United States and Great Britain agree to use their good offices, wherever or however it may be most expedient, in order to procure the establishment of two free ports—one at each end of the said canal.

ARTICLE 5.

The contracting parties further engage that when the said canal shall have been completed they will protect it from interruption, seizure, or unjust confiscation, and that they will guarantee the neutrality thereof, so that the said canal may forever be open and free, and the capital invested therein secure. Nevertheless, the Governments of the United States and Great Britain in according their protection to the construction of the said canal and guaranteeing its neutrality and security when completed, always understand that this protection and guaranty are granted conditionally, and may be withdrawn by both Governments or either Government, if both Governments or either Government, should deem that the persons or company undertaking or managing the same, adopt or establish such regulations concerning the traffic thereupon, as are contrary to the spirit and intention of this convention—either by making unfair discriminations in favor of the commerce of one of the contracting parties over the commerce of the other, or by imposing oppressive exactions or unreasonable tolls upon passengers, vessels, goods, wares, merchandise, or other articles. Neither party, however, shall withdraw the aforesaid protection and guaranty without first giving six months' notice to the other.

ARTICLE 6.

The contracting parties in this convention engage to invite every State with which both or either have friendly intercourse, to enter into stipulations with them similar to those which they have entered into with each other to the end that all other States may share in the honor and advantage of having contributed to a work of such general interest and importance as the canal herein contemplated. And the contracting parties likewise agree that each shall enter into treaty stipulations with such of the Central American States as they may deem advisable for the purpose of more effectually carrying out the great design of this convention, namely, that of constructing and maintaining the said canal as a ship communication between the two oceans for the benefit of mankind on equal terms to all, and of protecting the same; and they also agree that the good offices of either shall be employed, when requested by the other, in aiding and assisting the negotiations of such treaty stipulations; and, should any dif-

ferences arise as to right of property over the territory through which the said canal shall pass—between the States of Governments of Central America—and such difference should, in any way impede or obstruct the execution of the said canal, the Governments of the United States and Great Britain will use their good offices to settle such differences in the manner best suited to promote the interests of the said canal and to strengthen the bonds of friendship and alliance which exist between the contracting parties.

ARTICLE 7.

It being desirable that no time should be unnecessarily lost in commencing and constructing the said canal, the Governments of the United States and Great Britain determine to give their support and encouragement to such persons, or company, as may first offer to commence the same, with the necessary capital, the consent of the local authorities, and on such principles as accord with the spirit and intention of this convention; and if any persons or company should already have, with any State through which the proposed ship canal may pass, a contract for the construction of such a canal as that specified in this convention—to the stipulations of which contract neither of the contracting parties in this convention have any just cause to object—and the said persons or company shall, moreover, have made preparations and expended time, money, and trouble on the faith of such contract, it is hereby agreed that such persons or company, shall have a priority of claim over every other person, persons, or company to the protection of the Governments of the United States and Great Britain, and be allowed a year from the date of the exchange of the ratifications of this convention for concluding their arrangements and presenting evidence of sufficient capital subscribed to accomplish the contemplated undertaking, it being understood that if, at the expiration of the aforesaid period, such persons or company be not able to commence and carry out the proposed enterprise, then the Governments of the United States and Great Britain shall be free to afford their protection to any other persons or company that shall be prepared to commence and proceed with the construction of the canal in question.

ARTICLE 8.

The Governments of the United States and Great Britain having not only desired in entering into this convention to accomplish a particular object but also to establish a general principle, they hereby agree to extend their protection, by treaty stipulations, to any other practicable communications, whether by canal or railway, across the isthmus which connects North and South America, and especially to the interoceanic communications—should the same prove to be practicable, whether by canal or railway—which are now proposed to be established by the way of Tehuantepec or Panama. In granting, however, their joint protection to any such canals or railways as are by this article specified it is always understood by the United States and Great Britain that the parties constructing or owning the same shall impose no other charges or conditions of traffic thereupon than the aforesaid Governments shall approve of as just and equitable, and that the same canals or railways, being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other State which is willing to grant thereto such protection as the United States and Great Britain engage to afford.

ARTICLE 9.

The ratifications of this convention shall be exchanged at Washington within six months from this day, or sooner, if possible.

In faith whereof we, the respective plenipotentiaries, have signed this convention and have hereunto affixed our seals.

Done at Washington the 19th day of April, A. D. 1850.

JOHN M. CLAYTON. [SEAL.]
HENRY LYTTON BULWER. [SEAL.]

HAY-PAUNCEFOTE TREATY.

Treaty between the United States and Great Britain to facilitate the construction of a ship canal. Signed at Washington, November 18, 1901; ratification advised by the Senate, December 16, 1901; ratified by the President, December 26, 1901; ratified by Great Britain, January 20, 1902; ratifications exchanged at Washington, February 21, 1902; proclaimed, February 22, 1902.

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA.

A PROCLAMATION.

Whereas a convention between the United States of America and the United Kingdom of Great Britain and Ireland, to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end to remove any objection which may arise out of the convention of the 19th April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the "general principle" of neutralization established in article 8 of that convention, was concluded and signed by their respective plenipotentiaries at the city of Washington on the 18th day of November, 1901, the original of which convention is word for word as follows:

The United States of America and His Majesty Edward the Seventh, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, and Emperor of India, being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end to remove any objection which may arise out of the convention of the 19th April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of principle" of neutralization established in article 8 of that convention, have for that purpose appointed as their plenipotentiaries—

The President of the United States, John Hay, Secretary of State of the United States of America;

And His Majesty Edward VII, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, and Emperor of India, the Right Hon. Lord Pauncefote, G. C. B., G. C. M. G., His Majesty's ambassador extraordinary and plenipotentiary to the United States, who, having communicated to each other their full powers which were found to be in due and proper form, have agreed upon the following articles:

ARTICLE 1.

The high contracting parties agree that the present treaty shall supersede the aforementioned convention of the 19th April, 1850.

ARTICLE 2.

It is agreed that the canal may be construed under the auspices of the Government of the United States, either directly at its own cost, or by gift or loan of money to individuals or corporations, or through the Government of the United States; without impairing the "general subscription to or purchase of stock or shares, and that, subject to the provisions of the present treaty, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

ARTICLE 3.

The United States adopts, as the basis of the neutralization of such ship canal, the following rules, substantially as embodied in the convention of Constantinople, signed the 28th October, 1888, for the free navigation of the Suez Canal; that is to say:

1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary; and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service.

Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.

4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

5. The provisions of this article shall apply to waters adjacent to the canal, within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time, except in case of distress, and in such case shall depart as soon as possible; but a vessel of war of one belligerent shall not depart within 24 hours from the departure of a vessel of war of the other belligerent.

6. The plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal shall be deemed to be part thereof, for the purposes of this treaty, and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents and from acts calculated to impair their usefulness as part of the canal.

ARTICLE 4.

It is agreed that no change of territorial sovereignty or of the international relations of the country or countries traversed by the before-mentioned canal shall affect the general principle of neutralization or the obligation of the high contracting parties under the present treaty.

ARTICLE 5.

The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by His Britannic Majesty; and the ratifications shall be exchanged at Washington or at London at the earliest possible time within six months from the date thereof.

In faith whereof the respective plenipotentiaries have signed this treaty and thereunto affixed their seals.

Done in duplicate at Washington, the 18th day of November, in the year of our Lord one thousand nine hundred and one.

JOHN HAY. [SEAL.]
PAUNCEFOTE. [SEAL.]

And whereas the said convention has been duly ratified on both parts, and the ratification of the two Governments were exchanged in the city of Washington on the 21st day of February, 1902:

Now, therefore, be it known that I, Theodore Roosevelt, President of the United States of America, have caused the said convention to be made public, to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this 22d day of February, in the year of our Lord 1902, and of the independence of the United States the one hundred and twenty-sixth.

[SEAL.] THEODORE ROOSEVELT.

By the President:
JOHN HAY,
Secretary of State.

PANAMA TREATY.

[Copy of convention between the United States and the Republic of Panama for the construction of a ship canal to connect the waters of the Atlantic and Pacific Oceans.]

PANAMA—SHIP CANAL.

CONVENTION

BETWEEN THE UNITED STATES AND THE REPUBLIC OF PANAMA FOR THE CONSTRUCTION OF A SHIP CANAL TO CONNECT THE WATERS OF THE ATLANTIC AND PACIFIC OCEANS.

Signed at Washington, November 18, 1903.
Ratification advised by the Senate, February 23, 1904.
Ratified by the President, February 25, 1904.
Ratified by Panama, December 2, 1903.
Ratifications exchanged at Washington, February 26, 1904.
Proclaimed, February 26, 1904.

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA.

A PROCLAMATION.

Whereas, a convention between the United States of America and the Republic of Panama to insure the construction of a ship canal across the Isthmus of Panama to connect the Atlantic and Pacific Oceans, was concluded and signed by their respective plenipotentiaries at Washington on the 18th day of November, 1903, the original of which convention, being in the English language, is word for word as follows:

ISTHMIAN CANAL CONVENTION.

The United States of America and the Republic of Panama, being desirous to insure the construction of a ship canal across the Isthmus of Panama to connect the Atlantic and Pacific Oceans, and the Congress of the United States of America having passed an act approved June 28, 1902, in furtherance of that object, by which the President of the United States is authorized to acquire within a reasonable time the control of the necessary territory of the Republic of Colombia, and the sovereignty of such territory being actually vested in the Republic of Panama, the high contracting parties have resolved for that purpose to conclude a convention and have accordingly appointed as their plenipotentiaries—

The President of the United States of America, John Hay, Secretary of State; and

The Government of the Republic of Panama, Philippe Bunau-Varilla, envoy extraordinary and minister plenipotentiary of the Republic of Panama, thereunto specially empowered by said Government, who after communicating with each other their respective full powers, found to be in good and due form, have agreed upon and concluded the following articles:

ARTICLE 1.

The United States guarantees and will maintain the independence of the Republic of Panama.

ARTICLE 2.

The Republic of Panama grants to the United States in perpetuity the use, occupation, and control of a zone of land and land under water for the construction, maintenance, operation, sanitation, and protection of said canal of the width of 10 miles, extending to the distance of 5 miles on each side of the center line of the route of the canal to be constructed; the said zone beginning in the Caribbean Sea 3 marine miles from mean low-water mark and extending to and across the Isthmus of Panama into the Pacific Ocean to a distance of 3 marine miles from mean low-water mark, with the proviso that the cities of Panama and Colon and the harbors adjacent to said cities, which are included within the boundaries of the zone above described, shall not be included within this grant. The Republic of Panama further grants to the United States in perpetuity the use, occupation, and control of any other lands and waters outside of the zone above described which may be necessary and convenient for the construction, maintenance, operation, sanitation, and protection of the said canal or of any auxiliary canals or other works necessary and convenient for the construction, maintenance, operation, sanitation, and protection of said enterprise.

The Republic of Panama further grants in like manner to the United States in perpetuity all islands within the limits of the zone above described, and in addition thereto the group of small islands in the Bay of Panama, named Perico, Naos, Culebra, and Flamenco.

ARTICLE 3.

The Republic of Panama grants to the United States all the rights, power, and authority within the zone mentioned and described in article 2 of this agreement and within the limits of all auxiliary lands and waters mentioned and described in said article 2 which the United States would possess and exercise, if it were sovereign of the territory within which said lands and waters are located, to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority.

ARTICLE 4.

As rights subsidiary to the above grants the Republic of Panama grants in perpetuity to the United States the right to use the rivers, streams, lakes, and other bodies of water within its limits for navigation, the supply of water, or water power, or other purposes, so far as the use of said rivers, streams, lakes, and bodies of water, and the waters thereof may be necessary and convenient for the construction, maintenance, operation, sanitation, and protection of the said canal.

ARTICLE 5.

The Republic of Panama grants to the United States in perpetuity a monopoly for the construction, maintenance, and operation of any system of communication by means of canal or railroad across its territory between the Caribbean Sea and the Pacific Ocean.

ARTICLE 6.

The grants herein contained shall in no manner invalidate the titles or rights of private land holders or owners of private property in the said zone or in or to any of the lands or waters granted to the United States by the provisions of any article of this treaty, nor shall they interfere with the rights of way over the public roads passing through the said zone or over any of the said lands or waters unless said rights of way or private rights shall conflict with rights herein granted to the United States in which case the rights of the United States shall be superior. All damages caused to the owners of private lands or private property of any kind by reason of the grants contained in this treaty or by reason of the operations of the United States, its agents or employees, or by reason of the construction, maintenance, operation, sanitation, and protection of the said canal or of the works of sanitation and protection herein provided for, shall be appraised and settled by a joint commission appointed by the Governments of the United States and the Republic of Panama, whose decisions as to such damages shall be final and whose awards as to such damages shall be paid solely by the United States. No part of the work on said canal or the Panama Railroad or on any auxiliary works relating thereto and authorized by the terms of this treaty shall be prevented, delayed, or impeded by or pending such proceedings to ascertain such damages. The appraisal of said private lands and private property and the assessment of damages to them shall be based upon their value before the date of this convention.

ARTICLE 7.

The Republic of Panama grants to the United States within the limits of the cities of Panama and Colon and their adjacent harbors and within the territory adjacent thereto the right to acquire by purchase or by the exercise of the right of eminent domain, any lands, buildings, water rights, or other properties necessary and convenient for the construction, maintenance, operation, and protection of the canal and of any works of sanitation, such as the collection and disposition of sewage and the distribution of water in the said cities of Panama and Colon, which, in the discretion of the United States may be necessary and convenient for the construction, maintenance, operation, sanitation, and protection of the said canal and railroad. All such works of sanitation, collection and disposition of sewage, and distribution of water in the cities of Panama and Colon shall be made at the expense of the United States, and the Government of the United States, its agents, or nominees shall be authorized to impose and collect water rates and sewage rates which shall be sufficient to provide for the payment of interest and the amortization of the principal of the cost of said works within a period of 50 years and upon the expiration of said term of 50 years the system of sewers and waterworks shall revert to and become the properties of the cities of Panama and Colon respectively, and the use of the water shall be free to the inhabitants of Panama and Colon, except to the extent that water rates may be necessary for the operation and maintenance of said system of sewers and water.

The Republic of Panama agrees that the cities of Panama and Colon shall comply in perpetuity with the sanitary ordinances whether of a preventive or curative character prescribed by the United States, and in case the Government of Panama is unable or fails in its duty to enforce this compliance by the cities of Panama and Colon with the sanitary ordinances of the United States the Republic of Panama grants to the United States the right and authority to enforce the same.

The same right and authority are granted to the United States for the maintenance of public order in the cities of Panama and Colon and the territories and harbors adjacent thereto in case the Republic of Panama should not be, in the judgment of the United States, able to maintain such order.

ARTICLE 8.

The Republic of Panama grants to the United States all rights which it now has or hereafter may acquire to the property of the New Panama Canal Co. and the Panama Railroad Co. as a result of the transfer of sovereignty from the Republic of Colombia to the Republic of Panama over the Isthmus of Panama and authorizes the New Panama Canal Co. to sell and transfer to the United States its rights, privileges, properties, and concessions, as well the Panama Railroad and all the shares or part of the shares of that company; but the public lands situated outside of the zone described in article 2 of this treaty now included in the concessions to both said enterprises and not required in the construction or operation of the canal shall revert to the Republic of Panama, except any property now owned by or in the possession of said companies within Panama or Colon or the ports or terminals thereof.

ARTICLE 9.

The United States agrees that the ports at either entrance of the canal and the waters thereof, and the Republic of Panama agrees that the towns of Panama and Colon shall be free for all time so that there shall not be imposed or collected customhouse tolls, tonnage, anchorage, lighthouse, wharf, pilot, or quarantine dues or any other charges or taxes of any kind upon any vessel using or passing through the canal or belonging to or employed by the United States, directly or indirectly, in connection with the construction, maintenance, operation, sanitation, and protection of the main canal, or auxiliary works, or upon the cargo, officers, crew, or pasengers of any such vessels, except such tolls and charges as may be imposed by the United States for the use of the canal and other works, and except tolls and charges imposed by the Republic of Panama upon merchandise destined to be introduced for the consumption of the rest of the Republic of Panama, and upon vessels touching at the ports of Colon and Panama and which do not cross the canal.

The Government of the Republic of Panama shall have the right to establish in such ports and in the towns of Panama and Colon such houses and guards as it may deem necessary to collect duties on importations destined to other portions of Panama and to prevent contraband trade. The United States shall have the right to make use of the towns and harbors of Panama and Colon as places of anchorage, and for making repairs, for loading, unloading, depositing, or transshipping cargoes either in transit or destined for the service of the canal and for other works pertaining to the canal.

ARTICLE 10.

The Republic of Panama agrees that there shall not be imposed any taxes, national, municipal, departmental, or of any other class, upon the canal, the railways and auxiliary works, tugs and other vessels employed in the service of the canal, storehouses, workshops, offices, quarters for laborers, factories of all kinds, warehouses, wharves, machinery, and other works, property, and effects appertaining to the canal or railroad and auxiliary works, or their officers or employees, situated within the cities of Panama and Colon, and that there shall not be imposed contributions or charges of a persona character of any kind upon officers, employees, laborers, and other individuals in the service of the canal and railroad and auxiliary works.

ARTICLE 11.

The United States agrees that the official dispatches of the Government of the Republic of Panama shall be transmitted over any telegraph and telephone lines established for canal purposes and used for public and private business at rates not higher than those required from officials in the service of the United States.

ARTICLE 12.

The Government of the Republic of Panama shall permit the immigration and free access to the lands and workshops of the canal and its auxiliary works of all employees and workmen of whatever nationality under contract to work upon or seeking employment upon or in any wise connected with the said canal and its auxiliary works, with their respective families, and all such persons shall be free and exempt from the military service of the Republic of Panama.

ARTICLE 13.

The United States may import at any time into the said zone and auxiliary lands, free of customs duties, imposts, taxes, or other charges, and without any restrictions, any and all vessels, dredges, engines, cars, machinery, tools, explosives, materials, supplies, and other articles necessary and convenient in the construction, maintenance, operation, sanitation and protection of the canal and auxiliary works, and all provisions, medicines, clothing, supplies, and other things necessary and convenient for the officers, employees, workmen, and laborers in the service and employ of the United States and for their families. If any such articles are disposed of for use outside of the zone and auxiliary lands granted to the United States and within the territory of the Republic, they shall be subject to the same import or other duties as like articles imported under the laws of the Republic of Panama.

ARTICLE 14.

As the price or compensation for the rights, powers, and privileges granted in this convention by the Republic of Panama to the United States, the Government of the United States agrees to pay to the Republic of Panama the sum of $10,000,000 in gold coin of the United States on the exchange of the ratification of this convention and also

an annual payment during the life of this convention of $250,000 in like gold coin, beginning nine years after the date aforesaid.

The provisions of this article shall be in addition to all other benefits assured to the Republic of Panama under this convention.

But no delay or difference of opinion under this article or any other provisions of this treaty shall affect or interrupt the full operation and effect of this convention in all other respects.

ARTICLE 15.

The joint commission referred to in article 6 shall be established as follows:

The President of the United States shall nominate two persons and the President of the Republic of Panama shall nominate two persons, and they shall proceed to a decision; but in case of disagreement of the commission (by reason of their being equally divided in conclusion) an umpire shall be appointed by the two Governments, who shall render the decision. In the event of the death, absence, or incapacity of a commissioner or umpire, or of his omitting, declining, or ceasing to act, his place shall be filled by the appointment of another person in the manner above indicated. All decisions by a majority of the commission or by the umpire shall be final.

ARTICLE 16.

The two Governments shall make adequate provision by future agreement for the pursuit, capture, imprisonment, detention, and delivery within said zone and auxiliary lands to the authorities of the Republic of Panama of persons charged with the commitment of crimes, felonies, or misdemeanors without said zone, and for the pursuit, capture, imprisonment, detention, and delivery without said zone to the authorities of the United States of persons charged with the commitment of crimes, felonies, and misdemeanors within said zone and auxiliary lands.

ARTICLE 17.

The Republic of Panama grants to the United States the use of all the ports of the Republic open to commerce as places of refuge for any vessels employed in the canal enterprise and for all vessels passing or bound to pass through the canal which may be in distress and be driven to seek refuge in said ports. Such vessels shall be exempt from anchorage and tonnage dues on the part of the Republic of Panama.

ARTICLE 18.

The canal, when constructed, and the entrances thereto shall be neutral in perpetuity, and shall be opened upon the terms provided for by section 1 of article 3 of, and in conformity with the stipulations of, the treaty entered into by the Governments of the United States and Great Britain on November 18, 1901.

ARTICLE 19.

The Government of the Republic of Panama shall have the right to transport over the canal its vessels and its troops and munitions of war in such vessels at all times without paying charges of any kind. The exemption is to be extended to the auxiliary railway for the transportation of persons in the service of the Republic of Panama, or of the police force charged with the preservation of public order outside of said zone, as well as to their baggage, munitions of war, and supplies.

ARTICLE 20.

If by virtue of any existing treaty in relation to the territory of the Isthmus of Panama, whereof the obligations shall descend or be assumed by the Republic of Panama, there may be any privilege or concession in favor of the Government or the citizens or subjects of a third power relative to an interoceanic means of communication which in any of its terms may be incompatible with the terms of the present convention, the Republic of Panama agrees to cancel or modify such treaty in due form, for which purpose it shall give to the said third power the requisite notification within the term of four months from the date of the present convention, and in case the existing treaty contains no clause permitting its modifications or annulment, the Republic of Panama agrees to procure its modification or annulment in such form that there shall not exist any conflict with the stipulations of the present convention.

ARTICLE 21.

The rights and privileges granted by the Republic of Panama to the United States in the preceding articles are understood to be free of all anterior debts, liens, trusts, or liabilities or concessions or privileges to other Governments, corporations, syndicates, or individuals, and consequently, if there should arise any claims on account of the present concessions and privileges or otherwise, the claimants shall resort to the Government of the Republic of Panama, and not to the United States, for any indemnity or compromise which may be required.

ARTICLE 22.

The Republic of Panama renounces and grants to the United States the participation to which it might be entitled in the future earnings of the canal under article 15 of the concessionary contract with Lucien N. B. Wyse, now owned by the New Panama Canal Co., and any and all other rights or claims of a pecuniary nature arising under or relating to said concession or arising under or relating to the concessions to the Panama Railroad Co. or any extension or modification thereof; and it likewise renounces, confirms, and grants to the United States, now and hereafter, all the rights and property reserved in the said concessions which otherwise would belong to Panama at or before the expiration of the terms of 99 years of the concessions granted to or held by the above-mentioned party and companies, and all right, title, and interest which it now has or may hereafter have in and to the lands, canal, works, property, and rights held by the said companies under said concessions or otherwise and acquired or to be acquired by the United States from or through the New Panama Canal Co., including any property and rights which might or may in the future, either by lapse of time, forfeiture, or otherwise, revert to the Republic of Panama under any contracts or concessions with said Wyse, the Universal Panama Canal Co., the Panama Railroad Co., and the New Panama Canal Co.

The aforesaid rights and property shall be and are free and released from any present or reversionary interest or claims of Panama, and the title of the United States thereto upon consummation of the contemplated purchase by the United States from the New Panama Canal Co. shall be absolute, so far as concerns the Republic of Panama, excepting always the rights of the Republic specifically secured under this treaty.

ARTICLE 23.

If it should become necessary at any time to employ armed forces for the safety or protection of the canal, or of the ships that make use of the same, or the railways and auxiliary works, the United States shall have the right, at all times and in its discretion, to use its police and its land and naval forces or to establish fortifications for these purposes.

ARTICLE 24.

No change either in the government or in the laws and treaties of the Republic of Panama shall, without the consent of the United States, affect any right of the United States under the present convention, or under any treaty stipulation between the two countries that now exists or may hereafter exist touching the subject matter of this convention.

If the Republic of Panama shall hereafter enter as a constituent into any other government, or into any union or confederation of states, so as to merge her sovereignty or independence in such government, union, or confederation, the rights of the United States under this convention shall not be in any respect lessened or impaired.

ARTICLE 25.

For the better performance of the engagements of this convention and to the end of the efficient protection of the canal and the preservation of its neutrality, the Government of the Republic of Panama will sell or lease to the United States lands adequate and necessary for naval or coaling stations on the Pacific coast and on the western Caribbean coast of the Republic at certain points to be agreed upon with the President of the United States.

ARTICLE 26.

This convention, when signed by the plenipotentiaries of the contracting parties, shall be ratified by the respective Governments and the ratifications shall be exchanged at Washington at the earliest date possible.

In faith whereof, the respective plenipotentiaries have signed the present convention in duplicate and have hereunto affixed their respective seals.

Done at the city of Washington the 18th day of November, in the year of our Lord 1903.

JOHN HAY. [SEAL.]
P. BUNAU-VARILLA. [SEAL.]

And whereas the said convention has been duly ratified on both parts, and the ratifications of the two Governments were exchanged in the city of Washington on the 26th day of February, 1904;

Now, therefore, be it known that I, Theodore Roosevelt, President of the United States of America, have caused the said convention to be made public, to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof.

In testimony whereof I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this 26th day of February, in the year of our Lord 1904, and of the independence of the United States the one hundred and twenty-eighth.

[SEAL.] THEODORE ROOSEVELT.

By the President:
JOHN HAY, *Secretary of State.*

Spanish-American War Widows.

EXTENSION OF REMARKS
OF
HON. JAMES A. HAMILL,
OF NEW JERSEY,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 1, 1914.

On the bill (H. R. 13044) to pension widow and minor children of any officer or enlisted man who served in the War with Spain or the Philippine insurrection.

Mr. HAMILL. Mr. Speaker, I do not think there is any necessity for a long debate on this bill. It is, in my judgment, not necessary to dwell on it for any length of time to enable us to understand its meaning and purpose.

It is a simple proposition to pay a pension to certain widows and minor children of veterans who served for 90 days or more during the Spanish War or Philippine insurrection. I will gladly support it, because I consider it a very just measure.

It is 15 years since the commencement of the Spanish-American War. Of those who enlisted to serve in it a considerable number have died, and as time goes on the list of those who pass away will, of course, grow steadily larger. Most of these men are survived by dependent widows and children, for whose maintenance the Government makes no provision whatever in the way of pension. The pending bill authorizes the payment of a pension in such cases. Why should it not become a law?

The measure is, in the first place, directly in line with the general pension policy of the Government. So far as it applies it follows the existing act relating to the widows and children of veterans of the Civil War. Under the present law widows and minor children of veterans of the War of the Rebellion are entitled to pension, and the widow receives this pension without regard to the amount of her income at the time of her husband's death. Whether that income be large or small does not in the least affect her title to a pension. Proof of death is all that is requisite to validate her claim.

The scope of this pension bill is much narrower. It allows a pension at the rate of $12 per month to only those widows whose annual income does not exceed $250. It pensions minor

children at the rate of $2 per month until they attain the age of 16 years, though in case of disability, as, for instance, insanity, the payment is continued during the lifetime of the child or until the disability is ended.

At the present time the widows and children of veterans of the Spanish War and the Philippine insurrection have to be provided for by the various camps of Spanish War Veterans. It is manifestly unjust for them to be compelled to shoulder a burden which ought to be willingly assumed by the Government.

The Spanish War, and the Philippine situation which arose out of it, presented to our Army and Navy peculiar and unfamiliar difficulties and dangers. The perils which our soldiers had to encounter were not so much those of actual battle as they were of climate. They did not fear to encounter the military forces of Spain, but they dreaded to fight tropical disease. Thousands who had never engaged in actual combat came out of the service with health impaired and constitutions shattered as a result of the hardships they had to endure in tropical camps. It was the first war this Nation ever waged under a tropical climate and conditions, and it was a costly experience.

Just like all our other wars so was the Spanish-American War fought mostly by volunteer soldiers. It was fought by men who were members of the National Guard, or who enlisted as new recruits to serve in it. It was fought by men who came from the shops, the farms, or the offices, by men who for the most part worked for daily wages, and who have, as a rule, very little to leave when they die.

These soldiers went forth to war unselfishly. They were paid no bounties; they obtained no substitute moneys; they were not called to the colors by compulsion through the operation of a draft. They voluntarily answered the summons for troops and marched to war wholly out of motives of patriotism and out of a spirit of devoted loyalty to the Nation.

The total number of men who enlisted in both Army and Navy during the Spanish War and the Philippine insurrection was 434,000. There were 826 battles and skirmishes, and in 525 of these men were killed or wounded. About 12,000 men died either as the result of actual fighting or owing to hardships and suffering incidental to war and service. There are now about 4,000 widows who could claim pension under this bill. These figures are the result of an investigation conducted by the various camps of Spanish War veterans. Taking into account widows and children there should be about 10,000 claims for pension presented during the first year that this act will be in operation. The cost of carrying out this law will be, during the first year, about one and a half million dollars, and for some years later there will be a slight increase.

This is the first request ever made on Congress by the Spanish War veterans for the enactment of pension legislation. There can be no doubt of the justice contained in the contention of those who advocate the passage of this bill. It asks relief only for the helpless who are not able to render help to themselves.

The enactment of this measure will give another incentive to patriotism and will tend to refute the charge that Republics are ungrateful. These veterans whose widows and children are affected by this bill brought glory to the Nation. Their brave service proved that in the stress of war the reliance of the Nation can be confidently placed in the loyalty of its citizen soldiers. These soldiers were generous to the Government, and the Government ought to be at the very least just to them. [Applause.]

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. LATHROP BROWN,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. BROWN of New York. Mr. Speaker, to elucidate the question before the House I will print in parallel columns rule 1 of article 3 of the Hay-Pauncefote treaty, which was ratified in 1901 by the United States and Great Britain, and a portion of the Panama Canal tolls act, which was passed by the Congress of the United States and signed by President Taft in 1912. It is this portion of the Panama Canal act which the bill now before the House seeks to repeal:

[Rule 1, article 3, Hay-Pauncefote treaty.]

The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, *so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic, or otherwise.* Such conditions and charges of traffic shall be just and equitable.

[From section 5 of the Panama Canal tolls act.]

No tolls shall be levied upon vessels engaged in the coastwise trade of the United States.

Who can reconcile these two conflicting acts?

Great Britain, as is her unquestioned right, has suggested to the United States that the portion of the Panama Canal act which I have quoted above is in violation of the Hay-Pauncefote treaty. A treaty is an international agreement, and under the Constitution is the law of the land and superior to subsequent contradictory legislation for so long as the treaty shall be in force and effect. I have not heard anybody express any desire to abrogate the Hay-Pauncefote treaty, by the terms of which and subject to the terms of which the United States acquired the right to build the Panama Canal. Therefore the question resolves itself down to this: Is the Panama Canal act in violation of the Hay-Pauncefote treaty? If it is, the canal act should be repealed; if it is not, the question is still open as to whether Congress, for economic reasons or for reasons of public policy, desires to repeal it.

WHAT THE OPPONENTS SAY.

Before proceeding to argue why the Panama Canal act should be repealed, I desire briefly to mention the chief reasons offered by those who claim that it should not be repealed.

Certain newspapers have endeavored to create prejudice against the repeal of the Panama Canal tolls act by stating that England desires it to be repealed, and because England desires that it should be repealed America should not repeal it. If these papers also suggested that because England makes a proposition that we should not pay our coastwise shipping monopoly a subsidy of a million dollars a year, we should therefore pay it, would the question then have been viewed from the same prejudiced standpoint? I think not. Those opposed to the repeal of the Panama Canal tolls act further state that the repeal would be a surrender of our sovereign rights over the canal to Great Britain. To this I make the plain answer that what rights the United States has in the Panama Canal are the result of treaty stipulations, one treaty being the Hay-Pauncefote treaty, made with England in 1901, and the other the treaty made with the Republic of Panama in 1903, which latter treaty is contingent upon our living up to the stipulations contained in the Hay-Pauncefote treaty.

Repeal of the canal act instead of meaning the surrender of our sovereign rights means equality of treatment to the vessels of Great Britain, as stipulated in the Hay-Pauncefote treaty. Finally, those opposed to the repeal of the canal act state that the Democratic platform contains a plank advocating the freedom of our coastwise vessels from toll charges. To this I will briefly reply that the Democratic platform just ahead of this plank contains another plank disagreeing to any new form of ship subsidy, which this exemption obviously is. Therefore any Democrat may take his choice of which plank he will support. How the free-tolls plank came to be in the Democratic platform is not material to this argument. It is the sworn duty of a Member of Congress to support the Constitution and the laws of the land, and a treaty while in force is part of the law of the land. Therefore if a Congressman believes that a treaty is being violated, he has but one course to take.

PETTY POLITICS OF OPPOSITION.

Before proceeding further, Mr. Speaker, I desire to state that it has struck me very forcibly that the Republicans and Progressives who have opposed the repeal of the Panama Canal tolls act have scarcely endeavored to make any argument in support of their contention, but have made of international obligations a football of politics in their endeavor, by insinuation and subterfuge, to divide the responsible majority party of this Government. I can well understand a minority party playing politics in matters concerning the internal affairs of the United States, but I think it unwise of the minority not to consider the United States as an entity among the nations, just as a State is an entity within the United States of America, and give to this question the calm thought and mature deliberation which properly should be expressed by one of the legislative branches of Congress in considering the international relations of our country. Under the Constitution the President is vested with

authority to conduct international relations, by and with the consent of the Senate. Not once in a decade does the House of Representatives participate directly in the making or interpretation of treaties. I hold that at the boundaries of the United States politics should invariably cease and patriotic statesmanship should rule.

To come now to the constructive portion of my argument, Mr. Speaker, I shall briefly review the events leading up to the Hay-Pauncefote treaty. I shall discuss the interpretation of the treaty. I shall show a precedent for what I believe the proper action of the House, and shall conclude with the brief discussion of the economic questions involved.

CONDITIONS PRECEDENT TO THE HAY-PAUNCEFOTE TREATY.

Ever since the discovery of the Pacific Ocean by Balboa "from the peaks of Darien" in 1513, the eyes of the civilized world have been focused on the narrow isthmus dividing the Atlantic from the Pacific Ocean. Immediately upon the signing of the Guadalupe-Hidalgo treaty of 1848 with Mexico the problem of a direct waterway communication between our eastern and southern boundaries with our newly acquired territory, now partly included in the State of California, impressed itself upon our statesmen. In those days we were a weak Nation just recuperating from a bitter and expensive struggle with Mexico. The Monroe doctrine forbidding further encroachments by European powers on either American continent was the policy of the Nation, so that we could not but look with aversion at the prospect of England or any other nation acquiring an exclusive right to build a canal across the Isthmus of Panama. England had set up rights of sovereignty over the entire Mosquito coast, which included the mouth of the San Juan River, which was one of the entrances of any proposed canal; and had also set up claims of possession over various islands in the near neighborhood. The United States was in no position financially to undertake the construction of the canal alone, even if she should be able to acquire the territorial rights to a canal zone; and, as I have stated, England held possession of one end of what appeared to be the only practicable field of operations. In this emergency there were negotiated without the sanction of the then Secretary of State by our chargés d'affaires two unofficial, unratified treaties, one with Nicaragua by Mr. Heis and the other with Honduras by Mr. Squires. In both treaties the exclusive right to build a canal between the two oceans was granted to the United States.

If the United States had been in a position in 1849 to construct such a canal, it is fair to assume that the canal would have been in operation for the past 50 years. At that time we apparently were not able to do so, and these two treaties though unratified were frankly used as an argument with Great Britain why Great Britain should surrender her claims to sovereignty over the Mosquito coast and her other territorial possessions in the neighborhood, and enter into what is known as the Clayton-Bulwer treaty, which provided for the joint protection with the United States of any proposed canal that might be built. It is therefore obvious that the United States sought the Clayton-Bulwer treaty, and by this treaty, in a peaceful manner, persuaded England to give up such claims as she had on the American Continent which the United States believed to be contrary to the principles of the Monroe doctrine.

I append to my remarks the Hay-Pauncefote treaty, article 8 of the Clayton-Bulwer treaty, and two planks from the Democratic platform of 1912. I desire at this time to quote briefly from article 8 of the Clayton-Bulwer treaty, as follows:

> In granting, however, their joint protection to any such canals or railways as are by this article specified, it is always understood by the United States and Great Britain that *the parties constructing or owning the same shall impose no other charges or conditions of traffic thereupon than the aforesaid Governments shall approve of as just and equitable* * * *.

The Clayton-Bulwer treaty was ratified in 1850.

We are now approaching the time when the expressions of the most eminent statesmen of the United States for the previous half century are about to take definite shape in an agreement with Great Britain by which it was stipulated that there should be no discrimination in tolls or charges of traffic between the two nations.

During the 50 years after the signing of the Clayton-Bulwer treaty only two particular events need be noticed. The one is that Great Britain surrendered her sovereignty over her possessions in the neighborhood of the proposed canal, as provided by the Clayton-Bulwer treaty, and the other is that the Dominion of Canada endeavored to discriminate against the United States in the Welland Canal, which is owned by Canada but operated under the treaty of 1871, which treaty is practically similar to the Hay-Pauncefote treaty in its terms as regards no discrimination in tolls. The United States objected to this discrimination as being in violation of the terms of the treaty; Great Britain refused to recede; the United States continued to object, and Great Britain receded. It is but fair to state that Great Britain never officially admitted that she had ever violated her treaty obligations, but her actions speak louder than words. I shall again refer to this matter at a later period, because *the shoe is now on the other foot.*

In 1898, as a result of the Spanish-American War, it appeared indispensable to the United States for military reasons to be in a position to construct a canal through Panama without any proprietary interest therein on the part of Great Britain, *so that the United States could defend the canal against its enemies in time of war.* Accordingly Secretary Hay instructed Mr. Henry White, at London, to confer with Lord Salisbury on this matter. After a conference with Lord Salisbury, Mr. White wrote Secretary Hay as follows:

> A brief, informal conversation followed, during which Lord Salisbury said nothing to leave me to suppose that he is unfavorably disposed—much less hostile—to the construction of the canal under our auspices, *provided that it is open to the ships of all countries on equal terms.*

In this way negotiations were begun with the clear understanding on the part of both Great Britain and the United States that the ships of all nations would be allowed the use of the canal on equal terms, and negotiations were concluded on the part of the United States by the Hon. Joseph H. Choate, who has this to say about the negotiations, speaking before the Chamber of Commerce of the City of New York on February 13, 1913:

> It is true that I had something to do with the negotiation of this treaty. In the summer of 1901—you will remember that this treaty was ratified by the Senate in November, 1901—I was in England until October, and was in almost daily contact with Lord Pauncefote, who on his side represented Lord Lansdowne, the foreign secretary, and was also in very frequent correspondence with Mr. Hay, our Secretary of State, under whom I was acting. As the lips of both of these diplomatists and great patriots, who were each true to his own country and each regardful of the rights of the other, are sealed in death, I think it is quite proper that I should say what I believe both of them, if they were here, would say to-day—that the clause in the Panama Canal bill exempting coastwise American shipping from payment of tolls is in direct violation of the treaty. * * *
>
> I am going to read you the two clauses, and I would like to challenge any member to show how they can possibly be reconciled:
>
> "The canal shall be free and open to the vessels of commerce and war of all nations on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise."
>
> That is what the treaty says. In the canal bill the clause covered by Mr. Root's motion to amend by striking out is this:
>
> "No tolls shall be levied upon vessels engaged in the coastwise trade of the United States."
>
> Can you put those two things together and reconcile them in any possible way? Of course, it is an utter impossibility. * * *

So much for the point of view of Great Britain in agreeing to the Hay-Pauncefote treaty, and so much for the point of view of our officials who negotiated it. Their minds without doubt had met. It now only remains to prove that the Senate of the United States in ratifying the treaty understood the plain meaning of the English language in the same way as did those who presented the treaty to them for ratification.

CONSTRUCTION OF THE TREATY.

In 1900, when the first draft of the Hay-Pauncefote treaty was under consideration in the Senate, Senator Bard, of California, offered an amendment reserving to the United States the right to discriminate in respect to the charges of traffic in favor of vessels of its own citizens engaged in the coastwise trade. This amendment was promptly voted down by 43 votes to 23, and Senator Bard did not even see fit to offer it again when the final draft of the treaty was being adopted. Furthermore, when the first draft of the Hay-Pauncefote treaty was being amended, Senator Davis offered an amendment which to my mind forever settles the much-talked-of question as to whether "all nations," in rule 1 of article 3, includes the United States. The Davis amendment, which was adopted by a vote of 65 to 17, reads as follows:

> It is agreed, however, that none of the immediately foregoing conditions and stipulations in sections Nos. 1, 2, 3, 4, and 5 of this article shall apply to measures which the United States may find it necessary to take for securing by its own force the defense of the United States and the maintenance of public order.

Since rule 1 of article 2 of the first draft is substantially rule 1 of article 3 of the Hay-Pauncefote treaty, it is perfectly obvious that the Senate in adopting this amendment clearly had in mind that "all nations" included the United States, except where the United States expressly reserved to itself some right not reserved to Great Britain. Therefore I claim that the minds of the two countries have met. I claim that the words of the much-disputed rule 1 of article 3 of the Hay-Pauncefote treaty are in themselves perfectly plain. I claim

that even if there is doubt as to the interpretation of the words, the context of the treaty makes it perfectly plain what they mean when construed in connection with the entire treaty. I claim that even if both these propositions should be in doubt, the events leading up to, and the thoughts in the minds of, those who negotiated and ratified the treaty leaves not the slightest doubt that the true meaning of the treaty is *no discrimination* in toll charges as between vessels of the United States and vessels of Great Britain.

THE SHOE IS NOW ON THE OTHER FOOT.

What is the discrimination referred to in this treaty? It is a charge against the vessels, the citizens, or the subjects of one nation which is not charged against the vessels, the citizens, or the subjects of the other nation. The question naturally arises, if by law no foreign ship can participate in the coastwise trade of the United States, how can it be discrimination against any other ships to let American coastwise vessels go through the canal free of tolls when the ships of no other country can do the coastwise business of the United States? The answer is very simple. If the tolls for the upkeep of the canal are figured with any idea of paying expenses and meeting interest charges, then to exempt one class of vessels and to put this added burden on other vessels to make up the difference is the rankest sort of discrimination.

But this is not the point. The real answer is that Great Britain has coastwise vessels running from the eastern part of Canada to the western part of Canada, just as we have vessels which might run from Bath, Me., to Seattle, Wash. Suppose a Canadian ship of 10,000 tons register started from Montreal for Vancouver with a cargo of goods. Suppose an American ship of equal tonnage started from Boston bound for Seattle with an exactly similar cargo. Each ship is engaged in coastwise trade. The Canadian ship on the basis of a toll charge of $1.20 per ton would be put to an expense of $12,000 over the American coastwise ship in going through the canal in order to reach their respective ports in the same vicinity. Could a British subject expect to compete in the sale of his goods with an American citizen whose cargo could be carried for $12,000 less than that of the British subject? Of course he could not It is discrimination of a very glaring sort, exactly the discrimination that the treaty was drawn to prevent.

In 1871 Great Britain and the United States entered into the treaty of Washington, which provided, in substantially the same terms as the Hay-Pauncefote treaty, that there should be no discrimination in the use of the Canadian-owned Welland Canal between the subjects of Great Britain and the citizens of the United States. In 1888 the Canadian Government passed a local law exempting cargoes bound for Montreal or points east from all but a nominal payment of tolls through the Welland Canal, charging 2 cents a ton as against 20 cents a ton for cargoes bound elsewhere. The United States held that this was discrimination, not against vessels of the United States, because presumably all vessels could go to Montreal if they wished and so be exempt from the higher toll rate, but that it was a discrimination against the citizens of the United States in that it favored Canadian citizens and Canadian trade routes. For some little time Canada refused to agree with this contention of the United States, whereupon the United States proposed retaliation by denying Canadian vessels free passage through the St. Marys Falls Canal, which is owned by the United States.

As I have before stated, the Canadian Government immediately repealed its acts with regard to the Welland Canal. Opponents of this bill are trying to discriminate against Great Britain just as Great Britain tried to discriminate against the United States. Great Britain could no more sustain that contention then than can the United States sustain this contention to-day.

In this connection I wish to suggest that the estimated coastwise American tonnage which will use the Panama Canal for the first few years is about 1,000,000 tons per annum, while American tonnage going through the Canadian canals is now over 20,000,000 tons per annum. Should anyone wish to know what would be the commercial advantage to the United States under a policy of discrimination, the answer is, that for every ton saved to a coastwise vessel at Panama there would certainly be over 3 tons and perhaps as high as 20 tons lost to American vessels in the trade on the Great Lakes. What might happen commercially to the United States under a policy of discrimination after Canada completes her proposed canal between Georgian Bay and Lake Ontario or the Ottawa River can better be imagined than described.

ECONOMIC ASPECT OF CONTROVERSY.

This brings me to the true statement of what this exemption of tolls on "American ships" going through an "American canal" really means to the American people who are taxing themselves to the extent of $375,000,000 to build the canal. I have already stated that the Panama Canal is American only in so far as the United States, having built it, regulates its management, fortifies it, *and in time of war defends it against any enemy*, but it does not own it in the matter of making discriminatory rates against Great Britain. "American ships" means the ships owned by Americans, which by law are the only ships permitted to carry freight and passengers from one American port to another American port. Now these ships are owned on the Atlantic seacoast up to 94 per cent by two protected monopolies, who so divide the coastwise business of the Atlantic and Gulf ports between them that they do not even call at the same ports. "American ships" means ships owned by one one-hundredth of 1 per cent of the people of the United States.

The people of the United States are taxed for the estimated difference of *$15,000,000 a year* between the cost of operating the canal and the amount received from tolls. This tolls exemption would therefore legally pick the pockets of 100,000,000 Americans for the 10,000 Americans who would be benefited. Even if the 100,000,000 people of the United States chose to tax themselves to remit the tolls on the ships owned by one ten-thousandth part of their number, under the treaty they could not do so by remitting the tolls. They can do so by subsidizing these same ships to the amount of the tolls. I know of no man so foolhardy as to suggest to the hundred millions of people of the United States that they grant to the most complete monopoly existing on this continent a subsidy in addition to the monopoly already granted these coastwise vessels. With free tolls would prices to the consumer be lowered? If so, there might be some justification for a subsidy. As a matter of fact the toll charge of $1.20 per net registered ton is the equivalent of between 40 and 60 cents per cargo ton, which is between 2 and 3 cents per cargo hundredweight, which to the consumer buying a dozen oranges, we will say, is nothing. Even if the shippers and the transportation companies desired to subdivide to the consumer the 2 or 3 cents per cargo hundredweight in the saving in transportation charges, it would be physically impossible to do so. Furthermore, I do not think that any sane man could expect to find the amount of the tolls remissions in anybody's pocket except that of the one one-hundredth of 1 per cent of the people who already enjoy the coastwise shipping monopoly.

CONCLUSION.

Mr. Speaker, in conclusion I wish to say that I consider my duties in this House do not begin and end with representing the people of the first congressional district of the State of New York. I conceive that my duty here requires me to protest against the time-dishonored Republican doctrine of insidious subsidy, and in so far as the United States is concerned to support the ancient Democratic doctrine of "equal rights to all and special privileges to none." As a Representative of one congressional district I shall refuse to subsidize a monopoly which would benefit but one man in 100,000 of our population.

Ours is a proud Nation, victorious in war, too big, too strong, too just to perform any act as a Nation which no handful of our citizens would be so base as to perform as individuals. I shall not betray my trust to my constituents and to my country by voting to retain upon our statute books a law so subversive of true economic principles and so destructive of our national honor. Mr. Speaker, I vote to repeal the free-tolls clause.

ADDENDA.

Article 8 of the Clayton-Bulwer treaty, which was ratified in 1850, is as follows:

The Governments of the United States and Great Britain having not only desired in entering into this convention to accomplish a particular object, but also to establish a general principle, they hereby agree to extend their protection, by treaty stipulations, to any other practicable communication, whether by canal or railway, across the isthmus which connects North and South America; and especially to the interoceanic communications—should the same prove to be practicable, whether by canal or railway—which are now proposed to be established by the way of Tehuantepec or Panama. In granting, however, their joint protection to any such canals or railways as are by this article specified, it is always understood by the United States and Great Britain that the parties constructing or owning the same shall impose no other charges or conditions of traffic thereupon than the aforesaid Governments shall approve of as just and equitable; and that the same canals or railways, being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other State which is willing to grant thereto such protection as the United States and Great Britain engaged to afford.

The Hay-Pauncefote treaty, which superseded the Clayton-Bulwer treaty and refers to article 8 above, was ratified in 1901 and is as follows:

The United States of America and His Majesty Edward VII, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, and Emperor of India, being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end to remove any objection which may arise out of the convention of the 19th April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the "general principle" of neutralization established in article 8 of that convention, have for that purpose appointed as their plenipotentiaries:

The President of the United States—John Hay, Secretary of State of the United States of America.

And His Majesty Edward VII, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, and Emperor of India, the Right Hon. Lord Pauncefote, G. C. B., G. C. M. G., His Majesty's ambassador extraordinary and plenipotentiary to the United States;

Who, having communicated to each other their full powers, which were found to be in due and proper form, have agreed upon the following articles:

ARTICLE 1.

The high contracting parties agree that the present treaty shall supersede the aforementioned convention of the 19th April, 1850.

ARTICLE 2.

It is agreed that the canal may be constructed under the auspices of the Government of the United States, either directly at its own cost or by gift or loan of money to individuals or corporations or through subscription to or purchase of stock or shares, and that, subject to the provisions of the present treaty, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

ARTICLE 3.

The United States adopts as the basis of the neutralization of such ship canal the following rules substantially as embodied in the convention of Constantinople, signed the 28th October, 1888, for the free navigation of the Suez Canal; that is to say:

1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary; and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force and with only such intermission as may result from the necessities of the service. Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.

4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

5. The provisions of this article shall apply to waters adjacent to the canal within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time, except in case of distress, and in such case shall depart as soon as possible; but a vessel of war of one belligerent shall not depart within 24 hours from the departure of a vessel of war of the other belligerent.

6. The plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal shall be deemed to be part thereof for the purposes of this treaty, and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents, and from acts calculated to impair their usefulness as part of the canal.

ARTICLE 4.

It is agreed that no change of territorial sovereignty or of the international relations of the country or countries traversed by the before-mentioned canal shall affect the general principle of neutralization or the obligation of the high contracting parties under the present treaty.

ARTICLE 5.

The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by His Britannic Majesty; and the ratifications shall be exchanged at Washington or at London at the earliest possible time within six months from the date hereof.

In faith whereof the respective plenipotentiaries have signed this treaty and thereunto affixed their seals.

Done in duplicate at Washington, the 18th day of November, in the year of our Lord 1901.

JOHN HAY. [SEAL.]
PAUNCEFOTE. [SEAL.]

The two conflicting planks in the Democratic platform of 1912 are as follows:

We favor the exemption from toll of American ships engaged in coastwise trade passing through the canal.

* * * * * * *

We believe in fostering, by constitutional regulation of commerce, the growth of a merchant marine, which shall develop and strengthen the commercial ties which bind us to our sister Republics of the south, but *without imposing additional burdens upon the people and without bounties or subsidies from the Public Treasury.*

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. VICTOR MURDOCK,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914.

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. MURDOCK. Mr. Speaker, in 50 years no question has arisen with as many elements involved as this. This has resulted not only from the nature of the proposition, but also from the time and the manner of its presentation. The proposal affects vitally (first) our international relations, and touches intimately (second) our major domestic economic policies, and finally reveals in something of a new light (third) our governmental processes.

On the side of our international relations the monarchial powers will read in our action here our future attitude toward them. For repeal of the toll-exemption law will appeal to those powers as a marked and significant relaxation o. the attitude of virile challenge the western democracy has maintained toward Europe for over 100 years. And this, in turn, will be interpreted to mean that our commercial ambitions in the Pacific are not of great concern to the rest of the world, and that the United States has inaugurated a policy which purposes ultimately an abandonment of democratic guardianship over the Western Hemisphere embodied in the Monroe doctrine.

On the side of our domestic policies we have (a) a material change in our policy of the regulation of internal waterways, regulation which in the past has placed no embargo on interstate water traffic; (b) a recognition of the more than national aspect of our railroad freight rate problem, for the repeal of the toll-exemption law registers unmistakably the power of our transcontinental railroads against domestic regulation when the Canadian transcontinental railroads choose to intervene in their behalf; (c) the ultimate inclusion of foreign vessels to full participation in our coastwise trade, or the removal of all toll charges at the canal. For a charge on any portion of our interstate commerce, if it can not be extended to all, will in the nature of things be removed from all. That is, if we can not exempt our domestic traffic from the payment of tolls when it is between New York and California, whereas we do exempt it when it is between Pennsylvania and Louisiana, the inevitable result will be to find equality by removing all restrictions.

On the side of our governmental processes the present situation records a change of great moment. The success of the bill for the repeal of the toll-exemption law marks a distinct stage in the decline of the power of the legislative branch of government in its relation to the executive branch. For the triumph here in the repeal of the toll-exemption law is undeniably that of the executive branch of the Government.

All these elements are involved in the controversy which centers in an interpretation of the terms of the Hay-Pauncefote treaty of 1901.

THE INTEREST OF EUROPE IN THIS QUESTION.

Within the lives of the youngest of us Europe has materially changed the maps of the two outlying continents of the Eastern Hemisphere—Africa and Asia—and there has been added to the powers of first rank in that hemisphere a new and potent member—Japan. South America, Central America, and Mexico have been saved from division by the powers only through our policies and the doctrine which have safeguarded them. Meanwhile we have come into possession of Alaska, bounding the Pacific on the north, the Philippines in the east, and the Hawaiian Islands in the midst of the vast western ocean. Control over the Panama Canal, therefore, becomes to us an indispensable factor in our situation in the Pacific, an advantage which the diplomats of the world fully understand. Our position in the Pacific is viewed with jealousy, and the Monroe doctrine was never more unpopular with the powers of the Eastern Hemisphere than it is to-day; and I believe that if we show either an inability or unwillingness to maintain it we will open the door to disorder of tremendous extent and degree. I stand for peace, and peace is best insured to us if we, as a Nation, are firm, definite, determinate in our policies in time. An ounce of resolution to-day is worth a pound of armament to-morrow. No proposal to surrender our control over the canal can

be entertained with prudence which does not give consideration to the attitude of the Governments of the world toward us, not alone in time of peace and in the matter of commercial rivalry, but also in time of war when our position would be necessarily isolated and our need of every natural defense correspondingly great.

THE PART OF THE TRANSCONTINENTAL RAILROADS.

International relations aside, the control of the canal enters at once into our domestic economic policies. We have granted from the beginning free passage on our waterways. We have spent millions in deepening channels, in canalizing rivers, in dredging harbors. We have never placed the cost of these improvements upon the carriers. The Ohio River has locks and no tolls are charged. Traffic between the States has been free. Now we propose to make the traffic between the States which use this one canal pay an embargo. This departure emphasizes the part the transcontinental railroads play in the problem. Much of our internal water traffic has survived, if at all, then only precariously, against the power of the railroads, hundreds of miles of which to-day occupy the beds of old canals which were driven out of business. In the coastwise trade the railroads have not been so successful, and in defense have in the past taken over lines of vessels to wipe out competition. But from the beginning the transcontinental railroads recognized that independent lines of ships plying through the Panama Canal from Atlantic to Pacific States would be effectual competitors, because they anticipated that laws would be passed barring railroad-owned ships from the canal, a thing which has been done. For many years these railroads opposed successfully the building of the Isthmian Canal; but finally, under President Roosevelt, the construction of the canal was begun. It is about to be completed. The Congress in August, 1912, passed a law exempting American vessels engaged in coastwise trade from the payment of tolls. This threatened actual and effectual competition. It had in it the certainty of growth of new independent shipping between the Atlantic and the Pacific. Thereupon the transcontinental railroads of the United States called for help upon the transcontinental railroads of Canada and the Canadian railroads called upon Great Britain, which protested against the act of toll exemption.

RAISING THE CRY OF SUBSIDY.

The passage of this act repealing that act will be a demonstration that the transcontinental railroad situation is not in our charge as a Government, and it will bring a new and interesting complication in the fact that, while under the law a ship owned by an American railroad can not use the canal, a ship owned by a Canadian railroad can—a situation which will give Canadian railroads a dominating position in traffic charges. This is of the future. For the present the American transcontinental railroads are triumphant. They are about to win over the powers of this Government to regulate. Several of them were built on our Government's gratuities, which adds obloquy to their conduct in impairing the use of a great Government work by calling to their assistance foreign allies.

The transcontinental railroads also called to their aid the cry of subsidy. If the American vessels were exempted from the payment of tolls in coastwise traffic, it was claimed this was a subsidy. Craft may pass through the locks on the Ohio without paying tolls. No claim has ever been made that this was subsidy. The coastwise shipping has had exclusive right to trade between domestic ports, free from foreign competition, for nearly a century. No claim has ever been made that this was subsidy. But exemption of tolls in the Panama Canal was suddenly branded as indefensible subsidy, and it has served as a stalking-horse since—a herring drawn across the trail—to divert discussion from the real issue—our sovereign rights over the waters of our own domestic waterway at Panama. I have always voted against subsidies here. This was no subsidy. It was a perfectly normal continuation of the national policy of keeping our waterways free to our own carriers. That we will pursue this policy I have no doubt. Events themselves will compel it, for the charge against coastwise vessels at Panama will force, ultimately, free tolls at the canal for all or the destruction of the coastwise laws.

Let us take, for instance, a situation which will soon develop. By virtue of law American seamen work under better conditions than foreign seamen; are paid better, and the rates for service in American bottoms, for that and other reasons, are higher than in foreign bottoms. Under the new conditions about to be imposed at Panama, lumber on a German tramp steamer, a cheap bottom, from Vancouver, British Columbia, can be laid down in New York for less than lumber loaded at Seattle, Wash., in a high-priced American bottom, can be laid down in New York. One is a voyage in which all foreign vessels can compete. The other is coastwise traffic restricted to American shipping. Both must pay tolls. This, together with other advantages Canadian interests will enjoy if this bill passes, will in time bring shippers to demand free shipping. Nor is it likely that the seacoast States—East, South, and West—will ever let rest in peace a policy which puts a charge against interstate traffic. Either the coastwise laws will be broken down or the canal made free.

NOTABLE INSTANCE OF THE GROWTH OF EXECUTIVE POWER.

Equaling in interest both the international aspects and the domestic economic sides of this issue is the view it has given, in a most dramatic way, of the shifting powers of the executive and legislative branches of our Government. In the Constitution the powers of Congress are enumerated first. But it can not be contended successfully that the Congress has maintained its equality of power with either the executive or the judicial branch, and while the present situation is no more than an incident in a long decline, the incident is large. The House which passed the toll-exemption law in 1912 was Democratic; the Senate which concurred was Republican, as was the President. There was no partisan color in the transaction, and if there had been it would have been lost in the platform assertion of the victorious Democratic Party in favor of the proposition. The action which passed the toll-exemption law was therefore nonpartisan, a normal exercise of the congressional function.

The act was in no sense a careless legislative error. It was done with much scrutiny and deliberation. Consequently when the President, on March 5, asked Congress to rescind its action he requested an act that was obnoxious to the Congress as a law-making body and considered quite apart from its partisan divisions. The floor leader of the Democrats, Mr. UNDERWOOD, of Alabama, did not follow the President, nor did the Speaker, Mr. CHAMP CLARK, of Missouri, the two men around whom the Democratic machine in the House is built. There is little doubt that at this early stage of the transaction the President did not have a majority with him, and it was in the process of developing this majority that the great power of the executive office has been so dramatically shown. The ordinary method of caucus coercion was set aside. The Democratic Party platform's plain declaration in favor of toll exemption made caucus coercion impossible. The thing relied upon was the President's influence, exercised directly and with dispatch. So much emphasis was put upon the necessity of dispatch that careful consideration of the rivers and harbors bill, which met a challenge from two Members—Mr. FREAR, of Wisconsin, and Mr. CALLAWAY, of Texas, the first for toll exemption and the second against—was set down as a deliberate filibuster by the President's friends. It was not a filibuster. The next step by the President's lieutenants was to proclaim their purpose to adopt an extreme cloture rule, the most obnoxious form of control. Fifteen hours were to be extended for general discussion under the special rule, and the Sims bill for the repeal of toll exemption was closed against amendment, with the mere right extended for a single motion to recommit. Later, under pressure, the 15 hours' period was increased to 20, and 3 hours in lieu of the usual 40 minutes given for the discussion of the rule itself. The Republicans in the past have clotured both tariff and appropriation bills.

THE PROTEST AGAINST THE USE OF CLOTURE.

The Democrats avoided cloture on the tariff, but have used it in other instances. But no party had ever before attempted cloture upon a measure so momentous and so simple and so unpartisan in its nature. It was a daring thing to attempt. A hundred Democrats or more owe their seats in the House to a national revolt against the abuse and misuse of the processes of representative government in the House. Most of these made their campaigns with this a leading issue and with a pledge, specific or implied, that they would not vote to continue the custom in the House. Here was an invitation not only to break a plank in the party platform but to go back upon a personal pledge. The rule was proposed. Debate on the rule followed for a portion of an afternoon. The following morning there appeared in the newspapers an interview with Speaker CLARK, denouncing the rule. He said:

I am dead against the rule on the tolls question and intend to vote against it. I will not stultify myself by voting for any such rule. I led the fight to liberalize the rules and practices of the House, thereby imperiling my political future. We won that long and bitter fight, and it was the first Democratic victory in 18 years.

Time and time again I declared that I would not advocate a thing when in the minority that I would not advocate in the majority.

The Democrats won the House in 1910, the first time in 16 years. I was unanimously nominated for Speaker, and duly elected by every Democratic vote in the House, with the hearty good will of every Republican, because they believed that I am a truthful man.

In order to liberalize the rules and practices of the House, I voluntarily relinquished a large portion of the powers of the Speaker, which I could have retained by making a fight, but I honestly believed that the Speaker had too much power under the old system for the good of the House and of our institutions.

Among other things, I declared that I was in favor of throwing bills open to ample discussion and amendment, and I am going to keep the faith, come what may. If I were to vote for the pending rule, I could not look the House in the face. When I made that statement I was speaking particularly of tariff bills, but my statement is equally applicable to all great bills. Here is the situation:

We have a rule reported on a bill on the greatest question presented in my 20 years in the House, beside which tariff bills sink into insignificance—a bill which, if passed, will change our foreign policy which we have maintained for 125 years.

Only 20 hours for debate is permitted under this proposed rule, and the right to amend is absolutely prohibited, and no intervening motion permitted except one motion to recommit. On such an important and far-reaching measure there should have been at least a week for debate, with the unlimited right of amendment. Surely there is nothing sacred about the Sims bill, and there is no reason for this mad rush. I will not be a party to ramming such a rule down the throats of Members.

When the House met in great excitement at noon, the floor leader of the majority, Mr. UNDERWOOD, spoke warningly to his Democratic colleagues against the adoption of the cloture rule.

IMPORTANCE OF THE FIRST VOTE IN THE HOUSE.

Then came the test of the power of the President. The first vote was on the previous question on the rule. A Member who voted for the previous question was voting against any change in the rule—for complete cloture. For had the previous question been voted down, the rule could have been changed, time of debate extended, and amendment permitted. There have been other votes touching this measure since the initial one, and there will be others on the passage of the bill; there will be none and can be none as important as the first vote on the previous question on the rule. By that vote the House registered its complete surrender to the Executive in this matter, and suffered itself to be fettered against freedom of action. The vote was as follows:

Party.	Aye.	No.	Present.	Not voting.
Democrats	200	55	2	32
Republicans	8	103	1	11
Progressives	.....	19	.....	1
Independent	.....	.....	.....	1
Total	208	177	3	45

The total membership of the House is now 433. There are two vacancies, one in the twelfth Massachusetts and one in the seventh New Jersey. The political complexion of the House is now: Democrats, 289; Republicans, 123; Progressives, 20; Independent, 1.

Two hundred of the 289 Democrats in the House voted for the previous question on the adoption of the Henry rule. The other 89 Democrats, included 55 who voted against the adoption of the rule, 2 who were paired and voted "present" because the men with whom they were paired were absent, and the other 32 were absent and not voting.

The 55 Democrats who voted against the adoption of the previous question were:

Bruckner, Carew, Dale, Conry, Dooling, Driscoll, Fitzgerald, Goulden, Griffin, Maher, O'Leary, Patten, Difenderfer, Donohoe, Lee, Logue, Gorman, Graham, McAndrews, McDermott, Stone, Williams, Aiken, Finley, Ragsdale, Brockson, Broussard, Dupré, Elder, Morgan, Caraway, Taylor of Arkansas, Wingo, Deitrick, Mitchell, Murray of Massachusetts, Phelan, Doremus, Eagan, Harrison, Helm, Igoe, Clark of Missouri, Jones, Kindel, Taylor of Colorado, Kirkpatrick, L'Engle, Mahan, Murray of Oklahoma, O'Shaunessy, Raker, Sherwood, Underwood, Thomas.

Only one member of the Progressive Party was absent and not voting. He was Mr. COPLEY, of Illinois, who, however, was paired with Mr. BLACKMON, of Alabama, a Democrat. The other 19 Progressives all voted against the previous question. They were:

Bell, Nolan, Stephens of California, Thomson of Illinois, Hinebaugh, Murdock, Woodruff, MacDonald, Lindbergh, Chandler, Temple, Hullings, Rupley, Walters, Kelly, Lewis, Lafferty, Bryan, Falconer.

The eight Republicans who voted for the previous question were:

Bartholdt, Browne of Wisconsin, Gardner, Gillett, Madden, McKenzie, Steenerson, Stevens of Minnesota.

AN UNUSUAL MESSAGE FROM THE PRESIDENT.

The victory gains emphasis because of the manner in which the President made his proposal in the five-minute message of March 5. He said:

Gentlemen of the Congress, I have come to you upon an errand which can be very briefly performed, but I beg that you will not measure its importance by the number of sentences in which I state it. No communication I have addressed to the Congress carried with it graver or more far-reaching implications as to the interest of the country, and I come now to speak upon a matter with regard to which I am charged in a peculiar degree, by the Constitution itself, with personal responsibility.

I have come to ask you for the repeal of that provision of the Panama Canal act of August 24, 1912, which exempts vessels engaged in the coastwise trade of the United States from payment of tolls, and to urge upon you the justice, the wisdom, and the large policy of such a repeal with the utmost earnestness of which I am capable.

In my own judgment, very fully considered and maturely formed, that exemption constitutes a mistaken economic policy from every point of view, and is, moreover, in plain contravention of the treaty with Great Britain concerning the canal concluded on November 18, 1901. But I have not come to urge upon you my personal views. I have come to state to you a fact and a situation. Whatever may be our own differences of opinion concerning this much debated measure, its meaning is not debated outside the United States. Everywhere else the language of the treaty is given but one interpretation, and that interpretation precludes the exemption I am asking you to repeal. We consented to the treaty: its language we accepted, if we did not originate it; and we are too big, too powerful, too self-respecting a nation to interpret with a too strained or refined reading the words of our own promises just because we have power enough to give us leave to read them as we please. The large thing to do is the only thing we can afford to do, a voluntary withdrawal from a position everywhere questioned and misunderstood. We ought to reverse our action without raising the question whether we were right or wrong, and so once more deserve our reputation for generosity and for the redemption of every obligation without quibble or hesitation.

I ask this of you in support of the foreign policy of the administration. I shall not know how to deal with other matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure.

The concluding words of the President created an unusual sensation. The matters of "greater delicacy and nearer consequence" were plainly definite difficulties in the President's mind. They were, on fair presumption of the meaning of his words, of greater moment than our interest in the canal, and were imminent. What the difficulties were the President did not divulge. On that score Congress was left in the dark. Both the Senate and the House can avail themselves of the protection of secret sessions. This was not invited. The rumor with which Congress had to content itself was only a rumor—that Huerta, President of Mexico, enjoyed the support of Japan, which, in turn, has a fast alliance with Great Britain, and that the President, by inducing the Congress of the United States to show marked friendliness to Great Britain, would have Great Britain's influence over Japan in preventing complications in the accomplishment of the President's desire for the elimination of Huerta.

WAS CONGRESS GUILTY OF A BREACH OF FAITH?

When the President declared that Congress ought to reverse its action without raising the question whether we were right or wrong, he asked the seemingly impossible of a body given to habitual debate. And when he asked the men before him to support his foreign policy in this particular matter in ungrudging measure, that he might know how to deal with other matters of "even greater delicacy and nearer consequence," he awoke immediately an antagonism which, quite apart from partisanship, springs spontaneously in an assembly of men, insatiable of facts, and of more or less pride in their skill in establishing them, when they are denied access to avenues of information. No explanation of the intensity of this debate is complete without this view. The President was dealing with an international question—one that quickly transcended the plane upon which the general run of domestic and necessarily partisan questions are discussed. Congress had at a previous date exempted coastwise vessels of the United States from the payment of tolls in the Panama Canal. As an economic question, this issue might have been made a matter of renewed dispute, despite the indorsement of the policy by all three parties, and the Congress would have continued in its accustomed ways of debate. But the question was not raised as an economic issue. It came to us as an international one. Great Britain contended that the Congress was guilty of a breach of faith. We were charged, as a Nation, with breaking our word. We were asked to acknowledge the commission of a cheap error in legislation, or to confess an act of deliberate national dishonor.

THE MAIN ISSUE TURNS ON THE TREATY.

Whatever men may think of the economic justification of toll exemption, it can not be said that the act of the Senate and the House and the President in 1912, in writing toll exemption into law, was done unknowingly or dishonestly. The act, on the contrary, was written into law in the belief that it did not violate the treaty with Great Britain.

Confronted with the assertion that it did violate the treaty and challenged to reverse its action, without raising the question of right or wrong, Congress faced forthwith the moral duty of confession and restitution. There was no other honorable course open if we were wrong. But if we were right, confession would be dishonor and surrender insufferable.

The main issue, then, turned on the treaty itself. Had Congress and a President misread it? Had the delegates of three great national party conventions, by their indorsement of toll exemption, blundered and broken the Nation's pledge?

I think the great majority of men in Congress, under the challenge of the President on March 5, approached the question in

this mental attitude. And in the confusion and contentions which have followed since, however men may vote, or from whatever motive, this remains the issue.

The question will not be settled on that issue. Collateral and subordinate issues, individual fears and aspirations, considerations of temporary political advantage, personal and otherwise, play the determining part here.

But while these elements, important only for a day or for a man, may prevail, they can not change the facts. While temporary exigency and political necessity may surrender our rights over the canal, they can not alter the truth about the treaty, for time will prove that the British interpretation of the treaty is untenable; that the concessions which we did not make in fact, which we could not make in justice, we can not maintain in safety. The canal is for military as well as commercial purposes, and a surrender of our sovereignty over its waters commercially now will inexorably lead to the necessity of a future effort to preserve our military rights there.

THE HAY-PAUNCEFOTE TREATY NOT AGAINST THE UNITED STATES.

The treaty which John Hay made for us in 1901 puts no such embarrassment and embargo upon this Nation. Its terms give us control in commerce and in military affairs, and a reading of its lines proves it.

The treaty in full is as follows:

HAY-PAUNCEFOTE TREATY BETWEEN THE UNITED STATES AND GREAT BRITAIN TO FACILITATE THE CONSTRUCTION OF A SHIP CANAL.

Signed at Washington, November 18, 1901.
Ratification advised by the Senate, December 16, 1901.
Ratified by the President, December 26, 1901.
Ratified by Great Britain, January 20, 1902.
Ratifications exchanged at Washington, February 21, 1902.
Proclaimed, February 22, 1902, by the President of the United States of America.

A PROCLAMATION.

Whereas a convention between the United States of America and the United Kingdom of Great Britain and Ireland, to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end to remove any objection which may arise out of the convention of the 19th April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the "general principle" of neutralization established in article 8 of that convention, was concluded and signed by their respective plenipotentiaries at the city of Washington on the 18th day of November, 1901, the original of which convention is word for word as follows:

"The United States of America and His Majesty Edward VII, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, and Emperor of India, being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end to remove any objection which may arise out of the convention of the 19th April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the 'general principle' of neutralization established in article 8 of that convention, have for that purpose appointed as their plenipotentiaries:

"The President of the United States, John Hay, Secretary of State of the United States of America;

"And His Majesty Edward VII, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, and Emperor of India, the Right Hon. Lord Pauncefote, G. C. B., G. C. M. G., His Majesty's ambassador extraordinary and plenipotentiary to the United States:

"Who, having communicated to each other their full powers, which were found to be in due and proper form, have agreed upon the following articles:

"ARTICLE 1.

"The high contracting parties agree that the present treaty shall supersede the aforementioned convention of the 19th April, 1850.

"ARTICLE 2.

"It is agreed that the canal may be constructed under the auspices of the Government of the United States, either directly at its own cost or by gift or loan of money to individuals or corporations, or through subscription to or purchase of stock or shares; and that, subject to the provisions of the present treaty, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

"ARTICLE 3.

"The United States adopts, as the basis of the neutralization of such ship canal, the following rules, substantially as embodied in the convention of Constantinople, signed the 28th October, 1888, for the free navigation of the Suez Canal; that is to say:

"1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

"2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

"3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary, and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service.

"Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.

"4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in the case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

"5. The provisions of this article shall apply to waters adjacent to the canal within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time, except in case of distress, and in such case shall depart as soon as possible, but a vessel of war of one belligerent shall not depart within 24 hours from the departure of a vessel of war of the other belligerent.

"6. The plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal shall be deemed to be part thereof for the purpose of this treaty and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents and from acts calculated to impair their usefulness as part of the canal.

"ARTICLE 4.

"It is agreed that no change of territorial sovereignty or of the international relations of the country or countries traversed by the before-mentioned canal shall affect the general principle of neutralization or the obligation of the high contracting parties under the present treaty.

"ARTICLE 5.

"The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by His Britannic Majesty, and the ratifications shall be exchanged at Washington or at London at the earliest possible time within six months from the date hereof.

"In faith whereof the respective plenipotentiaries have signed this treaty and thereunto affixed their seals.

"Done in duplicate at Washington the 18th day of November, A. D. 1901.

"JOHN HAY. [SEAL.]
"PAUNCEFOTE. [SEAL.]"

And whereas the said convention has been duly ratified on both parts and the ratification of the two Governments were exchanged in the city of Washington the 21st day of February, 1902:

Now, therefore be it known that I, Theodore Roosevelt, President of the United States of America, have caused the said convention to be made public, to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this 22d day of February, A. D. 1902, and of the Independence of the United States the one hundred and twenty-sixth.

[SEAL.] THEODORE ROOSEVELT.

By the President:
JOHN HAY, *Secretary of State.*

THE CONTENTION OF THOSE FAVORING REPEAL.

There is among the proponents of the Sims bill an easy disposition to read a single paragraph in the Hay-Pauncefote treaty, regardless of its context, its history, its relation to the contract and its evident purpose, in support of Great Britain's contention that the United States can not exempt its coastwise traffic from the payment of tolls. This paragraph is rule 1 of article 3, as follows:

The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects, in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

This rule, standing alone, would be conclusive of the whole controversy in Great Britain's favor but for the inclusion of the six words "observing these rules" and "and of war." But the rule does not stand alone. It is only a part, and a small part, of the treaty which must be read as a whole, and it has behind it a long history which determines its meaning and saves the rule itself, containing the words "observing these rules" "and of war" from contradiction. To explain:

The history back of the rule which I have quoted starts with the Bulwer-Clayton treaty in 1850. At that time there was a possibility of the construction by a private corporation of a canal across Nicaragua. Great Britain had a protectorate over the Mosquito Coast, which embraced the eastern terminus of the projected work. The United States and Great Britain undertook to establish the neutralization of the proposed canal. In the eighth article of the Bulwer-Clayton treaty the parties agreed:

The Governments of the United States and Great Britain having not only desired, in entering into this convention, to accomplish a particular object, but also to establish a general principle, they hereby agree to extend their protection, by treaty stipulations, to any other practicable communications, whether by canal or railway, across the Isthmus which connects North and South America.

In granting, however, their joint protection to any such canals or railways as are by this article specified, it is always understood by the United States and Great Britain that the parties constructing or owning the same shall impose no other charges or conditions of traffic thereupon than the aforesaid Governments shall approve of as just and equitable; and that the same canals or railways, being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other State which is willing to grant thereto such protection as the United States and Great Britain shall engage to afford.

THE CHANGE FROM THE OLD TO THE NEW TREATY.

Fifty years after the Bulwer-Clayton treaty the United States made a new treaty—the Hay-Pauncefote treaty—with Great

Britain. In this latter treaty the purpose of the two Governments "to establish a general principle," that is, neutralization, appears not in the body of the instrument but in the preamble. The new treaty came to the Senate and was amended. Later still another new treaty came to the Senate and was ratified. The last form of the treaty was made public by Theodore Roosevelt February 22, 1902. The treaty itself was not a mere radical modification of the Bulwer-Clayton instrument; it was a new treaty, and it superseded in terms the Bulwer-Clayton treaty. That treaty had been drawn in the presumption that the canal would be constructed by a private corporation either of America or Great Britain, and the responsibility for its neutralization was mutual, with an agreement that neither Government would erect or maintain fortifications commanding the work. The Hay-Pauncefote treaty by its language admitted the possibility of the construction of the canal by the United States as a Government, and the responsibility for its neutralization was shifted from the shoulders of both nations to those of the United States alone, for the United States was granted "all rights incident to such construction as well as the exclusive right of providing for the regulation and management of the canal." And as a basis of the neutralization of the canal the United States, under this exclusive right, adopted the rules. In the first form of the Hay-Pauncefote treaty, which the Senate rejected, both the United States and Great Britain were to adopt the rules. In the second form of the treaty, which was ratified, Great Britain withdrew from the responsibility of adopting the rules and of protecting the canal. Here, then, was a radical change from the basis of neutralization established in the Bulwer-Clayton treaty. In that instrument both nations stipulated to protect the canal, by whomsoever constructed, and in return for that protection there was to be equality of treatment. The mutual relation was complete. Each was equal in responsibility and equal in benefits to be derived; but in the Hay-Pauncefote treaty the relation of mutuality was no longer complete. The United States, either of itself or through a private corporation of its citizens, was to build the canal; the United States assumed the responsibility for its protection. It could fortify the work. And this change from complete mutuality to sole responsibility was given even greater emphasis by the circumstance that in the Bulwer-Clayton treaty and in the first form of the Hay-Pauncefote treaty the two Governments united in bringing the treaty to the notice of other powers and inviting them to adhere to it. In the last form, the ratified treaty, this mutual function of ratification was omitted. The United States, which was to construct the canal, protect it, adopt rules for its management, and notify the world, had become the party of the first part. So, speaking to the world, the United States announced the six rules appended "as the basis of the centralization of such ship canal," and for no other purpose.

1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

2. The canal shall never be blockaded nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary; and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service.

Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.

4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

5. The provisions of this article shall apply to waters adjacent to the canal within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time, except in case of distress, and in such case shall depart as soon as possible; but a vessel of war of one belligerent shall not depart within 24 hours from the departure of a vessel of war of the other belligerent.

6. The plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal shall be deemed to be part thereof, for the purposes of this treaty, and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents, and from acts calculated to impair their usefulness as part of the canal.

UNITED STATES NOT ONE OF THE NATIONS OBSERVING THESE RULES.

Now to address myself to the first rule. None of those who contend that we have no right to exempt our coastwise traffic from the exemption of tolls, because under rule 1 it would be a discrimination against Great Britain, assert as yet that we can not discriminate in favor of our own vessels of war, for to charge our vessels of war tolls would be to pay ourselves, to take money out of our Treasury and put it back again—an absurdity. And if, under the language of rule 1, we stipulate that the canal is to be free and open on terms of entire equality as to vessels of war—and there is of necessity discrimination—how then do those who uphold the contention of Great Britain read that there shall be no discrimination against vessels of commerce? They must read the rule one way for vessels of war and another way for vessels of commerce. The history of the treaty, its text, and its purpose make one reading of the rule possible in the case of both vessels of commerce and vessels of war—the reading which proves that the United States is the owner of the canal and lays down the terms under which all nations may use the canal. Sir Edward Grey has admitted that the other rules in article 3, chiefly relating to war conditions, do not apply to the United States when the United States is at war. The admission is fatal to the contention of the British interpretation. Rules 2, 3, 4, and 5 relate particularly to conditions of war. No act of hostility may be committed in it, according to rule 2. War vessels of a belligerent may not revictual in it, according to rule 3. No belligerent may disembark troops in the canal, according to rule 4. No vessel of war may remain within 3 marine miles of either end for longer than 24 hours. Now, when the treaty was before the Senate John Hay sent a memorandum explaining that in event of war the ordinary effect of war upon treaties was to restore both nations to their natural rights of self-defense. That is, in case the United States was at war it could close the canal against its foe. If that is true, then "the belligerent" referred to in rules 2, 3, 4, and 5 is not the United States and can never be the United States. For the United States, if at war, can (2) commit acts of hostility in the canal; (3) can revictual there; (4) can disembark troops; (5) can remain within the 3-mile limit. Certainly if we are at war, we are not one of the nations "observing these rules." If we are not at war, we are not a "belligerent"; we are at peace and these rules do not apply to us.

THE ONLY WAY TO AVOID DISCRIMINATION.

But does rule 1 nevertheless apply to the United States? Rules 2, 3, 4, and 5 do not apply to us either in war or peace, as we have just seen. Does rule 1? In that rule we say that "the canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality." If we were at war with Great Britain we could not close the canal to her if the United States is to be included among the nations "observing these rules." But we would close the canal to Great Britain in war. We would not in that event be one of the nations observing rule 1. If, then, we are in war not one of the nations observing rule 1, are we in time of peace one of the nations observing rule 1? If we are, then we would charge tolls on our vessels of war; we would pay ourselves. That is, in times of peace, as one of the nations "observing these rules," and rule 1 in particular, we would take money out of our Treasury for the passage of our vessels of war and pay it back again; we would take money out of the British Treasury for a British vessel of war and put it in our Treasury. We would be the richer by that amount and England the poorer. What, then, would become of the pledge supposedly in rule 1 that the canal shall be free and open to the vessels of war on terms of entire equality, so that there shall be no discrimination? We are not one of the nations "observing these rules," any one rule or all of them, in time of peace or in war. If we are, then there is discrimination.

Those who contend for the British interpretation of the treaty, in their anxiety to have us keep one pledge will force us to break another. There is only one way to read the treaty and read it consistently, and that is by excluding the United States from the phrase "all nations observing these rules."

JOHN HAY'S IDEA OF THE TREATY.

The natural elements surrounding the canal itself, its construction, possession, fortification, control, management, the holding of the land through which it runs, uphold the fact of our sovereignty. And the treaty, its provisions, and its practical operation without friction confirm that sovereignty. That is, the crowning emphasis in the establishment of this view is extraneous to the treaty itself but confirmatory nevertheless. The Hay-Pauncefote treaty was drawn in the presumption that the canal was to be constructed by the United States, protected by the United States, and regulated by the United States, but through alien territory. It was constructed, instead, on land which was granted to us in perpetuity and is virtually our own. The Republic of Panama made over to us the Canal Zone. It is ours to govern, to develop, to protect. We would resist foreign invasion of it as quickly and with as much warrant as we would resist an invasion of New York. The shore lines of the canal are our coast lines as much as those of Maine or California. The ownership of the canal, its responsibility, its management,

possession, protection has added to it sovereignty. There is a principle of international law that all treaties are concluded upon the condition that if vital changes affecting the subject matter of a treaty take place so that it can not be said that the parties contracted in reference to the changed conditions, the treaty is by implication abrogated. But it is not necessary to call that principle to our aid. Conditions have changed in respect to the canal, but the spirit of the treaty itself upholds us in our assertion. There is evidence that John Hay so understood the treaty. In submitting it to the Senate, Mr. Hay said:

The whole theory of the treaty is that the canal is to be entirely an American canal. The enormous cost of constructing it is to be borne by the United States alone. When constructed it is exclusively the property of the United States and is to be managed and controlled and defended by it.

As to our responsibility over it, he said:

The United States alone, as sole owner of the canal, as a purely American enterprise, adopts and prescribes the rules by which the use of the canal shall be regulated, and assumes the entire responsibility and burden of enforcing, without the assistance of Great Britain or of any other nation, its absolute neutrality.

When Hay, later in 1902, made a treaty with the Republic of Panama he wrote into that treaty a provision that the vessels of Panama should pass through the canal toll free, a thing he would not have done had he believed it was in contravention of the treaty with Great Britain. This treaty is now in force. The same view was held in our State Department when, in 1909, Elihu Root concluded a treaty with Colombia which gave Colombia preferential rights in the canal.

THE CERTAIN COMPLICATIONS OF THE FUTURE.

The people registered their will through the only vehicle open to them to make their wishes known to Congress—the party platform. The circumstances surrounding the negotiation of this treaty confirm the American view of the extent of neutralization we have undertaken—like treatment of Great Britain with all other nations. The weight of American diplomatic authority sustains this view. The action of the American Congress has followed this course. Every consideration of national interest demands that we shall not lightly or weakly relinquish our own.

Yet we are asked to surrender our sovereignty over the canal, not to suspend the operation of the toll exemption law for a period pending further negotiations with Great Britain, or possible arbitration, but to accept the contention of Great Britain without question. This view may prevail here and in the Senate, but the contention we have made against it will be vindicated by the future, for the future, with its unavoidable embarrassments, its certain complications, its inevitable injury, will bring vindication in an hour, perhaps, when we will pay with our strength the debt our weakness makes to-day.

THE PLEDGES IN THE PARTY PLATFORMS.

The view I uphold to-day had the indorsement of 13,000,000 voters in 1912. The law exempting American coastwise vessels from the payment of tolls was approved by President Taft August 24, 1912. Before that date the three political parties had drafted their platforms. The Republicans stood in indorsement of President Taft's administration, of which this was a part, although he had not yet signed the act. The Democrats were unequivocal. Their platform pledge was as follows:

We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal. We also favor legislation forbidding the use of the Panama Canal by ships owned or controlled by railroad carriers engaged in transportation competitive with the canal.

This plank was enunciated at Baltimore July 2, 1912.

The Progressives, in their platform adopted at Chicago August 7, 1912, declared:

The Panama Canal, built and paid for by the American people, must be used primarily for their benefit. We demand that the canal shall be so operated as to break transportation monopoly now held and misused by the transcontinental railroads, by maintaining sea competition with them; that ships directly or indirectly owned or controlled by American railroad corporations shall not be permitted to use the canal, and that American ships engaged in coastwise trade shall pay no tolls.

THE CAMPAIGN POSITION OF ROOSEVELT, WILSON, AND TAFT.

The presidential candidates of all three parties have upheld the idea. The position of Theodore Roosevelt, candidate of the Progressive Party, is shown in a letter to the Outlook Magazine of January 18, 1913. It is as follows:

I believe that the position of the United States is proper as regards this coastwise traffic. I think that we have the right to free bona fide coastwise traffic from tolls. I think that this does not interfere with the rights of any other nation, because no ships but our own can engage in coastwise traffic, so that there is no discrimination against other ships when we relieve the coastwise traffic from tolls. I believe that the only damage that would be done is the damage to the Canadian Pacific Railway. Moreover, I do not think that it sits well on the representatives of any foreign nation, even upon those of a power with which we are, and I hope and believe will always remain, on such good terms as Great Britain, to make any plea in reference to what we do with our own coastwise traffic, because we are benefiting the whole world by our action at Panama, and are doing this where every dollar of expense is paid by ourselves. In all history I do not believe you can find another instance where as great and expensive a work as the Panama Canal, undertaken not by a private corporation but by a nation, has ever been as generously put at the service of all the nations of mankind.

Woodrow Wilson, the Democratic candidate, said in a speech to the farmers gathered in convention at Washington Park, N. J., on August 15, 1912:

One of the great objects in cutting that great ditch across the Isthmus of Panama is to allow farmers who are near the Atlantic to ship to the Pacific by way of the Atlantic ports.

Now, at present there are no ships to do that, and one of the bills pending—passed, I believe, yesterday by the Senate as it had passed the House—provides for free tolls for American ships through that canal and prohibits any ship from passing through which is owned by any American railroad company. You see the object of that, don't you? We don't want the railroads to compete with themselves, because we understand that kind of competition. We want water carriage to compete with land carriage, so as to be perfectly sure that you are going to get better rates around the canal than you would across the continent.

President William Howard Taft said, in December, 1912:

After full examination of the Hay-Pauncefote treaty and of the treaty which preceded it, I feel confident that the exemption of the coastwise vessels of the United States from tolls and the imposition of tolls on vessels of all nations engaged in the foreign trade is not a violation of the Hay-Pauncefote treaty.

THE CASE OF THE RIGHTS OF THE UNITED STATES.

Despite frequent protestation of fidelity to platform pledges by the two old parties, Republican and Democratic, each succeeding year discovers both parties in greater and greater degree unable or unwilling to keep faith with the people. In this debate the Democratic pledge is completely ignored by many Democrats, who refuse to give it even an incidental bearing on the issue. Other Democrats attempt, pathetically, to read a contradiction in the plain terms of their pledge. The contradiction is not there. Like the Republican leaders who violated the platform of 1908, which pledged a revision of the tariff downward, and revised the tariff upward, these Democrats are seeking only convenient excuse. The helplessness of both old parties in the matter of platform pledges is inherent in them—is part and parcel of the weakness inevitable in partisan organizations made up of conflicting elements, for the conflicting elements in each of the two old parties can be held together only by compromises, and in the compromises faith with the people can not be kept and is not kept.

The violation of platform pledges, however, is no new thing in America. Succeeding elections may bring rebuke and reparation in ordinary issues; but this is an extraordinary issue, and no future election, however it may reprimand, can restore the position we hold in the canal to-day and which we are about to relinquish. Surrender now is surrender forever.

To summarize and to conclude, I am against the repeal of the law exempting American coastwise vessels from the payment of tolls in the Panama Canal because the repeal is—

A violation of our rights under the terms of the Hay-Pauncefote treaty.

An unwarrantable surrender of our sovereignty over a canal which we constructed at a cost of $400,000,000.

A confession of a dishonorable legislative act by the American Congress not warranted by the facts.

An assumption of supineness in the Western Hemisphere before the nations of the world which will bring embarrassment and peril.

An indefensible relaxation in our maintenance of the Monroe doctrine.

A change in our attitude toward the agencies of transportation which will have vital and far-reaching economic results in our domestic affairs.

Panama Canal Tolls.

EXTENSION OF REMARKS

OF

HON. LAWRENCE B. STRINGER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. STRINGER. Mr. Speaker, the Hay-Pauncefote treaty of 1901, entered into between the Governments of the United States and Great Britain, is primarily responsible for our present situation in this matter of the exemption of Panama Canal tolls to our coastwise trade.

The crux of the whole question involved in this discussion is the interpretation that is to be placed upon the provisions of this treaty of 1901, with reference to such proposed exemption.

As a Democratic Representative from Illinois I am not responsible for this treaty nor its terms, for, in common with those who occupy seats in this House for the first time, I had nothing whatever to do with it.

For this treaty President Wilson is not responsible; Secretary Bryan is not responsible; the Democratic Party is not responsible, for at the time it was entered into neither President Wilson, Secretary Bryan, nor the Democratic Party were in power in this Nation.

The President under whom the treaty negotiations were begun was William McKinley. The President under whom it was completed and whose signature it bears was Theodore Roosevelt. The Secretary of State who negotiated it was John Hay. The United States Senate which ratified and approved it was a Republican body, with an active working Republican majority.

This treaty was a solemn, sacred international obligation, into which the United States Government entered, through its regularly elected and constituted authorities, and by this treaty the United States is bound.

Whether or not, primarily, Great Britain had any rights in the construction of this canal, I do not now care to discuss, for whether she had or not, the United States, by entering into this treaty with her concerning the canal, recognized that she had rights therein, stipulated with reference thereto, and we are now estopped from denying their existence.

If a blunder was made in recognizing rights in Great Britain in the canal, Woodrow Wilson did not make that blunder, Secretary Bryan did not make it, the Democratic Party did not make it.

If we are now foreclosed from denying British rights in the canal, it was a Republican President, a Republican Secretary of State, and a Republican Senate who foreclosed us in that regard.

If it was desirable that the coastwise vessels of this country should be allowed to pass through the canal without payment of tolls, then the fact that the treaty did not so provide is not the fault of the Democratic Party, for it was a Republican Senate which specifically voted down an amendment to the treaty which would have allowed this exemption.

If any sovereignty in the Panama Canal has been "surrendered" by entering into this treaty, neither President Wilson nor the Democratic Party did this "surrendering." The surrender, if such there was, was and is a Republican surrender pure and simple.

I am not saying that there was a "surrender," but the term has been used so frequently in this discussion that I am simply seeking to locate the responsibility for "surrender," if perchance any such "surrender" has really been made.

I am simply showing that the oft-repeated criticism of President Wilson and the Democratic majority of Congress in this behalf is unwarranted, unjust, and indefensible.

The Democratic Party did not make the Hay-Pauncefote treaty, had nothing to do with it, is not responsible for it; but, coming into power, the Democratic Party has found it part of the organic law of the land and is compelled to make the best of a bad situation.

Coming into power, the Democratic administration finds that the administrations preceding it, by and under the authority vested in them by the people, had entered into treaties, agreements, and contracts with a foreign power in reference to the neutralization of this canal, and recognizing the sacredness of treaties so made, regards it a patriotic duty to comply with the same and thus protect the national honor.

THE CLAYTON-BULWER TREATY WAS ABROGABLE.

If it be urged that the Hay-Pauncefote treaty of 1901 was necessitated by the existence of the Clayton-Bulwer treaty of 1850, it may also be urged that a half century had elapsed since the Clayton-Bulwer treaty had been entered into; that in the meantime conditions had absolutely changed, the map of Central America had undergone a complete transformation; and in 1901, when the Hay-Pauncefote treaty was signed, the circumstances which had made the Clayton-Bulwer treaty of 1850 necessary had passed away.

There is a doctrine of international law, well established and well understood, that when in the lapse of time the conditions under which a treaty was made have completely changed, its provisions shall no longer be binding, and the treaty may be abrogated.

Why did not President McKinley and President Roosevelt take advantage of this doctrine of international law, have the obsolete and antiquated Clayton-Bulwer treaty abrogated as not being applicable to the new conditions, proceed to buy or appropriate (as we did with the Panama strip) land upon which this canal should be dug, and dig the canal "on our own land," conduct and regulate it "in our own way," without consulting or entering into agreements with England or "any other country on earth"?

It is not for me to furnish the answer. Suffice it to say, they did not do it. They proceeded to recognize the Clayton-Bulwer treaty as an active, living entity. They recognized the rights of Great Britain in the construction of this oceanic canal. They contracted with her with reference to those rights. They revivified them with new life, placed the stamp of further approval upon them, and gave them new sanction.

And now that they have done this thing the political partisans of these former Presidents heap vials of abuse upon President Wilson, who had nothing to do with these agreements or treaties, but who is doing the only thing an honest, God-fearing President possibly could do, namely, make good the plighted word and faith of the Nation as sacredly given forth by his predecessors in official station.

SACREDNESS OF TREATIES.

Treaties between nations have always been regarded as the most solemn, binding, and sacred of all contracts known to mankind. Blood has been shed, lives sacrificed, and treasure spent to enforce, uphold, and preserve inviolate the sacredness of internationnal contracts.

Failure to observe treaties because of superior brute power to do so, regardless of the questions of national honor involved, renders the nation doing so an outlaw among the nations of the earth.

To say that because we are great and powerful and strong we can ruthlessly disregard solemn obligations at will is the doctrine of the cave dwellers and does not belong to twentieth-century civilization. Even the American Indian recognized the sacred obligations of tribal compacts and agreements.

The Hay-Pauncefote treaty having been entered into, it is now a sacred, binding contract between the United States and Great Britain, and must be observed.

Whether the terms gave us an advantage or inflicted a disadvantage is not the question here. Whether we personally like or dislike the other contracting party, or whether we approve or disapprove of their objects and motives, is not pertinent to this discussion.

The question is, Shall we live up to our sacred pledges? Shall we violate our international contracts? Shall we brand ourselves as international outlaws? Are we a nation of honorable, treaty-abiding people?

There is only one answer. Whatever the result, we must at all hazards comply with every treaty obligation made. To do otherwise would be a national disgrace and an everlasting and eternal dishonor. To even intimate that we would do otherwise is an insult to an honorable and law-abiding people.

WHAT THE HAY-PAUNCEFOTE TREATY DID.

What, then, did the Hay-Pauncefote treaty do, and what are its provisions?

In its preamble it provides that the new treaty is made to facilitate the construction of an interoceanic canal, by whatever route may be considered expedient, but "without impairing the general principle of neutralization established in article 8" of the old Clayton-Bulwer treaty.

By reference to article 8 of the Clayton-Bulwer treaty this "general principle of neutralization" is found to be that the canal shall be "open to the citizens and subjects of the United States and Great Britain on equal terms."

If no other provision existed in the treaty, this provision alone would bar the United States from exempting tolls in the matter of its coastwise trade, unless at the same time it exempted the tolls for vessels of the other contracting party as well, for the equality of terms is applied unrestrictedly to the "citizens and subjects" of both countries and no distinction is made as to citizens who are engaged in the coastwise trade as against those engaged in the foreign trade.

But the treaty does not stop here. It proceeds by the adoption of six rules as "the basis of the neutralization" of the canal and the first of these rules specifically declares that "the canal shall be free and open to the vessels of commerce and war of all nations observing these rules on terms of entire equality, so there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic or otherwise."

This language seems to be clear and unmistakable and is susceptible of but one construction. "All nations" means all nations, and includes the United States as well as other nations. Had it meant all other nations, it would have said so. If it had intended to have excepted the ships of the United

States, coastwise or otherwise, it would have excepted them by specifically doing so.

When we entered into a similar treaty with Nicaragua prior to the making of this Hay-Pauncefote treaty, we likewise provided for "equal tolls for the vessels of all nations," but desiring to exempt the coastwise trade of both countries we added the clause, "excepting the vessels of the contracting parties engaged in the coastwise trade." With this treaty as a precedent, had we intended to except our coastwise trade in the Hay-Pauncefote treaty, we would have specifically so declared it.

It is practically conceded that to exempt from canal tolls our foreign trade, by the passage of law to that effect, would be a clear violation of the treaty. Hence that has not been attempted, for the law passed by the last Congress, and now sought to be repealed, exempts from tolls only our coastwise trade and leaves our foreign trade to toll charges.

If the term "all nations" meant all other nations except the United States, then, under the terms of the treaty, we have as much right to exempt our foreign trade from tolls as we have our coastwise trade, and there would be far greater justice in doing so.

THE EXEMPTION NEGATIVED.

But not only did we stipulate in the treaty for entire equality of treatment for the vessels of all nations, but by the action of the Senate during the consideration of the treaty we expressly negatived any intention to make an exemption from tolls of our coastwise trade.

Before any treaty goes into effect it must first be ratified and approved by the American Senate. If the provisions of the treaty do not suit this body, it has the power to modify or amend them.

When the Hay-Pauncefote treaty was before the American Senate Senator Bard, of California, representing a State directly interested in the coastwise trade, offered the following amendment to the proposed treaty:

> The United States reserves the right in the regulation and management of the canal to discriminate in respect of the charges of traffic in favor of vessels of its own citizens engaged in the coastwise trade.

This amendment to the treaty was thereupon voted down by the United States Senate by a vote of 43 to 23, as shown by Senate Document No. 85, of the Fifty-seventh Congress.

This vote in the American Senate indicates:

First. That it was clearly understood that the term "all nations" in the Hay-Pauncefote treaty included the United States.

Second. That the treaty as it now stands was understood not to give a right to the United States to exempt tolls for its coastwise trade unless similar exemptions were given the ships of all other nations.

Third. That it was clearly the intention of the United States Senate to make no distinction in the treaty between vessels in our coastwise trade and vessels in the foreign trade, whether the vessels belonged to us or to foreign nations.

TESTIMONY OF AN EYEWITNESS.

If testimony is needed as to what was intended by the terms of the Hay-Pauncefote treaty as to the coastwise trade, that testimony has been furnished by Joseph H. Choate, the American minister to England at the time the treaty was adopted.

The signatories of the treaty, John Hay and Lord Pauncefote, are both deceased. Mr. Choate therefore is the one man living who can speak authoritatively as to the treaty. In an address delivered before the Chamber of Commerce of New York, February 13, 1913, Mr. Choate said:

> It is true that I had something to do with the negotiation of this treaty. In the summer of 1901—you will remember that the treaty was ratified by the Senate in November, 1901—I was in England until October and was in almost daily contact with Lord Pauncefote and was also in very frequent correspondence with Mr. Hay, our Secretary of State, under whom I was acting.
>
> As the lips of both of these diplomatists and great patriots, who were each true to his own country, and each regardful of the rights of others, are sealed in death, I think it is quite proper that I should say what I believe both of them, if they were here, would say to-day, that the clause in the Panama Canal bill exempting coastwise American shipping from the payment of tolls is in direct violation of the treaty. I venture to say now that in the whole course of the negotiation of this particular treaty, no claim, no suggestion, was made that there should be any exemption of anybody.

A PLAIN ILLUSTRATION.

As a plain, everyday illustration of how a law which exempts our coastwise trade from tolls violates the terms of a treaty guaranteeing equality of terms for all nations in the canal, and providing against discrimination against the subjects of other nations, a succinct example here follows:

A vessel owned by foreign citizens loads with lumber at Vancouver, on the Pacific coast, bound for New York. When it reaches the canal it is required to pay tolls to the amount of a possible $10,000 before it can pass through. An American vessel loads with lumber at Seattle, a few miles distant from Vancouver, but on American territory, and it is likewise bound for New York. It passes through the canal tolls free. The discriminative difference is the matter of the $10,000 tolls to the disadvantage of the foreign citizen as against our own.

Can it be said that such a discrimination does not violate a treaty which provides that the canal shall be open to vessels of commerce of all nations on terms of "entire equality," with "no discrimination against the citizens or subjects of other nations in respect to the charges of traffic or otherwise"? The English language can admit of no such construction.

THE TERMS UPON WHICH WE OWN THE CANAL.

But it is said that it is our canal; that we dug it and we can do with it just as we please. This is a catchy, but nevertheless a demagogic statement, born either of lack of information or in some cases an intention to deceive.

It is true that this is our canal and that we dug it, but it is not true that we can do with it as we please. One may own a horse, but he can not abuse it; one may own a house, but he can not set fire to it. All ownership is limited by laws regulating the control of same in the interest of the common weal.

Treaties are part of the law of the land, and have as binding an effect as a statute duly passed and proclaimed. Our ownership of the canal is subject to the limitations set forth in treaties which we have made with foreign powers concerning it.

It must be remembered that the canal was not dug on land that was primarily our own or on land that is now free from conditions which run with the land. The conditions running with the land must always be observed.

We may pass over the question of the flaw in our title to the Canal Zone in consequence of the high-handed manner in which we appropriated this zone from Colombia.

We may even dismiss consideration of the fact that we had a treaty with Colombia guaranteeing her integrity; that we not only stood by and saw her despoiled of her integrity in violation of treaty obligations by us sacredly made, but we actually aided and abetted in that despoilation. We may dismiss all this by saying that because we violated one treaty is no reason why we should deliberately proceed to violate another.

But even under our title, such as it is, we became owners of the zone under certain conditions and for certain specified purposes.

THE TREATY WITH PANAMA.

Conceding, then, that our title to the zone comes from the Republic of Panama, and this will not be denied, this title has its origin and authenticity in a single document, namely, in a treaty entered into with the Republic of Panama November 18, 1903.

Outside of this treaty with Panama we have absolutely no right, title, or ownership of any kind or character, under the sun, to the land upon which this canal was dug. By this treaty our rights to ownership and control rise or fall. This treaty is our sole authority and by its conditions and limitations we are absolutely bound.

Strange it is that those who claim that we would be justified in violating our treaty with Great Britain in our control of the canal are compelled to rely upon a treaty with another power to find authority to control the canal at all.

What, then, are the provisions of this international deed of the Canal Zone by the Republic of Panama to the United States, under which we get all the rights we have in the Panama Canal?

In the first place, the Canal Zone grant to us by the Republic of Panama is not an absolute and unconditional grant of territory. The granting words are not "to have and to hold." The granting words which give us title to the Canal Zone are especially limited in the treaty with Panama to "the use, occupation, and control" of the zone of land described. It is not a deed absolute.

This "use, occupation, and control" is granted in perpetuity to the United States, but for a certain purpose and a certain purpose alone, namely, "for the construction, maintenance, operation, sanitation, and protection of a canal." Should this land be used for any other purpose, or should we cease to use it for the purpose designated, it reverts back to the original grantor, namely, the Republic of Panama.

It is not, then, our land, to do with as we please. It is our land to use, occupy, and control for the purposes of a canal, which is to be subject to provisions thereafter provided for in the treaty deed. And these provisions specify how the canal shall be regulated and controlled.

In other words, with our deed to the Canal Zone run certain binding covenants which limit our ownership of the soil and all the appurtenances thereto.

These covenants are expressed in article 18 of our treaty with the Republic of Panama, and read as follows:

The canal, when constructed, and the entrances thereto shall be neutral in perpetuity, and shall be opened upon the terms provided for by section 1 of article 3 and in conformity with all the stipulations of the treaty entered into by the Governments of the United States and Great Britain on November 18, 1901.

In other words, the very treaty with Panama which gives us any rights to the canal at all actually reads into its covenants the Hay-Pauncefote treaty, which we are now asked to disregard.

The only document by which the United States has any right under the sun to dig, maintain, and control the canal makes it a condition precedent for our ownership and control that we shall observe the Hay-Pauncefote treaty in all its terms, and especially emphasizes the fact that ownership is conditioned upon our observance of the particular section which declares that the canal shall be—

open to the vessels of all nations on terms of entire equality, without discrimination against the subjects of any nation in respect of the conditions or charges of traffic or otherwise.

Violation, then, of the terms of the Hay-Pauncefote treaty is eo instanti a violation of our treaty with Panama through which we acquire our rights in the canal, and likewise constructive abrogation of the Hay-Pauncefote treaty is constructive abrogation of the treaty with Panama, and abrogation of the treaty with Panama cuts from under us our title to the canal and the Canal Zone and the whole enterprise reverts back to the Republic of Panama.

The Hay-Pauncefote treaty and the treaty with Panama are interwoven into one document and by both taken together our rights in the canal are determined.

Therefore, while we dug the canal and it is ours, our ownership and control is subject to the easement of all nations to receive for their ships passing through the canal the same treatment which we accord to our own.

If, then, we exempt our own shipping from the payment of tolls, which we have a perfect right to do, we must likewise exempt from payment of tolls the shipping of all other nations; but on the other hand, if we charge tolls to other nations we must charge tolls to our own shipping whether coastwise or otherwise.

This is the plain language of a treaty which has likewise been made the condition of the other treaty upon which our occupancy of the canal is based, both in its inception and in its continuity.

And again I say that if these conditions seem unsatisfactory and unpleasant it is not the present administration that is to blame. The responsibility rests upon the shoulders of those administrations who made and entered into the Hay-Pauncefote treaty of 1901 and the Panama treaty of 1903.

NO NEW RULE.

The rule adopted in the Hay-Pauncefote treaty, to which we agreed, that the canal "shall be open to all nations on terms of entire equality," without discrimination "as to charges of traffic," is no new rule to the nations of the world. It is substantially the same rule agreed to by England and adopted in the convention of Constantinople for the free navigation of the Suez Canal, which is substantially a British waterway.

Under that provision all the nations of the world, including the United States, has construed the term "all nations" as meaning to include England. England has agreed to that construction and her ships pay tolls through what is substantially her own canal on terms of equality with American ships, and there is no exemptions allowed for her coastwise trade.

THE TABLES TURNED.

Let us turn the tables for a moment. Suppose England had purchased the canal strip herself and dug the canal. Suppose that, prior to the purchase, England had entered into a treaty with us and we had given her consent to dig the canal upon the conditions that our ships were to be allowed equality of terms with her ships in the use of the canal. And suppose, after the canal was dug, England would have passed a law that her ships going from England through the Canal Zone owned by her, to her Indian and Australian possessions, should be allowed to navigate the canal toll free, while our coastwise ships would be compelled to pay tolls, would we not have protested that such an exemption was in plain violation of the treaty? And would we not be right in our contention?

WE SHOULD BE CONSISTENT.

There is such a thing as being consistent in the matter of nations as well as individuals. We should not ask that foreign nations interpret our treaties with them in one way and then proceed on our part at another time to interpret similar treaties in an entirely different way.

By the treaty of 1871 with Great Britain our citizens were to have the use of the Welland, St. Lawrence, and other Canadian canals "on terms of equality with the inhabitants of the Dominion of Canada."

In 1888 Canada fixed the tolls on the Welland Canal at 20 cents per marine ton, but provided that if the merchandise was exported from Montreal, or east of it, a rebate of 18 cents per ton was to be allowed, and that if it was transshipped in Canada this rebate should be allowed, but if transshipped to the United States the rebate should not be allowed.

Our Government protested against this discrimination against our shippers as being in violation of the treaty agreement providing for equality of terms of Americans with Canadians in the use of these Canadian canals.

After a great deal of discussion and exchange of diplomatic notes, together with threats of reprisals, the Canadian Government receded from its position and the American contention prevailed, and still prevails to-day.

We protested at that time that where a treaty gave us "equality of terms" with Canadians on canals built by them on Canadian soil, that a rebate given to the Canadian coastwise trade was unfair and in violation of "the equality of terms" provided for in the treaty.

But in this matter of the Panama Canal it is sought to rebate the entire amount of the tolls of our coastwise trade in a case where a treaty specifically provides that there shall be "no discrimination against any nation, its citizens or subjects, in respect to charges of traffic," but that the canal "shall be open to the vessels of all nations," not on "terms of equality" merely, but, to use the term of the treaty, "on terms of entire equality."

Is it not evident that if we persist in interpreting treaties in a manner which will discriminate in our favor in the Panama Canal, that other nations will interpret our treaties with them in such a way as to discriminate in their own favor, in their own waterways, as against our commerce and trade?

THE CHARGE OF SURRENDER.

Among other unfair methods adopted in this controversy is the one which seeks to get some one to believe that in repealing this bill we are surrendering sovereignty or something or other to Great Britain which we ought not to surrender.

There is no question of sovereignty involved here and nothing in the nature of surrender. The crux of the whole question is the interpretation and construction of a treaty. By a bill passed in the last Congress the treaty was interpreted one way. After a representation by the other party, and before it has been attempted to put the interpretation into effect, we have concluded that our former interpretation was erroneous and now seek to correct that interpretation.

An admission of a mistake, when mistake is made, is not surrender. It is merely reparation. To refuse to correct an error, when the error is apparent, is not a sign of bravery, but is indicative of moral cowardice.

When Canada receded from her position in the matter of the Welland Canal, upon our insistence that the treaty had been violated by a discrimination in rebate against our vessels, Canada did not surrender. She simply changed her interpretation of the treaty to agree with ours.

In a thousand cases questions of interpretation of treaties have been discussed between the chancelleries of the nations. Sometimes one nation has receded from a position, sometimes another, but in no case have these recessions been denominated surrender, unless where it has been done by some demagogue, who, running out of legitimate argument, decides to call names and appeal to prejudice.

In legislative matters between the two Houses of Congress, one House will propose an amendment, the other House will disagree to it. A conference committee results, and one or the other House recedes from its position. It is absurd to say that such recession is a surrender.

The claim that the repeal of the canal exemption law is a surrender is made with an obvious purpose. The scheme of hiding beneath the flag the efforts of special interests to secure special privilege is an old game. It has been worked before. But it deceives no one, for the bristles of special interests protrude through the flag and give the scheme away.

A noted author has said "Patriotism is the last refuge of scoundrels." I would not be so harsh, but I would say that patriotism is often the last refuge of those who seek partisan advantage irrespective of the merits of a controversy.

In repealing this bill providing for tolls exemptions we are not surrendering any right we now have. The only question is, What rights do we really possess in view of our treaty obligations?

No one denies for a moment that we have a right to exempt from tolls either our coastwise or foreign ships or both if we desire to do so. No one is attempting to deny it. But if we do exempt our ships from tolls our treaty obligations are such that we must give the ships of all other nations similar treatment.

We had the right in the first place either to enter into treaty or not to enter into treaty. We had the right to pledge ourselves to give the vessels of other nations the same treatment in the canal which we give our own or we had the right to refuse to do so.

We saw fit to enter into treaty pledges that we would do the former. We were not forced to do this. We did it voluntarily and willingly because in line with our policy for a century. Having agreed to do so, we are therefore morally bound to keep our pledges.

If it be represented to us by the other contracting party that we were about to violate the provisions of that pledge, and we are satisfied that such is the case, a reversal of that policy is in no sense of the word a surrender. It is simply common, everyday honesty.

APPEALS TO PREJUDICE.

Efforts have also been made to arouse racial prejudices by demagogic talk about favoring British contentions. This is not the first time that this attempt has been made to cloak and hide the efforts of the special interests in their attempts to secure special privilege.

In the days of President Cleveland, when the Democratic Party sought to break down the barriers of special privilege as represented in a high protective tariff and declared for a tariff for revenue only, the cry was raised all over the country that the Democratic Party was favoring "British free trade" and was opening its market to British merchants, and that British gold was being used to accomplish this purpose.

The object was obvious. It was an appeal to racial prejudices of long standing. The same object is sought in this discussion with regard to this bill, but as the object failed before, it will also fail here. The motive is too apparent to succeed.

It is not a question of England here, but a question of all the nations of the civilized world. The treaty happened to be made with England, but the world is the beneficiary, and all other nations are silently acquiescing in her representations. In this matter England is but the agent of other nations.

If England fails in her efforts, we will probably hear from the others later. If in no other way, we will hear from them in retaliatory interpretations of similar treaties we have with them, to the loss and injury of our own trade.

By exempting our coastwise trade we are not following out an anti-British policy, but an antiworld, as well as an anti-American, policy, for we have always stood for equal rights of American ships in all foreign waters.

In reference to this feature of the discussion I would quote the language of Representative KEATING of Colorado, a distinguished Irish-American Member of this House, in his recent discussion of this bill. Mr. KEATING said:

> I am bound to the people of Ireland by the tenderest of sentiments. My father fought for Irish freedom, and when he lost fled to this country with a price upon his head. I know the Irish people would make any sacrifice that men should make to gain freedom for the little green isle.
>
> But they can not be turned from their lofty purpose to be used as tools by an avaricious Shipping Trust, which is seeking to occupy Uncle Sam's property without paying rent.
>
> Twisting the lion's tail was used in the last generation to catch the Irish vote, and that is why it has been revived on this occasion, but I warn the gentlemen that they sadly underestimate the intelligence of the men of Irish blood who are citizens of this country. They can not be caught by the chaff gentlemen are spreading before them. They will resent this arrogant affront to their intelligence and chastise the cheap demagogues who seek to play upon their feelings.
>
> When I return to my constituents I want to be able to say that when the battle lines were forming I found on one hand the black flag of special privilege, and under it the remnants of an army which once followed Cannon, Barnes, and Penrose, and that on the other hand I saw the white banner of the new freedom, under it the militant hosts of progressive Democracy led by Woodrow Wilson, and that I cast my lot with Woodrow Wilson and his policies.

WRONG POLICY WITHOUT REGARD TO TREATY.

But if it were true that, without violating treaty provisions, we would have the right to exempt our coastwise trade from the payment of canal tolls, I would still be unalterably opposed to such exemptions, and for the following reasons:

First. Such exemption would be in the nature of a ship subsidy and would violate a cardinal tenet of Democratic faith.

Second. Such exemption would be the granting of a special privilege to a very favored few at the expense of the many, a position likewise abhorrent to Democratic ideas.

Third. Such exemption would be a discrimination in favor of our citizens engaged in the coastwise trade as against those of our citizens engaged in the foreign trade.

Fourth. Such exemption would be an advantage to the citizens of the Atlantic and Pacific coasts as against the great mass of the people residing in the Middle West.

Fifth. Such an exemption would inure purely to the benefit of the Shipping Trust and a few independent shipowners and would not benefit the general public.

Sixth. Such an exemption is in violation of our historic policy of demanding of other nations equal rights with their vessels in their canals and waterways and would place us in the inconsistent position of applying one rule as to the treatment to be accorded our ships in foreign waters and setting up a different rule as to foreign ships in our waters.

Seventh. Such an exemption would result in foreign nations retaliating by likewise discriminating against us in their waters and thus destroy our commerce the wide world over.

Eighth. Such an exemption would be such an example of national selfishness as to make our Nation an object of ridicule and derision in the eyes of the whole world.

DISCRIMINATION AGAINST OUR FOREIGN TRADE.

There is a popular error abroad that the law we seek to repeal guarantees an exemption from tolls in the canal for every vessel flying the American flag. This is not true. The present law gives this special privilege of exemption only to our vessels engaged in the coastwise trade, but compels our vessels in the foreign trade to pay the tolls.

The great injustice of this discrimination is apparent. Under our law no vessel of a foreign country is allowed to engage in the American coastwise trade. The coastwise vessels have an absolute monopoly of the coastwise trade as far as foreign competition is concerned, and by the organization of the Shipping Trust they have also eliminated competition at home.

Not so with our vessels in the foreign trade. They meet the competition of the world; they meet a competition which enjoys subsidies and are compelled to compete against these subsidies. And yet we propose to allow the coastwise vessels, which are protected from all competition abroad and who combine against competition at home, free passage through the canal, while our foreign vessels, which are compelled to compete with the world, are burdened with the payment of tolls. Let us take a succinct example:

You and I are citizens of New York and we desire to engage in the shipping trade. Both of us are American citizens and have paid equal proportions of the cost of digging the canal and will bear proportionally the cost of maintaining and operating it.

We both invest an equal amount of money in having ships built for us. We have our ships built just alike, at the same yards, and capable of carrying the same tonnage. Both ships are completed at the same time and both are loaded with the same amount and the same character of merchandise.

We both set sail at the same time, but I intend to take my cargo direct to San Francisco. You decide to stop first at Lower California and leave a portion of your cargo or take on additional merchandise and then journey on to San Francisco, your final destination being the same as mine.

We both reach the canal at the same time. You disclose your intention of stopping at Lower California en route and you are immediately classified as being in the foreign trade and are required "to dig up" $10,000 in tolls before you can pass through the canal. On the contrary, I am classified as being in the coastwise trade and the locks are open to me and the engines tow me through from Atlantic to Pacific without the payment of a single penny of tolls.

In other words, you are discriminated against to the amount of the $10,000 tolls and required not only to pay these tolls but to contribute your proportion of the cost of operating and maintaining a canal in order that I may use it free of cost.

If this does not constitute special privilege to a favored few, a policy at variance with every declaration of Democratic faith, I do not understand the plain logic of everyday things.

A DISCRIMINATION AGAINST THE PEOPLE.

But the discrimination does not end here. The discrimination is much greater when we consider the thousands of our population who will never use this canal, may never see it, and yet have paid for its digging and will be called upon to pay for its maintenance and operation.

The canal cost in round numbers $400,000,000. The annual interest charges on the bonds will be about $10,000,000; the annual operation expenses four millions more; the annual maintenance expenses another million; and the policing by our military about ten millions—in all, something like an annual expenditure of about $26,000,000.

The original investment has been paid by all the taxpayers of the country, and this annual expenditure will also have to be met by them, less the amount received from tolls. The annual

amount of expenditure will far exceed what is received from tolls, and this deficit will have to be contributed in the way of taxes by the people at large.

Every vessel using this canal free of tolls thus in effect takes the amount which it would otherwise pay from the pockets of the American people. In other words, the farmers of Illinois, the merchants and laborers of the Middle West, who receive no benefit from the canal and who may never even see it, are to be taxed in perpetuity in order that the vessels of the Shipping Trust may go through the canal free, and add to their already large profits what they would otherwise have to pay in tolls.

In addition to contributing to the cost of digging this canal and the annual cost of maintenance and operation these same farmers, merchants, and laborers are biennially contributing millions of dollars to keep up the harbors of the country for this coastwise trade.

For all this expenditure they receive substantially no benefit at all, but those who do receive the benefits, those whose vessels have the distance from the Atlantic to the Pacific shortened for them by many thousands of miles, those who will grow rich and affluent in the profits accumulated in the use of this canal, not only seek to appropriate the benefits of all that has been done by the people in constructing and operating this canal, but they claim the further right to carry their cargoes through the canal at will, without contributing even enough to purchase grease to lubricate the gates of the locks and the dam.

Grant this bonus to them, and before long they may further demand that the farmers, merchants, and laborers of Illinois shall contribute to furnish their vessels with free coal and pay the wages of their crews in order to stimulate and strenthen "our merchant marine."

THE SHIPPING TRUST THE CHIEF BENEFICIARY.

It may also be pertinent to inquire who will be the chief beneficiaries of this coastwise trade exemption of tolls. Who will receive the benefits?

The Committee on Interstate Commerce recently investigated the Shipping Trust in its relation to the coastwise trade. They made an exhaustive investigation and had extended hearings. They found and reported that the overwhelming majority of American coastwise vessels were owned either by the railroads or by the Eastern Steamship Corporation or the Atlantic, Gulf & West Indies Steamship Lines. In their report they say:

> Combining the two interests, it appears that the railroads and the two Atlantic coast shipping consolidations control nearly 85 per cent of the steamers and nearly 94 per cent of the gross tonnage engaged in the entire Atlantic and Gulf coastwise trade. Attention may be called again to the fact that very few of the routes between any two ports on the entire Atlantic and Gulf coasts are served by more than one line.

And yet this is the trust combination and monopoly that we are asked to free from tolls, asked to subsidize, asked to confer special privileges upon, at the expense of the whole people, and asked to do it in violation of treaty pledges solemnly and sacredly made. And this also in view of the fact that these same combinations, already, without the benefit of canal or free tolls, are declaring dividends to their stockholders of over 15 per cent.

POSSIBILITY OF RETALIATION.

I have before adverted to the fact that interpretation of treaties by us leading to discrimination in our favor will result in interpretation of other treaties by other nations in their favor as against us. John Bassett Moore has well said:

> A discriminating policy as to tolls will provoke retaliation in some form and prove in the end to be impracticable.

We have some thirty or forty treaties with other nations providing for "equal treatment" of our citizens with theirs. We have negotiated a dozen or more treaties with nations of Central and South America with reference to the Panama Canal, pledging equal treatment.

The foreign trade of this country amounts annually to nearly $4,000,000,000. More than a billion represents manufactured goods competing with the goods of other nations. More than three millions of American money is invested in other nations. These nations would welcome an excuse to discriminate against us. Shall we give them this excuse by misinterpreting the plain provisions of a treaty in a selfish way for our own benefit?

We have insisted that the term "equality of treatment" in our treaty with Great Britain as to Canadian canals meant equal rights for American vessels with Canadian vessels in those canals. Upon our insistence and in view of that treaty, Canada receded from her position granting discriminating rebates to her coastwise vessels in her canals.

If we now give a different interpretation to the term "equality of treatment" in the matter of the Panama Canal and insist upon freedom from tolls for our coastwise trade, while insisting upon the payment of tolls for the Canadian coastwise trade in Canadian canals, what is Canada likely to do in the new premises?

Will she not be likely to go back to her old construction of our treaty with reference to the treatment of our vessels in her canals? Is she not likely to reenact the discriminatory rebate in favor of her own vessels in her own canals in retaliation for our discrimination against her vessels in the Panama Canal? And if she does, can anyone blame her?

And let us see what that would mean. There passed through the Canadian Soo Canal year before last 6,500 vessels with a marine tonnage of about 32,000,000 tons. It is estimated that 75 per cent of this was American coastwise trade, or about 24,000,000 tons. There passed through the Welland Canal in Canada about 775,000 tons of American coastwise trade.

The highest estimate of the tonnage of our coastwise trade which will pass through the Panama Canal is a single million of tons. We are thus endangering our commerce of 24,000,000 tons in the Canadian canals to give a benefit to 1,000,000 tons to our seacoast trade. Is there any sense or economic reason in this?

Most of this twenty-four millions of commerce through the Canadian canals is commerce originating in the Middle West, in a territory tributary to Chicago. Is it the part of wisdom for an Illinois Representative to barter away advantages in twenty-four millions of Middle West trade to help out a trade of a single million on the Atlantic and Pacific seaboards, thousands of miles away?

Is it the part of wisdom of an Illinois Representative to discriminate against interior trade in the interest of a seaboard trade, giving the seaboard trade all the advantage?

Is it the part of wisdom to do so when by so doing he assists in violating sacred treaty obligations, trails national honor in the dust, refuses aid to the President in his foreign policy, assists a monopoly to reap particular benefits, fastens a subsidy on the American people, and confers special privileges on a favored few? I have decided that it is not.

Canada is contemplating an artificial waterway through the Georgian Bay, through which vessels loading at the ports of the Great Lakes can pass direct to Liverpool without breaking bulk, reducing the cost of transportation materially. The right of American vessels to pass through this canal on equal terms with Canadian vessels means millions of dollars to the American farmers of the West; but if we discriminate against Canada in the Panama Canal can we expect anything else than that Canada will discriminate against us in the Georgian Bay Canal?

Discrimination by us at Panama will be met by retaliatory discrimination against us in Canada, which will reduce the value of every bushel of American wheat and the value of every acre of land in the Middle West. Will it pay, either morally or commercially?

THE RAILROAD QUESTION.

But it is urged that by giving exemption of tolls to our coastwise trade it can compete more strongly with the railroads. By the same argument it could be said that if we give them free coal and pay their sailors' wages they would still be more able to compete with the railroads.

Of course the taxpayers would have to go down into their pockets to pay for this free coal and free wages, but they will have to go down into their pockets also to make good a deficit in the expense of operating the canal, caused, in part, by an exemption of tolls. It is as broad as it is long.

And why should we thus aid by subsidy the Shipping Trust in their competition with the railroads? We have given the Shipping Trust the benefit of a canal in the first place, and they can pay the tolls and then have an immeasurable advantage against the railroads in the matter of competition.

Exemption of coastwise tolls will not, in the ultimate analysis, aid the consumer one iota. The tollage of $1.20 per vessel-ton—a vessel-ton being 100 cubic feet and not 2,000 pounds, being based on space occupied rather than weight—would amount to about 50 cents a freight-ton, or one-fortieth of a cent per pound.

This small charge would be of no consequence to the consumer even if he actually received it. But he would not receive it, for a vessel can carry a cargo from New York to San Francisco by the canal for one-fourth what it costs a railroad to carry the same cargo transcontinentally.

The coastwise vessel owner can easily pay the tolls and then have all the advantage in the world over the railroads. If the vessel owner does not have to pay the tolls, he will simply be the amount of the tolls ahead, which will be added to his profit, and the consumer will reap no benefit.

Those who talk about railroad and shipping competition should remember that it is the canal itself, shortening the distance, as it does, from Atlantic to Pacific by 8,000 miles, which worries the railroads and not the matter of 50 cents per freight-ton tolls.

THE PANAMA RAILROAD.

In giving instructions to Mr. Lowell, our minister to England in 1881, with a view to securing a modification of the Clayton-Bulwer treaty, Secretary of State James G. Blaine said:

> The United States does not seek to have any exclusive privileges accorded to American ships in respect to conditions or tolls through an oceanic canal any more than it has sought like privileges for American goods in transit over the Panama Railroad.

Secretary Blaine has here raised a pertinent suggestion. The Panama Railroad belongs to the United States. It is as much our railroad as the canal is our canal. It runs parallel to the canal. Like the canal, it connects the seaports of the Atlantic and Pacific. Like the canal, it is constructed on American territory.

If coastwise vessels are to go through the Panama Canal without payment of tolls, why not allow American freight to be shipped over the Panama Railroad free of charge on the theory that it is also coastwise trade? Why not allow American passengers from Colon to Panama on this railroad to ride free of fare?

The Panama Railroad is a paying proposition. If American freight and passengers were allowed to use it free of cost, there would be a deficit in its operation. The people would be required to make good this deficit by the payment of taxes. But at that the situation would be no more different than the present canal proposition, for here it is proposed to exempt charges for coastwise freight; a deficit will result and the people will be called upon, through the avenues of taxation, to make good this deficit that special interests may have special privileges accorded them.

The United States has recently appropriated $35,000,000 to build a railroad in Alaska. It is expected that the freight tolls will pay for the operation of the road and the interest on the bonds. If, however, the exemption of canal tolls to our coastwise trade is a proper precedent, why not carry all freight offered for the Alaskan railroad free of charge and let the people make up the deficit? That this would be palpably unfair goes without saying, and yet it is no more so than the proposition to exempt coastwise vessels from the payment of tolls.

THE TALK OF "OUR SHIPS."

Again, it is said that this is our canal and we want our ships to go through it free from tolls. True, it is "our canal," but who is meant by the preposition "our"? "Our canal" does not mean that it is the shipowners' canal, that it belongs to the Shipping Trust, or that it is the special property of a favored few.

True it is that it is "our" canal, but that means it belongs to all the people. That should mean that no limited class of men shall be allowed to use it free of cost when all the people, all the taxpayers, who have paid for its construction will have to pay for its maintenance and operation as well.

We talk of "our ships" as if they belonged to the people. They are not "our ships." They are the shipowners' ships. They are the Shipping Trust's ships. They are "their ships," and not "our ships," and they want to use "our canal" for "their ships" without paying one cent for the upkeep and operation of the canal, when it was constructed by all and for all.

If these ships are "our ships," then the railroads of the United States are "our" railroads, should also receive special favors, and should be subsidized to the same extent that this law subsidizes "our ships." By the same token the Standard Oil Co. is "our" oil company, and the United States Steel Trust is our dearly beloved Steel Trust, and all should be likewise given special favors.

If the Government is to lift the coastwise vessels over the Continental Divide at the Isthmus free of cost, then the railroads have a just claim to have their trains lifted at public expense over the Continental Divide in Colorado.

Why should not the railroads and the oil companies and the Steel Trust and the ships pay their own way, as the farmer does, as the merchant does, and as the laborer is compelled to do?

The distinction between the coastwise vessels and other vessels is not the proper distinction to draw in the matter of tolls. Vessels—all vessels—which use the canal should help to bear the expenses of operation and maintenance. It is the use of the canal and the reaping of the direct benefits which should govern, and not the question of where the vessel comes from or whither it is going. It is the going through the canal that should count.

THE DEMOCRATIC PLATFORM.

But we are told that we are repudiating the Democratic platform adopted at Baltimore in our effort to repeal the exemption clause of the Panama Canal law, because that platform contained an incidental clause favoring such exemption.

How this clause got into the Democratic platform or who was responsible for it I do not know nor do I care to speculate about it. But this much I know, that whether in the Democratic platform or not it is undemocratic in every detail and does violence to the Democratic faith.

From time immemorial it has been a fundamental tenet of the Democratic Party that special privilege extended to a favored few is abhorrent to the principles upon which this Government was founded.

"Equal rights to all and special privileges to none" has been the Democratic slogan since the days of Jefferson, and any proposition which advocates granting to the beneficiaries of one of the greatest monopolies and trusts privileges not vouchsafed to all people is undemocratic whether in a Democratic platform or not.

If a plank had been inserted in the Baltimore platform declaring for the principle of high tariff protection, no matter in what disguise it may have appeared, I would feel myself duty bound as a consistent Democrat to repudiate that plank.

The general time-honored principles of the party predominate over specific declarations at variance with the general principles, especially when the specific declaration has not received consideration at the hands of the Democratic masses.

The proposition declaring for exemption of tolls for special interests had never been discussed by the people at large, had not found its way into any Democratic State platform that I know of, no delegation had been instructed to favor it, and it had not been indorsed by the majority of any representative Democratic body before its insertion in the Baltimore platform.

The proposition had passed a Democratic Congress, it is true, but it was passed by Republican votes, with a majority of the Democratic Members of Congress voting against it.

The same platform declared that "a private monopoly is indefensible and intolerable." To encourage, aid, and abet such a monopoly by granting it special privileges is also "indefensible and intolerable." The Shipping Trust, which was given special privilege by the exemption of its tolls at the Panama Canal, is one of the most "indefensible and intolerable" of all monopolies.

The same platform declared against "bounties and subsidies from the Public Treasury." The exemption of tolls for our coastwise trade is in the nature of a subsidy to the shipping monopoly. It frees the coastwise trade from paying into the Public Treasury what our vessels in the foreign trade are required to pay, and the deficit thus created has to be made up by the people who receive no benefits from the exemption at all.

Call it subsidy, if you will, or subvention, if you may, at all events it is special favors to the privileged few and is in violation of the Democratic faith.

Where two contradictory declarations appear in a Democratic platform and I am compelled, as in this case, to choose between the two, I have no apology to make when I choose the principle that is a time-honored and traditional declaration of Democratic faith rather than a minor declaration which does violence to every Democratic principle known.

STAND BY THE PRESIDENT.

And this, gentlemen of the House, leads me to my concluding observation.

President Wilson, in the plenitude of his authority as the selected guardian of the foreign policy of our Nation, appeared before this Congress and requested the repeal of this exemption law.

He did not badger nor browbeat nor seek to dictate nor control. He issued no orders, delivered no ultimatums, and made no demands. He simply asked and requested, as he had a perfect right to do. He simply appealed to the sense of justice of an American Congress. He said, in part:

> I have come to ask you for the repeal of that provision of the Panama Canal act of August 24, 1912, which exempts vessels engaged in the coastwise trade of the United States from payment of tolls and to urge upon you the justice, the wisdom, and the large policy of such repeal with the utmost earnestness of which I am capable.

He then proceeded to state that in his judgment the exemption was a plain contravention of the Hay-Pauncefote treaty, but added that he had not come to urge upon Congress his own personal views.

Having inside information, which, for diplomatic reasons, could not be given to the country at large, he stated that everywhere outside of the United States this exemption was considered a plain violation of a sacred treaty; that we could not

afford, as a Nation, to be placed in this position; and that we should reverse our action. He then added:

I ask this of you in support of the foreign policy of the administration. I shall not know how to deal with other matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure.

And for this he has been denounced as a dictator, an enemy to his country, and a truckler to foreign influence and power. He has ben charged with being "unpatriotic," "un-American," and "bartering away the people's rights."

The issue has been changed from one of the interpretation of a treaty or an economic policy to one as to whether the President shall be sustained or whether lack of confidence in his honor, patriotism, and integrity shall be registered in this vote.

In such a situation I have no hesitancy in taking my stand.

I have followed the President's lead long before he was chosen to the high office he now so creditably fills.

I followed him when, as governor of New Jersey, he cleaned the Augean stables of that State of political corruption and inaugurated the new freedom.

Having myself been the victim in Illinois of a combined effort to thwart the will of the people as expressed at the primary polls in a senatorial contest, I followed the President when, as governor of New Jersey, he forced an unwilling legislature in that State to record the popular will.

I was among the very first in my State who espoused the cause of his nomination to the office of President by the Democratic Party.

In the contest that followed I ignored my own candidacy for nomination for Congress in a State-wide effort to secure the indorsement of my State for his nomination.

Since his election as President I have stood with him in my capacity as a Member of this Congress in every policy which he has advocated and in every reform in which he has led. I have done so willingly and enthusiastically.

And now that his honor, patriotism, and integrity have been challenged, irrespective of what other considerations are involved in this bill, I do not hesitate to come to his support.

In this crisis in his administration I desire it to be known, and by my vote it shall be recorded, that the confidence that I have always had in his patriotism and integrity has not been diminished in the slightest degree.

In the campaign which I expect to wage for myself in Illinois this fall I desire it to be understood, now and all times, that I stand for Woodrow Wilson and his policies, and that by these policies I expect to rise or fall.

CONCLUSION.

Mr. Speaker, in order to vote against the repeal of his exemption I find myself in this position and in this situation:

I would be compelled to vote a dishonorable repudiation of the solemn pledges made by my country in a sacred and binding treaty with another power, on behalf of all the other powers of the world.

I would be compelled to vote a subsidy to a particular industry at the expense of all others and aid a conscienceless trust in its further efforts to prey upon the people.

I would be compelled to vote to discriminate against the commerce of my own section in favor of a seaboard traffic, and take money from the taxpayers of my State to make more profitable an already profitable trade.

I would be compelled to advocate a policy which would discriminate against our foreign trade, discriminate against our interior trade, discriminate against the great majority of our own people, discriminate against our South American and Canadian neighbors, and discriminate against the civilized world.

I would be compelled to repudiate the Democratic doctrine of "equal and exact justice to all and special privileges to none," and to violate every cardinal tenet of a time-honored Democratic faith.

I would be compelled to aid in a reversal of the established policy of my country in a century's dealings with the powers of the world and give the lie to our ancient contention for equal treatment for all nations, including ourselves, in the waterways of the globe.

I would be compelled to go back for my inspiration to the era of the cave dwellers and antediluvian times, when might made right and brute power ruled supreme in all lands.

I would be compelled to aid in obstructing the onward march of the world to a higher and nobler destiny and civilization, based upon the eternal brotherhood of man.

And, to all this, I would further be compelled to vote a lack of confidence in the honor, patriotism, and integrity of a President in whom I have implicit trust and faith.

Gentlemen of this House, the price that is asked is too great to pay. I shall stand by the President.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. GILBERT N. HAUGEN,
OF IOWA,

IN THE SENATE OF THE UNITED STATES,

Saturday, March 28, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. HAUGEN. Mr. Speaker, inasmuch as the time for general debate on the tolls bill was limited, I now avail myself of the privilege granted to print.

Much has been said about using the canal as a rate regulator, and that therefore we should have free tolls. The Government in the past, through its land grants, has aided materially in the building of railroads, yet, so far, nobody has suggested that after building the railroads the Government should maintain them. If we build a canal at the expense of $400,000,000, and maintain and operate it without expense to those availing themselves of its use, will the land-grant railroads not have the same right to demand that Uncle Sam maintain railroads partly built by the Government in order to regulate rates? Certainly if Uncle Sam should maintain one or more land-grant roads running across the continent, it would have a tendency to reduce the rates on parallel lines, but no one has suggested that, nor would it seem fair to tax all the people for its maintenance to benefit those directly and materially benefited.

It is also contended that the exemption of tolls to American ships going through the Panama Canal will reduce transportation rates in general. The toll to be charged under the bill will probably be fixed at a dollar per net registered ton, a registered ton equaling about two and a half tons by weight; hence the rate will be about 40 cents per ton or 2 cents per hundred pounds. When we stop to consider that railroad transportation rate from New York to San Francisco on first class is $3.70 per hundred pounds; second class, $3.20; third class, $2.65; fourth class, $2.25; fifth class, $1.90; and commodity goods in carload lots ranging from $1.10 down to 80 cents per hundred pounds and that the rate from Seattle to points in Iowa is: On first class, $3.30 per hundred pounds; second class, $2.85; third class, $2.38; fourth class, $2; fifth class, $1.98; and commodity goods in carload lots ranging from $1.10 down to 70 cents per hundred pounds, the proposed toll of 2 cents per hundred pounds, or ton toll of 40 cents per ton by weight sinks into insignificance. Were it not for the impregnable, selfish, and uncontrollable coastwise Shipping Trust, it is possible that free tolls might affect transcontinental rates and result in a slight reduction, but certainly not in inland rates. It is a well-known fact that whenever transcontinental rates are reduced, the rates between intermediate points are increased correspondingly. In other words, they rob Paul to pay Peter. Under our Constitution and laws, on the whole, the railroads are entitled to just and reasonable rates. The railroads are now contending that they are being underpaid and that rates should be increased. If so held by the commission, or if transcontinental rates are reduced on account of free tolls, inland rates go up to correspond. If so, what happens to the Middle Western States, who have so generously contributed toward the construction of our four-hundred-million-dollar canal? Some have estimated the amount contributed by the State of Iowa alone as high as $30,000,000. They will not only be taxed with a large portion of the cost of the canal and its maintenance, but will also be called upon to pay increased transportation rates over those already too high—as, for instance, the maximum carload rate on lumber from the Pacific coast to my home town is now about $500, which I believe is excessive and which, as well as other inland rates, evidently will have to be increased rather than decreased if the commission holds that the railroads are underpaid or if transcontinental rates are to be reduced.

Furthermore I am in doubt about the shipper on the coast obtaining any benefit from the free tolls. The testimony before Congress shows conclusively, and without controversy, that our coastwise trade is in the hands of a combination without competition from railroads or any source whatever, and that it pursues the same policy generally pursued by monopolies—to charge all that the traffic will bear. If a trust—and there seems to be no question about that—my knowledge of trusts has led me to believe, as many others believe, that a trust with a monopoly such as the shipping combination has takes all it can get, and I fear

that the proposed free tolls, which will probably aggregate $2,000,000 annually, will wind its way into the treasury of the shipping combine instead of inuring to the benefit of commerce, therefore, a ship subsidy, pure and simple, and like other ship subsidy bills proposed in the past not to encourage a merchant marine to stimulate competition but to subsidize 25,000 steam and sail ships now in existence, owned and controlled by a flourishing monopoly of our coastwise trade—one already receiving a subsidy for carrying our mail, and enjoying special privileges. For a half a century our merchant marine, this powerful combine engaged in coast trade, has had a monopoly, as our laws forbid foreign ships engaging in our coastwise trade. Not even a passenger may be carried from one American port to another directly or by way of a foreign port in any but an American ship under a penalty of $200, nor are foreign ships permitted to take a New York cargo to Seattle from coast to coast, nor would they be with free tolls, hence our coastwise ships have an absolute monopoly, not only in freight but in passenger traffic as well.

Therefore, so far as competition goes, there is nothing to be gained by granting free tolls, as, in my opinion, the only ones benefited by the free tolls would be the special interests. If so, if the combine is the only one to be benefited, and even if the coast commerce would be benefited to some extent, now that the canal has been built by all the people, it seems just and fair that the special interests directly benefited should pay at least a part of the expense of maintaining it. It hardly seems fair that the people who have so generously contributed toward its construction, as, for instance, the people of Iowa, who will receive practically no benefit commercially from it, should now be called upon to pay a proportionate share of all the expenses of maintaining it in all time to come, without any remuneration whatever by the combine directly and most benefited by it.

My understanding is that we have a commission whose duty it is to fix just and reasonable rates for railroads, express companies, and so forth. If transportation rates are high, and there is no question about that, why are they not reduced? Have the American people lost confidence in our Interstate Commerce Commission? Is it to be abolished as was the Commerce Court? Of course if the commission should grant the demand for increase asked by the railroads, and that in the face of its own report for 1913, there would be cause for complaint. The report is as follows:

Summary of monthly reports of revenues and expenses of steam roads reporting total annual operating revenues in excess of $1,000,000.

Item.	Year ended June 30—		Average per mile of road operated.	
	1913	1912	1913	1912
Average number of miles of road operated	221,748.58	219,666.45		
Operating revenues:				
Freight	$2,134,583,675.86	$1,902,742,853.03	$9,626.14	$8,661.96
Passenger	678,487,867.25	641,594,147.60	3,059.72	2,920.77
Other transportation	210,804,502.14	195,837,469.81	950.65	891.52
Nontransportation	33,287,717.53	28,789,383.52	150.11	131.06
Total	3,057,163,762.78	2,768,963,853.45	13,786.62	12,605.31
Operating expenses:				
Maintenance of way and structures	407,171,756.34	351,353,429.82	1,836.19	1,600.50
Maintenance of equipment	501,671,011.01	439,997,245.83	2,262.34	2,003.02
Traffic	61,201,495.37	59,203,342.86	276.05	269.52
Transportation	1,074,943,310.41	994,986,281.00	4,847.58	4,529.53
General	73,408,323.39	69,190,051.34	331.04	314.98
Total	2,118,585,896.52	1,914,960,350.85	9,554.00	8,717.58
Net operating revenue:				
Rail operations	938,577,866.26	854,003,502.60	4,232.02	3,887.73
Outside operations	1,379,130.21	475,163.90	6.23	2.16
Total net operating revenue	939,956,996.47	854,478,666.50	4,238.84	3,889.89
Taxes	124,356,024.17	116,419,026.43	560.80	529.98
Operating income	815,600,972.30	738,059,640.07	3,678.04	3,359.91

It will be seen that its own report gives net operating revenue on railroad carriers operating 221,748.58 miles of road as $939,956,996.47 for 1913, which is $85,478,329.97 in excess of net operating revenue for 1912.

Certainly rates will not be increased on such a showing. But if the commission should give credit to the contention that railroad rates should be increased because of the falling off of revenue by reason of the depression in business, short and light trains now running, and the thousands of empty cars rotting on the sidetrack, and conclude that it is the function of Uncle Sam to guarantee just and reasonable returns on watered stocks and bonds, to provide railroads with traffic, to see that cars are filled and large trains are run, in order that railroads may reap reasonable and fair returns on investments, then that is a different thing. But if so, and if practical and wise to do that, why not have a commission to see that farmers and merchants are also given fair returns on their investments? If railroads are to be reimbursed for losses sustained by reverses in business, in the falling off of traffic, as, for instance, in eggs, butter, and wheat, shipped direct from foreign countries, carried in foreign ships instead of by our railroads, why should the farmer be overlooked? Why not make up his loss due to the falling of prices on his eggs, butter, and cattle, on account of the large importations from foreign countries? If true, as reported, that the President is in sympathy with the proposition to increase railroad rates, why not a message to Congress suggesting a commission to see that the farmers are reimbursed one way or the other? No one denies that prices of eggs, butter, and fat cattle have gone down. Many believe it due to recent tariff legislation. The statistics show that beef, butter, and eggs are being imported. I quote from a letter from Rice Bros., live-stock commission men, Chicago, dated March 19, 1914, which reads as follows:

> The first load of Argentine dressed beef reached Chicago this week, forwarded by Armour & Co. just as a test. The quality was above expectations, comparing favorably with steers selling here from $8 to $8.40.

It will be seen that the quality of the Argentine beef is much above what has been contended, and that it compares with our best corn-fed beef. I have returns of a sale of cattle, sold for me in Chicago, March 25, 1914. Cattle that had been on feed since last October, averaging about 1,100 pounds, sold, some at $7 and some at $7.40. Evidently the Argentine beef is much above our average, and Argentina has some 30,000,000 cattle, increasing 25 per cent or seven and a half million head annually, which increase is in excess of the number slaughtered in our packing houses. In view of the vast supply and superior quality of Argentine beef likely to be imported, I take it that if the removal of tariff has not already affected the prices on cattle, it will as importations increase. If so, not only railroads, but farmers in general will suffer through this unfortunate legislation, and if one is to be reimbursed, why not the other? But I take it that the provision in our Constitution and laws to protect against the confiscation of property will not be construed as a guaranty of prices or profits. Under the circumstances, and having confidence in the commission, I can not believe that the commission can nor will grant the demand. In my opinion, to do so would be to add to the burden already heavy and would not be tolerated. But if in the opinion of Congress just and reasonable rates can not be had through the commission, a 2-cent toll on a hundred pounds from ocean to ocean, is not going to squeeze water out of watered stocks and bonds, nor reduce excessive rates aggregating hundreds of millions; hence, another remedy must be found, be it through abolishing the Interstate Commerce Commission and building and operating railroads by the Government, as proposed by some, or the regulation of stock and bond issues, or whatever it may be, one thing is certain and that is that $2,000,000 donated annually to the coastwise combine is not going to solve the problem; therefore I believe that the free-toll proposition is unjust and unwise economically.

As to our treaty obligations involved in this question, to say the least, it is an open question; it has been discussed pro and con, and there has probably been more hairsplitting and contention over the legal phase of the question than any other this Congress. My worthy colleague from Iowa, Judge GREEN, who has given the subject much thought and consideration, has, in my opinion, stated the question clearly and concisely, and I will content myself by referring to his remarks on the subject, which I quote in part:

> I shall briefly refer to the provision of the treaty which applies to the subject under consideration. Article 3, section 1, of the treaty is as follows:
>
> "The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable."
>
> I have not the time to enter into a full discussion of this section in its legal phases and shall not undertake to present them. I can only say that the words "entire equality" have always seemed to me to admit of but one meaning, and my study of the question in all its bearings as a lawyer has only served to confirm my view that this language meant what it said. I shall, however, refer to one matter which, in my judgment, determines what construction we ought to put upon the treaty in order that it may be said that we make no demands

upon other nations which we would not ourselves concede. We have had for many years a treaty with Great Britain relative to the canals and channels of the Great Lakes. In that treaty Great Britain granted to the United States the use of the Canadian canals on "terms of equality" just as the United States by this treaty granted to Great Britain the use of the Panama Canal, and in the same words. Great Britain and Canada at first contended that this provision did not apply to their coastwise trade, but we insisted that these words included all vessels no matter in what trade they were engaged, and after some years of contention we finally obtained the concession which we had demanded. The canals to which these words applied were built upon Canadian soil with Canadian money. In every way the circumstances were similar. Shall we now, after having made this demand and obtained by virtue of the construction which we ourselves put upon these words a most important concession—far more important than anything now involved—shall we now say that the language in the treaty means one thing when it is in our favor and the opposite when it is against us? Do any of us do business in this manner personally and can any nation survive that will thus conduct its foreign relations? What name would be applied to the private individual who conducted his business in this way and what name do we deserve if we so conduct our transactions with other nations?

It ought to be understood in this connection that the treaty rights which we have in the Canadian canals have been of immense value to the Middle West by reducing the rates on grain, and that with the completion of the Georgian Canal, connecting Lake Huron with Lake Ontario—a canal which will carry more traffic by far than will ever move over the Panama Canal—still greater benefits will be received. Inevitably, if we deny British vessels an equality in the Panama Canal, we must expect the same treatment on the Canadian canals, to the great loss to a section which has paid so much toward the construction of the Panama Canal without any possibility of receiving any benefit therefrom.

It has been asserted that the questions involved in this repeal are far-reaching and of highest importance. I agree, because I believe that nothing is of greater importance than national honor; but I am at a loss to understand how the right to grant a subsidy to the interest now most favored of all in this country can be for a moment weighed in the balance against our reputation for consistency, integrity, and fair dealing.

A word as to the gag rule adopted and the proposed repudiation of the Democratic platform. Inasmuch as it is not my rule or platform, I assume no responsibility. That an outrage was committed in the adoption of the rule and that the passage of the bill is a repudiation of the Democratic platform, no one seems to deny. It is not strange that those foremost in the fight against a gag and autocratic rule in the House now refuse to follow the Democratic Party in perpetrating the outrage. Speaker CLARK is reported in the press, "I will not be a party to ramming such a rule down the throats of Members." In his speech, March 31, page 6312, CONGRESSIONAL RECORD, referring to the fight on the autocratic rule adopted in the House, he states—

I often think of the 172 Democrats and thirty-odd insurgent Republicans who achieved our great victory on March 19, 1910, which started a political revolution. I love those men too well to quarrel with them now. [Applause.] You and I, Mr. Speaker, happened to be the Democratic leaders in that historic parliamentary contest, and among House Democrats you and I have been the chief beneficiaries. You owe the leadership of the House and I owe the Speakership to the fact, fortunate to us, that we were the Democratic leaders on that memorable occasion, but I have asserted a thousand times, and I do now reassert, that every man of the 172 Democrats and thirty-odd Republicans who fought with us on that bloody field is entitled to his full share of honor. In the immortal words of Admiral Winfield Scott Schley, "There was glory enough for all." With such men I will not quarrel. Indeed, the dignity of the high position which I hold by the partiality of the House forbids that I quarrel with any Member. I refuse to degrade the Speakership by so doing.

I assume that every Member will vote honestly the way his intellect and his conscience dictate; but why should I be denied the same privilege? No man here should be a "rubber-stamp" Congressman. [Applause.] I refuse absolutely to be either a "rubber-stamp" Representative or a "rubber-stamp" Speaker. [Applause.] If I did, you would have no respect for me. I stand for the dignity, the privileges, immunities, prerogatives, and the good name of the House of Representatives. I do not want to see this House degraded by passing, right or wrong, without any tenable reason, a bill which reverses our solemnly recorded action of two years ago, and which the Democrats indorsed at Baltimore.

There has been much felicitation among the supporters of this bill about their tremendous victory on the adoption of the rule. When it is remembered that the majority was only 28 on the rule and that a change of 15 votes would have defeated it in a House with 144 Democratic majority the grounds for their self-congratulation are hard to discover.

When Pyrrhus, King of Epirus, was walking over a battle field whereon he had won a hard-fought victory and observed the number of dead and wounded among his own soldiers, he mournfully exclaimed:

"Another such victory and we are undone!"

I am willing to follow where he leads so long as he is in the White House and so long as he does not ask us to repudiate a plain platform declaration, and there I draw the line. [Laughter.]

Under our system a national convention is the grand inquest of a political party, the highest authority for the declaration of party principles, higher than President or congressional caucuses; indeed, higher than President and congressional caucuses combined. There is no question about that.

The fathers also devolved upon Congress certain duties which we are sworn to discharge faithfully and well, duties which we can not shirk or fail to discharge without self-stultification and the condemnation of the people and of our own consciences.

The President discharges his duties. The question is, Have we the wisdom, the courage, and the patriotism to discharge ours? If not, we should make way for men imbued with the spirit of '76, to the end that we may transmit our priceless heritage of liberty to our children and our children's children unimpaired. [Applause.]

The declaration in favor of free tolls for our coastwise trade was writ large in the Baltimore platform. It is in these words:

"We favor the exemption from toll of American ships engaged in coastwise trade passing through the canal."

Was there ever a plainer sentence written since writing was invented? [Applause.]

We went to the people on that platform containing the free-tolls plank; headed by President Wilson himself, we all indorsed it; standing on it, we appealed to the voters of the land for their support; and they, responding to our Macedonian cry for help, enabled us to sweep the land from sea to sea by amazing majorities in the Electoral College. And now it is proposed that we reward their faith in us and their support of us by repudiating one of the planks of that platform on which we achieved that astounding victory, a plank so clear that there could be no misunderstanding about it, no possible misconstruction of it. I refuse absolutely to be a party to any such performance. [Applause.] Tell it not in Gath, proclaim it not in the streets of Askalon, that the Democratic Party will not keep faith with a confiding public.

Mr. UNDERWOOD, on March 27, page 5957, CONGRESSIONAL RECORD, speaking against the adoption of the rule, said:

In my judgment you are making a serious mistake to adopt this cloture rule, and I would not be worthy to hold your commission as the leader on this side of the House if, believing that you are making a serious mistake, I did not have the courage to stand here and tell you so in spite of everything.

Mr. MURRAY of Oklahoma, on the same day, states:

Mr. MURRAY of Oklahoma. Mr. Speaker, like the gentleman from Alabama [Mr. CLAYTON], I take this position because I am a Democrat. [Applause.] Evidently between us there is a difference in the definition of "Democracy." He doubtless takes the Democracy of this Nation to be the President. I do not. I deny the right either of the President or of this Congress to determine what is Democracy. Democracy is made in a representative convention duly assembled by the people. [Applause.]

We are here asked to violate our pledges twice in the same transaction—first, by a "gag" rule that will not permit the bill to be amended or an amendment to be offered, a thing that every Democratic nominee down to road overseer denounced in the campaign of 1912.

I am opposed to this "gag" rule, moreover, because if we are to stab our own party to death and a national policy of free "seas" of 100 years, we ought to have more time in which to commit the murder. [Applause.]

I take it no one will question this authority and that there can be no question as to the purpose of the rule adopted or as to the proposed repudiation of the Democratic platform. Believing and contending, as I always have, in freedom of speech and action, and having fought against autocratic and gag rule in this House for all these years, of course I would not support it, and at the request of the gentleman from Alabama [Mr. HEFLIN] for a pair, I paired with him against the rule, granting him a courtesy generally granted, and was recorded against the adoption of the rule, which, of course, in fact amounts to the same as if both had been present and voting.

I voted against the exemption of tolls to American coastwise ships in the act of August 24, 1912, and now, not being responsible for the Baltimore platform nor under any platform obligations on the subject, after giving the matter further consideration and investigation, which has fully convinced me that I was right in voting against the exemption, I felt it my duty to vote for its repeal.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. FINLY H. GRAY,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 28, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. GRAY. Mr. Speaker, at the time the United States determined upon the construction of the Panama Canal the Panama Canal territory was owned and held under the jurisdiction and sovereignty of Colombia, and by the stipulations of the treaty of 1856 with England, a then subsisting international obligation, the United States was not only without right to construct this canal, but was affirmatively precluded from entering upon such work within that territory, even though such territory be acquired from Colombia for such purpose. Before we could construct this canal we must not only acquire the territory from Colombia, but we must secure a modification of the Clayton-Bulwer treaty and a grant from England of the right to construct the canal across the Panama territory. The controversy over free tolls in its international character can not be understood or properly considered without

a full realization of our treaty obligations respecting the construction of the Panama Canal. The right to construct the canal through the Panama territory forms the one important and essential international chapter in the history of that great engineering project affecting the question of tolls.

We had absolutely no right under the treaty of 1856 to construct this canal. We had not only agreed in that treaty that we were without any right to build this canal, but we had bound ourselves affirmatively by our solemn obligation not to do so. We could not have even surveyed the route, nor stuck a pick in the ground, nor excavated a single goot of earth, nor took a step looking to prosecution of the work without first obtaining the consent and authorizatio nof England. That consent and authrization was obtained from England by the Hay-Paucefote treaty modifying all existing treaties respecting the construction of the Panama Canal, and, in consideration of this right granted to the United States, England exacted a provision obligating the United States to impose equal charges and equal terms upon the ships of the citizens of all nations without discrimination against any nation or its citizens.

After receiving this grant of the right to construct the canal, and in consideration for such grant obligating ourselves to impose equal tolls upon all ships passing through the canal, it is folly to prate about English domination or to ask such questions as "Whose canal is this?" and "Why should we consult foreign nations in the management of our own affairs?" It is a question of our national honor, of our respect for our treaty obligations, and if this treaty is to be ignored and disregarded in order to favor a few shipowners what assurance have we to offer to the world that other treaties will be better observed or more respected.

But even if the terms of the treaty now in dispute could be made to bear the construction claimed by the coastwise shipping interests; even if its provisions did not specifically preclude the United States from discriminating against the ships of other nations in respect to toll charges; even if the coastwise ships would reduce their freight rates in the amount of the tools remitted; even if international peace would not be jeopardized by our construction of the treaty, which is denied by every other nation; yet we could not afford to maintain this construction nor take advantage of the same.

We are a great and growing commercial nation. We are reaching out for the markets of the world. We are expending large sums to gain the trade of foreign countries. We are exerting our skill and dipolmacy to open up foreign ports and foreign markets to the products of our farms, factories, and mines. We are gaining the confidence and good will of foreign merchants and foreign consumers. We are succeeding in this great undertaking, and our export trade is fast becoming a valuable national asset and forms the basis for a great commercial future.

But our construction of this treaty has not only hatled the growth and development, the confidence, and good will in our commercial relations with the nations of the world, but it has brought us into controversy, distrust, and antagonism with foreign countries. Already heretofore friendly and reciprocating nations are resenting our attitude by declining to participate in our international exposition to be held at San Francisco more than in a mere formal way. But this reluctance of foreign nations to participate in the Panama Canal exhibition is of minor importance and concern compared to the effect which our attitude will inevitably have upon our foreign trade and our commercal relatons wth the world.

The growth of our foregn trade will be halted. The trade we now enjoy will be jeopadized. The confidence and good will we have thus far gained will be broken. The work of a generation to open up the ports of foreign nations to our products will have been lost and defeated. And all this, too, will be that we may tax all our people for the benefit of a few shipowners who now already enjoy a monopoly. Why should we be made to suffer such a great commercial disadvantage in order to favor the few and burden the many? We can only maintain the construction contended for by the coastwise shipping interests at an incalculable loss—loss of our national honor and integrity, loss of confidence and good will, loss of commerce and the markets of the world, loss in every character and in every capacity in which we have striven to gain, and loss to the great body of the people, as among ourselves, to favor a few shipowners already enjoying a monopoly of our domestic carrying trade.

The disputed provision of the treaty under consideration was to preclude discrimination by the United States favoring any certain ships to the disadvantage of other ships passing through the Panama Canal. Nothing is more obvious from the language used than that the provision exacted of the United States in consideration for the grant of the right to construct the canal through the Panama territory was to prevent discrimination in favor of our own ships. It certainly could not have been contemplaed that the United States would discriminate in favor of ships other tha nour own, and instead of the provision excluding our own ships, as is no wclaimed by the coastwise shipping interests, it is plain that it was intended to apply to our own ships especially, as well as other ships generally.

Panama Canal Tolls.

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. BUCHANAN of Illinois. Mr. Speaker, I am in favor of the repeal of free tolls to ships engaged in American coastwise trade. I voted against free tolls two years ago. I believed then that I was right, and I am now even more convinced of the justice of my position. I am opposed to free tolls on purely economic grounds, although I also believe we should uphold our treaties and agreements with other nations. There can be no doubt about the meaning of the language used in section 1 of article 3 of the treaty we have with Great Britain. It is binding upon this country both in honor and in law, and in view of this fact, I feel obligated to vote against free tolls for coastwise ships. The people of the United States are too honorable, too great, and too just to do anything about the propriety of which there can be the slightest doubt.

In the short time that this question has been before the people since the intention to repeal the free tolls law was announced, the country has been beset with an overflow of sentimental oratory, and an abundance of newspaper reports, appealing to the patriotism of the people. This four-flushed agitation by the trust-controlled newspapers of the country is intended to falsely arouse the national pride of the people and thereby mislead them from the real issues involved in this question. The principle underlying the repeal of free tolls to coastwise ships is an economic one; the matter of our treaty with England is secondary, while the argument that we are surrendering rights to Great Britain or any other country is absolutely ridiculous and absurd.

We must all admit that there is a clause in the last Democratic platform favoring free tolls to American ships engaged in coastwise trade passing through the canal, but this proposition is as out of place in the Democratic platform as a fish out of water. The plank in the Baltimore platform was made a part of the resolutions of that convention without attention, without notice, and without consideration or debate in any manner whatever. It was smuggled in and accepted until its true character was revealed, and now that it has been discovered it is turned out as obnoxious and antagonistic to true Democratic principles. There is no principle of the Democratic Party more firmly established than that opposing ship subsidies or subsidies of any kind. The principle is fundamental and is the very foundation of equal rights to all and special privileges to none. It has been reaffirmed for many years in the platforms of our party, and if the Democrats should now favor the proposition of free tolls, then, indeed, could they be charged with violating party pledges.

It has been argued that toll exemption is not in the nature of a subsidy, but I maintain that it is a subsidy, pure and simple. It makes no difference whether payments are made from the Public Treasury or whether payments which are due the Public Treasury are remitted, the results are the same upon the Treasury, upon the interests to be benefited, and upon the taxpayers. They are identical both in principle and in fact. Free tolls is merely a subsidy disguised in order to secure the Democratic indorsement of a principle which they have always condemned and repudiated.

This Government has already extended great favors to the coastwise shipping trade. It has shut out the foreign shipper from our local business and given them a monopoly. But they were not satisfied with this exhibition of generosity. They

divided the ports of the country among themselves so that only one line entered any port, so as to eliminate competition, to which the people of this country, who made these concessions to their interests, are entitled. But the greed of this trust was not yet satisfied. They were not satisfied with a monopoly of the coastwise trade, nor with dividing off the ports so as to eliminate competition, which enabled them to collect extortionate freight rates that in the end must come from the consuming people, but they have asked us to violate the highest law of the land for their selfish interests. They have asked us to go down in our pockets and pay the interest on the immense cost of the canal; they have asked us to assume the cost of operating and maintaining the canal; and now they have the unspeakable nerve to demand that we pay for them the price of passing through the canal.

The people of the United States have spent $400,000,000 to build the Panama Canal. Why ought we to discriminate in favor of any class of business that reaps the benefit of so large an expenditure contributed from the earnings of all the people? Furthermore, the benefits of the canal could not be equitably distributed. The people on the coasts have a natural advantage over those of the interior. The people of the interior contributed to the building of this canal, and why should we put them to a still further disadvantage by loading them with a burden of its upkeep and operating expenses which the coastwise shipper ought to pay? I believe in all cases that those who receive the benefits should pay for them, and the Coastwise Shipping Trust ought to be willing to pay its just share of the cost of operating and maintaining the canal.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. TIMOTHY T. ANSBERRY,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. ANSBERRY. Mr. Speaker, I want to take this opportunity of stating my position with reference to the pending bill. On the 23d of May, 1912, I cast my vote in this House against free tolls, and that vote is consistent with the votes I cast on this bill. At that time I concluded to vote against the Doremus amendment, because I felt that it amounted to giving away $1.20 per ton to the alleged monopoly which controls the coastwise shipping industry, and I could see no reason why I should vote a special privilege to these organizations, particularly since the canal was built for the best interests of all of the people and not in the interest of the few people who control this alleged shipping monopoly. I recall at that time conversing with Members on this side of the House as to the motives which impelled me to cast my vote against free tolls, and I said to them, as I say now, that in voting on this or any other question, if the Members of the House who seek to cast a Democratic vote would take the trouble to apply the question before the House to known Democratic principles, they would ordinarily meet with but little difficulty in arriving at a correct solution. And so I voted to make not our vessels, but vessels owned by a few of our citizens, pay tolls, and by so doing increase the revenues of the canal nearly a million dollars and decrease our taxes that amount.

Some of my Democratic friends and colleagues voted for the Doremus amendment despite the fact that it violated a Democratic principle and now at this late day they are patriotically reversing themselves because they feel that the President of the United States would not come to this Chamber and ask them to repeal that law unless he had strong reasons for so doing, and while their vote is proof of their patriotism, still I can not help indulging the reflection that careful application of a Democratic principle in May, 1912, when the Doremus amendment was passed, would have saved them the necessity for reversing themselves. In this connection I desire to print in the RECORD a letter which I received recently from an honored citizen of my great State which, in my opinion, reflects the sentiment of the thoughtful people of the district which I have the honor to represent. Judge Glenn, who wrote this letter, was on the common pleas bench in Ohio as a Republican, and his letter is in the nature of testimony from an adverse witness.

VAN WERT, OHIO, *March 11, 1914.*

Hon. T. T. ANSBERRY:
House of Representatives, Washington, D. C.

DEAR SIR: As far as the thick hide of a life-long Republican can be penetrated I must say that I see in President Wilson many commendable qualities as well as actions. The maximum of manliness and statesmanship has been reached in the President's position on the Panama Canal tolls repeal bill. Patriotism prevails over platform dictation and party fetters.

Should you find it desirable to support this measure and peanut politicians seek to make capital out of the fact of any apparent disregard of party obligations at least one Republican in your district will do all he can to explain and to commend the patriotic and manly attitude you assumed when you so voted.

Respectfully,

H. C. GLENN.

Resolutions of Protest Against the Surrender of American Rights at Panama.

EXTENSION OF REMARKS
OF
HON. JOSEPH R. KNOWLAND,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. J. R. KNOWLAND. Mr. Speaker, I insert in the RECORD the following resolutions and petitions protesting against the surrender of American rights at Panama:

Resolutions by Lincoln Republican Club, Santa Ana, Cal.

Whereas the American people have expended $400,000,000 upon the construction of the Panama Canal, thereby furnishing to the maritime traffic of the world the greatest improvement in the world's history, and

Whereas this great enterprise, being constructed with American money and through American territory, opened a legitimate avenue long needed for assisting the rapidly decaying American merchant marine by permitting the passage of American ships engaged exclusively in coastwise trade through the canal free of tolls, which course was adopted by a Republican administration and indorsed in the platforms of all other great political parties of this Nation, including the Democratic Party; and

Whereas President Wilson has suddenly found cause to reverse his position on the subject of free tolls and has demanded of Congress that this policy be repealed; and

Whereas in accordance with President Wilson's orders the Interstate and Foreign Commerce Committee of the House of Representatives has recommended the passage of a bill repealing free tolls to American ships, and the administration forces in both Houses of Congress are determined to accomplish the passage of this bill; and

Whereas the repeal of free tolls would not only remove a great and needed incentive to American shipping interests, but would also add a corresponding amount of freight to the articles transported from coast to coast in our own country, thereby benefiting the great railway systems to the detriment of the entire balance of the Nation; therefore, be it

Resolved, By the Lincoln Republican Club, of Orange County, that we are unalterably opposed to any policy looking to the repeal of free tolls, and that we condemn the present attempt to do so as un-American and a violation of the trust imposed in the Democratic Party by the people of this country.

—

NEW ORLEANS ASSOCIATION OF COMMERCE,
March 26, 1914.

The New Orleans Association of Commerce, the largest commercial organization in the South, is strongly opposed to the repeal of canal-toll exemptions for American coastwise vessels. We believe we voice the sentiment of the thinking people of the Gulf coast ports in this matter. We fail to see how the repeal of this clause would in any way benefit foreign shipping. We also fail to see how the retention of this clause could in any way harm foreign shipping, due to the fact that it involves coastwise or domestic commerce only and in which foreign shipping is debarred from competing in any event. We think not sufficient stress has been laid upon this essential distinction. American ships passing through the canal and trading in foreign ports will pay the same tolls as ships of foreign nations with which they compete. While we have every proper respect for the opinion and wishes of the President of the United States, we differ with him vitally in this matter. New Orleans is deeply concerned in the rehabilitation of the American merchant marine, and we feel that this unnecessary repeal, if put into effect, would deal a staggering blow to American aspirations for a return of maritime importance. We hope that the fight now waging against the attempted repeal will be successful, and desire to have our protest recorded in Congress. Senator JOSEPH E. RANSDELL, of this State, is familiar with this organization and our attitude on this question, as is Representative and Senator-elect ROBERT F. BROUSSARD, and other Members of the Louisiana delegation in the Senator and in the House.

We can not see in what possible manner the Hay-Pauncefote treaty is involved in a question which concerns American domestic commerce only. We earnestly hope you will vote against the repeal of this clause.

NEW ORLEANS ASSOCIATION OF COMMERCE,
By M. B. TREZEVANT, *General Manager.*

—

INTERNATIONAL ASSOCIATION OF MACHINISTS, OF OAKLAND, CAL.

Resolved, That we, the members of Lodge 610, International Association of Machinists, of Oakland, Cal., as citizens of these United States, do hereby protest against the repeal of the free tolls provisions of the Panama Canal act, and be it further

Resolved, That we are opposed to any arbitration on any question relating to the operation of the canal, as the building of said canal was made possible by American brains and financed by American coin, and be it further

Resolved, That we commend the stand taken by our Representative in Congress, Hon. JOSEPH R. KNOWLAND, in this matter as explaining our sentiments as American citizens, and that a copy of these resolutions be forwarded to Congressman JOSEPH R. KNOWLAND, a copy to the press and to the Central Labor Council of Alameda County.

The above resolutions were adopted in regular meeting at strike headquarters, Eighth and Pine Streets, Oakland, Tuesday, March 10, 1914.

C. J. FOLEY, *President.*
GEORGE ADAMS, *Secretary.*
L. T. STEVENSON, *Past President.*
J. J. DIGNAN, *Past President.*
A. L. SCHILLING,
Delegates to Central Labor Council, Alameda County.

—

BUTTE, MONT., MINERS' UNION.

At the regular weekly meeting of the Butte miners' union last evening resolutions were adopted protesting against the policies of President Wilson in regard to the Panama Canal, the Hay-Pauncefote treaty, and free tolls.

The resolutions, introduced by Jerry Egan, Pat Lee, and T. J. Leary, as committee, follow:

"Whereas a bill is before Congress providing for the repeal of the free-tolls provision of the Panama Canal act; and

"Whereas this bill has been introduced at the dictation of a foreign power and in consonance with the wishes of the transcontinental railroads of the United States and Canada; and

"Whereas we do not think the said free-tolls provision conflicts in any way with the so-called Hay-Pauncefote treaty; and

"Whereas we believe the retention of the said free-tolls provision will result in building up the merchant marine of the country and in lower transportation rates and cheaper food for the people: Therefore be it

"*Resolved*, That we, the officers and members of Butte Miners' Union, No. 1, of the Western Federation of Miners, are unalterably opposed to the repeal of the free-tolls provision of the Panama Canal act.

"*Resolved*, That we protest against the interference of any foreign nation in our domestic affairs, as fraught with danger to our self-respect and independence.

"*Resolved*, That copies of these resolutions be sent to the Senators and Representatives from Montana for presentation to the Senate and House of Representatives of the United States."

—

MASS MEETING OF CITIZENS OF NEW YORK CITY.

Resolutions introduced by Mr. Louis A. Van Doren, president of the Bronx County Bar Association, and adopted unanimously.

Whereas the Panama Canal has been built upon American soil by American energy and paid for by the money of the American taxpayer, and is, therefore, an American waterway; and

Whereas this waterway is subject exclusively to the sovereignty and jurisdiction of the United States, and the American Congress has provided that it shall be open to the commerce of the world upon fair and reasonable terms, and has exempted from tolls American coastwise trade, with which, under existing laws, foreign nations can not compete; and

Whereas Great Britain has demanded the repeal of this law, which involves solely a regulation of domestic commerce, and bases its demands upon the Hay-Pauncefote treaty, notwithstanding the facts that that treaty was made on the understanding that the canal should be built in territory alien to the United States and that since that time the United States has acquired by purchase from the Republic of Panama the rights of sovereignty over the territory through which the canal has been constructed; and

Whereas the British claim, if recognized, involves not only the surrender by the United States of sovereignty over its own territory and of the right to regulate its own domestic commerce, but also the assertion of an Anglo-American control over the canal; and

Whereas the present administration at Washington has refused to maintain the American right and has constituted itself the champion of the British claim as set forth in the protest of Sir Edward Grey, and advocates the complete repudiation of the attitude assumed by the last administration in reference to the canal: Therefore be it

Resolved, That we, citizens of New York, in mass meeting assembled in Carnegie Hall, this 20th day of March, 1914, denounce the proposal to repeal the free-tolls provision in the Panama Canal act in compliance with the demand or protest of any foreign power as an unjustifiable surrender of American rights in the Panama Canal and an unwarranted abdication of American sovereignty over American territory;

Resolved, That we denounce it as a breach of the Monroe doctrine, carrying with in by implication the recognition of the British claim that the canal is an international body of water, and not an American waterway, and the admission that it should in the future be subject to Anglo-American control.

Resolved, That we denounce as intolerable to patriotic American citizens the attitude or suggestion that the exemption of coastwise trade is anything but a regulation of domestic commerce, or that the policy to be adopted in reference to such commerce should be determined or affected by any power but the United States alone.

Resolved, That we commend the course of the Hon. JAMES A. O'GORMAN, United States Senator from New York, and the other Senators and Representatives who have courageously opposed the proposed repeal, and commend them for placing loyalty to their country above obedience to party leaders, who, although acting contrary to the platform of their party, now seek to coerce the legislative branch of the Government into a surrender of American rights.

Resolved, That we call upon the Representatives from the State of New York, regardless of party divisions, to stand by the exclusive right of the American people and the American Government to decide for themselves a question that vitally affects the commercial interests of this chief American port.

Resolved, That a copy of these resolutions be sent to each House of Congress and to the President. Finally, be it

Resolved, That we call upon the Congress of the United States to repudiate decisively these insolent demands of a foreign power and to stand like adamant against all attempts thus to surrender the vital interests of our country, whether these attempts be made by another branch of the Government, betrayed into panic by cleverly inspired fears of imaginary dangers, or suggested by those whose snobbish subserviency to certain foreign opinion makes them, as it made the Tories of the days of the Revolution, and as it makes the ambassador of today, look upon English claims as superior to American rights, and who seek in every controversy that arises between the two countries to serve England by the betrayal of America.

—

We, citizens of Butte, Mont., in public meeting assembled, protest against the repeal of the free tolls provision of the Panama Canal act, which was passed after full and adequate discussion by Congress, signed by a Republican President, approved in the plaforms, and distinctly accepted by the candidates of the Democratic and Progresaive Parties, and made binding by the votes of over 13,000,000 American citizens in the presidential election of 1912. To repeal it now, at the dictation of England, who violated the Clayton-Bulwer treaty on the false ground that it is a breach of the Hay-Pauncefote treaty, would be an unparalleled humiliation to this Republic and dishonoring to President Wilson, whose acceptance of it before his election was clear and unequivocal.

The free tolls provision is necessary for the protection of our coastwise shipping against the competition of the subsidized vessels of Europe, and especially those of England, whose cruisers—carrying the Confederate flag, but built in English shipyards, armed with English guns, manned by British seamen, and sent to sea in violation of international obligations, in defiance of the protests of the Federal Government—swept American commerce from the sea, and thus created the monopoly which England now seeks to maintain to the serious disadvantage and injury of this country.

The free-tolls provision is also necessary to protect our coastwise shipping from a combination of American and Canadian transcontinental-railroad corporations which want to crush all competition in the carrying trade. It is at the bidding of England and these railroad monopolies that the President is now endeavoring, by undue and improper pressure on Senators and Representatives, to make them sacrifice the interests of the American people on a false and unfounded allegation that the free-tolls provision is a violation of national honor.

If Congress should, in an hour of weakness, surrender American interests in the matter of canal tolls, the same improper and untenable interpretation of the Hay-Pauncefote treaty will also involve the dismantling of all fortifications in the Canal Zone and forbid the American fleet to use the canal in time of war, except on the same terms as the warships of other nations, including the country at war with the United States. We therefore call on Congress to maintain the honor, the interests, and the national dignity of this Republic by rejecting any bill which proposes to repeal the free-tolls provision of the Panama Canal act. We also urge the Senate to refuse to refer the question to arbitration.

We congratulate Senators CHAMBERLAIN, O'GORMAN, BRISTOW, POINDEXTER, and their colleagues who have stood with them in defending the true interests of the American people in face of gross and unfair attacks on and misrepresentation of them in a section of the New York press which notoriously holds a brief for England and never fails to take sides with her against their own country. We especially condemn and repudiate the World, the Times, and the Evening Post, and emphatically deny that they represent public opinion in this country.

Resolved, That copies of this declaration be sent to President Wilson and all the members of the Cabinet, to the Vice President for presentation to the Senate, and to the Speaker for presentation to the House of Representatives.

Resolution adopted by the Associated Chambers of Commerce of the Pacific Coast January 24, 1914.

Whereas on October 2, 1911, the Associated Chambers of Commerce of the Pacific Coast, at a meeting at which were present representatives of the Chambers of Commerce of San Francisco, Los Angeles, San Diego, Oakland, Portland, Tacoma, Seattle, and Spokane, adopted the following preamble and resolutions by a unanimous vote; and

Whereas the building of the Panama Canal was undertaken by the people of the United States in pursuance of the great national policy, amongst other things, of providing for the national defense, of opening up the shortest possible water route between the respective coasts of the United States and foreign countries, to provide through natural methods and to prevent monopoly of transportation means for transportation between the various sections of the Union at the lowest possible cost, to build up and expand our commerce with foreign nations, and, incidentally, to encourage the upbuilding of a now decadent merchant marine: Be it

Resolved, That it is the sense of this meeting that there should be no tolls charged through the canal to vessels coastwise flying the American flag;" and

Whereas Congress in due time passed a law for the regulation of the Panama Canal, which includes the provision exempting American ships engaged in the coastwise trade from the payment of tolls for the passage of ships through said Panama Canal; and

Whereas a protest has been filed by the Government of Great Britain against this provision, upon the ground of the provision of the Hay-Pauncefote treaty which reads, "The canal shall be free and open to the vessels of commerce and war of all nations observing these rules, on terms of entire equality"; and

Whereas for the reason that ships flying a foreign flag have not been and are not now permitted by law to engage in the coastwise trade, and are therefore not affected by any concession which the United States Government may desire to extend to American vessels engaged in the coastwise trade, and such concession is not in contravention of the treaty; and

Whereas the rivers and harbors act of 1884, section 4, uses the following language: "No tolls or operating charges whatever shall be levied upon or collected from any vessel, dredge, or other water craft for passing through any lock, canal, canalized river, or other work for the use and benefit of navigation now belonging to the United States, or that may be hereafter acquired or constructed"; and

Whereas from the point of view of the membership of the Associated Chambers of Commerce of the Pacific Coast no tenable or reasonable ground can be found for the contention for the claim advanced by Great Britain: Therefore be it

Resolved, By the Associated Chambers of Commerce of the Pacific Coast that we disclaim any intention or desire to avoid in the slightest degree any treaty obligation of the United States; that we claim for the people of the United States and for those of the Pacific coast as sensitive a regard for treaty obligations or obligations of any other sort as those held by the citizens of any other country, and particularly those of Great Britain, to whom we concede a high regard for all such obligations. Nevertheless, in a matter of such great importance as

that under consideration, in which we feel that the interests of all the people of the Pacific coast are deeply involved, we can not concede to any foreign Government the right to interpret a matter which we regard as being one entirely within the powers of the American Government, namely, that of prescribing the terms upon which American vessels may do business through an American-constructed canal with other American ports, in which business the vessels of no foreign country can or have engaged; be it further

Resolved, That the President and Congress are hereby urged, with all proper courtesy and respect to the Government of Great Britain, to stand firmly upon the principle herein set forth, and to refuse to have stricken from our statute books, or from actual enforcement, the law exempting from tolls through the Panama Canal of American ships engaged in the coastwise trade; be it further

Resolved, That certified copies of these resolutions be transmitted by the president and secretary of this Associated Chambers of Commerce of the Pacific Coast to the President of the United States, to the several members of his Cabinet, and to each of the Senators and Representatives in Congress, and to the Chamber of Commerce of the United States of America.

ASSOCIATED CHAMBERS OF COMMERCE
OF THE PACIFIC COAST.
ARTHUR W. KINNEY, *President.*
C. W. BURKS, *Secretary.*

IRISH-AMERICAN LEAGUE,
Oakland, Cal., March 9, 1914.

At a largely attended meeting of the Irish-American League of Alameda County, held on above date at Enterprise Hall, the following resolution was adopted unanimously:

"We, the members of the Irish-American League of Alameda County, and as citizens of the United States, do hereby protest against the repeal of the free-tolls provision for the Panama Canal.

"We commend highly United States Senators CHAMBERLAIN, of Oregon, and O'GORMAN, of New York, and Representative OSCAR UNDERWOOD, the minority leader of the House of Representatives, and also our own 'Young Giant of the West,' the Hon. J. R. KNOWLAND, of Alameda County, for their stand on the free-tolls question.

"We are also opposed to submitting to arbitration any question that may arise about the canal, as the canal was made possible only by American brains, brawn, and money.

"Mindful of George Washington's warning to keep aloof from all foreign entangling alliances, we believe if same is adhered to arbitration is unnecessary: And be it

"*Further resolved*, That a copy of this resolution be given to the press and a copy also be sent to the gentlemen mentioned herein."

NORTH SIDE BOARD OF TRADE,
Borough of the Bronx, N. Y., March 30, 1914.

Hon. JOSEPH R. KNOWLAND, *Congressman.*

DEAR SIR: At a regular monthly meeting of the North Side Board of Trade held on Wednesday evening, March 25, 1914, the following resolution was adopted and the secretary authorized to send you copy of same:

"Whereas the question of tolls for American vessels is now before Congress:

"*Resolved*, That the North Side Board of Trade favors the exemption of American coastwise vessels from such tolls on the Panama Canal when going to or between American ports; and be it further

"*Resolved*, That a copy of this resolution be forwarded to our Representatives in Congress at Washington, D. C."

Yours, very truly,
[SEAL.] CHAS. E. REID, *Secretary.*

YOUNG MEN'S REPUBLICAN CLUB OF LOS ANGELES COUNTY,
Los Angeles, Cal., March 19, 1914.

Resolutions.

Whereas the Interstate and Foreign Commerce Committee of the House of Representatives has recommended the passage of a bill repealing free tolls for American ships engaging in coastwise trade; and

Whereas the President and the leaders of the Democratic Party are trying to force this bill through Congress, thereby repealing one of the planks of their party platform; and

Whereas such action on the part of Congress would be a death blow to the American merchant marine, a permanent burden to the Pacific coast, and a serious handicap to the entire country: Therefore be it

Resolved, That it is the sentiment of the Young Men's Republican Club of Los Angeles County that the Panama Canal belongs to the American people, and that the American people, who spent $400,000,000 to build this canal, should reap the greatest possible benefit to accrue from its opening, even though such action on their part should offend some foreign power or powerful corporations, and that this organization is unalterably opposed to the repeal of free tolls: And be it further

Resolved, That a copy of these resolutions be sent by the secretary, in the name of this organization, to Woodrow Wilson, President of the United States; to United States Senators JOHN D. WORKS and GEORGE C. PERKINS; to Representatives WILLIAM D. STEPHENS, CHARLES BELL, and JOSEPH R. KNOWLAND.

Resolution adopted at a mass meeting of Philadelphia citizens, at which there were 3,000 in attendance.

MARCH 30, 1914.

ASK CONGRESS TO SAFEGUARD COUNTRY'S SOVEREIGN RIGHTS.

Congress was called upon, in forcible terms, to crush the plan to surrender the sovereign rights of the American people in a resolution unanimously adopted by the big assemblage of patriots at the Academy of Music last night to protest against the repeal of the clause in the Panama Canal bill exempting American coastwise vessels from paying tolls.

The resolution follows:

"Because England makes a territorial claim when she declares that the Hay-Pauncefote treaty not only encumbers the Panama Isthmus territory of the United States with equal rights of use by all other nations, but impresses upon it a servitude by which the United States loses the free use of its own canal for its own vessels, a claim England sought to establish in the general arbitration treaty of 1897, rejected by the Senate of the United States; and

"Because the Hay-Pauncefote treaty assumes the United States to be the owner of a canal built by it on its own territory, and therefore the United States has the right to fix the terms upon which other nations may use it; and

"Because Woodrow Wilson, President of the United States of America, accepts the contention of England and demands of Congress of the United States an unconditional surrender to England to sovereign rights;

"Therefore citizens of the United States of America gathered in Philadelphia to-day to protest against this action and to demand that the Congress prohibit this most unwarranted the surrender of the sovereign rights of the people of the United States, and we suggest and urge like action by citizens in other States, to the end that the rejection of the demand of the President for repeal of the Panama Canal free tolls for American ships trading between American ports act be general and irresistible.

"So we resolve."

SOCIETIES AND ORGANIZATIONS AGAINST REPEAL OF FREE-TOLL PROVISIONS.

Andrew Jackson Branch of the American Continental League, of New Haven, Conn., protesting repeal of clause for free tolls for American vessels through Panama Canal; to the Committee on Interstate and Foreign Commerce.

Abraham Lincoln Branch, American Continental League, of Cohoes, N. Y.; of Thomas Jefferson Branch, American Continental League, of Philadelphia, Pa.; of Franklin Branch, American Continental League, of Philadelphia, Pa.; and of Samuel Adams Branch, American Continental League, of Philadelphia, Pa., remonstrating against the repeal of the provision in the Panama Canal act exempting American coastwise shipping from the payment of tolls, which were referred to the Committee on Interoceanic Canals.

Nathan Hale Branch, American Continental League, of Columbus, Ohio; of the German-Irish-American Alliance of Newark, N. J.; of Francis Scott Key Branch, American Continental League, of Brooklyn, N. Y.; and of Dewitt Clinton Branch, American Continental League, of New York City, remonstrating against the repeal of that provision of the Panama Canal act exempting American coastwise shipping from the payment of tolls, which were referred to the Committee on Interoceanic Canals.

Yorktown Branch, American Continental League, of Philadelphia, Pa.; of George Washington Branch, American Continental League, of Philadelphia, Pa.; of Commodore John Barry Branch, American Continental League, of Philadelphia, Pa.; of Patrick Henry Branch, American Continental League, of Philadelphia, Pa.; of Paul Revere Branch, American Continental League, of Leominster, Mass.; of George Washington Branch, American Continental League, of Danbury, Conn.; of Andrew Jackson Branch, American Continental League, of Butte, Mont.; and of George Washington Branch, American Continental League, of Minneapolis, Minn., remonstrating against the repeal of that part of the Panama Canal act exempting American coastwise shipping from the payments of tolls, which were referred to the Committee on Interoceanic Canals.

Memorials of Lafayette Branch, American Continental League, of Jersey City, N. J.; of Lincoln Branch, American Continental League, of Providence, R. I.; and of Local Division No. 1, Ancient Order of Hibernians, of Danbury, Conn., remonstrating against the repeal of that part of the Panama Canal act exempting American coastwise shipping from the payment of tolls, which were referred to the Committee on Interoceanic Canals.

Commodore Barry Branch of the American Continental League, of Philadelphia, Pa., urging defeat of attempts to repeal clause in Panama Canal act exempting American coastwise shipping from payment of tolls; to the Committee on Interstate and Foreign Commerce.

Andrew Jackson Branch, American Continental League, of New Haven, Conn.; of Washington Branch, American Continental League, of Hazelwood, Pa.; of Anthony Wayne Branch, American Continental League, of Philadelphia, Pa.; and of John Adams Branch, American Continental League, of Philadelphia, Pa., remonstrating against the repeal of the provision in the Panama Canal act exempting American coastwise shipping from the payment of tolls, which were referred to the Committee on Interoceanic Canals.

United Irish Societies of San Francisco, Cal., remonstrating against the repeal of the exemption clause of the Panama Canal act, which was referred to the Committee on Interoceanic Canals.

Memorial of the Essex County Board, Ancient Order of Hibernians, at Lynn, Mass., protesting against repeal of the canal-tolls exemption; to the Committee on Interstate and Foreign Commerce.

Irish-American Societies of Ansonia, Conn., remonstrating against the repeal of the clause of the Panama Canal act exempting American coastwise vessels from the payment of tolls, which was referred to the Committee on Interoceanic Canals.

Central Labor Union of Philadelphia, Pa., protesting against repeal of canal-tolls exemption; to the Committee on Interstate and Foreign Commerce.

RIVERSIDE BUSINESS MEN'S ASSOCIATION,
Riverside, Cal., March 12, 1914.

At the regular meeting of the Riverside Business Men's Association held Wednesday evening, March 11, 1914, the following resolution was unanimously adopted, to wit:

"Whereas believing that the interests of California and the Pacific coast would be sacrificed by the repeal of the free tolls for American ships passing through the Panama Canal and the benefits of the canal to both shippers and consumers on the coast would be sacrificed by such repeal:

"*Resolved*, That the Riverside Business Men's Association respectfully urges upon our California Senators and Congressmen in Washington that they use their influence and votes to defeat the proposed repeal; and

"*Resolved*, That a copy of this resolution be sent by the secretary of this association to each of our Senators and Congressmen at Washington."

Respectfully submitted.

RIVERSIDE BUSINESS MEN'S ASSOCIATION,
By O. P. SANDERS, *Secretary.*

OPEN FORUM, SEATTLE.

SEATTLE, WASH., *March 29, 1914.*

Whereas all political parties in the United States either expressed their opinion in their platforms as favoring free tolls for our coastwise shipping through the Panama Canal or were silent upon the subject, and no political party expressed an opinion as against free tolls; and

Whereas President Wilson himself on the 15th day of August, 1912, in a public address favored and extolled the legislation for free tolls and upheld the platform of the Democratic Party thereon; and

Whereas the President has recently, by a message to the Congress, reversed his opinion on free tolls and asked for a repeal of the clause granting free tolls to our coastwise shipping without giving sufficient reasons therefor; and

Whereas our Senators and Representatives have requested and are requesting a good and sufficient reason for the repeal and are preparing to uphold the position the Congress and the President have already taken in this matter and which has become and is the law: Therefore be it

Resolved by the Open Forum (assembled in City Hall Park this 29th day of March, 1914), That we hereby petition our Senators and Representatives in the Congress to continue requesting further information and that the President furnish the same, and that we petition and urge them to use all means in their power that the free-tolls clause is not repealed and that our coastwise shipping is not subjected to any foreign interference.

Respectfully submitted.

THE OPEN FORUM,
By RICHARD MANSFIELD WHITE, *Secretary.*

The above preamble and resolution petition was adopted by a vote of 500 for and 1 against after two hours' discussion.

R. M. W.

LOS ANGELES GRAIN EXCHANGE.

Whereas the people of California and the Pacific coast have looked forward to the completion of the Panama Canal in the belief that its construction through a territory under the sovereignty of the American Government would result in a practical extension of the coast line of the United States from the Pacific to the Atlantic Ocean, thus resulting in the freedom of trade throughout the United States untrammeled by canal tolls or other forms of restrictions of trade; and

Whereas Congress has passed an act exempting American shipping engaged in the coastwise trade from the payment of tolls for passing through the Panama Canal, thus carrying out the expectations of the people of the Pacific coast for the same privileges in the matter of coastwise trade that are possessed by shipping engaged in trade between American ports on the Atlantic coast, which act received the approval of the President after it had been approved by all the commercial bodies of the Pacific coast and a large proportion of the commercial bodies and people of the entire country; and

Whereas great Britain has entered a protest against said act exempting American shipping from the payment of tolls upon the ground that it is in conflict with the Hay-Pauncefote treaty; and

Whereas said treaty was enacted at a time when this country had no rights on the Isthmus of Panama and possessed no territory in that section, and it was contemplated that the canal was to be constructed through foreign territory; and

Whereas the United States, subsequent to the enactment of that treaty, secured from the Government of the Republic of Panama a strip of territory 10 miles in width from the Atlantic to the Pacific, which strip of territory is as much a part of the territory of the United States as any part of continental United States; and

Whereas the shipping of no foreign country has ever been permitted to engage in the coastwise trade of the United States, and all regulation of such traffic has been the exclusive province of the United States Government, in which no foreign government has ever before assumed to have rights to control: Now, therefore, be it

Resolved, That this meeting of directors of the Los Angeles Grain Exchange enters its earnest protest against the proposed surrender to Great Britain upon a matter which, in our opinion, is purely one of domestic concern and regulation; be it further

Resolved, That we earnestly urge the Senators and Representatives of the State of California in the Congress of the United States to stand firmly upon the rights of the United States to regulate its own coastwise commerce by the exemption of payment of tolls or any other form of tribute, and to oppose and vote against the proposed repeal of the exemption from the payment of tolls of American shipping engaged in the coastwise trade.

[SEAL.] (Signed) LOS ANGELES GRAIN EXCHANGE.
By O. H. GIBBONS, *Secretary.*

HEADQUARTERS SERGEANT HAMILTON FISH CAMP, No. 46,
DEPARTMENT OF NEW YORK,
UNITED SPANISH WAR VETERANS,
New York, March 21, 1914.

To the honorable the CHAIRMAN OF THE
INTEROCEANIC CANALS COMMITTEE,
United States Senate, Washington, D. C.

SIR: At a regular muster of this camp held on March 20, it was unanimously resolved that this organization go on record as utterly opposed to the surrender of any of the benefits to our citizens arising out of the construction, ownership, and operation of the Panama Canal, arguing, as we do, that any yielding to an unwise and unwarranted expediency of any of our legitimate rights in that which is undoubtedly our own would far outweigh in ultimate disastrous results any fancied security that may be thought necessary for a temporary, insecure, and insincere protestation of a purchased friendship at a sacrifice of all harmony in our future foreign and domestic relations by those who are opposed to the principle of free tolls in the Panama Canal to our own coastwise shipping within our own waters and along our own coast; and

Whereas the Panama Canal having been built entirely by the United States of America at the sacrifice of its own efforts and resources, we see no reason for, and are unanimously opposed to, any restrictions being imposed upon our coastwise shipping that will deny to them the full enjoyment of our national waterways, to which they are entitled by the executive construction, ownership, and operation of this stupendous engineering undertaking; and

Whereas it was never the intention of the signers of the Declaration of Independence or the founders of this great Republic to permit any interference in our internal affairs, nor has it since been the policy of those who carried forward the work of the fathers or to permit specious argument to lead us astray from the path of right and justice; therefore be it

Resolved, That we call upon our Representatives in Congress, and particularly your honorable committee, to urge upon all concerned to most emphatically repudiate the intermeddling of unfriendly influences, inimical to the patriotic consideration of the just rights and interests of our citizens, an honorable conception of our country's institutions, and a loyal support and earnest respect for all those things which have ever been dear to the heart of every true American; and be it

Resolved, That rather than yield one iota of the just rights of our country it were better that we abrogate all treaties that would shackle freedom in our internal affairs.

W. R. WHITING, *Adjutant.*

ANCIENT ORDER OF HIBERNIANS.

NEW BRITAIN, CONN., *March 15, 1914.*

At the regular meeting of the Rev. W. A. Harty Branch of the Ancient Order of Hibernians, assembled to do honor to the martyr patriot, Robert Emmet, we, the 600 members of the above-named branch, proclaim anew our allegiance to this great Republic, in which so many of our people have found a home and to which they have given loyal and unstinted service from the Revolutionary struggle to the present day, coloring its battle fields with their blood and contributing their full share to the building of the strength and prosperity which have made it the greatest power on earth.

We claim to have earned the right to full citizenship given us by the law of the land, and which has ever been exercised unselfishly for the welfare and glory of these United States and the promotion and extension of the principles of government as established by the Father of our Republic.

We resent the attempt of a section of the daily press, inspired by foreign influence and acting for English interests, to restrict and limit our citizenship to the mere act of voting and to misrepresent our motives to our fellow citizens.

In civil life as well as in war our race have done their full duty to these United States, and never has that duty been more loyally performed than in our warning, based on our better, more intimate, and more recent knowledge of English methods, who now seek by the insidious wiles of British diplomacy under the mask of peace to entangle our Government in the quarrels and rivalries of the Old World.

We congratulate Senator JAMES A. O'GORMAN, and Representatives UNDERWOOD, MANN, DOREMUS, KNOWLAND, KAHN, and MURDOCK for their true American spirit, manifested by their action on the free-tolls act.

We protest against the repeal of the free-tolls provision of the Panama Canal act at the dictation or solicitation of England.

We affirm that the free-tolls provision does not violate the Hay-Pauncefote treaty, and that England, having openly broken the Clayton-Bulwer treaty by annexing the Belize territory, is not in a position to charge the United States with a breach of national honor. She swept the sea of American commerce during the Civil War, and would now dictate the terms on which American ships are to compete with her ships in an American waterway built with American money.

We also congratulate Senator CHAMBERLAIN for the resolution he introduced into the Senate calling upon Ambassador Walter H. Page for an explanation of his speech in London, in which significant mention is made of the Monroe doctrine and the Panama Canal act; and we as citizens would favor his recall by the President of the United States if his utterances on that occasion were reported correctly by the American press of this country.

Resolved, therefore, That copies of these resolutions be sent to President Woodrow Wilson; Vice President Thomas R. Marshall; Secretary of State William J. Bryan; Hon. WILLIAM J. STONE; Hon. CHAMP CLARK, Speaker of the House of Representatives; Committee on Foreign Affairs; Committee on Interoceanic Canals; and to the Senators and Representatives from the State of Connecticut, with a request that they be printed in the CONGRESSIONAL RECORD.

T. C. SMITH, *Chairman.*
J. F. MEEHAN, *Secretary.*

TAXPAYERS' ASSOCIATION.

The Springhurst Taxpayers' Association, of Bronx County, in meeting assembled at their clubhouse, No. 1085 Leggett Avenue, on the 28th day of March, 1914, unanimously adopted the resolutions that follow:

Whereas there is now pending before Congress the matter of the repeal of the free tolls on the Panama Canal; and

Whereas the last Congress has seen fit to exempt coastwise vessels from the payment of tolls in the Panama Canal; and

Whereas the money, skill, and ingenuity of the American people have accomplished the gigantic task of digging said canal: Now be it

Resolved, That we, the Springhurst Taxpayers' Association, of Bronx County, hereby appeal to our Representatives in Congress to take a firm stand against the repeal of said free tolls and again demonstrating to the English Government that we conduct our Government in the interest of the citizens of this country and without dictation from any outside Government, and least of all England.

C. A. ARNSTEIN, *Secretary,*
912 Brook Avenue.

NEW YORK, *March 28, 1914.*

DEAR SIR: At a meeting of the Citizens' Democracy held this evening the following resolution was adopted and the undersigned were directed to forward it to the New York Members of Congress:

Resolved, That, having in mind the rights, dignity, and honor of the United States and the interests of its coastwise shipping, we protest against the attempt to repeal the free-tolls provision of the Panama Canal act at the dictation of England and the transcontinental railroads, and we urge the Members of both Houses of Congress to vote against repeal and preserve to the United States the right to control its own waterway for all time.

Respectfully,

G. MURRAY HULBERT, *Chairman.*
JOHN T. MARTIN, *Secretary,*
293 Valentine Avenue.

GERMAN SOCIETY.

Die Vereinigte Deutsche Gesellschaften der Stadt New York, an organization in the city of New York composed of 110 societies and a membership of 11,000, at a meeting of its executive board passed the following resolutions:

Whereas the Panama Canal has been built by Americans with $400,000,000 of American money upon American soil and is therefore an American waterway, through which American vessels engaged in domestic trade should be as free from tolls as are any other American ships using any other American inland waterway; and

Whereas the right of American coastwise ships to free tolls has been upheld by Roosevelt and Taft, Republican Presidents; by two Senates and three Congresses; by Olney, Democratic, and Knox, Republican, Secretaries of State; by the United States Supreme Court; by high American authorities; and even by the note of the British legation in 1912; and

Whereas Congress in 1912 exempted American coastwise ships from tolls and the three great political parties and 13,000,000 voters approved such exemption; and

Whereas Hon. Woodrow Wilson, as a candidate for President, standing upon the Democratic platform and individually, pledged himself to free tolls; and

Whereas the British Government alone protested against such exemption, the country which has violated every treaty it ever had with America or any other nation, and whose interpretation of any treaty should, in the light of history, be viewed with distrust and suspicion:

Resolved, That while we do not question the good faith of our President, we, as American citizens, declare for an American and against a British interpretation of the Hay-Pauncefote treaty.

Resolved, That we call upon the President of the United States to withdraw his appeal to Congress to repeal the free-tolls provision and afford the people of this country, who unanimously declared in favor of the American interpretation of the Hay-Pauncefote treaty, an opportunity at the November elections either to reverse themselves or redeclare their approval of the American interpretation of the Hay-Pauncefote treaty.

Resolved, That in any event we call upon all the Members of Congress, and specifically upon those of the State of New York, to uphold the American interpretation of that treaty and so prevent a misguided though well-meaning President from inflicting a loss to national dignity upon this country and from surrendering American rights to our traditional British enemy.

NEW YORK CITY CLEVELAND DEMOCRACY.

The action was taken at a meeting held in the rooms of the Cleveland Democracy, No. 1939 Madison Avenue. The resolutions reaffirm the Democratic platform relative to exempting coastwise American ships from canal tolls.

The meeting was called by Chairman Selden, of the Democratic Association of New York County, and the resolutions were introduced by County Clerk Schneider and seconded by Gustavus A. Rogers.

"We represent over 100,000 independent Democrats who voted for President Wilson," said Mr. Schneider in offering the resolutions, "and we believe that internal-commerce regulations should not be read into treaty obligations."

The resolutions follow:

"Whereas Congress has passed a regulation exempting American ships employed in coastwise trade from paying tolls on passing through the Panama Canal, and under an act of Congress no ships but those owned by citizens of the United States are allowed to engage in coastwise trade; and

"Whereas the territory through which the Panama Canal passes is a part of the United States, acquired by treaty and purchase; and

"Whereas the Panama Canal was purchased and built by the United States with its own money and is now under the control and supervision of the War Department, an administrative department of the Federal Government, we consider that such exemption is nothing more than an interstate regulation, similar to railroad regulations; and no more subject to treaty regulations with foreign powers than any other departmental order; and

"Whereas the Democratic delegates, in convention assembled, at Baltimore, Md., in June, 1912, adopted the following paragraph relative to exemption of tolls, reading as follows: 'We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal'; and

"Whereas our loyal and sincere support of the candidates of the Democratic Party contributed largely to their election; and

"Whereas President Wilson in his campaign speeches reaffirmed again and again the principles of the Democratic platform, and particularly that section relating to the Panama Canal: Be it

"*Resolved*, That we, independent Democrats of the county of New York, reaffirm the principles of the Democratic platform as adopted by the Democratic national convention at Baltimore in June, 1912, and subsequently indorsed by President Wilson, particularly that paragraph reading as follows: 'We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal'; be it further

"*Resolved*, That a copy of these resolutions be sent to the President, the Democratic Senator from New York, the chairman of the national Democratic committee, the chairman of the State Democratic committee, the governor of the State, and the press."

A few of the organizations that have formerly passed resolutions protesting against the repeal of the free-tolls provision:

The Southern Commercial Congress.
The National Rivers and Harbors Congress.
The Lakes-to-the-Gulf Deep Waterways Association.
Chamber of Commerce and Business League of Mobile, Ala.
Chamber of Commerce of Oakland, Cal.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. JAMES P. MAHER,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. MAHER. Mr. Speaker, the Panama Canal is nearing completion and will soon be thrown open to the commerce of the world. We entered upon this great undertaking after other world powers had attempted it and failed. We have expended $400,000,000, raised by taxing the American people, in order that we might succeed where these others had failed. And now that American genius and determination and treasure have achieved a glorious triumph, it is suggested to us by a hereditary enemy that we forego all the substantial fruits of our accomplishment and accord to all the nations of the world, who have neither contributed labor nor genius nor paid toll in lives or dollars, equal privileges with the people who have made this great canal possible and who have paid the cost.

We have a treaty covering this point, a treaty with Great Britain, the nation whose shipping through our canal will equal that of the rest of the world combined. Able men in this House have in all sincerity disagreed and divided upon the interpretation of this treaty. It then becomes apparent that the treaty is susceptible of more than one interpretation, and the question before us now is what interpretation shall we put upon it. The eyes of the Nation are upon us in this grave crisis, and are focused with an intensity which surpasses that which any public question has called forth for more than half a century. We shall answer to the people for our action, and it behooves us to see to it that we who represent the people reflect their belief and sentiment as far as is compatible with our national honor.

When free tolls first came before this House the treaty was construed as it should be, to the effect that the canal was an American canal, built by American dollars, on American territory, and for the American people, and that construction of the treaty was voiced in no uncertain fashion by the overwhelming

vote recorded in its favor. The Senate in passing the bill indorsed the views of the House, and it received the unqualified approval of the then President of the United States and became a law. Ex-President Theodore Roosevelt, in whose administration the construction of the canal was begun, concurred in this interpretation of the treaty, as did John Hay, our representative who helped frame the instrument, and it also found favor with President Wilson when he was a candidate for the high office he now holds, and with the present Secretary of State. It may be assumed that these eminent statesmen and the two Houses of Congress made their decision in this momentous matter only after mature deliberation, and their views and opinions then expressed coincided with mine and constitute the reasons why I do not believe we should repeal the law which gives us free tolls for American coastwise shipping.

What are the reasons assigned as so potent and forceful as to warrant our abandoning of the rights which we have so dearly bought? None at all. We are told that we must recede from the stand which we have taken, right or wrong, and that at the instigation of Great Britain. To my mind this is the most impertinent suggestion ever made to this House through an official channel and constitutes a reflection on the judgment, integrity, and courage of every Member. It is hinted that by surrendering our rights in this matter we will incur the doubtful benefit of Great Britain's sanction and prestige in the pressing of some other American demand now under discussion with the diplomats of some other nation. If that demand, whatever it be, be founded on right and justice, what need have we of Great Britain to enforce it? And what assurance is offered this House that this vague right or interest is of greater weight than the invaluable interest in the canal which we are asked to sacrifice? The suggestion that our coastwise shipping competes with Great Britain's international trade is absurd on its face. The ships of Great Britain and every other nation are absolutely precluded, and have been for many years, from participation in our coastwise trade. By what far-fetched theory, then, can trade through the canal from New York to San Francisco be declared in competition with ships which are forbidden to engage in that trade? It would be as proper for Great Britain to suggest the rates to be imposed by the great State of New York on commerce passing through the Erie Canal, for the trade from New York to San Francisco is from one American port, in American bottoms, through an American canal, built on American territory, to another American port.

The object of free tolls was well stated by President Wilson himself when a candidate for the White House in a speech made at Washington Park, N. J., on August 15, 1912, in which he said:

> You see the object, don't you? We don't want the railroads to compete with the railroads because we understand that kind of competition. We want water carriage to compete with land carriage, so as to be perfectly sure that you are going to get better rates around the canal than you would across the continent.

This is one of the substantial returns on the vast capital invested by the American people in this canal. Now comes Great Britain, the avowed attorney of a great transcontinental railroad, asking the repeal of this law, and the President of the United States demands that Congress return a verdict in their favor without requiring them to prove their case.

The effect of acquiescing in these demands would be far-reaching, and one of the most drastic results would be a practical declaration to the world that we agree that in time of war our battleships would have no more right to the use of the canal than the ships of our enemy; that we have not the right to embark or disembark troops on the canal territory, nor to maintain arsenals or storehouses for the munitions of war. And all this in the face of Great Britain's express recognition of our right to fortify the canal.

Free tolls was an important plank in the platform adopted at Baltimore by the Democratic Party. I pledged myself to that platform, and I intend to redeem that pledge even though exhorted to repudiate it by the man who as a candidate before the people so loudly and emphatically declared that the time had come when men who promised one way and voted another would be retired into very private seclusion.

The soundness of free tolls is sustained by numerous and irrefutable arguments, while the proponents of repeal put forward nothing better than hints and vague suggestions of diplomatic complications. I shall vote against the repeal as un-American, and I feel that I can go before my constituents in the fall and tell them my actions here have at all times reflected their beliefs and sentiments, and that I have remained stanch in my support of the party platform.

Pull Illinois Out of the Mud.

EXTENSION OF REMARKS
OF
HON. LOUIS FITZHENRY,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 6, 1914.

Mr. FITZHENRY. Mr. Speaker, the good-roads problem in Illinois is and has always been a serious one. The exceedingly rich soil, which makes her rank so high as an agricultural Commonwealth, is the cause of the serious situation which confronts our people. The general assembly, State, county, and township officers are bending every effort to improve the road conditions of the State. The Illinois Highway Improvement Association, the Illinois Bankers' Association, and similar societies and associations are aiding the public officers in their efforts to improve these conditions.

In line with this effort on the part of the people of the State, Hon. Edward F. Dunne, governor, on March 23 issued the following "road-day" proclamation, designating April 15, 1914, as a "hard-work day" for all public officers and citizens to begin practical and effective work upon the improvement of highways:

PROCLAMATION.

To the people of the State of Illinois:

Perhaps no subject has more thoroughly aroused the people of Illinois to action than has the question of improvement of our wagon roads.

In Illinois we are entering upon a new era of road improvement. The new road law of the State, one of the most comprehensive under which any State is acting, has become operative.

It therefore seems fitting, as the time of year approaches when actual work can be done on our roads, that there should be set aside a day known as road day, upon which should be commenced coordinated and intelligent work in improving the roadways of the State. In the observance of this day particular attention should be called to the improvement of our dirt roads, and, so far as practicable, plans should be laid whereby actual work shall be initiated on a day set aside for that purpose and carried on continuously thenceforth.

The spirit of the new road law is one of cooperation; the cooperation of State officials with local officials, and, more especially, the cooperation of the people themselves with all the officials in their endeavor to carry on efficient work.

Heretofore our road laws have been woefully inadequate and ineffective. The Tice law of 1913 now makes possible economical and well-systematized efforts, without which efficient results can not be obtained.

It is important that the local highway commissioners, the county superintendents of highways, the good-roads organizations, and commercial clubs, in their respective communities, unite in the adoption of a plan to organize and carry out this work, so as to give the greatest number of citizens an opportunity to celebrate the observance of "road day" by practical work on the roads, such as road dragging, grading, draining, hauling, and placing gravel, stone, or other road material.

I have requested the State highway commission to suggest what class of work may be entered into advantageously.

It is also advisable that "road day" be observed in the schools, for the children of to-day are the citizens of to-morrow, and there should be read to the pupils in all the schools on this day a short treatise dealing with the subject of road improvement, together with this proclamation.

It is hoped that the observance of "road day" will result in the inauguration of practical work in the upkeep of the public roads of the State.

Now, therefore, for the purpose of bringing about the commencement of comprehensive and coordinate work upon the roadways of the whole State, I hereby designate Wednesday, April 15, 1914, as "road day"—not a holiday, but as a hard-work day—upon which day I respectfully urge the State highway commission, the State highway engineers, county superintendents of highways, town or district road officers, their employees, and the public in general to begin practical and effective work upon the improvement of highways of the State, to continue said work industriously, and "pull Illinois out of the mud," which has so grievously clogged her rural transportation in the past.

In witness whereof I, Edward F. Dunne, governor of the State of Illinois, do hereunto set my hand and cause to be affixed the great seal of the State this 23d day of March, A. D. 1914.

[SEAL.] E. F. DUNNE, *Governor.*

By the governor:

HARRY WOODS, *Secretary of State.*

In line with this proclamation I received an urgent appeal last Saturday from the Illinois Highway Improvement Association to take up Illinois road day with the Post Office Department to the end that all postmasters and rural carriers might be authorized to cooperate with the State, county, township, and municipal officers to make road day in Illinois a success. As the result of my efforts I procured the following communication from the Postmaster General:

OFFICE OF THE POSTMASTER GENERAL,
Washington, D. C., April 6, 1914.

Hon. LOUIS FITZHENRY,
House of Representatives.

MY DEAR MR. FITZHENRY: I have received and read with interest your letter of the 4th instant in regard to the observation of April 15, 1914, as good-roads day in Illinois, in which you urge the department to authorize postmasters to cooperate with the local authorities in the improvement of road conditions.

The Post Office Department is intimately concerned in the good-roads movements. There are now practically 43,000 rural routes, over which the annual travel exceeds 300,000,000 miles. There are also about 150,000 miles of star routes, over which the annual travel exceeds 80,000,000 miles. The total cost to the Government of this service is more than $50,000,000. The combined services reach more than 20,000,000 people. The rural mail service has been and is an important factor in our national development. Its great and varied benefits to our people are too obvious to require comment. Passable roads have been a condition to the establishment and maintenance of rural delivery, and this fact has naturally stimulated road building and maintenance activities throughout the country.

Now that the Parcel Post Service is a feature of our postal system, the rural mail carrier extends to the farmer express facilities formerly available only to residents of towns and cities. The heavier load of the rural carrier and the consequent increased benefits to the people are additional reasons for the further improvement of post roads. It therefore becomes the duty of the Post Office Department to aid in every feasible way the State authorities in their endeavor to improve public highways.

In line with this policy the department issued instructions in October last to postmasters of all classes to cooperate with their respective State and county authorities in their endeavor to improve road conditions. I have caused these instructions to be repeated in the daily bulletin of the department in order that postmasters of Illinois may be reminded of the department's desire in this respect and shall take as active an interest in Illinois good-roads day as may be consistent with the regulations governing their official conduct.

Yours, very truly,

A. S. BURLESON,
Postmaster General.

ADDRESS BY HON. DANIEL C. ROPER, FIRST ASSISTANT POSTMASTER GENERAL.

Good-roads days are celebrations encouraged by the Post Office Department. At the National Association of Postmasters of the Second and Third Class, at Washington, D. C., on Tuesday, October 21, 1913, First Assistant Postmaster General Daniel C. Roper delivered an address discussing the subject of good roads and urging the members of the convention to use their influence in their respective States and localities to procure the dedication of certain fixed days as road days for the improvement of highways and incidentally the dispatch of the mails. The address is as follows:

"Mr. President and members of the National Association of Postmasters of the Second and Third Classes, I am pleased to greet the members of this convention, constituting, as they do, the representatives of the second and third class post offices of the country. These classes embrace 7,921, or 94 per cent, of the 8,406 presidential postmasters. It may be truthfully said, therefore, that you are the backbone of this division of the service.

"William E. Gladstone, the great English statesman, felt that he was never so highly complimented as when referred to as 'the great commoner,' and among the postmasters of the country you are entitled to this distinction. You represent post offices which serve at once cities having populations ranging from a few hundred to 10,000, and have to do with a very large portion of the commerce of the country at both its point of origin and its point of distribution. As our country's progress and development and the convenience and happiness of our people depend largely upon the manner in which this commerce is handled, the importance of your realizing the responsibilities which rest upon you for efficient postal service can not be overestimated.

"The great privilege and honor of being a postmaster can be enjoyed by less than 60,000 persons out of a population of 100,000,000. I am sure that you fully appreciate this, as well as the responsibilities which it carries, and that you will give to the department your undivided cooperation and endeavor toward bringing our service to that high degree of efficiency which an intelligent and progressive citizenship has a right to demand.

"Thought force is the real dynamic factor. We must keep our minds open to suggestion, for one of the most unmistakable signs of the diminution of a man's usefulness as a public or private servant is his manifestation of an unwillingness to consider or an inability to accept new ideas. Each postmaster has learned something through his experience that others should know, and the department must be the great clearing house for these ideas. In this way the force of one postmaster's good idea will carry it into every post office in the land. Ideas will be welcomed at the department. They will be carefully and thoroughly analyzed, tested in certain post offices to be used as initial points for such service, and when found to be feasible they will be brought to the attention of all postmasters and put into operation throughout the service. In this way postmasters who have received the least at the hands of nature will be given the benefit of the thought and experience of those who have received the most.

"To give to the people the very best postal service, administered in the most efficient and therefore the most economical manner, is the basic policy of this administration. Quick dispatch, security, and prompt delivery of the mails, effective coordination of work, elimination of unnecessary operations, and the substitution of earnest public service for perfunctory office holding—these are sought and with your cooperation will be attained.

"I wish to take advantage of this opportunity to impress upon you postmasters the necessity of giving careful thought and consideration to ways and means of handling the enormous volume of parcel-post matter which the service will be called upon to care for during the coming holiday season. The department has no doubt as to the capacity of the service to meet this demand, but to do so efficiently and effectively every man must be alive to the needs of the situation and alert to avail himself of the means for satisfying them. In this connection, I desire especially to charge your minds with the spirit and purpose of the letter which is being addressed to you under date of the 24th instant on the handling of parcel-post matter. It has been the endeavor to embody in this letter such suggestions as will be of service to you in the delivery of bulky packages during the rush season. I will quote a portion of this letter for your information:

"At the smaller city delivery offices, where the number of parcels has not been such as to require special service, if there is such an increase in business that the regular carriers can no longer handle all of the parcels, substitutes on foot should be employed to afford relief. When the number of heavy and bulky parcels or the area to be covered is such that it is not economical to employ a substitute on foot then vehicles should be employed, the character of the vehicle depending upon the number of parcels. In some places vehicles, such as push-carts, bicycles, and motorcycles equipped with baskets are used to advantage. As the volume of parcel mail increases horse-drawn vehicles without extra drivers should be employed. It is believed that it is not economical to employ automobiles at the smaller city delivery offices solely for the delivery of parcels.

"As the holiday season approaches and the volume of parcel mail increases, postmasters should endeavor through the means outlined above to dispose of the mail from day to day, not allowing it to accumulate and result in congestion in the post office and delay in delivery. Arrangements should be made in advance for substitutes who will be available for duty, and application should be made for the necessary auxiliary allowances. If conveyances can be used advantageously as indicated, postmasters should apply for an allowance for temporary horse hire. Such applications should show clearly the need for and the advantage to be gained by the use of vehicles.

"In the event that substitutes are not available, and it becomes absolutely necessary to employ regular carriers overtime in order to promptly handle the mail, they should be paid the pro rata amount to their regular salaries for such service, and report should be made to this office in accordance with the instructions of March 28, 1913.

"It is specially important that postmasters give careful attention to the condition in which parcel-post packages are received from mailers. There is great need of better wrapping and more careful labeling. Your attention here is called to our circular letter of September 30, 1913, which bears upon this subject, and so great is its importance that it became necessary for the department to couch its instructions in the following language:

"Postmasters and clerks are informed that whenever it is shown that the loss or damage to a parcel or its contents is clearly the result of improper packing or wrapping at the time of its receipt at the office of origin, the person responsible for its acceptance in that condition will be held responsible for the damage.

"Because of the responsible position, already referred to, which you hold with respect to the economic development of the country, it is appropriate that I direct your attention to a notice which appeared in the Postal Bulletin of yesterday calling the attention of postmasters to the desirability of cooperating with State and county authorities in the interest of better public roads.

"In establishing our Government its wise founders delegated to the States certain powers and functions and reserved others to the National Government. Powers affecting local government were almost entirely reserved to the States, and only the necessary powers to create a central government and defend it against foreign foes, to enable it to establish a system of judiciary, and to maintain armies and navies were delegated to the Federal Government. In the wisdom of our forefathers the Federal Government was given the power 'to establish post offices and post roads.'

"One of the first questions that engaged the attention of the Federal Congress was the building across the continent of a post road to bind and hold together the States. Millions of dollars were spent in the construction of the Cumberland Turnpike, which connected Cumberland, Md., and Vandalia, Ill, and measured 675 miles. Had not Watt invented the steam engine, the Government would of necessity have continued to construct Government post roads; but following this invention, our Government authorities diverted their attention and financial aid from the dirt post road to the railroad. So the great transcontinental railroads which span the distance between the Atlantic and the Pacific Oceans were built partly with Government aid, on the ground that the Government was thereby 'establishing post roads' in the meaning of the Constitution.

"Our Postal Service is naturally interested in every movement which looks to better public highways.

"At this time more than one-half of all the roads of the United States are post roads. There are in this country about 2,200,000 miles of earth roads, and of these nearly 1,200,000 miles are regularly traveled by rural and star-route carriers. This service is being constantly and rapidly extended.

"It is therefore only natural that Congress is now addressing itself to the subject of 'good roads,' and equally natural that the Post Office and Agricultural Departments should be selected to coöperate in the experimental measures of Federal aid that are now being conducted. This experimental work, which is the first of its kind ever undertaken by our Government, is important out of all proportion to the actual results in roads built. Much depends upon the proper cultivation of public sentiment in this regard, and in the notice promulgated on the 20th of this month postmasters are advised that in their capacity as representatives in their communities of the National Government they are expected to manifest an active interest in the good-roads propaganda, especially on 'good-roads days' set aside by the governors of States. You represent the commercial branch of the Government, the common carrier of letters and packages, that is now undertaking to bring its parcel-express facilities to the door of every citizen of the United States. The 20,000,000 residents on rural and star routes must now be reached through your instrumentality for the collection and delivery not only of letters and newspapers, that weigh little, but also of miscellaneous merchandise in packages weighing as much as 20 pounds each. Such a service has never been attempted by private express companies, and its effective administration presents many problems even to the Government. Chief among these is the condition of the roads.

"Ninety per cent of the highways in the United States are earth roads. Such roads are not necessarily bad, and, under orderly scientific plans of construction and maintenance, may be made very good. Although much good work has been done in the past decade, there still remains vast room for improvement. Hope lies mainly in the signs of a general awakening of the people to the importance of the mighty task, the performance of which is a condition to their future prosperity and happiness.

"Here, as public-spirited citizens and as representatives of the National Government and the Postal Service, lies your opportunity. The most important thing is to bring clearly and forcibly to the attention of the people the need for good roads.

"Passable roads are now a condition to the establishment and maintenance of rural mail delivery, and this requirement has had the effect of stimulating road building and repairing. With the development of the parcel post a much better condition of the roads will become necessary. The National Government must therefore stimulate and in many cases lead the agitation in each community for better roads. As public-spirited citizens concerned in the welfare of your immediate communities and as representatives of the National Government concerned in the welfare of the Nation, it is your duty to take as active an interest in the improvement of road conditions in your respective communities as is consistent with the regulations governing your official conduct.

"Postmaster General Burleson believes and relies more in the wisdom of encouraging thorough and intelligent cooperation throughout the entire line of postal employees than in superabundance of rules and regulations. His plan is to place as much responsibility as possible on the shoulders of the postmasters, and he feels that the degree of satisfaction in which the postmasters handle the service in their respective communities will reflect their suitability and usefulness to the service. This has been the test that has been applied by the Postmaster General in determining whether the best interests of the service would permit him to retain postmasters until the end of their official terms. The test of the usefulness and success of the postmaster is easy of ascertainment. It is arrived at by the answer to this question: Are the postal facilities of the community better by having him as postmaster? The same test may be applied to your association here in convention assembled. Is the Postal Service better by its existence? An affirmative answer to this question establishes the right of your association to exist, while a negative answer either shows that it is not measuring up to its possibilities or that its existence is not warranted. I apply the same test to the individual, and wait for the reply to the question: Is the community better by his existence in it? If your aims and operations as individual citizens and as postmasters at the close of this convention are for the uplift of the communities and post offices which you represent, for a higher degree of efficiency and greater service, then your purposes are well founded, your faces properly fixed, and you are in an attitude of appreciation of the responsibilities inherited from those who have preceded you, and may God speed you in such endeavors."

Equal Suffrage.

EXTENSION OF REMARKS
OF
HON. A. W. LAFFERTY,
OF OREGON,
IN THE HOUSE OF REPRESENTATIVES,

Friday, April 10, 1914.

Mr. LAFFERTY. Mr. Speaker, under the leave granted me to extend my remarks, I submit the following splendid essay by an eminent Episcopal minister of London, the Right Reverend the Bishop of Kensington, which expresses my sentiments precisely. This essay has already had wide circulation in England.

THE MORAL ISSUES INVOLVED IN THE WOMEN'S MOVEMENT.

[By the Right Reverend the Bishop of Kensington.]

A fresh opportunity will be given at the Church Congress to consider the claims which the women's movement makes upon the body of church people. As one who has gradually become convinced that this movement has been inspired by a vision of those moral and spiritual ideals for which the church has stood in all ages, and is constantly sustained by a passionate enthusiasm for righteousness, I venture to address those who have been unable to see anything in the demand for the vote deeper than a foolish ambition on the part of some women to enter the arena of politics. I am convinced that the great mass of church folk dismiss the matter as a purely political question which has no concern for the church. "The less we have to do with politics and politicians the better," they say; "an arena where the dust is so vitiating and the atmosphere so demoralizing is one from which we can expect no benefit to woman. Let her keep out of it at all hazards."

It is never easy to discern the great issues involved in a new movement. It has been particularly hard in this case. The agitation which for years proceeded on strictly constitutional lines failed to secure attention. When, to the regret of the vast majority of its supporters, it entered upon the phase of militancy, it aroused the immediate antipathy of those for whom any cause is without further question condemned which resorts to methods of violence. At the present time the movement is boycotted by the press. Under the heading of the suffrage movement nothing appears save accounts of outrages perpetrated by militants, and the conclusion intended to be drawn is that its force is spent and the issues raised by it may be ignored. With wearisome iteration suffragists have asserted that the vote is mainly a symbol, and they have disavowed any support of violent or unconstitutional methods. To no purpose. They can not secure a hearing. Of the great consuming passion for righteousness, which is the motive of all their enthusiasm, and which nothing can quench, those remain apparently ignorant who should be the first to extend their sympathy. To those of us who have come to know the motives which inspire their leaders, and the force of conviction which animates them, it is terrible to contemplate the possibility of the church remaining coldly apathetic, and content to follow along the line of the world's judgment. It seems to us nothing less than a tragedy that so splendid a force with which to combat evil in its most strongly entrenched position should be lost. It will not be lost if it be once realized that there is inherent in this movement a moral and spiritual force which is growing in volume and intensity daily, a movement by which woman is seeking to possess herself of the means to exert a potent influence in life, and to have a voice in effecting changes in social conditions essential to purer and healthier living.

The truth is that with the education of women there has come inevitably a knowledge of the facts of life and an insight into their causes which has been simply overwhelming. It is absolutely true to assert that the girl of to-day knows the facts of life and the conditions which prevail for multitudes of her sex, of which her mother was almost entirely ignorant. For example, it need not be supposed that the state of the London streets is very different to what it was a generation ago. Whether it is better or worse it is not easy for anyone to say. But whereas a generation ago it was generally regarded as of inevitable necessity, it is being looked at to-day by eyes that burn with indignation and horror, and with a longing to exchange a state of impotence for one of power to deal with it.

Beyond the facts which meet the eye there is now a vision of the cause for their continued existence, viz, the prevalence of a moral standard which society has complacently acquiesced in being fixed for man on a plane far below that demanded for woman. The day is not so far removed when the unfortunate

of the streets was unquestionably condemned as one who by reason of her wickedness entrapped men to their destruction. For her there could be no pity. She had fallen by her own fault, and no punishment was great enough for her to bear at the hands of society. To-day it has dawned on woman's consciousness that this unfortunate is there not wholly by reason of her own wickedness, but because men in large numbers demand victims for their lust; that while men have expected that their wives, sisters, and daughters should be pure, they have another standard for men, which recognizes the need for the existence of a "fallen" class of women. Behind that fact women have discerned another, namely, the conditions under which thousands of girls and women are expected to live and work for sweated wages, so that a life of honorable toil is, indeed, for multitudes but a grinding slavery. When relief from its sordid and insupportable dullness can be so easily purchased by the rewards of shame and dishonor, it is not easy to condemn the victims so much as the community which tolerates such conditions for its helpless ones. The traffic which involves thousands upon thousands of girls in a life of shame is merely the working of that law which seeks the supply of those who will gratify the demands of man's passions and lust.

The church and other religious bodies have for many years engaged in the work of stirring the conscience of the community in this matter. We have engaged in rescue and preventive work. In London we claim to have established a network of shelters, refuges, and homes, so that the church can hold out a helping hand to the tempted and fallen in every part of the diocese. But those who have been foremost in this work have always realized that the main obstacle in their way has been the apathy of the great body of even professing Christian people. We have realized that with all our agencies we only touch but a fragment of the mass of evil. No cause has made its appeal with so little measure of success in securing financial support. Our appeal always seemed to fall upon deaf or unheeding ears, both among men and women. We were always up against a dead wall of apathy, prejudice, and indifference. The dead weight of a moral sense which strangely acquiesced in the inevitableness of this social evil has ever been our deadliest foe. For years efforts to amend the criminal law, backed by archbishops, bishops, and prominent laymen, were unavailing. And then for some inexplicable reason there came a change. Last year public opinion became vigorous and overwhelming in the endeavor to grapple with the white-slave traffic. Society seemed all at once to awake to the fact of its existence. It was shocked and horrified to find that the evil was of gigantic proportions; that the traffic was a huge systematized business, organized and controlled by the forces of cunning, cruelty, and wealth. Victims were being swept into the horrible net from every class and condition. They were being procured for men. It was not that there was anything new in the facts. To what was this stirring of the national conscience due? I do not hesitate to assert that it was due to the woman's movement. Not only had the noble-hearted women who were its leaders fearlessly presented the facts. There had come through many avenues a knowledge to women of the standards of sex morality accepted by those who made the laws, of the treatment of their sisters which such standards of morality involved, of the state of the law which made easy the ruthless path of the procurer and procuress. Of that knowledge expression was found in that movement which impels women to step boldly into the arena, with a determination to lift womanhood out of the depths to which so many have sunk, and to secure such conditions of life and a standard of wages as will make the path of shame no longer an all but inevitable means of livelihood for so many of their sisters.

With this knowledge has come a burning desire to attack the evil at its source rather than to spend our strength in mitigating some of its most pitiful effects; to prevent catastrophes by removing the cause of disaster. Women have come to realize that too long they have consented to acquiesce in the continued existence of evils which press with such pitiless cruelty upon their sex, and with unerring instinct they have seized upon the vital point.

While we social reformers and rescue workers have been content to make heroic efforts to rescue out of the turbid flood of evil such portions of the human wreckage which come within our reach from the shore, we seem to have had no eyes for those cruel rocks higher up the river on which the frail barks were foundering. It is to that critical spot to which the women of to-day are pointing. Why not blow up that rock, they say, no matter what the risk may be through the explosion to the nerves of those who securely live on either bank? That rock may be rooted in antiquity, it may have come to be regarded as a part of the fixed order of things, but it is removable; let us have a hand in helping to remove it. We know the truth of the appeal. That rock stands for conventional public opinion. It has its fixed status in the legislation which has expressed the standard of morality accepted by those who, through the possession of the vote, alone voice the will of the community. It stands for that view of womanhood which is as dishonoring to man as it is unjust to woman.

The coincidence of the passing of the criminal law amendment act with the agitation for woman suffrage is one which can not be explained away. We have no wish to belittle the efforts made by any who contributed to the result. But justice compels us to recognize that our failure in past years was due to the absence of that moral sense in the community, due to the ignorance of the real facts of life, in which women for generations had been held. But now with the inrush of knowledge, made powerful by the women's movement, the conscience of the community was stirred to energetic action. The acknowledgment of this constraining influence was seen in the eagerness with which both political parties passed the bill. The rapid change of front then shown by our legislators may indeed have been due to a desire to demonstrate what men could do for women when they tried. All honor to them that they made even a tardy effort.

It was one thing to pass the bill. We all confidently hoped that with this quickening of the national conscience great good would result. Enough has happened during the short interval in which the criminal law amendment act has been in operation to realize the truth of the contention of the leaders of the women's movement that acts of the legislature can only be effectively carried out when they are administered by those who are sincerely determined to use the powers which such acts create. We have lately seen in the conduct of the Piccadilly Flat case enough to deepen our fears that the act passed a year ago may prove a dead letter.

It was the first instance of a woman being charged under the criminal law amendment act. The home secretary stated in the House of Commons that "the case was opened and pressed as a bad one"; that "the indictment included three counts under section 7 (4) of the criminal law amendment act, 1912, for exercising control for the purpose of gain over the movements of three prostitutes and three counts under section 1 of the vagrancy act, 1898, and section 7 (4) of the criminal law amendment act, 1912, for living in part on the immoral earnings of the same three prostitutes. The maximum penalty for each of these offenses is two years' imprisonment. The Crown proceeded with all the charges—none were withdrawn—and the prisoner pleaded guilty to all counts of the indictment." The prisoner, Queenie Gerald, was sentenced to three months in the second division. The ages of the girls under her control were 17, 17, and 18. From letters found in the woman's possession it was plain that her wealthy male clients were dealing with her as a procuress, i. e., as a person who would procure girls who were not prostitutes. "There was abundant evidence," Mr. McKenna stated, "to show that she defrauded her clients, but no evidence to show that she was guilty of procuration." She kept within the letter of the law. As her male clients did not betray their identity by any signature or addresses to their letters, there was no evidence against them. But they were guilty of attempting to procure; they were, in fact, the very people against whom the act was framed to proceed, but apparently there was no attempt to secure their presence in the dock beside the accused woman. A number of names were found in the diary and ledger kept by the woman, but, the home secretary explained, "the names were not in the handwriting of the persons supposed to be referred to," and so "these names were not relevant to the case." That the first test case involving a woman under the act, "pressed as a bad one," should have met with this fate must be regarded as indeed a disaster.

When one recalls the zeal displayed in the raid made by the police upon the offices of the Women's Social and Political Union, the pertinacity with which every supposed clue was followed up, and the sentences imposed upon those who were under any circumstances and from any point of view acting from political motives; when one realizes how the mass of citizens have indorsed the action of the Government in treating these women as criminals of the most dangerous type, one is moved, indeed, to marvel. This is the way the strong arm of the law can work its will against those women who were mainly instrumental in rousing indignation against the horrors of the white-slave traffic. Thus the righteous wrath of the nation can find its vent in the punishment of political offenders condemned to long periods of imprisonment in the third division while women of the Queenie Gerald type are put in prison for three months in the second division and the charge against her male clients,

which would inevitably have involved disclosure of their names, is never preferred.

This latest example of the administration of the law in the cases of men whom, as stated in the House of Commons, "the law, as it at present stands, can not touch," is one from which only the cynical will derive any satisfaction. We are indeed come to a strange pass when the moral sense of the community can so signally fail to discriminate between the offenses of women engaged in a campaign to secure the franchise and of those who engage in the noisome white-slave traffic. Some of those who rejoiced at the passing of the criminal law amendment act a year ago might even find it possible to understand that it is this outraged sense of injustice which has led some women to resort to methods which, however indefensible they may appear, at least are designed to make the people hear.

In the great mass of the ardent supporters of the women's movement there is a deeply seated longing to go to the root of this social evil, with which, for many reasons, both men and women are loath to come to grips. They have been driven to the conclusion that the only effectual means by which any member of the community can contribute to the solution of its problems is by the vote. They know that in a democratic state the will of the community to create or to remove the conditions under which its life shall be lived finds its expression by its enfranchised citizens. In them, at least, we have those who are eager to serve where service is most needed, zealous to play their part in making life richer and fuller and more worth living for the whole body. In a great campaign for righteousness, purity, and truth we require all the forces of which the body is possessed; we require means by which those forces may be applied and their weight brought to bear upon the actual conditions of life. So long as the aspirations of women to be such a force are held in check, and freedom to express themselves be denied, we are but missing the most hopeful and fruitful of all influences in national life which the goodness of God has given to mankind.

Will there not be found sufficient zeal for righteousness in the church to-day to cause us to intervene and prevent a loss so grievous?

A Brief and Appeal.

EXTENSION OF REMARKS

OF

HON. VICTOR MURDOCK,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 11, 1914.

Mr. MURDOCK. Mr. Speaker, I submit an address to Congress by Mr. Samuel Gompers, president of the American Federation of Labor, on the subject of exempting labor unions from the provisions of the Sherman antitrust law. The matter is now at issue here. Mr. Gompers entitles his address "A brief and appeal." It is a remarkable document and well worth the study of not only all Members of Congress but of all American citizens. It evidences deep study and exhaustive research and presents logical conclusions on a question touching vitally and fundamentally the Republic.

This is the brief and appeal prepared by Mr. Gompers, and which is addressed to the Members of the United States Senate and the House of Representatives:

"Since current discussion has been largely upon a matter of vital importance to many millions of people whose welfare has been intrusted to your keeping, and since special interests have endeavored to prejudice the minds of legislators and the public and to place them at variance with the contention of the workers thereon, there rests upon me an imperative duty not only to those upon whom the dead weight and burden of industry have ever fallen, but to you, that you may avoid being placed in opposition to labor's contentions without having had them fully and completely presented for your consideration.

"The matter to which I refer is embodied in the Bartlett-Bacon bills (H. R. 1873, S. 927), Sixty-third Congress.

"I am addressing you to explain why the workingmen and women demand as a matter of social justice and humanity that they be given relief from the status in which they are now placed by reason of court interpretations of the Sherman antitrust law of 1890.

"The history of those who toil has been one of pathos and bitter struggle, one of great suffering and indomitable courage. In the earlier centuries the toilers were compelled to work at the will or caprice of masters who owned their bodies and their labor power. Living beings with human hearts and brains were legally and socially rated as things, property. As a result of the barbarian invasions that overturned the social, economic, and political institutions of Europe and produced feudalism, it was expedient that changes be made in the status of the workers—they were made serfs and villeins. Although their bodies were made free, the overlord retained an ownership in their labor power. From this status, this semithraldom, the workers struggled to secure more definite and more advantageous terms affecting the services they owed, until finally they reached the level of freedom of contract.

"Yet liberty, equality, justice, equal opportunity, had then not been won, nor are they yet assured to those who have always been the oppressed wherever or whenever oppression has existed. They had no voice or influence in determining the laws of the land, or in selecting the administrative agents who made them effective. The laws of the land had been made by those whose interests, environment, and experience in no way touched the world of the workers: political and judicial theories, precedents were in accord with the convictions and viewpoint of the controlling classes; intellectual life and interests were isolated from the work-a-day world. Ethical and moral standards were as yet untouched by enlightened and merciful humanitarianism. It was the task of the workers to present their pleas and conceptions of justice so that established practices and standards might be broadened to include the welfare of all the people. This was the task laid upon untutored, undisciplined workers. Opposed to them were the keenest, most subtle intellects and forces vested interests could retain. Each forward step was fiercely contested. The controlling interests would not abandon their special privileges even when once lost, but sought to regain them by circumvention, sophistry, and legal chicanery.

"Law is a product of two elements—the imperative and the traditional. Most of our difficulties have arisen through the second element. Precedents and judicial interpretation determined by the individual bias of the judge or by prevailing economic and political philosophy have been obstacles to the adoption of newer ideals of justice and to the shifting of standards to suit changing conditions.

"These are some of the difficulties which the workers of to-day inherit from the past ages. They explain why the workers now have to combat legal and economic theories which accord to employers certain rights to labor power, and why greater consideration has been paid to safeguarding wealth than to safeguarding the freedom of the workers who help to create that wealth. The workingmen of our country ask most seriously and solemnly whether it is just that property be hedged about by inviolable sanctity while they are denied normal activities in furtherance of the welfare of human beings.

"When feudal regulation of labor conditions was broken down by the disturbances resulting from the Black Death, a system of state regulation was inaugurated. This was never effective, and completely failed under the changes set up by the industrial revolution. With the coming of the factory system individual relations between employers and employed became impossible, and the workers were powerless to protect their rights, interest, and even their lives. Collective action by workmen in furtherance of such of their own interests as were opposed to those of the employers was legislated against as 'conspiracy.' According to the old political and economic theories of justice, employees had no right to withhold labor power necessary to the operation of the employer's business, a theory evolved under the conditions of former periods, when workmen were the master's property. We, in our country, inherit many of the problems and theories from the old country, and some are of our own making. It took years to secure relief from the old 'conspiracy' laws which curbed and restricted the workers in protecting and promoting their industrial rights and interests. When at last it seemed that the efforts of the toilers were to be rewarded, the courts of the United States, by interpretations which amounted to judicial legislation, applied the Sherman antitrust law to trade-unions in a way which virtually and actually revived the conspiracy laws.

"When the courts applied the Sherman antitrust law to labor organizations they created an offense never intended by the makers of that law. As has been repeated again and again, but never refuted, as an investigation of the CONGRESSIONAL RECORD will prove, the men who drafted the Sherman Antitrust Act—Senators Sherman, Edmunds, and George—did not intend that it should apply to organizations instituted not for profit. On March 25, 1890, when the bill was before the Senate, Senator Sherman insisted upon the following amendment:

"*Provided*, That this act shall not be construed to apply to any arrangements, agreements, or combinations between laborers, made with

a view to lessening the number of hours of labor or the increasing of their wages; nor to any arrangements, agreements, or combinations among persons engaged in horticulture or agriculture, made with a view of enhancing the price of their own agricultural or horticultural products.

"Senators George and Edmunds did not oppose the amendment, but regarded it as surplusage. The amendment was agreed to while the Senate was sitting in Committee of the Whole. On March 26, when the bill came up again for consideration, Senator Stewart of Nevada said:

"The original bill has been very much improved and one of the great objections has been removed from it by the amendment offered by Senator Sherman, which relieves the class of persons who would have been first under the prosecution under the original bill without amendment. * * * The bill ought now to be satisfactory to every person who is opposed to the oppression of labor and desires to see it properly rewarded.

"In advocating the amendment Senator Hoar said in part:

"I hold we may constitutionally and wisely allow laborers to make associations * * * for the sake of maintaining and advancing their wages; * * * their contracts are made with corporations who are but associations or combinations of capital on the other side. When we are promoting and even encouraging that, we are encouraging what is not only lawful, wise, and profitable, but absolutely essential to the existence of the Commonwealth itself.

"Afterwards the bill was referred to the Committee on the Judiciary, where the amendment was suppressed.

"Because of the failure to include this amendment in the law, organized labor was always apprehensive that attempts would be made to pervert the act from its real purpose. Nor were we mistaken, and that is why we now seek legislative relief that organized labor may not be prohibited from doing things 'not in themselves unlawful.'

"That which we seek is not class legislation. It is a common custom in speaking to couple together the words 'labor and capital' as though they stood for things of similar natures. Capital stands for material, tangible things, things separate and distinct from personality; labor is a human attribute, indissolubly bound up with the human body. It is that by which man expresses the thought, the purpose, the self that is his own individuality; if he is a free man, he has the right to control this means of self-expression. This he values above all, for if he lose this right to decide the granting or withholding of his own labor, then freedom ceases and slavery begins.

"Under the present industrial order, with its concentration of industry on the one hand and the division and subdivision of work on the other, the individual workingman is unable to maintain his right of self-assertion unaided, hence workers instituted organizations and banded together to secure for themselves wider freedom of action to regain the economic and social power they lost by the conditions mentioned. To classify these combinations, not for profit and without capital stock, in the same category with corporations, trusts, and monopolies, is forcing an indefensible classification and grouping together things of a directly opposite character.

"The associations of working people, commonly known as labor unions, deal not with property, material things, but with labor power alone, with lives, happiness, rights, and welfare of men, women, and children. They strive for the uplift and conservation of the Nation itself.

"Corporations, trusts, and monopolies aim to create monopoly conditions, to manipulate capital and production so as to secure monopoly profits. It is most unjust to try to coordinate these two inherently different kinds of organizations and to apply to them similar regulations. Justice does not necessarily result from the application of identical provisions to all people or to all groups or associations of people. On the contrary, it works injustice if the conditions, rights, and purposes are dissimilar or the people unequally situated. Theoretical justice becomes real justice only when men as well as their deeds are taken into consideration.

"It is impossible to legislate equitably for 'labor' and 'capital' under the same law. Certainly it is not class legislation to make different provisions for two things inherently different, aiming at different purposes and employing different methods. The provisions of no law will admit of universal indiscriminative application.

"This is no 'special privilege' or 'exemption' that organized labor asks. Our demand for justice is that working men and women and their organizations shall not be prosecuted for entering into any combination or agreement having in view the increasing of wages, the shortening of hours, or the bettering of conditions of labor, or for any act done in furtherance thereof not in itself unlawful.

"Attention is respectfully and particularly called to those last four words that have been so persistently and unfairly suppressed by the press and our opponents. We are not seeking to be permitted to do criminal acts, but are demanding that the rights of which we have been deprived by judicial interpretation be restored to us. We are not asking to be 'exempt' from the application of a law which properly applies to labor organizations as well as to other voluntary associations, organized not for profit, but we are asking that inherent differences that exist be recognized by the laws and the courts as well as by reason.

"The mere fact that a law or a legal precedent exists does not necessarily imply that it works justice. Oppression and wrong may become established, and under the cloak of authority and regularity take on a prestige and a sanctity usually ascribed to accepted rules of justice. These are the insidious forces that have fought labor under the guise of conspiracy laws, and now seek to accomplish their purpose by interpreting the Sherman antitrust law as a modernized conspiracy act.

"Those rights which we wish restored are rights necessary to conducting the normal activities of labor organizations. Labor organizations are formed to protect the workers and their rights against the cupidity of employers and combinations of employers dealing in the products created by labor power. The right to cease work, to strike, to withhold labor power, is essential to the maintenance of the freedom of the workers. It would be impossible to retain present advantages, or to increase wages, or to better conditions of work without the right or the power to strike, not only as individuals but as organizations. Organized labor does not advocate strikes. On the contrary, we deplore the necessity for them, but we know, and we know from actual experience, how powerless and helpless workmen would be to protect themselves without the right and the power to strike. To make acts in furtherance of these purposes either enjoinable or punishable both by fines and imprisonment takes from the associations of workers that which gives them virility and effectiveness.

"The men and the organizations that have instituted suits against labor unions under this law, the methods that have been employed, and the charges made, make it manifest beyond a doubt that the purpose of the prosecutions is not to prevent restraint of trade or competition, but to disrupt or make ineffective labor organizations.

"Those who have been in the ditches, the factories, the grinding toil of modern industry, know what the labor movement has done for human progress and welfare. Those who work for the United States Steel Corporation or the Tobacco Trust know what it is to deal with organized employers without collective protection. In the light of these facts, which are well known, would it not be well to consider seriously whether or not this fear of alleged 'conspiracies' of labor associations should be allowed to pervert an effort to arrive at standards of justice that do not sacrifice human rights to the right to conduct business?

"Peaceful, rightful attempts to secure advantages for workers or to resist deterioration and oppression have been deemed 'combinations in restraint of trade.' The Workingmen's Amalgamated Council of New Orleans struck to induce the employers to make a beneficial joint agreement with union labor—a purpose certainly not in restraint of trade. No violence was charged; and yet the court ruled 'the defendants were in restraint of trade.' In the case of Loewe *v.* Lawlor et al. it was offered and accepted as evidence of 'conspiracy' that out of 82 manufacturers of hats in the United States, 70 were in agreement with the union of hatmakers to maintain the best standards of wages and other labor conditions prevailing in the trade. Is it any wonder that the men of labor have been forced to the conclusion that judicial interpretation of conspiracy is synonymous with successful hostility to the humanizing influences of unionism? It is absurd to argue that activities of organized labor are intended to destroy or to injure business; such a result would defeat the very purpose it has in view.

"Even should the activities of labor organizations be rightfully classified as conspiracies, has not the time come when it must be considered whether these 'conspiracies' of organized labor do not do more to further the advancement of humanity and national welfare than the property interests which have been heretofore carefully safeguarded? It is no 'man of straw' that we fear in the application of the Sherman antitrust law to organized labor.

"While it is unthinkable that the organized labor movement can be crushed out of existence, yet the repression of normal activities, thus rousing among the workers resentment at injustice, and the denial to them of legal methods of redress, would lead to situations and conditions which thoughtful, patriotic citizens can not consider without dread.

"This struggle of the working people to secure individual rights and liberty has not been confined to our own country.

In England the same problems have been confronted and solved. In 1824 Parliament enacted that no workman should be 'subject or liable to any indictment or prosecution for conspiracy, or to any other criminal information or punishment whatever, under the common or statute law, for entering into any combination to obtain an advance or to fix the rates of wages, or to lessen or alter the hours or duration of the time of working, or to decrease the quantity of work, or to induce another to depart from his service before the end of the time or term for which he is hired, or to quit or return to his work before the same shall be finished, or, not being hired, to refuse to enter into work or employment, or to regulate the mode of carrying on any manufacture, trade, or business, or the management thereof.'

"For a while the toilers were released from 'legal shackles,' but the courts by judicial legislation and interpretation, in England as here, sought again to bind on the chains. As soon as legislative relief was given against the judicial theory of 'criminal conspiracy' under the common law, the interests took refuge behind the doctrine of 'civil conspiracy.' Finally the workmen won their fight by securing the British trade disputes act of 1906, which contains the following provisions:

"1. The following paragraph shall be added as a new paragraph after the first paragraph of section 3 of the conspiracy and protection of property act, 1875:

"'An act done in pursuance of an agreement or combination by two or more persons shall, if done in contemplation or furtherance of a trade dispute, not be actionable unless the act, if done without any such agreement or combination, would be actionable.'

"2. (1) It shall be lawful for one or more persons, acting on their own behalf or on behalf of a trade union or of an individual employer or firm in contemplation or furtherance of a trade dispute, to attend, at or near a house or place where a person resides or works or carries on business or happens to be, if they so attend merely for the purpose of peacefully obtaining or communicating information, or of peacefully persuading any person to work or abstain from working.

"(2) Section 7 of the conspiracy and protection of property act, 1875, is hereby repealed from 'attending at or near' to the end of the section.

"3. An act done by a person in contemplation or furtherance of a trade dispute shall not be actionable on the ground only that it induces some other person to break a contract of employment, or that it is an interference with the trade, business, or employment of some other person, or with the right of some other person to dispose of his capital or his labor as he wills.

"4. (1) An action against a trade union, whether of workmen or masters, or against any members or officials thereof on behalf of themselves and all other members of the trade union in respect of any tortious act alleged to have been committed by or on behalf of the trade union, shall not be entertained by any court.

"(2) Nothing in this section shall affect the liability of the trustees of a trade-union to be sued in the events provided for by the trades-union act, 1871, section 9, except in respect of any tortious act committed by or on behalf of the union in contemplation or in furtherance of a trade dispute.

"5. (1) This act may be cited as the trade-disputes act, 1906, and the trade-union acts, 1871 and 1876, and this act may be cited together as the trade-union acts, 1871 to 1906.

"(2) In this act the expression 'trade-union' has the same meaning as in the trade-union acts, 1871 and 1876, and shall include any combination as therein defined notwithstanding that such combinations may be the branch of a trade-union.

"(3) In this act and in the conspiracy and protection of property act, 1875, the expression 'trade dispute' means any dispute between employers and workmen or between workmen and workmen which is connected with the employment or nonemployment or the terms of the employment or with the conditions of labor of any person, and the expression 'workmen' means all persons employed in trade or industry, whether or not in the employment of the employer with whom a trade dispute arises; and in section 3 of the last-mentioned act the words 'between employers and workmen' shall be repealed.

"It may not be amiss to quote here the declaration upon this subject of the Democratic Party platform of 1908, which was repeated in 1912:

"The expanding organization of industry makes it essential that there should be no abridgment of the right of wage earners and producers to organize for the protection of wages and the improvement of labor conditions to the end that such labor organizations and their members should not be regarded as illegal combinations in restraint of trade.

"In his speech of acceptance of the presidential nomination by the Democratic Party, Hon. Woodrow Wilson took occasion to make the following declaration:

"The working people of America—if they must be distinguished from the minority that constitutes the rest of it—are, of course, the backbone of the Nation. No law that safeguards their life, that improves the physical and moral conditions under which they live, that makes their (the working people of America) hours of labor rational and tolerable, that gives them freedom to act in their own interests, and that protects them where they can not protect themselves can properly be regarded as class legislation or as anything but a measure taken in the interest of the whole people, whose partnership in right action we are trying to establish and make real and practical. It is in this spirit that we shall act if we are genuine spokesmen of the whole country.

"The Progressive Party platform of 1912 contained the following declarations upon this subject:

"The Progressive Party, in order to secure to the people a better administration of justice, and by that means bring about a more general respect for the law and the courts, pledges itself to work unceasingly for the reform of legal procedure and judicial methods.

"We believe that the issuance of injunctions in cases arising out of labor disputes should be prohibited when such injunctions would not apply when no labor disputes existed.

"We believe also that a person cited for contempt in labor disputes, except when contempt was committed in the actual presence of the court, or so near thereto as to interfere with the proper administration of justice, should have a right to trial by jury. * * *

"We favor the organization of the workers, men and women, as a means of protecting their interests and of promoting their progress.

"Mr. Wilson, presidential candidate of the Democratic Party, and Mr. Roosevelt, candidate of the Progressive Party, for President, represented the principles enunciated in the two party platforms of 1912. Those principles, quoted above, declared in favor of the legislation urged by the workers, and received, computing together the votes for both the Democratic and Progressive presidential candidates, 10,412,977 votes, as against Mr. Taft, the candidate of the Republican Party, which did not declare for labor's principles, who received 3,484,974 votes. Surely no one can therefore truthfully declare that the people are not in sympathy with that which the workers deem so necessary for their welfare. The people desire the welfare of human beings and seek information how best to promote their purposes. The spirit of the age is sympathetic, humane.

"But overwhelming as was the indorsement by the people of this legislation, it is submitted that the fundamental principles involved in the assertion of labor's rights should be more amply set forth. Those principles are based upon established truths. Who will gainsay that the ownership of a free man is vested in himself alone?

"The only reason for the ownership of bondmen or slaves is the ownership of their labor power by their masters. Therefore it follows that if free men's ownership of themselves involves their labor power, none but themselves are owners of their labor power. If a free man, by choice or by reason of his environment, sells his labor power to another and is paid a wage in return, this wage is his own. This proposition is so essentially true that it is the underlying idea upon which is based the entire theory of private property. To question or to attempt to destroy the principle enunciated involves the entire structure of civilized society.

"The free man's ownership of himself and his labor power implies that he may sell it to another or withhold it; that he may with others similarly situated sell his labor power or withhold it; that no man has even an implied property right in the labor of another; that a free man may sell his labor power under stress of his needs or he may withhold it to obtain more advantageous returns.

"Labor power is not a product; it is human ability to produce. Because of its very nature it can not be regarded as a trust or a corporation formed in restraint of trade. Any legislation or court construction dealing with the subject of organizations, corporations, or trusts which curtail or corner the products of labor can have no true application to the association of free men in the disposition or withholding of their labor power.

"The attempt to deny to free men, by injunction or other process, the right of association, the right to withhold their labor power or to induce others to withhold their labor power, whether these men be engaged in an industrial dispute with employers or whether they be other workmen who have taken the places of those engaged in the original dispute, is an invasion of men's ownership of themselves and of their labor power and is a claim of some form of property right in the workmen who have taken the places of strikers or men locked out.

"If the ownership of free men is vested in themselves and in them alone, they have not only the right to withhold their labor power, but to induce others to make common cause with them and to withhold their labor power also, that the greatest advantage may accrue to all. It further follows that if free men may avail themselves of the lawful right of withholding their labor power, they have the right to do all lawful things in pursuit of that lawful purpose. Neither court injunctions nor other processes have any proper application to deny to free men these lawful, constitutional, and inherent rights.

"In the disposition of wages from the sale of labor power man is also his own free agent. All things that he may lawfully buy he may also lawfully abstain from buying. He may purchase from whomsoever he will, or he may give his patronage to another. What he may do with his wages in the form of bestowing or withholding his patronage he may lawfully agree with others to do.

"No corporation or company has a vested interest in the patronage of a free man. If this be true, and its truth can not be controverted upon any legal basis, free men may bestow their patronage upon anyone or withhold it or bestow it upon another—and this, too, whether in the first instance the business concern is hostile or friendly. It is true for any good reason, and, in the last analysis, for no reason at all.

"It is not a question of whether we like or dislike lockouts or strikes, boycotts or blacklists The courts have declared that lockouts and blacklists and all that pertain thereto are not unlawful. It is difficult to understand, then, unless the courts have the concept that an employer has some form of property right in the laborer or the laborer's patronage, how they are justified in stretching their authority, perverting the purpose of the law, and undertaking by the injunctive process to outlaw either the strike or the boycott.

"To claim that what one man may lawfully do becomes unlawful or criminal when done by two or more men is equal to asserting that naught and naught make two.

"The legislation sought is not what can be termed 'class legislation,' if that expression is interpreted in the disparaging sense implied by those opposed to labor's position. Practically all legislation is group or class legislation. Universal categories of the Kantian type can deal only with metaphysical principles. Specific laws deal with groups clearly differentiated from others and possessing common characteristics. Unlike quantities, groups or conditions can not be subjected to the same controls if justice is the end sought. It follows, then, that special legislation is necessary and just, provided, however, that the differentiation is based upon correct principles. This fundamental truth has been upheld by the judiciary in the following decisions:

"Legislation which, in carrying out a public purpose, is limited in its application, if within the sphere of its operation it affects all persons similarly situated, is not within the amendment (the fourteenth amendment). (Barbier *v.* Connolly Laundry case, U. S., 27; United Railway Co. *v.* Beckwith, 129 U. S., 26, and cases cited therein; Railroad Cattle Damage case.)

"The inhibitions of that section (sec. 1 of the fourteenth amendment) are laid upon the action of the several States, and have no reference to legislation by Congress. (Chinese summary trial, presumption of guilt; In *re* Sing Lee, 54 Fed. Rep., 337.)

"The equal protection of the law * * * does not forbid classification. * * * The power of classification has been upheld whenever such classification proceeds upon any difference which has a reasonable relation to the object sought to be accomplished. (Atchison Railway *v.* Matthews, 174 U. S., 103. See also Kentucky Railroad Tax cases, 115 U. S., 321.)

"Classification must also rest upon some difference which bears a reasonable and just relation to the act in respect to which the classification is proposed, and can never be made arbitrarily and without any such basis. (Gulf, Colorado & Santa Fe Ry. *v.* Ellis, 165 U. S., 155.)

"The fact, then, that organizations not for profit, but for securing humanitarian benefits for the workers, would be exempt from the application of the provisions of the Sherman antitrust law would not constitute a reason for declaring the measure unconstitutional; such a decision would depend upon whether there are real and inherent differences between the voluntary associations of working people (organized not for profit) and monopolies or combinations whose sole purpose is profit, or upon whether the application of the law to the two kinds of organizations would produce similar results.

"Such differences do exist. Organizations of labor have their origin in human need; they seek human welfare and betterment; they have to do with human labor power. Capitalistic monopolies have their origin in desire for larger profits; they seek economic control and the elimination of competitive rivals; they deal in material things, in the products of labor, in wealth.

"Between capital and labor there is a vital and fundamental difference, an understanding of which is essential to those upon whom falls the responsibility of dealing with matters influencing the freedom of men.

"Capital consists in material things which are external, useful, and appropriable.

"Capital is that which a man has, not what he is.

"To classify skill, knowledge, labor power as capital is an error in terminology that has crept into the thinking of some economists and political scientists.

"It is an error conducive to grave injury to the working people.

"These attainments or attributes are not possessions of the individual; they are the individual, and can not be separated from personality. Cultivation of powers and ability increases the potential labor power, increases and enriches the resourcefulness and efficiency of the individual. But these things are subjective, immaterial, and are not in themselves capital. The individual may be able, powerful, and therefore fortunate, but it does not necessarily follow therefrom that he has capital. The wealth which he may produce and use as capital is separate and distinct from himself.

"It follows, then, that to apply to voluntary associations of working people (commonly called labor organizations) which are concerned with individuals and their powers the same regulations as are applied to organizations manipulating the products of labor leads to mischievous results and perversion of justice. Legislation recognizing the inherent difference between these two kinds of organizations could not be condemned as unconstitutional on the charge of unjustifiable discrimination.

"After considering the charge of 'class legislation' from the angle of 'difference of kind,' it remains to take up the matter as to whether the law would produce similar effects upon both kinds of organizations. The effect upon trusts and monopolies of the application of the Sherman antitrust law is an open question, the discussion of which is not essential to the matter in hand. Suffice it to say, the law aims at the prohibition of conspiracies, monopolies, or combinations in restraint of material things, the reestablishment of competitive conditions in material things. So far as the law has been invoked against labor organizations, it has been directed against two kinds of collective action—the withholding of labor power and the withholding of patronage. It is at once evident that both labor power and patronage are not capital or material things—property—to which that law was intended to apply, but are subjective, personal.

"If labor power and patronage are treated as something to be controlled as property, then so much of the individual no longer belongs to himself. The individual, like a nation, can not exist part slave and part free; it must be either one or the other.

"A free man has the right to bestow or withhold his labor power and his patronage whenever or wherever he may wish. To gainsay this right is to deny freedom. Since no individual is given any legal or inherent proprietary right in a man's labor power or patronage, he can not be aggrieved or afforded grounds for action when they are withheld from him. Labor power and patronage are what make the individual workman effective and forceful; they constitute his principal protection and means of self-expression. They must be guarded as the foundation of individual freedom, the precious birthright of a man free to be himself and to possess his own soul.

"Not only must the theoretical right to bestow or withhold labor power and patronage be maintained, but this must be given reality and effectiveness by permitting men to pursue lawful courses of action in exercising this right. If the end is lawful and worthy, then the normal means for attaining that end must also be recognized as legal and necessary. Justice must be reasonable and practical. There has been an attempt—it matters not whether consciously or unconsciously—to build up a legal fiction which tends to nullify these rights by discrediting and misrepresenting the means by which they are exercised.

"The legal mind is strongly influenced by the traditional element of the law developing out of the observance of precedents in its application. It is concerned for consistency, for continuity even when that necessitates the continuation of an antiquated concept.

"Consequently the old legal concept that labor unions and their normal activities for making their demands effective are either conspiracies or partake of the characteristics of conspiracies is very hard to dislodge from the legal mind, and continues to influence many decisions and arguments. Lawyers of the legalistic type speak the orthodox vernacular, and their curiously twisted phrases take on the semblance of accepted principles and lines of reasoning. Yet the heterogeneous elements of their legal fictions appear somewhat incongruous and mystifying to laymen. They speak of an unlawful combination or conspiracy to accomplish a lawful purpose, and of a lawful combination to accomplish some criminal or unlawful purpose, or to accomplish some purpose not in itself criminal or unlawful, by criminal or unlawful means, as being equally criminal. Then, by using one or more of these hypotheses, together with the use of precedents based upon the principle that labor combinations and collective action are conspiracies, lawyers and judges have restricted labor organizations in their elemental, normal activities intended to promote the welfare of those who toil. In this connection permit me to call your attention to these memorable words of Junius upon the nature of precedent:

"If an honest man, and, I may truly affirm, a laborious zeal for the public service has given me any weight in your esteem, let me exhort and conjure you never to suffer an invasion of your political constitution, however minute the instance may appear, to pass by, without a determined, persevering resistance. One precedent creates another They soon accumulate, and constitute law. What yesterday was fact to-day is doctrine. Examples are supposed to justify the most dangerous measures, and where they do not suit exactly, the defect is supplied by analogy. Be assured that the laws which protect us in our civil rights grow out of the Constitution, and that they must fall or flourish with it.

"This legal fiction of theoretical justice and equal protection of all men under the law does not accord with the facts as experienced by those upon whom the burden of the world's heavy toil has fallen. This legal fiction represents what might be called visible or outward justice. But greater and more real

than this is the invisible or real justice that is not bound by theory or convention, but goes straight to the heart of things, takes into account facts and modifying conditions, and is not circumscribed and bound by conventions and precedents. That is the justice too often gagged, bound, and well-nigh stifled by lawyers. That is the justice that must be rescued and established by our statesmen if liberty and freedom are to be maintained. This was the course advocated by Edmund Burke in regard to the American Colonies, the policy which Hon. Woodrow Wilson admirably expressed in his history of the American people thus:

"Mr. Burke admitted that his theory was not a theory for the strict lawyer; it was a theory for statesmen for whom fact must often take precedence of law.

"Law and legal interpretation have not divested themselves of all the influences of that time when men were not free and were looked upon as chattels and property. They have not yet come under the sway of the newer expressions of the social conscience which Prof. Charles E. Merriam has aptly termed 'social politics.'

"Hostile lawyers, lawyers paid to present the cases of their clients, judges under domination of the employer's and the legalist's viewpoint, have misrepresented and misinterpreted acts and purposes of the workingmen to make them appear criminal and destructive, whereas the guiding purpose animating the labor movement is not destruction but construction, for the completion and perfection of general welfare.

"It is charged that workingmen conspire to destroy business when they withhold labor power or patronage pending the securement of specific rights. As a matter of fact, destroying business would frustrate the end sought. This legal fiction called destroying business arises out of confusing physical property with the immaterial something called good will, which is dependent on reputation and patronage. This latter emanates from individuals not concerned in the particular business under consideration; it has a direct relation to business, but it is not business. For detracting from patronage, either individually or collectively, workingmen can no more be charged with destroying business than can competitors who build up their business at the expense of others engaged in the same line. Workingmen have the right to pursue policies for their welfare which may entail losses by employers. To be sure, the employer has a right to his property and a right to do business, but the latter is a general right. He is not guaranteed the right to be protected against all hazards in a particular business. That is the principle involved in the reduction of the tariff, even though that may mean some decrease in the employers' or other business men's profits.

"Whenever the activities of organized labor have raised new issues and problems or brought precedents into question, rather than adjust to meet new ideas and new conditions and blaze out newer and straighter paths to justice, judges and lawyers have applied the well-nigh threadbare dictum 'criminal conspiracy,' and have followed figuratively if not literally the old legal maxim 'when in doubt, hang the prisoner.' Legal fiction and misunderstanding have placed restrictions upon individual freedom through which it is hard to break.

"Since the Sherman antitrust law has been so interpreted as to increase these limitations, labor has found the right to unite for mutual protection but a mere legalistic expression. The law as now interpreted has the effect of crippling and enervating labor organizations and of prohibiting the exercise of necessary activities. What we seek is not special privilege, immunity from prosecution for crimes, but the right to do those things necessary to organizations accomplishing a real work for human workers.

"In regard to another point made by opponents, namely, that the Bartlett-Bacon bills, if enacted into law, would be regarded as unconstitutional, your attention is respectfully called to the exemption provision of sections imposing a tax on corporations embodied in the tariff law of 1909, approved and signed by Mr. Taft, then President. That proviso is as follows:

"*Provided, however*, That nothing in this section contained shall apply to labor, agricultural, or horticultural organizations, or to fraternal beneficiary societies, orders, or associations operating under the lodge system, and providing for the payment of life, sick, accident, and other benefits to the members of such societies, orders, or associations, and dependents of such members, nor to domestic building and loan associations, organized and operated exclusively for the mutual benefit of their members, nor to any corporation or association organized and operated exclusively for religious, charitable, or educational purposes, no part of the net income of which inures to the benefit of any private stockholder or individual.

"In Flint *v.* Stone, Tracy & Co. the Supreme Court of the United States, in rendering its decision on the validity of the proviso excluding labor and other organizations from this corporation tax, anticipated the objection raised by opponents. The court decided thus:

"As to the objection that certain organizations, labor, agricultural, and horticultural, fraternal and benevolent societies, loan and building associations, and those for religious, charitable, or educational purposes, are excepted from the operation of the law, we find nothing in them to invalidate the tax. As we have had frequent occasions to say, the decisions of this court from an early date to the present time have emphasized the right of Congress to select the objects of excise taxation, and within this power to tax some and leave others untaxed, must be included the right to make exemptions such as are found in this act.

"That there is nothing novel or pernicious in provisions of this nature is further proved by the tariff law recently enacted by Congress. That law contains, in the section dealing with the income tax, the following provision:

"*Provided, however*, That nothing in this section shall apply to labor, agricultural, or horticultural organizations, or to mutual savings banks not having a capital stock represented by shares, or to fraternal beneficiary societies, orders, or associations operating under the lodge system or for the exclusive benefit of the members of a fraternity itself operating under the lodge system, and providing for the payment of life, sick, accident, and other benefits to the members of such societies, orders, or associations, and dependents of such members, nor to domestic building and loan associations, nor to cemetery companies, organized and operated exclusively for the mutual benefit of their members, nor to any corporation or association organized and operated exclusively for religious, charitable, scientific, or educational purposes, no part of the net income of which inures to the benefit of any private stockholder or individual, nor to business leagues, nor to chambers of commerce or boards of trade, not organized for profit, or no part of the net income of which inures to the benefit of the private stockholder or individual, nor to any civic league or organization not organized for profit, but operated exclusively for the promotion of social welfare.

"Nor is this the only example—all annual incomes under $3,000 are exempt; the tax itself is graduated, making the burden not mathematically but really equal and in proportion to ability to pay; the compensation of all officers and employees of a State or any political subdivision thereof is exempt, except when such compensation is paid by the United States Government. In fact, all excise taxation is based upon class differentiations. The question to be considered is not whether a distinction is made, but whether the distinction is founded upon a real difference, and whether the results from recognizing the distinction would promote the welfare of the greatest number.

"The opponents of the legislation labor seeks assert that the principal activities and methods of organized labor are destructive and subversive to orderly progress. Quite the contrary is true. To be sure, things have been done by some connected with the labor movement which all right-thinking people deplore. These excrescences have been featured by the sensational and hostile press. The undue prominence given them tends to minimize or obscure the constructive, permanent, fundamental work of the movement. This side is often wholly hidden from persons whose lives do not come in contact with those who work in the ditches, the mines, the factories, and wherever the burden of toil is borne by those who can not enter the easier places.

"This labor movement is a real, vital expression of human need and hope; it must conform to life as it is, and though it hopes to establish better things, it can not deal with men and present conditions as though they were ideal. The men and women in the movement are human beings with all the passions, frailties, and possibilities of human nature. Is what they are and do not due, in a large measure at least, to existing social conditions? If they have at times done that which they should not, it has not infrequently been because they had been made desperate by denial of justice, and because protective measures had been declared illegal by those in judicial and political control. As the thoughts of men have widened, practices and acts which had been held illegal have been legalized. The working people have won many such victories; by the adoption of the legislation under consideration they seek to establish recognition of the right to effective collective action not in itself unlawful.

"Our opponents simulate great alarm as to the disastrous effect of the boycott. But is that such a new and anarchistic device? Quite the contrary. It is a weapon that has been successfully used for good purposes by men of all times. Our Revolutionary fathers used it most effectively to defeat what they considered the unjust demands of the English Government. It may be interesting here to call attention to the placards reproduced in the second volume of Hon. Woodrow Wilson's History of the American People, which illustrate the point so nicely. The one on page 159 is an 'unfair list'; on page 162 is a 'conspiracy' agreement; on page 173 an unmistakable boycotting poster, though conceived in patriotism and ended reverently with 'forever and ever, amen.'

"The boycott per se is not evil. Its purpose and the means employed to make it effective determine whether it should be given praise or condemnation. It has been used for innumerable purposes by all classes and kinds of people. Nor are the 'interests' adverse to these devices used by labor organizations. A short time ago the Missouri Legislature repealed a law legalizing rates filed in accordance with the statute, thereby

reviving the State antitrust law. Ten insurance companies promptly withdrew from the State. Later the agents of over 100 companies were instructed by their respective superiors to do no more business in the State. That policy of the companies is to all intents and purposes a strike, ceasing to do work until their demands shall have been granted. There are innumerable illustrations of effective boycotts prosecuted by certain interests against other interests—for profit.

"Organizations to promote temperance, prohibition, and like purposes, in making a campaign against the liquor traffic, are trying to institute an effective boycott against the liquor interests. The efforts of the Consumers' League to create a public sentiment hostile to establishments, business houses, factories, which pay low wages, fail to provide seats, conveniences, and sanitary conditions for their employees, and then to give this sentiment expression by refusing to purchase articles without the label which guarantees "fair" conditions of production, are, in the last analysis, a boycott against establishments where low standards prevail.

"The boycott in itself can not, therefore, be condemned as pernicious, illegal, or as a class weapon. But opponents insist that if the Bartlett-Bacon bills, or the principle embodied in them, are enacted into law there would then be no recourse under existing law for violence or lawlessness in connection with a strike or lockout. As a matter of fact, existing Federal and State laws now provide penalties for violence or crime committed by persons whether in connection with a strike, lockout, blacklist, or boycott, with any other activity, or due to any other cause.

"Acts of violence and crimes can be and are punished under proper laws made and provided to meet them. No one need fear but that all crimes of workingmen will be duly punished. It is not immunity from such punishment that labor asks, only exemption from a statute which was not intended to and should not apply to it, and which was framed to regulate an essentially different kind of organization.

"Opponents usually say that the workingman may strike, agree to strike, and apply the direct boycott, but when it comes to going further and so acting as to impede and obstruct the natural and lawful course of trade in this country, then they say he shall stop.

"That sounds well to those who can be content with mere phrases and paper declarations, but to those who know and who have felt the power of the invisible forces working in and through the Government it is but an empty platitude, an expression of theoretical or academic rights which lack the effectiveness of reality. It is the old, old story of the employers who approve of unions, but only of unions that do nothing.

"The workingman shall not interfere with the 'natural and lawful course of trade.' Forsooth, is there any trade independent and uninfluenced by some human agency and directing control? Is not its course determined by these human agents for their own satisfaction and benefit? If these agents who are now accorded by law limited powers to regulate and manipulate trade, and who, by the domination of wealth, corrupt bargains, and secret agreements, exercise unlimited power over trade for personal interests, is it equitable that the workingmen shall be barred from exercising control of themselves and their normal activities? The statement of our opponents which I have quoted is akin to the phraseology of the old-time idealistic sciences, the 'natural' man of the political-rights school of thought, the 'economic' man of the early economists, the 'average' man of statistical theories—straw creatures like unto nothing seen upon the earth or in the spaces above or beneath.

"Even Senator ROOT, scarcely recognized as a leader of progressive legislation, in the first of a series of lectures on 'The essentials of the Constitution,' which he delivered last year at Princeton University, thus acknowledged the domination of the interests in political affairs:

> "All of these new political methods are the results of efforts of the rank and file of voluntary parties to avoid being controlled by the agents of their own party organization and to get away from real evils in the form of undue control by organized minorities with the support of organized capital.

"Government was first organized to protect property. Property owners and wealth possessors long controlled and directed it. With changing social and economic conditions, with the development of the social conscience, men have realized that political agencies may be made to serve social ends, hence all should participate in the government, and that the welfare of all may be secured in that way. The courts have been especially backward in recognizing the rights secured by legislation. As in the Danbury Hatters' case, the Supreme Court applied the Sherman antitrust law to the union and found a 'conspiracy in restraint of trade' for three reasons: A strike at the factory, collective bargain agreements by which 70 out of the 82 hat factories of the country agreed to union shop conditions, and a boycott of the hats of the Danbury firm. It is evident from this that theoretical rights do not always constitute real rights. The hatters were confronted by the following alternatives:

"First, for the Loewe Co., with which the dispute arose, to pay whatever wages it pleased to its workmen, to force its employees to toil a longer working day, and to impose any other conditions at variance with those prevailing in the trade without resistance or strikes on the part of the union, and thereby to encourage other employers in the trade to follow the same policy, and even creating the necessity for their cutting wages, increasing hours of labor to meet the conditions prevailing in the Loewe establishment; or

"Second, for the hatters to do as they wisely and justly did, to exercise their lawful, constitutional, and inherent right to quit work, to strike, and to endeavor to persuade their fellow citizens and friends to give their patronage to hat manufacturers disposed to be more just in their dealings with their employees, and thus to maintain a higher general standard of life afforded by the conditions prevailing generally in the trade.

"As George W. Alger says in his book, Moral Overstrain, in discussing some equivocal rights of labor:

> "Stated as concretely as possible, the principal difference between the working people and the courts lies in the marked tendency of the courts to guarantee to the workman an academic and theoretic liberty which he does not want, by denying him industrial rights to which he thinks he is ethically entitled. His grievance is that in a multitude of instances the courts give what seems to him counterfeit liberty in place of its reality.
>
> "The workman does not want the vain liberty so often declared to him by the courts, of throwing up his job and looking for another. He does not take kindly to the judicial affirmations to him of the right to be maimed without redress, or to be killed by his employer's indifference to his safety. His grievance is not directly with the courts and law. The workman knows little about the law, and most of what he understands he does not like. He objects to the economics on which those killing decrees are rendered against him. He does not call it economics, but at the bottom the real trouble, from the workman's point of view, is the blindness of courts, which do not seem to notice or to understand the social and economic conditions under which he has to work. For the law still embodies in these decisions an outworn philosophy, the old laissez faire theory of extreme individualism. * * *
>
> "The whole point to be noticed is simply this, that by the working-class ideal of liberty a special demand is made on the law—a demand more frequently refused than granted. What it demands from the courts is the recognition and protection, and at times the creation, by law of the workers' economic rights. The law, on the other hand, guarantees to him the ancient and largely negative individual liberty, freedom from legal restraints, the right to do any unforbidden thing he wants to—if he can—and tells him to shift for himself for his economic rights. The workers' discontent with the law lies in the fact that it guarantees him individual and not social or industrial freedom.

"The Hatters' case was retried last year, and the men again found guilty of 'illegal conspiracies' because they tried to establish a minimum standard of wages and conditions for all the workers in the trade and because they determined to withhold their patronage from an unfair firm which refused to conform to the union wage scale and conditions prevailing in the trade. For these reasons their little property holdings and deposits were levied upon and held to satisfy the threefold damages allowed by the antitrust law.

"Recently the Supreme Court of Errors of Connecticut, in Conners *v.* Connelly, rendered a decision ignoring the difference between trusts and labor organizations and declaring that there is danger in a monopoly of 'anything' of which there is common need. Though a laboring man may be very humble, yet he is not a thing. The whole opinion is reasoned from that false hypothesis. It ignores the economic necessity for collective bargaining and ignores the difference between that human act and a monopoly or a trust in material things. The toilers grow weary and restive under laws and courts that promise them the rights of men, but judge them as 'things.' How long must they ask for relief?

"In addition to the instances already cited, in which men of labor were indicted under the criminal provisions of the Sherman antitrust law because they sought to protect and advance the interests of their fellow workers as workers, proceedings were brought against the Electrical Workers' Unions of Chicago, Ill. Since then the officers of the coal miners' unions were indicted under the provisions of that law, and for no other reason than that already mentioned.

"Federal district attorneys and grand juries make so-called 'investigations' of the normal activities of workers to see whether some indictment or other process can not be employed to estop the workers from protecting their rights and their interests against conscienceless employers. These investigations, at the least, result in harm to the workers by harassing the organizations of labor and leaving them with a burden of

expense in legal defense. These prosecutions—which may better be termed persecutions—should come to an end. They can be ended by the enactment of the Bartlett-Bacon bills.

"Unless the principles involved in this discussion are promptly and effectively enacted into law, securing to the working people freedom to unite for the purpose of safeguarding and exercising recognized rights necessary for their physical protection and the development of those qualities which determine their very being, the sense of injustice already stirring abroad in our land will be fostered by even a greater reason for existence.

"The working people of our country ask nothing in the form of legislation—the subject we are discussing—that is not already statute law in Great Britain, for in 1906 the British Parliament enacted the British trade-disputes act, which has been quoted.

"The specific applications of the Sherman antitrust law to labor organizations have done violence to the right to strike—to cease work collectively—with all that that involves, and the right to withhold patronage and to agree to withhold patronage. The issues in this legislation involve the same principles found in our contention against injunction abuses, namely, there is no property right which an employer has or can have in the labor power or the personality of another citizen—a workman. In a hearing before a subcommittee of the Senate Committee on the Judiciary during the last session of the Sixty-second Congress I presented some reasons why the law should be amended to protect workmen from present abuses. I had incorporated in the record documents substantiating the position of labor. They are as follows:

"Why Injunctions Should not Apply. Edward J. Livernash.
"Trial by Judge and Jury. Henry C. Caldwell.
"Section 20 from High on Injunctions.
"Arthur et al. v. Oakes et al. Opinion by Justice Harlan.
"Contempt Case, Buck's Stove & Range Co. v. Gompers, Mitchell, and Morrison. Dissenting opinion of Chief Justice Shepard.
"Injunctions in Labor Cases. David Silverstein.
"The Misuse of Equity Power. Andrew Furuseth.
"Man's Ownership of Himself. Samuel Gompers.
"Government by Law, not Discretion. Samuel Gompers.
"Essence of Labor's Contention in the Injunction Abuse. Samuel Gompers.

"Another presentation of this same principle is found in the address of Mr. Jackson H. Ralston, made before the American Academy of Political and Social Science and published in The Annals July, 1910.

"My presentation of the cause of organized labor has not been from the legal viewpoint, for I am not a lawyer. But even could I present the legal phases, I doubt whether that would aid in determining justice for the workers. Often justice is obscured in the mazes of legal theories and technicalities. The law is not an unfailing source of justice; it can only approximate that ideal as it is rendered flexible enough to adjust to new conditions and needs. That is what we ask for in the legislation we seek.

"It is not my purpose to present here a legal argument in defense or in furtherance of labor's position with respect to the principle involved in legislation of this character, nor can I herein make a full sociologic or economic presentation of the subject.

"The legislation sought—that is, the enactment of the principles embodied in the Bartlett-Bacon bills—is one of deep concern to the workers of our common country. It lies very close to their hearts and vitally affects their rights, their interests, their progress.

"A sense of duty and of the obligations devolving upon me as a citizen, a man, a worker, as well as president of the American Federation of Labor, impels me to impress in this form the thoughts, the hopes, and the aspirations of the toiling masses of America, to whose welfare it has been my good fortune to devote the best efforts of which I am capable. It is this sense of duty and obligation which impels me to submit in this way, perhaps rather voluminously, something of the information and experience I have upon the subject under discussion. It is a duty not only to the toilers of America, to its citizenship, but also to the representatives of the people, their governmental agents, in the interest of the great principles upon which our Republic is based, to present the cause of justice and human welfare. That the facts and the arguments herein set forth may be available to all in determining their course upon this issue, fraught with such tremendous possibilities for weal or woe directly to the millions of working people and generally to all the people of our common country, is my warrant for the length of this statement.

"It is earnestly hoped that the appeal may not be in vain and that the legislation sought may be promptly enacted."

The Mexican Situation—Its Problems and Obligations.

EXTENSION OF REMARKS
OF
HON. FRANK W. MONDELL,
OF WYOMING,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, April 11, 1914.

Mr. MONDELL. Mr. Speaker, I take advantage of the privilege granted me to extend my remarks in the RECORD to place in the RECORD an address which I delivered before the American Association of Political and Social Science in Philadelphia, Pa., on Friday, April 3, 1914, on the Mexican situation.

The said address is as follows:

"Our relations with the Government and the people of Mexico are controlled and effected by three somewhat distinct elements of relationship and obligation. They are:

"Primarily, the reciprocal duties and obligations incumbent on all civilized nations and enjoined by international law and usage.

"Secondly, those duties and obligations and the problems they present as effected by the fact that we are Mexico's only important immediate neighbor and, as Secretary of Foreign Affairs Gamboa puts it, 'Mexico's nearest friend.'

"Finally, those duties and obligations as enlarged by the responsibilities we have assumed under the Monroe doctrine.

"The maintenance of a correct attitude toward the Government and people of Mexico is rendered the more difficult by reason of the fact that our proximity to Mexico tends to make our border people partisans in case of civil strife in that country and multiplies the opportunity for and the likelihood of losses and injury to our citizens and their property under unsettled conditions. On the other hand, this intimate relationship and the responsibilities we have assumed under the Monroe doctrine as applied to Mexico increase the importance of the maintenance of a correct and defendable attitude in our dealings with that neighboring State.

"A brief résumé of recent occurrences in Mexico may aid in elucidating the character of the problems there and our relation to them.

"The unfortunate Madero revolution started from our border. The Diaz government which it overthrew had, in my opinion, abundant ground for criticizing our failure to exercise proper precaution to prevent the hatching and launching of revolutionary movements aimed at the life of a neighboring friendly power. However that may be, the revolution was successful and was promptly recognized by our Government. But the Madero government was destined to be short-lived. Undermined by plots and conspiracies and overpowered in the seat of government, President Madero was forced to resign and Huerta was proclaimed as provisional President two weeks before the close of the Taft administration.

"For more than a year the government of which Huerta is the head has exercised practically unchallenged jurisdiction over 23 of the 31 political subdivisions of Mexico, including the capital city, covering more than two-thirds of the territory and three-quarters of the population of the Republic.

"That government has in the main maintained order and protected life and property in the extensive and populous regions under its control. A very large portion of this territory has at no time been seriously disturbed, and the orderly processes of civil government have been but little affected by the civil strife which has been in progress elsewhere.

"The government of Mexico under Huerta has long been recognized by most of the powers of Europe, and has apparently faithfully endeavored to fulfill its international obligations. The attitude of this government toward our own, even under the trying conditions we have established, of unofficial communication through various intermediaries, has been straightforward, frank, and remarkably free from ground for criticism.

"The conspiracies and conflicts which preceded the inauguration of the government of Huerta, the lamentable assassination of ex-President Madero, which stained the first days of its establishment occurring, as these events did, but a few days before the close of the Taft administration, made it incumbent on the outgoing to leave the incoming administration free to deal with the situation unembarrassed by prior act of recognition.

"The new administration adopted an attitude which the President later referred to as one of 'watchful waiting.' How

watchful it was must remain a matter of opinion; that it was one of waiting can not be disputed.

"But this attitude of 'watchful waiting' was not maintained down to the time when the President so characterized the attitude of his administration. The policy of our Government was substantially modified when the President sent John Lind as his personal representative to, as the President phrased it, 'those who are now exercising authority or wielding influence in Mexico.'

"This mission modified our attitude from one of 'watchful waiting' to one of energetic advice, or meddlesome interference, depending on how one views it. The unusual nature and remarkable character of the demands made were very forcibly pointed out in the spirited reply of Secretary of Foreign Affairs Gamboa. The declaration by those 'exercising authority' in Mexico of the impracticability of fully acceding to the President's demands was followed by another period which might, perhaps, be properly called 'watchful waiting.' This, however, did not long continue.

"A radical change in our attitude was clearly indicated by the President's message delivered to Congress December 2, 1913, in which he declared, in effect, that the government exercising authority over the major portion of Mexico would never be recognized or dealt with by our Government so long as Huerta was at the head of it, no matter how extensive its authority or control might be, because, he said, this is a military despotism and we are the friends and champions of constitutional government in America. One will search the annals of American history in vain to find such a note of personal prejudice and individual ill will toward the head of any Government as is found in the language with which the President makes these declarations and in which he predicts the downfall of what he calls a 'precarious and hateful power.'

"Some time after the delivery of this message of the President, the predicted overthrow of the Huerta government not having occurred, the embargo on the shipment of arms into Mexico was raised, with the explanation and declaration that there now existed no constitutional government in Mexico entitled to the benefits of that embargo.

"Up to the time of the dispatch of John Lind with his very extraordinary instructions to 'those exercising authority' in Mexico our attitude, while open to criticism as to its wisdom, was undoubtedly not censurable from the standpoint of international usages. The demands contained in Mr. Lind's instructions upon those 'exercising authority' in Mexico did, however, unquestionably establish a new precedent in our international affairs, while the declarations contained in the President's December message, to which I have referred, involve a radical departure from the past policy of our Government in dealing with the Republics on this continent.

"One of the primary obligations resting upon civilized Governments is to abstain from meddlesome interference with the internal and domestic affairs of other nations. It is true we are the friends of constitutional government; we are also its champions, as the President states, but we are under no obligations and have no right or authority to determine what constitutes constitutional government in other countries. On the contrary, we are bound by our international obligations, while favoring the establishment of governments which we deem to be constitutional in form, to recognize such governments as foreign peoples may establish, maintain, and give their adherence to.

"We are certainly getting on dangerous ground when we in effect declare that we shall refuse to have official relations with any government, no matter how well established or how long maintained, unless it be a constitutional government according to our interpretation. When we further assume the right to pass not only on the legitimacy of governments, without regard to the extent, character, or permanence of their authority, but to dictate who shall preside over them, we have assumed an international task that will keep us very busy and much embroiled in the future.

"Our national policy in the recognition of governments has been well defined and uniformly adhered to.

"In 1830 Secretary of State Van Buren wrote to Mr. Brown, our chargé d'affaires to Brazil, as follows:

> "Your business is solely with the actual Government of the country where you are to reside, and you should sedulously endeavor to conciliate its esteem and secure its confidence. So far as we are concerned, that which is the government de facto is equally so de jure.

"The Government of Juarez in Mexico was recognized by President Buchanan, though not in possession of the capital, on the ground that it was 'obeyed over a large majority of the country and the people.'

"President Pierce, in a message to Congress of May 15, 1856, relative to the situation in Nicaragua, said: 'It is the established policy of the United States to recognize all governments without question of their source or organization, or of the means by which the governing persons attain their power, provided there be a government de facto accepted by the people of the country.'

"Secretary of State Evarts, in a letter written in 1879 to our representative in Venezuela, Mr. Baker, stated that recognition of a government did not depend on its constitutionality; that as our international compacts and obligations were with nations rather than political governments we should be watchful lest our course toward a government should affect our relations with the nation.

"In 1899 Secretary Hay authorized our minister to recognize the Government of Castro in Venezuela 'if the provisional government is effectively administering the government of the nation and in a position to fulfill international obligations.'

"Mr. Hill, Acting Secretary of State, in a letter of September 8, 1900, to Mr. Hart, United States minister at Bogota, stated that it had been the policy of the United States for more than a century 'to base the recognition of a foreign government solely on its de facto ability to hold the reigns of administrative power.'

"These are a few of the many declarations by our Government of our policy to recognize a government fully established exercising control over the major portion of a nation and disposed to meet its international obligations.

"The Italian historian, Ferrero, in a recent review of the Mexican situation characterized our present attitude toward Mexico as one of masked or indirect intervention, an attitude he said was accomplished 'by giving support to one of the two parties at war, generally the weaker one.' In the present case this masked or indirect intervention has been accomplished by giving aid and comfort to every foe of law and order in Mexico, like Zapata, and every enemy of those whom the President has recognized through Mr. Lind as 'exercising authority' in Mexico. It has been done by withholding recognition from the Huerta government, by demanding its virtual overthrow, by continued official prediction of its early downfall and, later, by encouraging the sale of arms and munitions of war to its enemies.

"These acts are of a character which might easily prompt reprisal on the part of the Mexican Government. As a matter of fact, however, they have apparently failed to affect or disturb the very proper attitude of that Government toward ours, or to change or modify its disposition and purposes to protect, as far as possible, our citizens and their property in the regions over which that Government exercises jurisdiction.

"I realize that the American people are not at this time particularly concerned as to the propriety, according to the usages of international intercourse, of the acts and attitude of our Government toward the Government and people of Mexico. I doubt if they are particularly solicitous over the question as to whether or no the attitude of the administration toward the Government of Mexico, in indirectly intervening in favor of its enemies, may be a straining of the authority of the President in dealing with international affairs.

"An overwhelming majority of the American people are, however, sincerely anxious to see peace established and are earnestly solicitous to avoid the necessity of armed intervention in Mexico. They have, therefore, a lively interest in knowing whether the attitude of our Government toward Mexico is one calculated to aid in establishing peace and averting the necessity of intervention.

"In a speech I delivered in the House of Representatives on Friday, February 27, 1914, I said:

> "I am persuaded that the acts and attitude of our Government have had the effect of prolonging and extending the lamentable condition of appalling disorder and distress which prevails in Mexico; that a continuation of our present policy, or lack of policy, tends to retard indefinitely the establishment of orderly conditions and constitutional government, and will eventually, if persisted in, compel armed intervention, with its inevitable horrors and calamities.

"Let us examine the situation for a moment with a view of determining whether the views thus expressed are well founded. The President, in his message of December 2, said, 'Mexico has no government,' and declared that Gen. Huerta, who is exercising an authority which the President himself has recognized, must surrender that authority. It is true that if Huerta were to eliminate himself from the affairs of Mexico and some one else were to take his place who Zapata, in the south, and Villa, Carranza, and other lesser chieftains in the north would all acknowledge and give loyal adherence to, and no other aspiring revolutionary chieftain appeared, the miracle of thus establishing order might be accomplished.

"Such an arrangement would still leave our administration confronted with the embarrassment its recently announced doc-

trine relative to constitutionality would present. Assuming that difficulty could be overcome, no one familiar with the situation has the slightest notion that such a program of general conciliation and unanimous self-effacement on the part of the rival leaders could be carried out. There can be no doubt in the mind of anyone who has followed the developments in Mexico but what the warring leaders and factions must, some of them, at least, be eliminated or persuaded by force before there can be a full restoration of peace.

"Assuming that the demand of our administration for the overthrow of Huerta and the government of which he is the head is accomplished by the united forces of the so-called constitutionalists in the north and the outlaw Zapata in the south, is there any ground for hope that in such a contingency order and constitutional government would be speedily established in Mexico?

"Is there anything in the character or past record of the so-called constitutional chieftains to justify the expectation that they could or would even attempt to establish a government which would meet its international obligations or be satisfactory to the majority of the people of Mexico? One must be sanguine indeed who can bring himself to believe that the people of southern and central Mexico and the strong and influential men of the nation, the vast majority of whom now give at least nominal adherence and support to the government of Huerta, would approve or support a government established by the joint efforts of Villa and Zapata, even though presided over by so well-intentioned an individual as Carranza is reported to be.

"Our quite general approval of the unfortunate Madero, our abhorrence of the manner of his untimely taking off, and our natural and proper disposition to hold those at the head of the Huerta government responsible for that act inclined our people to approve, for a considerable period, the withholding of recognition, the refusal to officially recognize the Huerta government. The time came, however, when the refusal to formally recognize a government, for the time being at least, firmly established, widely supported, reasonably fulfilling, or attempting to fulfill, its international obligations involved not only a compete reversal of our national policy, but a surrender of the only adequate means of protecting our citizens in Mexico and their property and of fulfilling the obligations we have assumed under the Monroe doctrine toward the property and citizens of other nations.

"It is not only not denied that our refusal to recognize the Government of Mexico under Huerta has greatly handicapped that Government in securing the means for restoring order throughout the Republic; our administration has gloried in that fact and prophesied the early downfall of the Mexican Government as a result. Our attitude, therefore, has confessedly lengthened the period and increased the violence of disorder in Mexico. If the present Government in Mexico be not a constitutional government, the extension of its authority over all of Mexico would not make it so. When, however, we compare the very general protection of life and property which has prevailed in the territory controlled by the Huerta government with the confiscation, plunder, murder, rape, and rapine which has in many localities characterized the victories of the opponents of that government, we shall find abundant ground for the belief that our duty to aid and encourage the establishment of peace and order in Mexico would have been better performed had we taken the usual course of recognizing conditions as they are, the Mexican Government as it exists, and holding it responsible for the protection of life and property throughout the Republic.

"No one familiar with the situation in Mexico believes it possible, out of the conditions of turmoil and disorder which now exist there, to bring at once a government of unquestioned constitutionality, perfect in its aims and personnel. Only a strong arm and a determined purpose can establish order there. If we persistently use our influence to weaken the strong arm of the Government and to encourage further revolution we are following a path which will inevitably lead us to the point where we must be the strong arm which restores order. Our present attitude, therefore, is one which leads to intervention as certainly and inevitably as though it were thus planned and purposed.

"The only way in which we can hope to reasonably perform our duties and obligations and avoid intervention in Mexico is to cease giving aid and comfort to the guerrilla forces, the outlaw chieftains, the well-meaning figureheads of revolution, masking under the guise of constitutionalism, and return to the usages of international law and our long-established policy and look to the Government which is in authority to establish order and protect life and property."

Panama Canal Tolls.

REMARKS
OF
HON. JAMES T. LLOYD,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. LLOYD. Mr. Speaker, I voted for free tolls to vessels engaged in the coastwise trade of the United States passing through the Panama Canal, in May, 1912. In July thereafter the Baltimore convention adopted a plank in its platform in these words:

We favor the exemption from tolls of American ships engaged in coastwise trade passing through the canal.

Following the action of the convention indorsing the free-tolls proposition, the Senate passed the bill sent to it from the House, and the provision became a law. My action and those with whom I voted was ratified by the Democratic convention, and during the campaign which followed President Wilson in a strong speech indorsed that plank of the Democratic platform and commended it to the people of the United States by his unqualified approval.

Since the November election, in 1912, the views of other nations with reference to what is known as the Hay-Pauncefote treaty have been ascertained, and there is no doubt but what they insist that in providing free tolls for coastwise vessels this Government is violating its treaty obligations. The portion of the treaty which pledges equal treatment to all nations was made with England, and is in the following language:

That the canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

It was my judgment in 1912, and is now, that the United States has the right to provide free tolls for its own vessels under this treaty if it sees fit to do so; but my candid judgment is that our country can not afford to insist upon this interpretation of the treaty when it is understood that every other nation believes that the treaty voluntarily made by our Government agreeing to equality in use with all other countries is violated and that our country is in honor bound to live up to its contract. There are no people on earth who are more honorable in their dealings than the people of this Republic. No loyal, patriotic citizen would repudiate a contract, and in dealings with the nations of the world no true citizen would have it said, as the declaration is now repeatedly made here and in other countries, that the American Government can not be relied upon to carry out its contracts. It is the duty of the Government to pursue its course of strict integrity in this matter, as in every other, so that the nations of the world will have the utmost respect for any contracts that the Government may make. I rejoice in the traditions of our fathers; I am proud of the achievements of this Republic; I am gratified at the high place that our Government occupies amongst the nations of the world, and I would not, in the matter of so little consequence as this, lower the standard of integrity or lessen the confidence that the nations of the world have in our Republic. It has in the past been an example of the highest type of morality. The Nation itself, like the people who live in it, is willing to carry out its obligations at any cost, and I would not wish to be a party to any kind of action that can be construed as a blot upon the splendid record that has been made. This question rises far above partisanship. We must have the respect of the nations of the world if we desire to live at peace with them and secure their confidence in our commercial and international relations.

It takes much of courage for the President to violate a platform declaration of his party and reverse the position which he himself has assumed, but this is one of the highest evidences of exalted patriotism and high conception of duty that he has the courage to do so when convinced that it should be done.

No man can afford to violate the pledges of his party platform unless some unforeseen condition arises which makes it necessary to do so, or in some international complication where the honor of the Republic and its relation to the nations of the world is presented. The President in his message to Congress

makes it plain that, on account of international complications and the criticisms of other nations against what they charge as a violation of a solemn treaty, it becomes necessary to meet the situation and to avoid conditions which the President says he can not meet without serious embarrassment that the position of the United States with reference to tolls in the coastwise trade shall be reversed. Under existing law no foreign ship can engage in trade from port to port along our coast. There has grown up as a result of this situation a shipping monopoly, and the information obtained since 1912 by the various commissions and committees which have investigated the subject shows the worst monopoly in the United States to be the Shipping Trust, and that monopoly is largely controlled by the two great interests in this Republic—the Standard Oil Co. and the Steel Trust.

It is shown now beyond question that the exemption of tolls to the coastwise trade will result in great benefit to this shipping monopoly and will foster the interests of other great trusts, to the detriment of the interior of the country.

In casting my last vote on the tolls proposition, I followed the course of the President and accepted as true his statement that international conditions made it necessary to reverse the action of this Government on that proposition. I did it as a patriotic act, because in dealing with the nations of the world partisanship must be forgotten; the administration must be upheld. In every crisis of the past the loyal American citizen has come to the rescue of the Republic and followed the course of the President, whether he believed that the views of the President with reference to local matters were right or not. American citizens may differ in their ideas and policies as to the Government of our own country, but in our relation to the nations of the world, either in war or peace, our country has stood by the administration, upheld its policy, and showed by its course its loyalty and devotion to the Republic itself. The highest type of patriotic devotion, the strongest evidence of genuine affection for the Republic, is shown by the individual who is willing to violate his party pledge, who is willing to forego his personal views as to local considerations, and is ready to meet the demands of the Republic in its relation to the nations of the world. In pursuing this course the American citizen shows no truckling disposition, but that higher evidence of genuine loyalty which would cause him to give life, if needs be, to maintain the honor and integrity of the Republic.

I am a partisan of the strictest kind. I believe it is fortunate for the Republic that there are political parties within it. I have always been devoted to my party and believe that its success means most in securing the rights of our people and in carrying out the principles for which our fathers contended. I believe the good of this Republic is best conserved by the success of the Democratic Party. I believe the carrying out of its teachings and the administration of the laws under its leadership means most for the well-being of every citizen of the Republic. I am also convinced that every man should be so devoted to his country's cause that whether in war or in peace he should be willing to make sacrifices for his country's good. And if in this emergency it is a sacrifice to require that American ships passing through the canal shall pay tolls, why not make the sacrifice for the good that will come to the Republic in maintaining the high moral standard which it has always enjoyed in its relations to the nations of the world? My candid judgment is that it is the most powerful Nation. Its example is the most potent of any country on the globe, and I am anxious that it shall continue to be the one bright star that encourages the oppressed in all the nations of the world to hope for better conditions on account of the example that our country has continually set to the world.

It was said in the long ago that "righteousness exalteth a nation" and that "sin is a reproach to any people." Righteousness demands that this Government shall carry out the contracts which it makes and that it shall abide by the reasonable construction which may be placed upon them by all other nations, rather than by the narrow view of its own selfish interest.

Learned men in the United States, and many of them, insist that the interpretation of the contract has been properly made by the other nations, and certainly there is ground for that position. Under the circumstances it seems to me that it would certainly be wise to accept the interpretation which gives to the other nations that equality of privilege in the use of the Panama Canal which they claim under our contract is their right, and avoid the charge of bad faith against our Government. I am convinced that I should stand by the President, who has done so well in the performance of his duty, and not abandon him in this international crisis in which he is trying to uphold the integrity of our country.

Panama Canal Tolls.

SPEECH

OF

HON. J. A. FALCONER,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914,

On the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912.

Mr. FALCONER. Mr. Speaker, the necessity of keeping faith in matters of contract is essential to integrity. The inference by the Democratic administration that previous Congresses and Presidents violated the canal treaty is unwarranted.

There may be a question of economics involved, but there is little room for difference of opinion as regards the turning over of the sovereignty of the United States in the Canal Zone to Great Britain.

What are the relative positions of the United States and Great Britain in this treaty question? Article 3 of the treaty reads:

The United States adopts, as the basis of the neutralization of such ship canal, the following rules—

Not Great Britain and the United States adopts, but the United States adopts.

RULE 1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

After a thorough consideration does anyone hold that the United States is to be included among the nations of the world in observing rules 1 to 6, inclusive? If the United States is bound by rule 1, it is also bound by all the rules under article 3. Would John Hay, upon whom rested the interest of the United States, agree that the United States be bound by rule 3?

Rule 3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary, and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service.

Or rule 4:

Rule 4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such cases the transit shall be resumed with all possible dispatch.

Or rule 5:

Rule 5. The provisions of this article shall apply to waters adjacent to the canal within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time, except in case of distress, and in such case shall depart as soon as possible; but a vessel of war of one belligerent shall not depart within 24 hours from the departure of a vessel of war of the other belligerent.

Mr. Speaker, during the last war in which our country was involved the hearts of patriotic Americans were stirred by the historic trip of the battleship *Oregon*, and, sir, the people of my State are proud of the skill of our workmen demonstrated in the handiwork of the battleship *Nebraska*. Is there a man in the service of the United States to-day, either in or out of Congress, who is so fatally dull as to hold that in the event the experiences of the Spanish-American War were being lived over again and were in process to-day, with the canal in operation, that the *Oregon* or the *Nebraska* would be subject to the "observance of these rules"? Would the officers of either of these ships hesitate to take on stores of coal or ammunition in the Canal Zone? Would they hasten through the canal under "these rules"? Would they hesitate to remain longer than 24 hours within 3 miles of either end of the canal? And would such a man as Commander Clark, or any other red-blooded American naval officer, hesitate for 24 hours after the enemy's ship had departed before advancing in pursuit? Ask Admiral George Dewey. We will not cast reflections upon the sacred memories of Sampson, Schley, and "Fighting Bob" Evans by pressing the question.

The gentleman from Minnesota urges that "these rules" would not apply in time of war on the ground that as a matter of international law "all treaties are abrogated in time of war." Then, sir, why urge that "these rules" were intended to apply to the United States? His own argument shows the weakness of his position.

Is there a Congressman on the floor of the House who would vote $400,000,000 of the people's money to construct a canal that would be subject to such rules? Congress would not do it in 1902 nor would Congress subscribe to such a doctrine in 1912.

Is there a Member here who takes the position that the United States has no right to refuse the privileges named in the rules to any and all nations refusing to observe these rules? As a matter of fact, Great Britain or any nation refusing to observe these rules could and should be denied the use of the Panama Canal in times of peace or war with any opposing nation. Can Great Britain or any other nation on any pretext deny the United States the right of the use of the canal in time of peace or war?

The Congress and President under whom the building of the Panama Canal was initiated and carried on, and the succeeding Congresses and President under whom the canal, practically speaking, was constructed to completion, all unite that the United States has exclusive right to fix tolls on coastwise traffic, and agree with the able diplomat, John Hay, in his position, as shown in his memorandum accompanying the draft of the treaty to the Committee on Foreign Relations of the Senate. In this memorandum he says:

The whole theory of the treaty is that the canal is to be an entirely American canal. The enormous cost of constructing it is to be borne by the United States alone. When constructed it is exclusively the property of the United States and is to be managed and controlled and defended by it * * * The United States alone, as the sole owner of the canal, as a purely American enterprise, adopts and prescribes the rules by which the use of the canal shall be regulated, and assumes the entire responsibility and burden of enforcing, without the assistance of Great Britain or of any other nation, its absolute neutrality.

Further, Mr. Hay, discussing the change in the treaty from the former to the present treaty where the United States alone makes the rules, says:

It was also believed that this change would be in harmony with the national wish that this great interoceanic waterway should not only be constructed and owned, but exclusively controlled and managed by the United States.

Hon. Richard Olney, ex-Secretary of State, discussing these rules, says:

The words under construction are, in substance, the first of a set of six rules adopted by the United States as the basis of the neutralization of the canal. But the other five certainly apply only to parties other than the United States, so that there is the strongest reason for holding that the first of them is to be given a like application. And if the British construction be correct, instead of liberating the United States from all foreign control of the canal and from all duties to foreign powers in respect of its use—except not to discriminate between them—the Hay-Pauncefote treaty compels the United States to reverse its established policy and to devise a plan for subsidizing its own vessels in order that they may have such free and other use of the canal as the United States may decide to be demanded by United States interests.

Many English authorities support the position of those supporting the present law. Hon. C. A. Hereshoff Bartlett, LL. B., referring to rule 1, under article 3, says:

The provision of the treaty referred to means that there shall be no discrimination by the United States against any one foreign nation, or its citizens or subjects, in favor of any other foreign nation, or its citizens or subjects, in respect of the conditions of or charges for traffic or otherwise. "On terms of entire equality" refers to the equality extended to all nations other than the United States; that is to say, it is prohibitive of the United States favoring one foreign nation as against another. Its purpose was to provide that vessels of commerce of all nations foreign to the United States should enjoy the same equality among themselves; but this is quite another thing from saying that vessels of commerce of foreign nations shall enjoy the same equality as the vessels of commerce of the United States, and that the Federal Government can not, without infringing the terms of the treaty, extend the free use of the canal even to its own vessels engaged in the coastwise trade. What else does the expression "there shall be no discrimination against any such nation" mean? It means that no attempt should be made by the Federal Government to promote the interests of one foreign power to the detriment or exclusion of another; that all foreign nations should stand together equal and alike in the use of the canal.

After a thorough discussion of the whole subject, Sir Edward S. Cox-Sinclair sums up with the following:

(a) That the United States can support its action on the precise words of the material articles of the treaty, that its case is strengthened by reference to the preamble and context, and that its case is difficult to challenge on grounds of general justice;
(b) That there is no international obligation to submit the construction of its legislative act to any process of arbitration; and
(c) That any aggrieved party has an appropriate, an impartial, and a competent tribunal in the Supreme Court of the United States.

Mr. Bonaparte, Attorney General for the Roosevelt administration, speaking against the repeal of free tolls, says:

I have a poor opinion of any American statesman who would thus interpret a treaty, especially when, as in this case, the language of the treaty, reasonably understood, is against this interpretation.

Theodore Roosevelt, the greatest American of the day, in the Outlook of January 18, 1913, said:

I believe that the position of the United States is proper as regards this coastwise traffic. I think that we have the right to free bona fide coastwise traffic from tolls. I think that this does not interfere with the rights of any other nation, because no ships but our own can engage in coastwise traffic, so that there is no discrimination against other ships when we relieve the coastwise traffic from tolls. I believe that the only damage that would be done is the damage to the Canadian Pacific Railway. Moreover, I do not think that it sits well on the representatives of any foreign nation, even upon those of a power with which we are, and I hope and believe will always remain, on such good terms as Great Britain, to make any plea in reference to what we do with our own coastwise traffic, because we are benefiting the whole world by our action at Panama, and are doing this where every dollar of expense is paid by ourselves In all history I do not believe you can find another instance where as great and expensive a work as the Panama Canal, undertaken not by a private corporation but by a nation, has ever been as generously put at the service of all the nations of mankind.

But we are not obliged to rest our case on the interpretation of the above authorities. Observe the treaty of 1815 between United States and Great Britain:

No higher or other duties or charges shall be imposed in any of the ports of the United States on British vessels than those payable in the same ports by vessels of the United States, nor in the ports of any of His Britannic Majesty's territories in Europe on the vessels of the United States than shall be payable in the same ports on British vessels.

Nothing is here said of coastwise trade ships.

The above treaty has been in effect for 100 years, yet the port of Bristol, England, charges United States ships 56 cents per ton port charges, while the British ships pay only 20 cents. And the same rule is in operation in the United States, foreign vessels paying 12 cents port charges, while United States ships pay nothing.

The Supreme Court of the United States has passed on the specific point at issue in the case of Olsen *v.* Smith (195 U. S. Sup. Ct. Repts., p. 344), to the effect that international interpretation universally eliminates domestic shipping from the purview of such treaties.

The Texas and Federal laws both exempt domestic vessels from pilotage charges. A suit was brought by Olsen, a licensed American pilot at Galveston, against an English pilot, Smith, who refused to pay pilotage, insisting that the United States was violating the treaty of 1815, above quoted, and I will quote it again, Mr. Speaker, for the benefit of those who insist in quoting "plain English" in rule 1 of article 3 of the Hay-Pauncefote treaty, and ask if this 1815 treaty appears also to be "plain English":

No higher or other duties or charges shall be imposed in any of the ports of the United States on British vessels than those payable in the same ports by vessels of the United States.

The United States Supreme Court definitely and positively rules on the point at issue:

Neither the exemption of coastwise steam vessels from pilotage, resulting from the law of the United States, nor any lawful exemption of coastwise vessels created by the State law, concerns vessels in the foreign trade, and therefore any such exemptions do not operate to produce a discrimination against British vessels engaged in the foreign trade and in favor of vessels of the United States in such trade.

Referring to the logic of the contention, the court said:

In substance the proposition but asserts that because by the law of the United States steam vessels in the coastwise trade have been exempt from pilotage regulations, therefore there is no power to subject vessels in the foreign trade to pilotage regulations, even although such regulations apply without discrimination to all vessels engaged in such foreign trade, whether domestic or foreign.

From the above, sir, where has England the ground for interfering with our domestic shipping? Under the law of 1817 no foreign ships can participate in our coastwise traffic, and, Mr. Speaker, where there can be no competition between foreign and American ships there can be no discrimination.

England is not obliged to use our canal, nor would she if she could find a cheaper route. England permitted France to build the Suez Canal, and then by English economic "skill" possessed herself of practical control and dictated terms and tolls from the standpoint of proprietary ownership. And now, after the United States has built the Panama Canal on United States soil, with United States money, with American ability and brains, Great Britain presents herself at the bar of this House and demands the surrender of American sovereignty.

TREATIES SUBJECT TO CHANGED CONDITIONS.

Mr. Speaker, the Hay-Pauncefote treaty was made and signed in December, 1901. At that time the high contracting parties treated upon the basis that the canal would be built upon territory foreign to the United States; but in the course of events the United States purchased from the Republic of Panama, for $10,000,000 and other valuable considerations, a strip of territory 10 miles wide, or 5 miles on either side of the center of the canal proper. These changed conditions, sir, affect the application of the terms of the treaty. As a matter of international law, there is an abundance of authority sustaining this statement.

Mr. Hannis Taylor, a recognized authority on international law, in the course of a treatise on the subject, says:

So unstable are the conditions of international existence, and so difficult is it to enforce a contract between States after the state of facts upon which it was founded has substantially changed, that all such

agreements are necessarily made subject to the general understanding that they shall cease to be obligatory so soon as the conditions upon which they were executed are essentially altered.

Prof. Oppenheimer, holding the chair of international law in the University of Cambridge, in volume 1, page 550, section 539, International Law, says:

It is an almost universally recognized fact that vital changes of circumstances may be of such a kind as to justify a party in notifying an unnotifiable treaty. The vast majority of publicists, as well as all the Governments of the members of the family of nations, agree that all treaties are concluded under the tacit condition rebus sic stantibus.

One of the greatest English authorities, whose writings are looked upon as the last word in the British foreign office, Mr. Hall, in his work on International Law, section 116, says—

that neither party to a treaty "can make its binding effect dependent at will upon conditions other than those contemplated at the moment when the contract was entered into; and, on the other hand, a contract ceases to be binding so soon as anything which formed an implied condition of its obligatory force at the time of its conclusion is essentially changed.

The gentleman from Minnesota and others have frequently quoted article 4 of the treaty as having direct bearing upon changed conditions referred to above; but, sir, the context of the treaty in its entirety would indicate that the contracting parties to this treaty had in mind only interchange of territory between countries foreign to the United States. There was absolutely no thought of territorial sovereignty by purchase by the United States.

Mr. Speaker, I want to call attention to article 19 of the Hay-Bunau-Varilla treaty, in which the Republics of Panama and the United States are the contracting parties in the year 1903, two years after the Hay-Pauncefote treaty:

The Government of the Republic of Panama shall have the right to transport over the canal its vessels and its troops and munitions of war in such vessels at all times without paying charges of any kind. The exemption is to be extended to the auxiliary railway for the transportation of persons in the service of the Republic of Panama, or of the police force charged with the preservation of public order outside of said zone, as well as to their baggage, munitions of war, and supplies.

Read it again and again my "repealer" friends. Was Great Britain consulted before this treaty was made? No. Did Great Britain interpose an objection? No. As a matter of fact, did not England recognize the international rule, "changed conditions change the effect of treaty stipulations"? Where is the consistency of British diplomacy in passing the Panama exemption and then 10 years later interpose an objection to coastwise exemption of United States shipping? It is a clear case of an easy game for British nerve.

THE QUESTION OF SUBSIDY.

The supporters of the administration's repeal bill persistently evade the real issue, dwelling on the question of subsidy to shipping interests.

Whose money built the Soo Canal?

Whose money deepened the waterways in every seaport and lake port in the United States?

Whose millions have been expended in developing for shipping purposes the great Mississippi and its tributaries?

Whose millions have been expended in developing the harbor of New York City and the harbors of all the cities reaching to the great western metropolis, Seattle?

Whose millions have been expended in the construction of the Panama Canal?

Whose approximately twelve hundred millions of money have been expended in the above worthy developments?

The public's money, sir; and for the purpose of enlarging and perfecting water-shipping facilities in the territory of the United States. If the Panama Canal free tolls is subsidy, so also is Soo Canal free tolls subsidy.

There are men on the floor of the House who are looking forward to and advocating legislation appropriating money for the purpose of constructing the "Lakes to the Gulf" deep waterway. The people's money will pay the bill, and every part of the United States will be taxed for that expenditure.

These expenditures have been and will continue to be made, and wisely made, for the direct purpose of reducing transportation charges in the United States. It is an economic rule the world over that the country with developed water transportation has a magnificent asset. No one factor has added so much to the cost to the American consumer of all products of labor and the soil as has railroad transportation. Mr. Speaker, the railroads are back of this repeal movement.

Since the founding of this Government land and water transportation companies, without common interests, have engaged in opposing contest.

The reading public knows that the transcontinental railroads have persistently, and for half a century successfully, thwarted patriotic effort to construct a water route across Nicaragua; and I venture the assertion, sir, that had Mr. Roosevelt not been President in 1901 to 1908 construction of the canal would not yet be in process.

Fundamentally, the question before Congress is not free tolls, but whether the absolute and single authority obtains to the United States to fix tolls on domestic shipping through the canal.

Has it ever occurred to these "repealers" that the fixing of tolls on the canal, without interference of any foreign nation, could be used as a most effective instrument to break up shipping monopoly in our domestic trade?

Is it possible that gentlemen by yielding to British demands are consenting to subsidy of British ships?

Chargé d'Affaires Inwess's note voicing British protest says:

The proposal to exempt all American shipping from payment of tolls would, in the opinion of His Majesty's Government, involve an infraction of the treaty, nor is there, in their opinion, any difference in principle between charging tolls only to refund them and remitting tolls altogether.

Great Britain takes this position, notwithstanding the fact that signatory parties to the Suez Canal refund Suez Canal tolls in way of a subsidy to their merchant ships. All this, sir, in the face of the fact that the Suez Canal ownership is not entirely owned by one government, while the Panama Canal is entirely owned by the United States. Does it not appear to the administration forces that repeal of free tolls to American coastwise ships would be, in effect, a subsidy to Canadian railroad ships as well as to all foreign ships?

PLATFORM PLEDGES.

Much time has been given in this debate to the subject of broken platform pledges. While to some this appears an important factor, I am going to pass it over by simply quoting remarks by honorable gentlemen on their conscientious scruples in adhering to pledges to the people, also a plank from the Democratic platform, with comments on party platform pledges.

On August 15, 1912, Woodrow Wilson, candidate for President of the United States, regarding free tolls, said:

One of the great objects in cutting that great ditch across the Isthmus of Panama is to allow farmers who are near the Atlantic to ship to the Pacific by way of the Atlantic ports, to allow all the farmers on what I may, standing here, call this part of the continent, to find an outlet at ports of the Gulf or the ports of the Atlantic seaboard, and then have coastwise steamers carry their products down around through the canal and up the Pacific coast or down the coast of South America.

Now, at present there are no ships to do that, and one of the bills pending—passed, I believe, yesterday by the Senate as it had passed the House—provides for free tolls for American ships through that canal and prohibits any ship from passing through which is owned by any American railroad company. You see the object of that, don't you? [Applause.] We don't want the railroads to compete with themselves, because we understand that kind of competition. We want water carriage to compete with land carriage, so as to be perfectly sure that you are going to get better rates around the canal than you would across the continent. * * *

Our platform is not molasses to catch flies. It means business. It means what it says. It is the utterance of earnest and honest men, who intend to do business along those lines and who are not willing to see whether they can catch votes with those promises before they determine whether they are going to act upon them or not.

They know the American people are taking notice in a way which they never took notice before, and gentlemen who talk one way and vote another are going to be retired to a very quiet and private retreat.

Hon. William Jennings Bryan, in a speech before the Pennsylvania State Legislature, May 13, 1913, said:

The fact that we not only have platforms, but that the platform is becoming more specified year after year, is conclusive proof that the people believe in the Democratic theory, and they write their platforms because they believe, and those who run upon them lead the voters to believe, that they believe a platform is binding upon those who stand upon it.

As a believer in the Democratic theory of representative government I desire to announce it as a settled principle not to be questioned in this country that a platform is binding upon every honest man who runs upon that platform. I have heard it said by men after an election that they could not conscientiously support something in their platform, and it raises a very important question whether a man should violate his conscience as a public servant, and I frankly tell you that I believe that no man should violate his conscience, either as an individual or as a public servant. Far be it from me to say that any man elected to any office should as an official do a thing that his conscience condemns. But does that mean that he should violate his platform? No; it seems that his conscience should commence to work before the election, and not hibernate until after the election.

I lay it down as a proposition and I am prepared to defend it anywhere, that the Representative who secures office upon a platform and then holds the office and betrays the people who elect him is a criminal worse than the man who embezzles money intrusted to him.

The last paragraph of the Democratic platform of 1912 said:

Our pledges are made to be kept when in office as well as relied upon during the campaign.

Now, Mr. Speaker, in the light of the above statements, let me quote a plank in the Democratic platform sanctioned by William Jennings Bryan and used by Woodrow Wilson in his candidacy for the Presidency of the United States:

The Panama Canal, built and paid for by the American people, must be used primarily for their benefit. We demand that the canal shall be so operated as to break transportation monopoly, now held and

misused by the transcontinental railroads, by maintaining sea competition with them; that ships directly or indirectly owned or controlled by American railroad corporations shall not be permitted to use the canal, and that American ships engaged in coastwise trade shall pay no tolls.

Mr. Speaker, without comment, I pass from this feature of the discussion.

Mr. Speaker, I submit that this whole discussion and this administration bill present a most unusual spectacle. The President submits to the Congress a petition, his very own, asking that we reverse the legislation of a previous Congress. "We ought to reverse our action without raising the question whether we are right or wrong," says the President. No information is furnished. No reasons are given. No suggestions are made except "I shall not know," and so forth.

Mr. Speaker, I am against this bill. As a check on transcontinental rail rates, coastwise water rates should not be manipulated by the meddlesome hand of Great Britain. The best interest of the country generally demands the defeat of this bill. It should be defeated.

A Constructive Foreign Policy.

EXTENSION OF REMARKS

OF

HON. EDWARD W. TOWNSEND,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 11, 1914.

Mr. TOWNSEND. Mr. Speaker, under leave granted me to extend my remarks, I insert in the RECORD an address delivered by me in Witherspoon Hall, Philadelphia, on Saturday last before the American Academy of Political and Social Science. The address is as follows:

"After the first performance of Sardou's political satire 'Rabagas,' at the Vaudeville Theater in Paris in 1872, President Thiers ordered the governor of Paris to forbid a second performance.

"I wish that after the first performance of Sardou's romantic drama 'Dora,' at Wallack's Theater in New York in 1878, where it was given its American name of 'Diplomacy,' that the then mayor of New York had ordered its immediate suppression. I am soberly convinced that if the police powers of New York had been exercised for the immediate suppression of that play, it would be less difficult now to discover the elements of a constructive American foreign policy.

"If some of you wonder what I have said has to do with the subject I have been asked to address you upon this evening, I hasten to explain. Not many weeks ago an artist friend of mine in New York, who had found profitable occupation in drawing caricature illustrations of the tango dance, drew the figure of a young woman so distorted that it was a caricature of his own caricatures. Acting upon a happy inspiration he gave the drawing the title of the 'Debutante Slouch,' and thus it was reproduced in a popular illustrated weekly. To-day a million young American women are trying to copy that illustration in their own walk and carriage, and those who have unusually supple backbones and are highly gifted with the power of imitation are succeeding, to the delighted surprise of observers.

"You see at once now the quarrel I have with Victorien Sardou's play 'Diplomacy.'

"Jerome A. Hart, in one of his entertaining books, gives us a lively and comprehensive account of the plays of Sardou, and, speaking of a woman character in the play of 'Diplomacy,' he says of her:

> "This young lady is a unique and fascinating person, beautiful, elegant, seductive as a fairy princess.
>
> "'Dora,' you may recall, was unconsciously enlisted into the group of women whom Sardou would have us suppose exist in all the large European capitals and act as secret agents for diplomats. Mr. Hart gives testimony to his belief that such groups actually exist and are not the creation of M. Sardou's lively imagination, and says of them:
>
> "These ladies wear gorgeous gowns, and resemble Solomon's lilies in the other respect that they toil not; but they excel at writing letters, which letters pay the cost of their gorgeous gowns. Their perfumed correspondence is filled with gossip, political and other, and it amuses foreign statesmen even when it does not instruct them.

"I shudder as I pause to ask if Mr. Hart unconsciously suggests here one of the reasons why only the very rich may play 'Diplomacy' for us in foreign capitals. But that is somewhat aside from my main purpose in introducing Mr. Sardou into this very respectable company. Sardou is not the only offender, but he came conveniently into my mind as a type. Other romance writers have entranced their readers, drawing, if I may be permitted to phrase it in this way, the 'Debutante Slouch.' The creators of this burlesque diplomacy have been amazed, as my artist friend was at the result of his work, to find his fanciful creation laboriously copied; to find that nature, in fact, imitates art. Sardou and his fellow offenders have created a picture of diplomacy wherein we see lovely and mysterious women gorgeously gowned, seducing from incautious diplomats secrets for the information of other diplomats; a picture of subtle intrigue; of masterful intellect gaining advantage by processes allied to wizardry; of vast and complicated affairs determined at secret meetings, the result of which at times is announced by the sudden boom of artillery, the thundering charge of cavalry. This is the romance picture of diplomacy which excites the ambition of excellent heads of families, creating a desire to desert their homes and their comfortable clubs and their golf links to enter upon this delightful occupation, thinking to become 'Baron Steins,' to commune with bevies of 'Doras,' to control the destinies of nations, to send to startled Secretaries of State code messages carrying important information derived from scented correspondence. That is why M. Sardou's play and like output from other romancers lie under the disadvantage of my severe disapprobation.

"To be sure, there is a somewhat more real, though scarcely more admirable, attraction to the very wealthy in the prospect of representing our country in foreign courts. They will have there opportunity to dine with nobility, even at times royalty; they will be seen at the shooting boxes of dukes, at the race course with earls, at the clubs with baronets, and on the streets with men of fashion.

"In nothing which I have said do I intend to indicate disapproval of the custom practiced by many administrations, of more than one political faith, of making appointments to the large places in the Diplomatic Service of rich men because they are rich men. I am willing to admit that almost any rich man who made his own money, if he obey instruction such as I shall presently indicate, would be as capable as one less favored by fortune in carrying on, as a diplomat, the business of our foreign relations; but it distresses me greatly that this air of romance, of unreality, should have enveloped this very practical business.

"There should be no illusion about it, and the incentive to engage in the business should be only a desire to do a public service in a very straightforward manner. I do not mean that there are not certain qualifications for the office not usually possessed by men who who have been eagerly engaged accumulating fortunes, but I have a scheme to overcome the difficulty arising from that lack of special knowledge. There is, for instance, the great difficulty of knowing exactly how to address members of the diplomatic corps. In my own three years' experience on the Foreign Affairs Committee of the House of Representatives I have had the customary opportunities offered to the members of that committee of meeting not infrequently members of the diplomatic corps in Washington, and the ladies of their households. I have found the men very human beings, interested deeply in trap shooting, golf, baseball, the price of beef, and the difficulty of securing a lower berth. The ladies are, all of them, charming and affable. But I began to enjoy this highly enviable opportunity too late in life successfully to school myself in one of these special qualifications I have referred to. I do not know to-day, and sadly confess that I never expect to know, what rank in diplomacy entitles a man to be addressed "your highness," and what rank as "your excellency."

"There is another difficulty concerning this special requirement that I have spoken of, of a more serious nature, which somewhat handicaps our system of appointment as it is practiced at present, but which, under my improvement, will be also happily overcome. It is the matter of speechmaking by our diplomats. For this embarrassing problem I have a happy solution. One appointed to be ambassador to the Court of St. James, let us say, going to Washington to receive his instructions, could be supplied with a set of speech forms—form A to be used at the dedication of a new monument to Robert Burns; form B to be used if the admirers of Wordsworth are to unveil a bust to their favorite poet; form C, the opening of a new Anglo-American Club in London. It is unnecessary further to unfold this scheme. It readily unfolds itself to any practical mind. To be sure, the unexpected is always happening. But even in such an event I would have the situation handled with caution and according to instructions received by the ambassador. If, for instance, a society is placing a tablet in honor of

George Bernard Shaw, and should invite our ambassador to submit a few remarks upon that interesting occasion, and his index fails to disclose an appointed form, the appropriation allowed by my committee for incidental expenses would enable him to cable news of the exciting event to the Secretary of State and receive an approved speech by cable in ample time for its delivery.

"To divert a moment from the sober and orderly course of my remarks, what, I ask, could be more solemnly whimsical than an expression of the opinion of the present Secretary of State on the life and writings of George Bernard Shaw, unless, indeed, it might be a whimsically solemn review by Mr. Shaw of the diplomatic excellencies of the present Secretary of State of the United States.

"Now, to my panacea: There are in the Department of State in Washington a score, probably more than that number, of men who have received years of training there. They are linguists and highly skilled in the details, the precedents, and the history of our foreign relations—the kind of men foreign nations appoint to diplomatic posts—but incapable of making large campaign contributions. These are without prospect of being sent by us to occupy diplomatic posts at important capitals. We should provide a new position in each American embassy—that of assistant ambassador—and to these places should be appointed men such as I have described, and thus, by the presence of such a man at each embassy, the ambassador will be given freedom solely to daily with social delights. This assistant ambassador could perform the simple duties of the office, such as conveying to the Government to which his chief was accredited the information his own Government wished to be conveyed, and receive from that Government the information it wished to convey to Washington, and diligently devote the rest of his time to discovering means of increasing our foreign commerce. Having been trained in his business, this assistant ambassador would know what he is in a foreign capital for; he would be under no illusions as to 'Doras'; he would know that there was no hocus-pocus, no sharp card tricks, no foolery whatever of any kind about this business of maintaining proper and profitable foreign relations between nations. He would know that Mr. Sardou was just as much a joker as is Mr. Ibsen, and that the play of 'Diplomacy' is no more like the thing diplomacy than 'A doll's house' is like anything that really ever existed.

"If these thoughtful remarks have not indicated to you precisely what in my opinion should constitute the 'elements of a constructive American foreign policy,' they have been made in vain.

"I know that statistics make dull matter for an address, but I can not refrain from using a few figures to emphasize my contention that our foreign policy should be more largely directed to securing foreign commerce for special reasons I shall soon urge.

"The total Latin-American foreign commerce for the year 1912 was twenty-eight hundred million dollars, of which our share was eight hundred millions, with a balance against us, however, of two hundred millions. A fair percentage of commerce for us, although the balance against remains a serious drain. The figures for the A. B. C. group, Argentina, Brazil, and Chile, are far from satisfactory, a fact due, in part certainly, to our lack of a constructive policy toward the A. B. C. group. The total foreign commerce for Brazil for 1912 was $670,000,000, of which our share was one hundred and ninety millions, with a balance against us of fifty-three millions. Great Britain had a balance in her favor of thirty-four millions in her share of Brazil's commerce for the same year. Only one more illustration by statistics: Chile's total commerce for 1912 was two hundred and sixty-one millions, of which our share was forty-one millions, with a balance against us of eight millions.

"In those three great countries, of trade potentialities beyond computation, we have an embassy in Brazil only. There are bills pending to raise Argentina's legation to an embassy, but the administration has not yet made a recommendation that we should pay a similar deserved compliment to Chile, although peculiar reasons exist why Chile should be so complimented. [Since this address was delivered in Philadelphia the Foreign Affairs Committee of the House has favorably reported a bill to raise the legation at Santiago, Chile, to an embassy.] It seems to me that our State Department should adopt as a policy toward the A. B. C. group an attitude of special cordiality which would have as its most significant expression our friendly recognition of the great importance these powers have achieved in the family of nations, of our sincere pleasure in their splendid civilization, their high advancement in art, letters, and science. They should be made to know and feel that they are to share with us the responsibilities, the burdens, and privileges of Western Hemisphere guardianship. Our exchange of commerce, of friendly intercourse through travel, is startlingly short of what it should be; and for a remedy we must look to a foreign policy giving greater and deserved recognition to those three great and splendid nations.

"Commerce promotes peace as surely as peace promotes commerce. But what I shall say upon this subject now is upon the assumption that we shall remain at peace with the great nations of the earth through the simple expedient of minding our own business, and making the great part of that business the securing of foreign trade as a means of extending our domestic industries. Granting me that assumption, I now reveal what most profoundly lies in my mind on this subject. It seems to me that no student of our present economic and social conditions, even one giving but casual study to those subjects, can fail to see the vital necessity of providing for labor more employment at more wages if we wish our country good health. There are symptoms plain to the senses that a distemper threatens our social body. Some have looked about and denied that such symptoms were visible. To-day only the fool will make such denial. More employment and better wages must be provided if we would have the threatening symptoms disappear, the fever subside. As an essential means for bringing about such subsidence, and as speedily as may be, there must come a vast increase in our foreign commerce, a vast increase of foreign consumption of our manufactures.

"The radicalism so plainly discerned in groups of all the three parties contending for the political control of the Government is born of a perception of this need. It seems at times, though, as if this radical energy were misdirected to attain the desired big end. We can not, solely by legislation, increase employment, increase wages, or decrease the hours of labor, yet this is being constantly so attempted. Manufacturers will not produce more than they can profitably sell; they can not give more than a certain share of their product in wages or else they starve themselves. The radicals see the symptoms and in part, at least, attempt their cure. Underemployment, underpay, are not caused by the symptoms of idleness and unfair conditions of living. Yet we see the attempt persisted in to cure those things by legislation, which in no degree whatever can, nor does it even seek to, increase the demand for laborers and increase the share of the product which capital can give to labor. The remedy, it seems clear to me, is expansion of our foreign trade, a great increase of foreign use or consumption of our productions; and that I would have brought about largely by the work of our diplomats in carrying out our foreign policy.

"Probably the men attracted from idle lives at home by the fascination of a Sardou picture of 'diplomacy' would be but small aid in furthering a policy which seeks to better domestic conditions by increasing our foreign trade. If it has become a political necessity that such men should hold such offices, then the remedy I suggested, half in jest, a moment ago might be seriously considered. Let us, if it seems expedient that we should do so, treat the office of ambassador as purely ornamental, an offering to one whose gifts to party entitle him to a reward. But let us reform our embassies by placing in each of them a practical man, trained in intercourse with foreigners, trained to know which of our productions the country he is accredited to might use or consume, trained to know that diplomacy is not a romance, but a business, and perhaps in that way we may supply at least the elements of a constructive American foreign policy."

The Commission Council of the City of New Orleans.

EXTENSION OF REMARKS

OF

HON. H. GARLAND DUPRÉ,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 13, 1914.

Mr. DUPRÉ. Under the leave granted to me to extend my remarks in the RECORD, I include the following memorial:

MEMORIAL ADDRESSED TO THE CONGRESS OF THE UNITED STATES BY THE COMMISSION COUNCIL OF THE CITY OF NEW ORLEANS.

The city of New Orleans is incontestably the largest city of one of the most productive sections of the United States. In respect to population, material wealth, industrial development, banking resources, commercial faculty, business consequence, and every element, and all elements which singly or in combination constitute a metropolis, New Orleans stands preeminent and unapproached in the vast and prolific

section called the South. This status is demonstrated by statistics and is known and recognized by all informed men, both in this country and abroad.

Not only does New Orleans overshadow all its neighbors in respect to the aforementioned economic considerations, which are in varying degree common to its so-called rivals and therefore subject to comparative estimate, but, in addition, the said city occupies a commanding position in the trade relations of the Nation with the outside world, which said position its said so-called rivals do not occupy, and to which each and all of these are from the nature of the case forever ineligible.

With one single exception, New Orleans is the greatest and most important seaport in all the United States. Situated at the mouth of the great watercourse of the Nation, it is the gravity focus of the Mississippi Valley and supplies the facilities of contact between the tremendous productive resources and energy of this prolific region and the trade marts of the world. Its function is not merely to sell shoes and pots and pans to a limited contiguous territory and, perchance, by juggling with freight rates, to invade the local territory of some other competitive jobber in shoes and pots and pans, but it is the junction point of world trade routes whereat is transshipped the outgoing productive surplus of an agricultural and industrial empire and wherefrom is distributed the incoming material and commodities with which foreign nations supply the domestic trade. Its obligation is not local only, but comprehensive to the extent even of being national; and its mission is not merely to serve the jobbing requirements of a limited territory, but to facilitate those movements of commerce upon which the prosperity of the Nation at large depends. In this important particular, both in respect to the presently established trade routes to Europe and the countries to the southward and in respect to the wider fields to be opened to access through the Panama Canal, New Orleans occupies a position distinctly superior to that of all the cities of the Gulf and south Atlantic seaboards and wholly beyond the rivalry of any inland city of the South.

These counts, in general, are the claims which New Orleans has made, and with particularity and in detail substantiated, before the reserve bank organization committee. These claims have been by said committee ignored, and instead of designating New Orleans as the locus of one of the Federal reserve banks the said city has been, by an achievement of geographic legerdemain, crowded off the financial map and the palm awarded to the two small inland cities of Dallas and Atlanta, almost touching elbows with the metropolis on the west and on the east. Both of these cities are thriving and enterprising and both buy and distribute a considerable amount of goods, but the trade activities of each proceed largely along special lines and the scope of their commerce is confined within more or less circumscribed limits. Singly each of these two cities is in every essential respect inconsequential as compared with New Orleans. If both might be consolidated into one, the combination would still fall short of equaling New Orleans either in population, wealth, banking resources, industrial productivity, business, and commercial consequence, or in any of the essentials which should constitute the qualifications of a Federal reserve center. Furthermore, if these two cities could be amalgamated and then blotted from the map, the result to the business of the Nation would not be nearly so far-reaching and severe as those which would follow the closure of the great trade route through the port and market of New Orleans. It is vain to seek for any reasonable hypothesis to explain why the claims of New Orleans and of the vast territory and the great interests served by said city should have been ignored and the tremendous financial facility for business movement and business expansion should have been bestowed upon two comparatively puny inland cities neither of which can ever become what New Orleans is and long has been—one of the principal capitals in the world-encompassing democracy of commerce and trade. Considerations not only of common justice but of national welfare demand that the great national banking system shall be organized and administered along broader lines than those manifested in the initial achievement of the reserve-bank committee.

New Orleans's preeminence has not been achieved through favor or fortunate circumstance. Its position as the greatest southern city and one of the important commercial and financial centers in the trade economy of the world has been won and maintained through triumph over disfavor and misfortune. The devastation of war, the demoralization of reconstruction, the burden of taxation created during the carpet-bag era, and still enduring, and the desolation of pestilence, now forever overpast, have fallen heavily upon the staunch old city; but, in spite of all, its supremacy has been maintained, and to-day it faces the splendid future with the militant optimism of new unscarred generations tempered, let us hope, by the lessons of a historic past. It is true that many of the younger communities, untrammeled by the burdens of the old régime, have sprung from nothing and with shout and bluster and hectic progress have exhibited amazing comparative percentages of growth, but none have approached or will approach the position of commercial and financial importance held by the inevitable output of the Mississippi Valley. It is true that the comparative growth of the city has not been so rapid or spectacular as that of some of its neighbors, but it is also true that the story of "booms" and quick "bonanzas" which have swallowed millions of unwary capital hold no place in New Orleans's history. But withal the city is not without dynamic enterprise and actual achievement and fundamental preparedness which qualify it to respond to the demands of vigorous growth and rapid trade expansion which must inevitably follow the epochal developments of the near future. Within the past few years it has invested in a modern sewerage, drainage, and water system alone approximating the sum of $19,000,000, and has, as a result, in this respect, facilities as complete and efficient, if not more complete and efficient, than any other city in the Union. Furthermore, the city and State have spent upward of $4,000,000 upon a system of public dock and switching facilities, and has now admittedly the most fundamentally sound system of port administration of any port in the United States. Within the next few weeks work will be begun upon a system of public warehouses which are to be used in conjunction with the dock and switching facilities, and which when completed will involve the expenditure of $3,000,000 of public money. Thus are the people of the State and city spending their money in providing facilities which will serve not only the business of the city but the commerce of the vast territory behind the same; and thus are these people preparing for the largely increased demands that will be made by the business of the country when the trade map of the world shall have been changed by the opening of the isthmian canal and the city of New Orleans shall have doubled and quadrupled in size and shall have become, perhaps, not the second largest but the greatest port of the Nation. Upon these bases of trade necessity and trade usefulness, both in respect to present actual status and future inevitable development, are grounded the claims of the port and city of New Orleans for a principal part in the great new system of national finance.

The city of New Orleans supplicates no favors from the President, the committee, or from the Congress of the United States. It asks only for a just and an intelligent application of the Federal reserve law. It believes, in solemn earnestness, that through unfamiliarity with the fundamental movements and exigencies of trade and through susceptibility to superficial and collateral considerations the distinguished authors of the present bizarre alignment have fallen into an error which if uncorrected will not only deny justice to this city and the extensive territory affected but will vitiate the financial system from which the people of the Nation have been led to expect such momentous beneficial results. The city of New Orleans asks for revision. Wherefore:

The Commission Council of the City of New Orleans, in behalf of the people it represents, deems it not only justifiable but obligatory that the error herein pointed out shall be brought to the attention of the people of the United States, and to that end directs that copies of this memorial be sent to the congressional Representatives of Louisiana, to be by them respectfully presented, in such manner and in such method as may to them seem wise, to the Congress of the United States.

Adopted by the Commission Council of the City of New Orleans, April 9, 1914.

[SEAL.] GEO. TERRIER, Jr.,
Clerk of Commission Council.

Approved:

MARTIN BEHRMAN, *Mayor.*
A. G. RICKS,
HAROLD W. NEWMAN,
W. B. THOMPSON,
E. E. LAFAYE,
Commissioners.

Citizenship.

EXTENSION OF REMARKS
OF
HON. JOHN C. McKENZIE,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 15, 1914.

Mr. McKENZIE. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a memorial of the House of Delegates of Porto Rico to the President and to the Congress of the United States concerning citizenship.

The memorial is as follows:

Memorial of the House of Delegates of Porto Rico to the President and to the Congress of the United States concerning citizenship.

A bill declaring Porto Ricans collectively citizens of the United States is now before Congress.

The House of Delegates of Porto Rico, in the face of a problem that so essentially affects the life, the personality, and the destiny of the people it represents, can not under any circumstances waive the duty of studying this great problem, and, with the profoundest respect, begs to address to the President and to the Congress of the United States the present clearly reasoned statement, the fruit of a careful and impartial analysis of the question in its several aspects, as also of an exact knowledge of the sentiments and wishes of the vast majority of Porto Ricans.

But before entering upon a discussion of the merits of this question we desire to clearly state that nothing that may be said on the matter should be construed as disparaging or mortifying with regard to the noble title of American citizenship; but that, while rendering just and sincere homage to your citizenship, we firmly and loyally maintain our opposition to being declared, in defiance of our express wish or without our express consent, citizens of any country whatsoever other than our own beloved soil that God has given us as an inalienable gift and incoercible right.

First of all we claim that the granting of American citizenship to Porto Ricans answers no purpose whatever that may serve public necessity or afford general convenience.

The privileges of citizenship can only be referred to two orders of ideas—one internal, the other external to the country of its origin, or, in other terms, in municipal and in international law.

We already possess our own sufficient citizenship of Porto Rico, which is indisputable and ostensible to the world, inasmuch as our citizenship is derived, by natural law, from our birth and, by written law, from an act of the Congress of the United States.

Section 7 of the organic act of Porto Rico, approved by the President of the United States on April 12, 1900, provides "that all inhabitants continuing to reside therein who were Spanish subjects on the 11th day of April, 1899, and then resided in Porto Rico, and their children born subsequent thereto, shall be deemed and held to be citizens of Porto Rico, and as such entitled to the protection of the United States."

It has been stated and repeated on various occasions, without any basis whatever, that we Porto Ricans are a people without a fatherland and without citizenship, of a personality ignored by the law of nations. We have our fatherland, which is our island; we have our citizenship, which is that of Porto Rico; we have personality, which is that of our people; and none can ignore them without causing the island to disappear from the map or without denying that the Congress of the United States that established our citizenship and our personality may be, as it is, one of the most powerful and surpassingly great entities in the political concert of the universe.

We are citizens of Porto Rico and as such entitled to the protection of the United States. It is thus written in our organic act, and in accordance with the precepts of that act the diplomatic and consular corps of the United States ever since the administration of President McKinley keep a register in foreign countries of citizens of Porto Rico and give Porto Ricans the protection to which they are entitled throughout the world.

American citizenship in foreign countries accords no other privilege than that of the enjoyment of the protection afforded by the Government of the United States in the extraterritoriality of consular and diplomatic law. As citizens of Porto Rico we enjoy that protection and with it the only privilege derived from American citizenship in international relationship.

In the other order of ideas which refer to the privilege of citizenship within the State itself such privileges are summed up and condensed in the individual rights guaranteed by the Constitution of the United States; and the Bill of Rights of your Constitution is applicable to Porto Rico, as has been decided by your Supreme Court in various opinions it has handed down, and specially so in the case of Downs *v.* Bidwell (182 U. S., 244), in which Judge Brown thus expresses the opinion of the court:

"My position * * * is simply that the Constitution does not apply to territories acquired by treaty until Congress has so declared * * * except so far as concerns the natural rights of their inhabitants to life, liberty, and property * * *."

And prior to the expression of any opinion whatever by the Supreme Court of the United States the people of Porto Rico, providing for its own liberty, had already, on February 27, 1902, promulgated "An act to define the rights of the people," which absolutely guarantees the right of conscience and the exercise of religious worship, the privilege against arbitrary search and imprisonment, the freedom of speech, both spoken and written, and the right of peacable assembly, with powers to apply to the government for redress of grievance by petition or remonstrance.

We therefore possess, through the extension of your constitutional law, the rights of life, liberty, and property, which are all the essential rights of humanity. We also have guaranteed by our own law the primary rights of the people; and if you still deem your law and our law insufficient, you may add to or amplify them or determine for us all rights and liberties you please in a new organic act without affecting our citizenship, inasmuch as liberty and rights are gifts that may be granted and accepted to infinity, like the light of heaven that never ceases to shine and illuminate the world.

And we have demonstrated that there is not the remotest necessity of declaring the people of Porto Rico citizens of the United States in order that they may enjoy, as they do enjoy as citizens of Porto Rico, all the privileges of American citizenship within and without the limits of our inextinguishably adored soil.

It has also been repeated, through ignorance of the facts and a confusion of ideas, that although the granting of American citizenship to Porto Ricans solves no practical problem, it yet satisfies a spiritual longing that responds to a general sentiment.

When one speaks thus a distinction should be made as to whether that longing and that sentiment live in the hearts of Americans or in the hearts of Porto Ricans. It seems that in matters of heart, in dealing with something like citizenship that may alter the life and the destiny of our people, it is to us to whom the sentiment should be attributed and it should be we who manifest it. But, if we are to speak with entire loyalty, we must say that the sentiment concerning American citizenship for Porto Rico is neither felt by Porto Ricans nor by Americans.

It is not in you who might have declared Porto Ricans citizens of the United States in the law that you promulgated for us in the year 1900; you, nevertheless, constituted us citizens of Porto Rico; it is not in you who, besought in Congress by presidential messages to confer on us your citizenship, abstained from so doing during 13 years with firm perseverance.

This does not imply a complaint but is rather praise, for we consider your abstaining from so doing not an offense but a mark of respect for the wishes of the people of Porto Rico, and to your own democratic Constitution which does not permit the government of a people to be transformed in its fundamental basis of citizenship without the consent of the governed.

The sentiment of American citizenship for Porto Rico is neither in you nor in us. You have known for many years that the people of our island is profoundly displeased; that it is in constant protest against the absurd form of government that you imposed on us without our consent; and, through erroneous information or inexact appreciation, you have probably interpreted our displeasure and our protest as due to the fact that you have not granted us American citizenship, when in reality of the few good things contained in our present organic act the best is Porto Rican citizenship which you consecrated before the world by means of a law of your Congress.

The general dissatisfaction in our country, the tide of bitterness that has swept over our souls and its overflow in constant protest has had its birth and its growth in the régime you decreed for us in the year 1900—a government without representation in its highest spheres, where the legislative and executive powers are amalgamated, where the people does not freely and sovereignly impose their own taxes, where Porto Ricans are kept from directing the administrative departments, where we are subject to an oligarchy of six men who, through presidential nomination, form the majority in the upper house of our legislature, and who are at the same time at the head of the executive departments, who legislate and execute the law, grant franchise of a public nature, and do all those things that constitute the principal attributes of government while they lack a knowledge of our local laws, of our customs, our temperament, our collective life, our mode of feeling, of thought, and of speech.

We know that the ideas and men who now sit triumphant in the Capitol and at the White House are not responsible for this form of autocratic government against which the great Democratic Party protested in its convention at Kansas City in the year 1900 with these energetic words:

"We declare again that all governments instituted among men derive their just powers from the consent of the governed; that any government not based upon the consent of the governed is a tyranny; and that to impose upon any people a government of force is to substitute the methods of imperialism for those of a republic. We hold that the Constitution follows the flag, and denounce the doctrine that an Executive or Congress, deriving their existence and their power from the Constitution, can exercise lawful authority beyond it or in violation of it. We assert that no nation can long endure half republic and half empire, and we warn the American people that imperialism abroad will lead quickly and inevitably to despotism at home. Believing in these fundamental principles, we denounce the Porto Rican law, enacted by a Republican Congress against the protest and opposition of the Democratic minority, as a bold and open violation of the Nation's organic law and a flagrant breach of the national good faith. It imposes upon the people of Porto Rico a government without their consent and taxation without representation. It dishonors the American people by repudiating a solemn pledge made in their behalf by the commanding general of our Army, which the Porto Ricans welcomed to a peaceful and unrestricted occupation of their land."

The same facts the same reasons, that provoked your protest against the absurd constitutional system in force in Porto Rico; the same facts, the same reasons, but embittered to us by the woe of their experience, have aroused and stimulated our protest, which has its origin in the depth of our régime, without being connected with citizenship, for the citizenship of Porto Rico is neither a source of disparagement nor sorrow nor injury to us, but it is a humble and filial pleasure to us to be citizens of our own little and beautiful fatherland.

Another aspect of the question of the declaration of citizenship for Porto Ricans collectively is offered from the standpoint of insular revenue.

In virtue of section 4 of the present organic act in force in Porto Rico, and the proclamation of the President of the United States of December 25, 1901, all duties and taxes collected in Porto Rico, including excise taxes and customs duties, are paid into the insular treasury.

Apart from the excise taxes and customs dues, the most important taxes collected in Porto Rico are those imposed, at the rate of 1 per cent, on the value of real and personal property. The total revenue paid into our Treasury during the fiscal year 1912–13 amounted to $6,650,224.10, and in the same year all personal and real property was assessed at $179,272,023, so that the taxes on this amount of property at the rate of 1 per cent could only have produced the sum of approximately $1,800,000, and the balance paid into the Treasury, amounting to upward of $4,800,000, was the proceeds principally accruing from excise taxes and customs dues.

At the present date, and under the economical crisis that the country is traversing, the value of property having considerably decreased, especially such property as is related with the sugar-cane industry, the income from taxes on property will during coming years inevitably diminish.

With these data we formulate a question of high and complicated transcendency.

If the citizens of Porto Rico are collectively declared citizens of the United States and are provided by Congress with a constitution, the island being under the flag of your Republic, will not our island, in fact and in law, be converted into an incorporated organized Territory of the United States? With the status of Territory, could we retain in our treasury the income from excise taxes and customs dues? Would not such revenues, like those of all other Territories, have to be paid into the Federal Treasury? Could Congress, within the impassible limits established by the Constitution of the United States, prevent Federal revenues collected in Porto Rico from being turned into the United States Treasury and permit them to remain in the treasury of Porto Rico?

These are all questions that it is very difficult to answer satisfactorily on the spur of the moment; but after a careful study of this complex problem we are of the opinion that we should very probably lose with our excise taxes and customs dues the two most abundant sources of government revenue.

Should this occur our government would only be able to rely on taxes collected on property and other small imposts that would hardly amount to more than a million dollars, to cover a budget that even with the greatest economy could never be less than about $4,000,000. This situation could only be solved in the rigorous terms of a terrible dilemma for our country; we should either have to impose taxes at the rate of 4 or 5 per cent on the value of property, or we should have to destroy or enormously decrease the service of institutions, public health, and other important branches of our progress; either descend into the exploitation of property or sink our people into the abyss of want and ignorance.

The supposition, the doubt, the mere possibility that this gravest of situations might arise, should suspend the action of Congress in deciding to transform the citizens of Porto Rico, now capable of modestly developing their resources and their civilization, into citizens of the United States without their consent, and with this glorious title find themselves overwhelmed by economical or moral disaster.

When we say moral disaster we merely refer to the case in which the people of Porto Rico should have to detain or retard their progress, due to the scarcity of government resources to carry them on; but another higher and more delicate problem, likewise of a moral character, is offered to your contemplation as a body of select men born and bred in the superiority of a national environment so pure and clear as that of your democratic Republic.

There are things and ideas in the life of nations, inapprehensible and fugitive, that escape the artificial action of laws when those laws are not the outcome of the remote and tardy action of time, of history, and the fitness of all social elements.

Your can surely, by a law of your Congress, decree that all Porto Rican citizens shall be citizens of the United States; you possess political power to do so, but have you peradventure the natural, real, gentilitious, creative power of instantly converting a Porto Rican into an American, not precisely an American born in your country but a real American citizen, intimately and essentially amalgamated with you in your origin, in your historic evolution, in your language, in your struggles, in your destinies, in all that vast psychology determining your national spirit?

We, Porto Ricans, Spanish-Americans, of Latin soul, imaginative, high-strung, ardorous by reason of the sun of our climate and by the blood in our veins, separated from you by over 400 years and by more than 400 leagues, with a different historic process, diverse language, different customs—could we rapidly, under the sudden impulse of a law, even though ourselves desiring it with an intense and firm will—could we convert ourselves into American citizens in that spiritual sense that the notion of citizenship requires, and feel, think, wish, and speak as you do and have with you that solidary of life, of memory, of hope, of ideals, in your long, concurrent, and continuous efforts toward the national and international aims of your great and glorious Republic?

We possess all these qualities to make us good citizens of Porto Rico; we lack them all to be good American citizens.

We have our own proper natural citizenship, that of our country. You yourselves recognize it and proclaim it from the high places of your Congress.

In all sincerity, we say to you that we revere your noble citizenship, a citizenship that involves the divine attribute, the grandeur of being the first fatherland to found liberty in America; but we likewise say to you, with equal sincerity, that we are satisfied with our own well-beloved Porto Rican citizenship, and proud to have been born and to be brethren in our mother island.

And so great is our love for our own citizenship, our own fatherland, that, in conclusion, we must make use of a hyperbole to express the earnestness of our sentiment. We, like all Porto Ricans, are believers in the existence of God and of a perpetual superhuman life; but were there a citizenship of heaven with a right to eternal happiness, and it were offered us in exchange for our own, we would vacillate to accept it and should under no circumstances accept it until after death.

JOSÉ DE DIEGO,
Speaker of the House of Delegates of Porto Rico.

Post Offices Twentieth Congressional District, Pennsylvania.

EXTENSION OF REMARKS
OF
HON. ANDREW R. BRODBECK,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, April 17, 1914.

Mr. BRODBECK. Mr. Speaker, I beg to ask the indulgence of the House for a few minutes on a matter of personal privilege. As a Member of this body, I feel it due you as well as the constituents of my district that I should make a statement concerning certain newspaper articles that were published March 25 and 26 charging that postmasterships in York and Adams Counties, comprising the twentieth congressional district in Pennsylvania, were bartered and sold under the Wilson administration, reflecting upon the district and upon me as the Representative as well as on the present administration.

For some time prior to the appearance of these articles rumors were current in the district that certain local factional political manipulators would "spring something" to discredit the Congressman of the district. While I am not directly charged, yet indirectly the inference is made that postmasterships have been bought and sold.

When I noticed the article that appeared on March 25 in the Philadelphia Ledger, I issued the following statement, which appeared in the public press of the 26th:

The Ledger article of to-day does not charge that I directly or indirectly received any money for appointments, or that any money was paid or promised to be paid at my suggestion, request, or with my knowledge. I assert, however, that when advised that a candidate had agreed to contribute to the county committee I refused to recommend the man, said I would not recommend him, and that I would recommend no one under such conditions.

I deny that I directly or indirectly advised or requested contributions from any candidate for any purpose or had any knowledge thereof. The endeavor to connect me with this by affidavits appearing in the Ledger is the work of my political enemies, who are well known to the people of York County, who had me befriend them, and perhaps are using this means to try to escape legitimate obligations.

The people of York can recognize the location of the official who took the affidavits of Ruhl and Painter, and can connect up this with the "public-spirited" men who are engaged in slanderous and libelous attacks on me, and whose reputations are well known politically and otherwise.

I leave it to the judgment of the people of my home county and district to decide after they have carefully considered all the facts as to who have been honest in this matter. I publicly request the Post Office Department, that has made a thorough investigation through an inspector whom I do not know, to publish broadcast the result of the investigation.

On the same day there appeared a statement issued from the office of the Postmaster General, which was as follows:

The material published in to-day's papers with regard to an investigation recently made by a post-office inspector was not given out by the department, it being an invariable practice to treat matters of this kind as strictly confidential. The information certainly reached the public through local sources. However, the facts are that certain charges were recently filed, involving the manner in which the nominations of postmasters were made to the department for Hanover, New Freedom, and Wrightsville, Pa., and for these offices only. A careful investigation of these charges has been made by an experienced post-office inspector, with the result that Hon. A. R. BRODBECK and his secretary, Mr. C. A. Geesey, have both been completely exonerated, and all but one of these postmasters, namely, the one at New Freedom, were likewise absolved of blame. The Postmaster General has to-day signed an order removing the postmaster at New Freedom.

Your attention is called to the statement issued from the office of the Postmaster General that "the facts are that certain charges were recently filed involving the manner in which the nominations of postmasters were made to the department for Hanover, New Freedom, and Wrightsville, Pa., and for these offices only. A careful investigation of these charges has been made by an experienced post-office inspector, with the result that Hon. A. R. BRODBECK and his secretary, Mr. C. A. Geesey, have both been completely exonerated."

It will be noted that in the affidavit of Ira S. Painter, which was printed in the Ledger article of the 25th, appeared this statement:

That in the early part of May, 1913, the deponent had at New Freedom, in the deponent's store, a conversation with Allen M. Seitz, the Democratic chairman of York County, who came to New Freedom with the authority of the said A. R. BRODBECK to act for him and in his place in selecting a person to be named by the said A. R. BRODBECK for postmaster at New Freedom, and in the course of the conversation the said Seitz produced a form of contract, handed it to the deponent to read.

Just how this affidavit was obtained and other facts concerning it is not clearly stated. From statements made since by deponent it would seem, however, the dastardly, villainous attempt on the part of some one, by intimidation or otherwise, to make up incriminating evidence without regard to the sacredness of an oath.

The foregoing part of Mr. Painter's affidavit is absolutely without truth, so far as my authority to Mr. Seitz for doing so is concerned, nor had I any knowledge that same was done until I saw it in print.

The postmaster at New Freedom has since stated to me that he entered into a written agreement with the county chairman of York County some time during the beginning of April and not in May, as stated in Painter's and Ruhl's affidavits, to annually contribute to the campaign fund the sum of $75, but that he had never paid money to anyone as the result of this action. This agreement was made absolutely without my knowledge, and, in fact, I knew nothing of it until very recently.

An article also appeared on the 27th of March in the Philadelphia Ledger, in which it was made to appear that the postmaster at Wrightsville, Mr. W. B. Reisinger, had been dominated by my secretary, C. A. Geesey, into making a contribution for the entertainment of the State Federation of Democratic Clubs of Pennsylvania. This letter from my secretary is self-explanatory:

HON. A. R. BRODBECK, *Washington, D. C.*

MY DEAR MR. BRODBECK: In the Philadelphia Ledger of March 27 I noticed an article in which the name of the postmaster at Wrightsville, Mr. W. B. Reisinger, and my own were used in a statement made that I had admitted signing Mr. Reisinger's name in the amount of $30. The entire statement is an absolute falsehood. The facts are these: About the 7th of August, 1913, Mr. Reisinger called at my office in York. Just about as he was leaving I stated that I was a member of the committee of the Young Men's Democratic Society of York, Pa., appointed to entertain the State Federation of Democratic Clubs of Pennsylvania in September, and asked him if he cared to make a contribution to help defray the expense of the entertainment. He stated that he would make a contribution and would send his check. Neither he nor I said anything as to the amount. A day or so later I received Mr. Reisinger's check in the sum of $10, placed his name on the list of contributors, with my initials, C. A. G., after the name, followed by the amount, $10. This list is made up of contributors from all walks of life and is still in existence.

Very truly, yours,

C. A. GEESEY.

The following letter from Mr. W. B. Reisinger, postmaster at Wrightsville, on the Philadelphia Ledger article of March 27 is also self-explanatory:

WRIGHTSVILLE, PA., *April 6, 1914.*

HON. A. R. BRODBECK, *Washington, D. C.*

MY DEAR SIR: In the Philadelphia Ledger of March 27 there appeared an article in which the name of your secretary, Mr. C. A. Geesey, and my own were used, in which an attempt was made to "show the postmasters after their appointment were dominated by Clarence A. Geesey."

That statement is attributed to Walter Krone; that he said that he had seen Secretary Geesey sign the name of myself to a list of contributors for defraying the expense of a dinner held at York under the auspices of the Democratic Federation of Clubs. Further statement is made that I had contributed $30.

The statement as a whole, in so far as I am concerned, is without truth. The facts are these: On or about August 7, 1913, while in York, I called at the office of Mr. Geesey. In conversation with him he stated that he was a member of the committee to entertain the Federation of Democratic Clubs of Pennsylvania, and asked me if I cared to contribute anything toward the entertainment. I replied that I would and would send my check. Upon arriving home I made out my check in the sum of $10 and mailed it to Mr. Geesey. During our conversation no intimation was made by Mr. Geesey as to any amount that I should contribute, nor did I say what I intended to contribute.

I am making this statement in justice to Mr. Geesey and myself.

Very truly, yours,

W. B. REISINGER.

I might add that the newspaper gives as authority for the Wrightsville story Walter F. Krone, who was a candidate for the position of postmaster at York, Pa., and failed to receive my recommendation.

Selfishness is characteristic of the band of political pirates and character assassins who are a part of a bipartisan machine in York and Adams Counties, who know no such thing as patriotism or loyalty to party principles, who are actively engaged in attempting to place in false positions those who are acting with the best of motives. These men are known to many, but not to all, the residents of the twentieth Pennsylvania congressional district. When once known to the voters generally their motives and methods will be repudiated.

It is likely that attempts have been made to make other Members of the House victims of similar political conspiracies. I have political enemies who for jealous or personal reasons would certainly stoop to the most ignoble methods in an effort to secure their ends.

In refutation of the statement reflecting upon the people of my district I desire to say that the people of the twentieth congressional district in Pennsylvania, with the exception of certain questionable political elements, are far above the charac-

ter of people they have been pictured to you by newspaper stories. They are, as a people, mostly Pennsylvania Germans with quite a long line of descendants of Scotch, Irish, German, Welsh, and other nationalities, whose thrift and frugality are well known. They are industrious, prosperous, and progressive American citizens, commanding the highest type of citizenship, of whom I am justly proud, and shall jealously guard and protect their honor and rights and most vehemently resent any reflection cast upon them by any man or men.

As to the much-talked-about investigations of post offices and postmasters of Pennsylvania by Senator PENROSE I invite, encourage, and urge same to be of a most searching character, and earnestly hope that the Senator will not confine the investigation to the present administration only, but cover the past 5 or 10 years of postmaster and rural carrier appointments. What would be better still, since the Senator is talking about investigating, would be to uncover the practices and methods of financiering the past five or six congressional campaigns in the twentieth congressional district in Pennsylvania. I promise the Senator there are many people in the district, irrespective of party, who would like to know all about it, and some who would not like to tell what they know about it, yet without much trouble he can get enough evidence to make an interesting report.

Mr. Speaker, I thank you and the Members of the House for your patient indulgence during the brief statement I was permitted to make. I assure you I am not moved by any motive to do injustice or malice toward anyone, but rather by a charitable inclination of meting out good for evil, and an appeal for fair play one toward another.

Increased Federal Control and Reduced Bureau Expenses Impossible.

Why do Congressmen clamor for more clerks? It is because of increased Federal control. Why did the cry ring out day after day last summer, "Jones wants a clerk"?

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 17, 1914,

On the bill H. R. 15279, the legislative, executive, and judicial appropriation bill.

Mr. JOHNSON of Washington. Mr. Speaker, the wrangles which have attended the long consideration of this bill—a bill making appropriations for legislative, executive, and judicial expenses for next year—show to an absolute certainty, to me at least, a peculiar situation now pervading the country, and indicate a conflict that is bound to be fought out in Congress much sooner than most of us realize.

Here we have a bill which we, as a Committee of the Whole, have shot all to pieces, and which we now, in general session, are trying to patch up.

Was the member of the Appropriations Committee in charge of the bill [Mr. JOHNSON of South Carolina] to blame for bringing in a bill subject to as much change as this one? Of course he was not.

Why?

Because, if I am any judge, the people of the United States are clamoring for more Federal control. They want control of everything, from the greatest trusts down to the smallest of the migratory game birds, and at the same time the people are clamoring against expending the money to pay for the machinery to make such control effective.

In one breath we cry for more and more control—almost to the point, right now, of Federal usurpation.

In the next breath we cry for Federal economy. Also, we cry against increased bureaucratic power. We lament the enormity of the bureaus and the size of the salaries of those who run these bureaus.

How are we going to run the increased Federal machinery without increasing Federal expenditures? How are we going to keep thoroughly competent men and women at the head of bureaus of child welfare, labor mediation, Life-Saving Service, Indian Office, without providing enough money to enable the United States to employ persons of ability commensurate with this extended control for which we hear such clamor? How are we going to have competent assistants when we pay them less than men of like ability can secure in commercial pursuits? Further, how are we going to extend these already great bureaus without further extending their influence, including their influence on Congress?

In extending Federal control we are all offenders, one way or another. For instance, I was one of the westerners who worked as hard as I knew how for a Government railroad in Alaska. We of the West saw that with great aggregations of capital rapidly passing under Federal control we would never get the Alaska trunk-line railroad any other way.

You of the East—Massachusetts, New York, and Pennsylvania, and other States—are perfectly willing that from one-third to one-half of each of our 11 great Western States shall be "conserved," "preserved," "reserved," or whatever you want to call it—laid aside for your constituents' children's children. You do not pretend to know much about the actual workings of the forest-reserve system. How could you? You leave that for the Committee on Agriculture, and that committee leaves it to the chiefs of the Forest Bureau. That bureau asks for all that it thinks it can get. You begrudge that sum, but give it. Now, in my opinion, if the Forest Service is going to carry on a true quickening process of real conservation which shall not starve the present generation to death in the "conserved" districts, that service should have not a five-million-dollar appropriation, but one of ten millions. Then, we could secure some roads through these reserves.

You of the Middle West demand Federal good roads. The rest of us join with you, and the result is that we appropriate twenty-five millions for Federal good roads. That means another great bureau, and in a little while another one of these fights as to how much shall be paid to chiefs, assistants, and so forth.

Besides, how long do you think it will be, Mr. Speaker, before Congress finds itself considering a bill to regulate the width of wagon tires used on Federal good roads?

WHY SENATORS AND CONGRESSMEN NEED MORE CLERKS.

For a little while, in this bill, now closing, there was a paragraph giving Congressmen an additional $25 a month for clerk hire. It is out of the bill now. Why do Congressmen cry for more help? In the Senate last summer why did the cry ring out day after day, "JONES wants a clerk"?

Because of increased Federal control. As affairs pass over from State to Nation, Senators and Congressmen find themselves more and more the intermediaries between people and governmental bureaus. Senators and Congressmen are "go-betweens," and one observes with dismay that a good many of them go to the bureaus with hat in hand.

Why?

Because as these bureaus increase in size and power they can easily make their power felt; all the more easily if that power is combined with Executive dictation.

The combination is one well calculated to make the most courageous Congressman think hard as to whether he shall speak up and both vote and talk his convictions or whether he shall sit tight, say nothing, and vote as per orders from higher up.

Mr. Speaker, of all the appropriation bills, this one brings out the "Federal control" situation most clearly. You can not increase Federal control and cut down Federal expense at the same time. Some folks, as well we know, get economy and wastefulness mixed. Everyone wants wastefulness stopped; but, I submit, it is not economy to abolish entirely the office of Second Assistant Indian Commissioner, as this bill does, when all who go to the Indian Office know that not only the commissioner, but all of his assistants, are worked almost to the breaking point. Of course the Senate will rectify this, but why leave it to the Senate?

It is not economy—certainly not economy of time—to cut out all the heads of the Life-Saving Service, as was done last week, and then "cut" them in again, as was done to-day.

Mr. Speaker, permit me to congratulate the chairman [Mr. JOHNSON of South Carolina] on the great patience he has exercised, and to intimate that the next time a bill carrying appropriations for heads of bureaus and great branches of departments is introduced, his troubles will be increased many fold unless in the meantime the people decide just how far they desire "Federal usurpation" to go.

The old high-school debating subject comes to mind, "Shall the people rule the Government, or shall the Government rule the people?" Just now the latter proposition is in the ascendancy. How far shall it go?

Agricultural Appropriation Bill.

SPEECH

OF

HON. ROBERT Y. THOMAS, JR.,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 13, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. THOMAS. Mr. Chairman, the item of $49,000 in the Agricultural bill now under consideration is for an investigation of insects which affect southern field crops, and also includes an investigation of insects affecting cotton, tobacco, rice, sugar cane, and other agricultural products. There are numerous insects which affect tobacco, among which are the tobacco flea beetle, the tobacco hornworm, usually known as the common tobacco worm, the bud worm, the sucking fly, the tobacco leaf miner, the cutworm, the tobacco leaf feeder, the cigarette beetle, and other insects which affect growing and dried tobacco.

The Department of Agriculture has only asked for the sum of $8,000 to make these various investigations concerning tobacco alone and to perform such work in demonstration as will teach the farmers of the country how to properly use the remedies the Agricultural Department has discovered for the purpose of destroying such insects. A majority of the States of this Union grow tobacco in various quantities, and an appropriation of $8,000 is entirely inadequate to do the work to properly demonstrate the worth and effectiveness of the remedies discovered by the Agricultural Department to destroy these various tobacco insects. Tobacco is one of the largest agricultural products in the United States and is the only agricultural product upon which the Government lays the heavy hand of taxation. In 1912 the farm value of the tobacco crop in the United States amounted to over $85,000,000. Tobacco pays to the Government the second largest amount that is paid in internal-revenue taxes, and while the farm value of tobacco is over $85,000,000 a year the Government collects in internal revenue from that source over $70,000,000 a year. The internal-revenue tax on tobacco each year is nearly equal to the farm value of all the tobacco raised in the United States, and an appropriation of $8,000 for the purpose of making investigations and finding remedies for destroying the various insects which prey upon the tobacco crop is a mere pittance and entirely inadequate for the purpose. The sum of $18,000, which is an additional $10,000 over the Agricultural bill appropriation for this purpose, amounts to only about $1 out of every $4,000 that the Government collects as internal revenue on tobacco. I have reliable information to the effect that the Agricultural Department desires this increased appropriation. The department has a few stations for demonstration in this work, but owing to the small size of the appropriation for this purpose has not been able to do any great amount of work in this line.

The department has discovered and perfected a remedy—arsenate of lead—for the destruction of tobacco worms and other tobacco insects, which it has demonstrated to be superior to any remedy heretofore used. I made an argument before the Committee on Agriculture on this subject, and requested the committee to allow this increased appropriation and include it in the Agricultural bill. This the committee refused to do. There is not a member of the Agricultural Committee who comes from any great tobacco-raising State, and consequently the members of that committee are not as familiar with growing tobacco as the Members from the States of Kentucky and Tennessee. None of them, I take it, have ever toiled or sweated in a tobacco patch killing tobacco worms. There is no work that is much harder, and if that committee had experienced actual work in the tobacco field, I am of the opinion they would have allowed this appropriation without question. The remedy discovered by the Agricultural Department for the destruction of the tobacco hornworm, which is the great pest of growing tobacco, is arsenate of lead in powdered form. The Bureau of Entomology has found that arsenate of lead in dust form is very effective in destroying these worms, and the object of this appropriation is to furnish means for this bureau to demonstrate to the tobacco raisers of the country how to use this remedy. The bureau estimates that by the use of this remedy from $3 to $6 per acre is saved in the cost of raising tobacco. It furthermore estimates that by the use of arsenate of lead from $5,000,000 to $10,000,000 per year farm value of the tobacco crop of the United States can be saved.

The CHAIRMAN. The time of the gentleman has expired.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent to proceed for five minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. THOMAS. The minimum estimate that can be saved to the farmers of the United States by the application of arsenate of lead to tobacco plants, for the purpose of destroying worms, is $5,000,000 and the maximum estimate is $10,000,000. Now, consider what a vast sum in increased internal revenue that would give to the Government. The Government collects in internal revenue from tobacco over 80 cents for every dollar in the value of the farm product. If by the use of arsenate of lead in the destruction of tobacco worms there should be the minimum estimate of $5,000,000 in the farm value of tobacco saved, the Government would thereby collect over $4,000,000 additional in internal revenue. Should the maximum estimate of $10,000,000 in the farm value of the tobacco crop be saved, the Government thereby would increase its revenue between eight and nine millions of dollars. As a purely business proposition this appropriation should be increased to such an extent as to enable the department to make these demonstrations in every tobacco-growing State of the Union. The appropriation is so ridiculously small that the Agricultural Department is hampered and restricted in its work of administration. Tobacco is raised in a majority of the States. The total acreage of tobacco for the year 1912 was more than a million and a quarter acres. The States of Kentucky and Tennessee alone raised over 551,000 acres. The State of Kentucky grows more than one-third of all the tobacco raised in the United States. It would, beyond question, be economy for the Government to have a sufficient number of stations to demonstrate this work for the destruction of tobacco worms and other insects affecting tobacco with arsenate of lead. It would be a matter of great economy, because from five to ten millions of dollars per year would be saved to the farmer in the farm value of the crop, and the internal revenue of the Government would be increased from four to eight millions of dollars. Tobacco is grown from Wisconsin to Florida and from the East to the West in varying quantities. I believe something near 30 of the States raise more or less tobacco, and it should not require any argument whatever to convince this House that an appropriation of even $18,000 is entirely inadequate for the purpose of this work.

Mr. STAFFORD. Will the gentleman yield?

Mr. THOMAS. Yes.

Mr. STAFFORD. The gentleman has just referred to the cultivation of tobacco in Northern States. If the gentleman will direct his attention to the phraseology of the item under consideration, it is limited to southern field crops, so the tobacco fields of Wisconsin, Ohio, Indiana, and so forth, would be excluded from participation in this appropriation.

Mr. THOMAS. I understand from the chairman of the committee that it does not exclude those States.

Mr. STAFFORD. The phraseology is specific. It says:

For investigation of insects affecting southern field crops, including insects affecting cotton, tobacco, rice, sugar cane, etc.

Mr. THOMAS. Tobacco is a southern field crop, although it is grown in a number of Northern States.

Mr. STAFFORD. I do not question for a moment that the appropriation would be available for crops in Kentucky and Tennessee, but the question is whether it will be available for crops in Pennsylvania, Connecticut, Ohio, and other Northern States.

Mr. LEVER. Will the gentleman yield to me.

Mr. THOMAS. Yes.

Mr. LEVER. I will say to the gentleman from Wisconsin that this appropriation is used in New York, Kentucky, and various points in Tennessee; Florida; Quincy and Tampa, Fla.; Richmond, Va.; and various points in Pennsylvania.

Mr. STAFFORD. But the gentleman will agree the phraseology restricts the use of the appropriation to crops in the southern fields.

Mr. LEVER. I do not think so, necessarily.

The CHAIRMAN. The time of the gentleman has expired.

Mr. THOMAS. I ask unanimous consent for two minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. THOMAS. I am confident, Mr. Chairman, that if the Members of this House had worked in a tobacco patch as I have and killed as many tobacco worms as I have they would vote unanimously for this increased appropriation. I do not know of any harder work that a farmer has to do than to bend day by day in a tobacco patch over tobacco plants picking off the worms. Every leaf of the plant on which there is a worm has to be taken one by one and turned up and the worms picked off and killed, as the worms stay on the underside of the leaf and it is necessarily tedious and hard work.

Mr. LANGLEY. Has the gentleman ever done any grubbing? If he has, he must admit that is strenuous work.

Mr. THOMAS. I have done grubbing and all other kinds of farm work, and I know from actual experience that it is all strenuous.

I incorporate as a part of my remarks an article written by Mr. A. C. Morgan, of the Bureau of Entomology, Department of Agriculture, and which appeared in the Southern Planter of recent date. In this article Mr. Morgan says:

A little more than six years ago the Bureau of Entomology, of the United States Department of Agriculture, began the investigation of insects affecting tobacco. The headquarters for this work were established at Clarksville, Tenn., where investigations of insects affecting the growing crop have been carried on continuously. At different times branch stations have been maintained at Appomattox, Va., to study the so-called wireworm of tobacco (which is not a true wireworm) at Quincy, Fla., to study the tobacco bud worm at Key West and at Tampa, Fla., for studying the beetle of affecting stored and manufactured tobacco, and recently a laboratory has been established at Richmond, Va., for study of the last-named pest.

At Clarksville, Tenn., all insects that in any way affect tobacco have been studied with the end in view of suggesting means of control. As a result of this work much information has been secured relative to nearly 100 insects that affect tobacco either directly or indirectly, and rather exhaustive data has been secured relative to the life histories and means of control of the hornworms, flea beetles, and cutworms. A very satisfactory means of control of the hornworm has been found, and since this insect is the most widespread and probably the most injurious pest of the crop this article will be confined mainly to a discussion of the means of control of this pest.

LOSS DUE TO TOBACCO INSECTS.

A few years ago the Bureau of Statistics of the United States Department of Agriculture estimated that the actual loss in value of tobacco due to insect attack was considerably more than $2,000,000 annually. This estimate was based on the actual loss in weight. No estimate was made for the decreased value of injured tobacco, for plant bed injury, for cost of labor required in replacing young plants killed in the field by insect attack, for the tobacco injured by Paris green, nor for the labor and insecticides required in fighting insects upon the growing crop. Some sections of Virginia estimate that, when hornworms are numerous, it will cost $8 per acre to do the necessary handworming. The same estimate holds good for Tennessee and Kentucky when hand picking is relied upon solely. However, as a general practice, hand picking is employed in these States only up to the time when worms are at their worst, and afterwards when the tobacco is ripening. When the worms become very numerous an application of Paris green is applied. Thus the average cost of fighting the hornworm for these two States is probably not more than $4 per acre—if we consider the entire acreage. For the 551,000 acres grown in these two States in 1912 the total cost of fighting this one insect would reach the enormous sum of $2,204,000. If only half of the 1912 acreage of North Carolina, Virginia, and South Carolina be considered as subject to hornworm attack, and the cost of fighting the pest be placed at the very low figure of $4 per acre, the cost of the fight will amount to a yearly tax of $802,000—for these States grew 401,000 acres of tobacco in 1912. Adding the cost of fighting the hornworm in these two sections to the estimate of the Bureau of Statistics of the yearly loss, we have the total of over $5,000,000 loss annually. Undoubtedly this estimate represents the minimum loss. The maximum will frequently reach $8,000,000 to $10,000,000. Since the greater part of this loss is due to the tobacco hornworms, we will now discuss in some detail the methods employed in fighting this pest.

METHODS OF FIGHTING HORNWORMS.

In Kentucky and Tennessee there are three methods employed in fighting hornworms. First, hand worming during the whole season. The cost of this method varies greatly with the season and the severity of the worm attack, but in years when worms are fairly numerous the cost is estimated at from $6 to $10 per acre. The second method employed is to hand worm until worms become very numerous, then apply Paris green, afterwards to hand worm the ripening tobacco—for experience has shown that Paris green will injure ripening tobacco. The cost of this method varies greatly with the season, but upon the average will be found to be $5 to $6 per acre. The third method employed is to do very little hand worming before tobacco begins to ripen, but to make two or three applications of Paris green, after which from one to three days of hand worming is necessary upon the ripening tobacco. This method is the cheapest and does not average over $4 to $5 per acre.

NECESSITY OF USING AN INSECTICIDE.

In Kentucky and Tennessee hand worming as an entire-season method has been almost completely discontinued, except in years of exceptional scarcity of worms. Ten to fifteen years ago labor was plentiful and cheap, and hand worming was found to be economically effective. However, during the past decade this method has become too costly on account of the scarcity and high price of labor. The growers were forced to employ an insecticide to assist them in the fight. The writer has no doubt but that the conditions existing in Kentucky and Tennessee are duplicated in many localities of Virginia and the Carolinas. Under such conditions an insecticide should be employed in the fight, for hand worming, in addition to its greater cost, has many objections; for instance, eggs are not picked off, many small worms are overlooked, and, lastly, during the hot hours of the day large worms crawl down into the "puffles" near the base of the leaves and a considerable number are thus overlooked. On the other hand, a thorough application of an insecticide will kill practically every hornworm within two or three days, and will continue to kill those that hatch out several days after the application.

THE USE OF INSECTICIDES.

There are two insecticides that may be used with good effect by the tobacco grower, namely, Paris green and a certain grade of arsenate of lead in powdered form. Paris green is the cheaper of the two, but its use should be discontinued on account of the very frequent serious injury to the foliage. Where hand worming has been employed the change to the use of an insecticide will reduce the cost of fighting worms by at least one-half. Arsenate of lead is strongly advised instead of Paris green. Paris green frequently causes irritating sores upon the operator, may burn the plant seriously, may cause leaves to drop off, will wash off easily, and can not be applied to ripening tobacco. Arsenate of lead has none of these disadvantages. In Kentucky and Tennessee, wherever the use of arsenate of lead has been demonstrated, the growers have decided to quit the use of Paris green entirely. It is certain that arsenate of lead is a safe insecticide for tobacco in the dark-tobacco districts of these two States, even when applied in exceptionally heavy dosages. The results should be the same in other tobacco districts.

In districts where hornworms are a serious probem the proper use of arsenate of lead should reduce the cost of fighting and the loss of tobacco due to this pest by from $1 to $3 per acre over any method now in use. In one experiment at Clarksville, Tenn., in 1913, all worms were killed on an acre of tobacco from about July 20 to September 1 at a cost of $4 for insecticide and labor. There was no worm injury upon the plat and no burned tobacco. This cost is about the maximum that may be expected for keeping tobacco free of worms with arsenate of lead for 40 days during the height of the worm season.

All tobacco growers who find the tobacco hornworm a serious problem, no matter what method they use in combating the pest, are advised to write either to their Congressmen or to the Secretary of Agriculture, Washington, D. C., and request a copy of Circular 173 of the Bureau of Entomology, entitled "Arsenate of Lead as an Insecticide Against the Tobacco Hornworms." After reading this circular address inquiries for further information to the writer of this article, Clarksville, Tenn., who will be glad to supply exact information in regard to the grades of lead to be used, and will advise with the growers in regard to problems of application.

This article contains a great deal of valuable information concerning insects injurious to tobacco. Paris green is in common use for the purpose of destroying tobacco insects. This remedy—Paris green—is often injurious to tobacco and frequently burns it, and besides is liable to injure the operator. In some districts the tobacco crop has been so injured by the use of Paris green that the value of the crop has deteriorated one-half or more. Arsenate of lead is used in dust form, mixed with wood ashes, and is applied to the tobacco plant by the use of a dust gun. The remedy does not injure either the tobacco or the operator, and is said to be superior in every respect to Paris green in destroying tobacco insects. I believe this House will grant this increased appropriation. The House seems to have no hesitancy in granting enormously large appropriations for the Army and Navy and other departments of the Government, and the farmers, who are the very foundation rock which supports the entire superstructure of our Government, should at least be given some consideration.

Since before the days when the messengers from the Roman Senate were sent to summon Cincinnatus from work on his farm to the dictatorship of Rome, farming has been considered an honorable occupation. The newspapers of the country in cartoons usually represent the farmer as a hayseed with long whiskers, wearing boots with his breeches stuffed into the top of them. This is a great mistake, because a majority of the farmers of this country are intelligent men, of good, hard, sound common sense, who make an honest living for themselves and in addition feed the world.

I confidently believe the amendment I have offered to this bill will be passed by this House, notwithstanding the objections of the Agricultural Committee, and this increased appropriation for the benefit of the farmers will be granted. [Applause.]

Legislative, Executive, and Judicial Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. SILAS R. BARTON,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 16, 1914,

On the bill (H. R. 15279) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1915, and for other purposes.

Mr. BARTON. Mr. Speaker, I am for this bill heart and soul. There should not be one vote in this House against it, and yet you will find Members who honestly and conscientiously reason that they can vote for big appropriations for agriculture, war, and Navy, and yet practice, what to me seems, false economy in limiting, to a penurious degree, the appropriation for a Children's Bureau.

Shall we say to the world that we place a higher value on live stock than on the lives of the babies of this country? Only a short time ago we voted $625,000 for the investigation and extermination of diseases of animals. The same bill carries an appropriation of $400,000 for the eradication of the southern cattle tick. We have expended large sums of money to make our streams navigable. Shall we now say to this country that we will not give this, the greatest bureau in the service, the sum required for the proper exercise of its duties?

Several years of my life were spent directly in the work for a great fraternal order, and I found in that work that the

people of our country have, as a rule, hearts that overflow with fraternal love. That experience is a part of my life and the better part. Every State in this Union is filled with fraternal and religious organizations. It does not make much difference what name they operate under, for they all do a great, humane work, having the same basic principles and all seeking the same end. The children are the foundation of the race, and who will say that dollars appropriated for preserving the lives of these little ones are not spent in a holy cause?

Listen to the great purpose of this bureau:

The said bureau shall investigate and report to said department upon all matters pertaining to the welfare of children and child life among all classes of our people and shall especially investigate the questions of infant mortality, the birth rate, orphanage, juvenile courts, desertion, dangerous occupations, accidents, and diseases of children, employment, legislation affecting the children in the various States and Territories.

Could there be, than this, a more laudable purpose?

Mark Twain once said:

The future president of the United States is now lying in his cradle busying himself with no greater problem than trying to get his big toe in his mouth.

That baby's business is our business. His present and future is our present and future. He and his kind make our future generations, our future Government. Out of the cradles of the pampered rich seldom come the characters who make American history. These future molders of our Nation's destiny, in all its ramifications, are in the cradles of the common people, and it is these babies that we purpose to save and make more pleasant their babyhood days.

This Nation does not want conditions prevailing such as were cited by the gentleman from Kansas, requiring mothers within a few days after the birth of their baby to go to work in the factory or mill, leaving the neighbors to care for the fragile flower that has just bloomed into life.

No; our men have too much manhood for that. Our women have too much motherhood to permit such conditions to exist. We want the mothers and the children of this country to have the best our bounty can provide. We should by all means practice economy; but it is not economy to reduce to a minimum the appropriation for this bureau, and I am glad there will be a roll call on this amendment in order that men here may be required to go on record with respect to this all-important proposition.

Legislative, Executive, and Judicial Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. THOMAS C. THACHER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 16, 1914.

On the bill (H. R. 15279) making appropriation for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1915, and for other purposes.

Mr. THACHER. Mr. Chairman, I do not ask for more time than that allotted to me, for I shall avail myself of the permission given me to revise and extend my remarks in the RECORD; but I do ask that the sum allotted the Children's Bureau by the committee, namely, $25,640, be increased to the amount in the amendment offered by the gentleman from Colorado [Mr. KEATING], namely, $139,000, making a total appropriation of $164,640, the amount requested by Miss Lathrop, the very able head of the Children's Bureau.

It is just two years ago this very month that the Children's Bureau was organized, and the act of April, 1912, creating this bureau provides that it—

shall investigate and report upon matters pertaining to the welfare of children and child life among all classes of our people, and shall especially investigate the questions of infant mortality, birth rate, orphanage, juvenile courts, desertion, dangerous occupations and accidents of children employment and legislation affecting children in the several States and Territories.

I believe that the Children's Bureau has accomplished much good and will do more good. Congress takes up many questions of a wide range and discusses measures and votes appropriations freely for objects of all kinds. Sometimes it seems to me that too much time is spent in the House in discussing political questions and in considering appropriations for objects dear to the proposers but not in every case needed or demanded by the masses of the people, and that not enough attention is given to the health and social welfare of our people. We want the people of our great American Republic to be strong, healthy, and happy; and yet, in order to get strong and healthy people the little children should be strong and healthy, and also the mothers. I stand for all measures which will, in my opinion, protect our children and women. I stand for legislation and appropriations which will benefit the health of our children. I wish better labor laws enacted throughout our broad land for the protection of our women and children.

The Children's Bureau in its short existence of two years has accomplished much and can do more. We learn from the vital statistics of the Census Bureau that in this country each year 300,000 infants under 1 year of age die. In this very city of Washington 15 out of every 100 infants die before they reach the age of 1 year. In some of the manufacturing cities the death rate of these infants is much higher. Statistics and investigations show that many of these deaths can be prevented if the mother knows and will use simple rules and remedies applicable in such cases. The Children's Bureau has printed these rules in a little pamphlet, which has met with general favor wherever it has been distributed. It is sold at a few cents a copy.

I understand that the Commission on Industrial Relations is cooperating with the Children's Bureau in studying the most important question of child labor and the methods used in supervising the change made by the child from school into industry. In this connection a thorough study will be made of the child-labor laws and conditions in the several States, and this data will eventually be published. I believe in this work. I shall vote to give the Children's Bureau the money which Miss Lathrop asks.

Legislative, Executive, and Judicial Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. CHARLES LIEB,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 20, 1914,

On the bill (H. R. 15279) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1915, and for other purposes.

Mr. LIEB. Mr. Speaker, I want to express myself in the strongest terms possible as favoring the appropriation of $275,000 to promote and develop the foreign and domestic commerce of the United States. The amount which this bill carries is $215,000 in excess of former appropriations. In other words, we have heretofore been expending what in reality appears an insufficient sum to stimulate our trade with foreign countries, and now we consider the feasibility of making a systematic effort to widen the field for foreign commerce for our manufacturers.

Strange to say, in this age of our industrial development, we have been too busy to give serious thought to the sale of our products to foreign centers of industry, and I refer in particular to South America. Of course we are factors in South American trade, but very insignificant factors in comparison with the inroads of other nations.

Secretary of Commerce Redfield has offered a happy suggestion for stimulating our export trade and he must have the money to carry on his work. He proposes to establish 15 or 16 highly trained commercial agents in the prominent trade centers of Central and South America, and in return for the money Congress allows for salaries and other necessary expenses he agrees to bring our producers in closer touch with the great trade to our south. It has been explained to the committee how these agencies established will serve as information bureaus for our manufacturers and business houses; and he has very ably pointed out how our producers have been handicapped in the past owing to limited means of getting information that is necessary to sell goods on a systematic basis. Secretary Redfield explained to the committee that there is constantly an immense demand for information about South America; that the Consular Service is the only source of information, and that very little information can be obtained. The amount which this appropriation calls for is for the employment of men traveling in certain direct lines, like sending a man to South America, let us say, on cotton, another man on boots and shoes, another man on furniture and lumber, another on canned goods, another on woolens, and another man on machinery, each of them traveling as a specialist in that single line throughout all the countries of Central and South America. This is to be a regular force, just as it has been called, and it is intended to be employed especially in collecting commercial information about

South America in view of the increased demands for information about that country. That was put in at the special request—and with the hearty approval of the President—of the United States Chamber of Commerce and of the manufacturers' associations in order that there might be developed a more thorough and systematic knowledge of the markets in South and Central America.

The district which I represent abounds in manufacturing. The last Federal census gave the first district of Indiana a total population of 191,516, and now this has increased well over the 200,000 mark. Evansville, the leading city of the district, has a population of about 90,000. Evansville is distinctly a manufacturing city. It disputes the claim of Grand Rapids, Mich., as being the greatest center in the United States in the manufacture of furniture, having 36 factories of this description. It has many great stove foundries and factories manufacturing vehicles, agricultural implements, steel and iron plants, and in fact I do not think there is a city in the United States with a population of less than half a million that has such a diversified outlay of factories, most all of whom have had trade relations with South America. We have the largest buggy manufacturing plant in the world, and our great steam-shovel works furnished a majority of the shovels which made the excavations for the Panama Canal. Only recently I caused to be distributed among my colleagues copies of special editions of Evansville newspapers which showed the remarkable growth of Evansville's industries in the past few years.

With the Panama Canal in operation, with the growth of our trade to South American countries greatly stimulated through the untiring efforts of the Department of Commerce, and situated as it is on the great Ohio River, which is being canalized by the Government for permanent navigation, with a direct outlet to ocean-going vessels plying out of the Gulf of Mexico, I can foresee the growth of a great industrial center of the United States. There are also the great cities of Pittsburgh, Cincinnati, and Louisville on the Ohio River, and Evansville ranks fourth in population among the many great cities of the river which flows into the Mississippi not many miles below Evansville. Mount Vernon in my district is also destined to be benefited by the stimulation of our South American trade. This city manufactures agricultural implements on an extensive scale.

I have had many letters and telegrams from manufacturers in my district, and they are most enthusiastic on the point of Secretary Redfield's project and urge that Congress acquiesce. They realize what it will mean to them. For years they have been handicapped in carrying on their trade with foreign countries because of a lack of information. As an example, I recently had an inquiry from a firm in Evansville which deals extensively in store fronts, architectural iron works, and steel bridges. They had never been able to do much business with South America and asked me to supply what information I could. I consulted with the Pan American Union, and they had a number of documents which, no doubt, were helpful. I also wrote to the various consular services in principal countries, and I am informed they were able to give some information; but anyone can concieve how much more advantageous it would have been had I been able to communicate direct with United States commercial agents on the ground in South America. They could constantly be of assistance to this one Evansville institution, while the efforts which have been made with the Consular Service and the Pan American Union necessarily must stop with the furnishing what little information they have been able to gather together along general lines.

With the additional force which this bill would give to the service, Secretary Redfield would have at his command approximately 32 men who could furnish information as to the probable market for American goods, the character of the market, the prices to be had, the kind of packages in which they ought to put up their goods, the best methods of shipment, the grades of the articles they can sell; could furnish samples of what is sold there and the credit methods of the countries. We could find out what the English are doing, what the Germans are doing, and what the market is or can be made.

We are informed by the Department of Commerce that there is a market for flour in competition with English mills. In my district we have cities like Evansville, Mount Vernon, Boonville, Rockport, Grandview, Princeton, Petersburg, Elberfeld, New Harmony, and other places whose trade in South America would depend upon the way the packages are put up, the kind of flour offered, the kind of wheat, the baking facilities there, whether done in a domestic way or whether they generally use baker's bread, and a great many other things which depend upon the character of the flour offered, whether high-patent flour or just straight flour.

As I understand the project, I, as a Member of Congress, could call upon any of my constituents to let the Department of Commerce inform them just what kind of facts they want and the Department of Commerce will get them for these manufacturers. In other words, there will be a deliberate organization, Secretary Redfield says, for the purpose of bringing this information, not only into Washington and filing it here but for sending it right out to the manufacturers and merchants, which is the purpose of the whole thing. At the present time our consular agents abroad, as Mr. PHELAN has pointed out, investigate foreign conditions and report on them. While they have rendered valuable service, very much better service can be obtained through these special attachés, whose sole business will be to investigate and report on the trade conditions. They will obtain for us information which will be invaluable to our American manufacturers.

We need to saturate ourselves with the customs of the people whom we now so little understand, study them, study their trade methods, and only can we do this by putting ourselves seriously on the competitive basis. To bring about the desired returns, in other words, we must acquaint ourselves with the great Republics on our south, who call us their "big brother," by making it our systematic business to establish trade relations as they should be established.

In the past we have been haphazard in our relations with South America. We thought they were so big and so near to us that they would come to us with their own accord. It is true that the natural conditions, namely, our great and expansive industries and a people on the south of us ready to exchange riches for riches, served to bring our manufacturers in closer touch with South America. But what was lacking was a well-organized system. We have begun to have a voluminous trade with our neighbors. But there is no system for developing and holding what prestige we have attained; there is no well-defined basis for future operations. But many other countries, Germany in particular, have already made great progress in cinching the South American trade.

The German trade getter spends years in studying foreign trade conditions. He saturates himself with the knowledge of the country where he is to be his firm's business getter. There are many lessons which we could learn from Germany, but we do not have to spend our time studying the German mode of conquest; our rallying cry is to throw our hats in the ring and establish our system of saturation by means of the Government agents advocated so rightfully by Secretary Redfield.

The manufacturers of this country are entitled to all we can throw in their way in respect to stimulating the channels of foreign trade to our south. They have expanded in the past practically by their own disconnected efforts. The moral effect of our Government making serious effort to cooperate with them on a systematic basis would be great in itself; the actual results our Nation would bring to industries in the way of building up trade would be much more than we now anticipate; but we owe the manufacturers something, not only for the good of the country at large but because we have in reality shamefully neglected this end of our string in the past. We have appropriated millions and millions for agricultural purposes, for good roads, for science, for rivers and harbors, and for interoceanic highways, but comparatively little attention has been paid to the manufacturer. We have let him shift for himself. We have forgotten that a guiding hand can be extended to them with results that will be stupendous if we can but read the handwriting of Secretary Redfield and other champions of this movement.

This is a matter that is also of interest to the laboring man, as an expansion in industry always means additional employment.

Why, Peru, Chile, Brazil, and Argentina have by themselves an aggregate population of over 35,000,000, or more than one-third of our own population, as given in the last Federal census. Can we grasp what this means?

In the year 1910 the total exports to all South America from the United States was $93,246,820. Of this amount almost half, or $40,694,941, represented exports of our goods to the country of Argentina. Is it not the business of our Government to look into the matter of giving special attention to the development of trade in such countries as Peru, Chile, and Brazil, since the population of Argentina is only one-fifth of the total population of the four countries in the aggregate? Another phase of the situation seems pertinent to me. For some years foreign countries have been getting a larger share of trade from Argentina than from Chile, Peru, and Brazil, and for that reason I cite certain facts in regard to the imports of Argentina which will serve to illustrate conditions in the four countries as a whole. The imports of Argentina for 1909

from all the world was $302,756,000. The imports from the United States during the same year were $43,069,000. In other words, we are selling about one-seventh of the goods bought by Argentina from all the world. This is far from the proportion that should prevail. We should have at least half the trade of all important South American countries. What strides are we making to overcome the deficit? The figures I now give will show that we are making practically no headway. While it is true that our exports to Argentina increased during the 10-year period up to 1910 to the extent of 178 per cent, it must be considered that the exports from the entire world to Argentina increased 160 per cent during the same period. Looking at it from another angle, we observe that in the year 1899 our exports to Argentina were 13.2 per cent of the total exports from all countries, while 10 years later, in 1909, our exports to Argentina were 14.2 per cent of the total. The gain is so small as to be hardly noticeable.

Hon. David Kinley, of the University of Illinois, recently said on the subject of the promotion of trade with South America:

> Now, it is clear that very few manufacturers or exporting houses can afford to undertake the establishment and financing of a large export business at any South American center. This requires considerable capital and, above all, a sure supply of goods regularly available. The most feasible plan, therefore, would be the organization of a commission house or agency, established in the principal South American cities, to cultivate the market for American products, with a capital sufficient to compete with English, French, German, and Belgian houses in the matter of granting credit, and representing a sufficient variety of large firms in the United States to be sure that orders would be promptly filled with goods made to suit the needs and prejudices of the country at prices which would compete with those of other foreign sellers. These agencies or commission houses should employ natives as largely as possible and should insist that their superior officers shall also speak the language of the country. In this way can existing needs become known and properly met and new wants stimulated and developed. The capital at command should be large enough to afford credit to purchasers of our goods when the American exporter himself is not willing or able to do so. Above all things, the agency or commission house should be able to guarantee the quality of the goods and establish a reputation for scrupulously honest dealing. There are probably few better markets in the world for automobiles than Buenos Aires in proportion to its population, yet few American machines are seen there. The reason given is that when the demand for automobiles first appeared it was supplied with machines of American manufacture which turned out to be shoddily built, although gaudily painted and varnished. Of course they broke down after a little use, and the prejudice against American machines became so strong that a would-be purchaser now would hardly consider a proposal to buy one.

I think Secretary Redfield has gone a step farther in pointing out the way of a great commerce than suggested by Mr. Kinley. While Mr. Kinley no doubt had in mind the development of trade through concerted action of the producers themselves, Secretary Redfield has supplemented this with a suggestion that the Government go about it systematically and pave the way for the activities for our producers, and not leave the producers to fight their own battles in the foreign-trade conquest.

Eight-Hour Law for Women in District of Columbia.

SPEECH
OF
HON. GEORGE R. SMITH,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, February 12, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (S. 1294) to regulate the hours of employment and safeguard the health of females employed in the District of Columbia.

Mr. SMITH of Minnesota. Mr. Chairman, I have always felt that the resources of this country are so bountiful that all our people could be taken care of in plenty, and I believe that our first duty is toward the women and children. Therefore I am in favor of this measure.

I do not believe that increased idleness to the extent that this bill provides for is going to be a detriment. I think it is going to be a blessing. It is very doubtful whether the man who works 12 hours a day accomplishes more than the man who works only 8 hours a day. It is not the time you put in, but it is the concentration that you apply in your work, the concentration of your mind upon your work, that gets the results; and I think we would be very derelict at this time if we did not see to it that this measure became a law as soon as possible.

There is need for it; there is demand for it; and when we consider that the women in these hotels and places of that kind are compelled on many occasions to work 14 and 15 hours a day, it is a matter that we can point to only with regret. On the other hand, it will be a matter that we can point to with pride if we can regulate it so that they can have decent hours and sanitary conditions under which to work.

It has also been suggested that it is unfair to have inspectors appointed. Why, it is the only effective way in which you can enforce a measure of this kind. If I am running a manufacturing plant, I want to be on the same basis with my neighbor who is running a similar manufacturing plant; if I am law-abiding and live within the law, I want my neighbor to be law-abiding and to live within the law also. It would be unwise to leave the enforcement of the law to the employees themselves. Therefore, I believe that the inspectors provided for in this bill are necessary. [Applause.]

The Larger Outlook.

EXTENSION OF REMARKS
OF
HON. WALTER I. McCOY,
OF NEW JERSEY,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, April 21, 1914.

Mr. McCOY. Mr. Chairman, under the leave granted to extend my remarks in the RECORD, I include an address on "The Larger Outlook," delivered by Hon. William C. Redfield, Secretary of Commerce, before the University of California, Berkeley, Cal., March 23, 1914.

ADDRESS ON "THE LARGER OUTLOOK" DELIVERED BY HON. WILLIAM C. REDFIELD, SECRETARY OF COMMERCE, BEFORE THE UNIVERSITY OF CALIFORNIA, BERKELEY, CAL., MARCH 23, 1914.

One of the most interesting movements of to-day is the growing social consciousness. The cult of the individual, while by no means abandoned, has for a peer, if not a superior, this awakened and practical sense of vital social relationship. The movement of which I speak is not "socialism." It does not seem to be the result of any distinct social philosophy. It is not led as a unified whole by any definite group of leaders. Rather do men prominent in many walks of life associate themselves with it as with a force hardly to be ignored than as one which they take in charge and control. It is not paternalism, though here and there it may seem to have paternalistic features. The city, State, and Nation follow in this matter rather than lead. What they may do is the result of a conviction and purpose formed among their citizens which impels them to action rather than the outcome of fatherly kindness extended to needy and thoughtless children. The movement is not altruism. This is indeed distinctly disavowed. It has features in which altruists rejoice, but often where it is most highly developed it claims to be severely practical and, indeed, to have a sound economic basis. It surely is not pessimism, for it is the development of a social hope, and in all its forms is the farthest removed from doubt and fear. It is not empty optimism, for it does not take the form so much of a belief that things are and shall be well as it does that of the doing of those things which count for further social and spiritual progress. It is not the work of the few, but the outcome, in large degree probably, of the almost or quite unconscious thought of the many. It has not been imposed from above, but has worked its way up from beneath.

The movement is as interesting in its variety and its apparent spontaneity as in its great extent and in the degree to which it is altering domestic, business, and industrial life. It has become almost a habit for the largest retail establishments to provide restaurants and rest rooms, often hospitals, for their employees. A manufacturer said to me a few weeks ago that the factory matron on rainy mornings saw that the girls replaced their wet shoes, stockings, and skirts with dry ones supplied by the company. During the day the wet garments, laid aside in the morning, were dried and pressed, and the girls put them on before leaving for home in the evening. If it happened to rain heavily when the works closed at night, umbrellas were provided by the company that the girls might not get wet going home. The matter was not made a point of special mention. It was merely one of a number of things illustrating modern methods of management.

One of the large associations of retailers is planning a scheme of sharing profits among the force of salesmen and clerks. A great warehousing company employs a welfare secretary, whose influence extends among the workmen on the docks and into their homes. A factory opens the way to thrift and endeavor

by engaging that its piecework rates shall not be cut because the workmen earn largely. In the city of New York, which is sometimes said to be given over to the money power, the efficient social service of the Young Men's and Young Women's Christian Associations results in raising within a fortnight recently four millions for extending their work. An officer of a steel foundry writing me of the social service carried on in his works dwells with delight on the quality of cake made in their club kitchen. A large department store recently showed me its laundry and bakery with pride. On the office table in a large eastern factory is a silver loving cup, the gift of 1,500 working girls to their employer on the fiftieth anniversary of the business.

The President of the United States writes of a new freedom, which is, in substance, the clearing of the path of progress for the average man. The Nation regards a great industrial dispute not so much as a far-off matter, which solely concerns the disputants, but rather as affecting the body politic like something which deranges the nerves of our physical frame.

We say commonly such and such a thing ought to be investigated. Why ought it? Why use the word "ought"? What obligation is there unless it be a social one? Why not let the parties immediately concerned fight it out? Why worry State or Nation over a local affair? We all answer these questions readily now for we have grown to see that these local things have their general bearings, and that the average citizen must be free from the restraints of monopoly or the constraints of financial power to work out his own salvation. So the social quarrel, take what form it may, concerns us all. The social consciousness may not have fully found itself, but it is busily at work nevertheless. It appears in legislation at our State and national capitals often in crude form, but I think never without a true sense of noblesse oblige, meaning that the duty is laid upon those who make and enforce the law to see to it that the humblest man gets his equitable chance. So workmen's compensation acts and pure-food laws have come into being. So public-service commissions exist providing for the citizen that power of control which else might be held in the hands of those who would make the phrase "public utilities" a sarcasm. So great corporate units that were masterful once have learned the lesson of service. So womankind assert their right on a social basis to join in the direction of those things in which they are daily intimately concerned. The same great movement appears in the growing demand for vocational and industrial training. This has for its basis frankly the social ideal that it is not morally right or economically sound that our children shall longer go untaught in the practical work of life. The advocates of industrial education plead, in substance, the old saying:

Satan finds some mischief still for idle hands to do.

And moralist and economist join hands in calling for practical training. They will tell you that a factory full of willing but untaught working men or women involves loss to the manufacturer and loss, perhaps even danger, to the worker. Both wage and product are held down because the worker's mind and hand have not been taught the lesson of skilled industry, and the lesser product cuts down the earnings of the owner and the smaller wage cramps the home of the worker. Many a working woman would be farther away from the social danger line had she in her girlhood been thoroughly taught the art of self-support. Private and public organizations are taking up this work. The Nation is studying now how it can best aid it, and some of our States have enacted wise legislation for what is in very truth the saving of a large part of its children.

It is not uncommon now to hear that mail-order houses and great industrial organizations have insured the lives of all their working people. I venture to think five years ago few if any knew of such a thing. Now banks and retailers, factories and merchants think this course wise. Large factories now employ physicians, finding it is profitable to guide their workmen in the paths of health. In one industrial city the factories unite not only to assist in providing workmen with recreation and with educational advantages, but to secure them continued employment.

The truth is that a new social bill of rights is being practically worked out in our land; here a little, there a little; line upon line in this place; precept upon precept in another. Men have not known that they were working out a revolution. Many of them who have had part in the movement have not thought of what they did or of what others were doing as aught but an individual thing. Many are not conscious how far the current has run in other places. If, however, we were now to attempt to set back the car of social progress to the point where it stood even 10 years ago we would speedily become conscious how far it had run in that interval. Indeed, the program of one of our political parties takes shrewd advantage of this social consciousness and bases its plea for power on the working out by law of social reforms.

The impulse of this mighty force is felt in our political debates, and is reflected in party platforms. One may scarcely take up the morning paper or read his monthly magazine without seeing, if he has vision, the daily strides this movement makes. It is the power that condemns monopoly. It and no other is the force which demands the removal of privilege. It is that which says the creature of the State may and shall be regulated by the State. Crudely often, powerfully always, this new force speaks its will. "He that hath ears to hear let him hear."

It follows almost, of course, that advantage will be taken by selfish men of this great power to enhance their personal fortunes. It is natural, too, that sincere advocates of the cause shall sometimes be more impassioned than accurate; just as much has been said and done on the side of freedom that would hardly be consistent with true liberty. More than one great cause has evinced its greatness by surviving the mistakes of its own advocates. The wave of social advance shows striking irregularities. Here it deals with the local, there with the national; yonder loud voices discuss the trivial; in quiet places prophets dream of the ideal. It needs to be remembered, as a truth in national and economic life as well as in religion, that the unseen is often the eternal.

It is not many weeks since that I was stating with vigor my views on a certain public situation. The incidental bearings of my remarks brought out from a friend the retort that the gentleman had a "keen sense of the obvious." The sarcasm did its work then and since. Is it not true that my friend's clever bon mot characterizes well much of our public thinking and debate? We have become socially conscious. Have we become socially thoughtful?

If I have clearly suggested to you something of the nature and extent of existing social movements and of the living as well as the grave issues that lie therein, I am sure it will be plain also that we need in our public discussions not only accurate information on the subject of debate, in addition to a righteous and unselfish motive, but also, I hope, a sense of public proportion lest our vision be distorted and we spend on the unimportant the mental energy, physical effort, and financial power that should be exerted upon the essential.

I remember to have heard a sermon from a great divine upon a text that has wide implications. It was this: "Thou hast taken me and thou hast set me in a large place." May we not try to day to realize a little of the largeness of our environment, to take ourselves out, if you please, from local and contiguous influences and think in great areas?

Let us briefly, then, consider how we deal with human life. We value it, of course. That is, we say we do. None of us individually gives it up willingly. Happily, few of us would take it willingly. But, collectively, do we care very much about it? It has through many years and until recently been our reproach in the eyes of the world that we sacrificed many of our children to keep a national holiday. The cruelty of the deed was masked under the meaningless phrase "Boys will be boys." At last this particular motor center of our national conscience aroused action. We have nearly stopped the sacrifice. Consider, however, what remains to be done. We deplore the loss of life and human suffering which arise from disturbed conditions in our sister Republic to the south. The red pictures of the battle fields of the Civil War make us quiver. We are shocked that the Balkan wars cost nearly half a million dead or wounded. Many of us know from sad experience what death means in our own homes. It is a truism to say that it brings in its train many ills beside bereavement. Bereavement of itself alone is hard enough to bear.

Now, there have died in the United States in the last six months from preventable causes more people than were slain in the Civil War and more, many times more, than all that have died in the Mexican troubles. A special student of this problem, connected with one of our great life insurance companies, using the conclusions of Prof. Irving Fisher, who investigated this subject for the Government in 1908 as a member of the National Conservation Commission, tells me that every year in the United States 650,000 people die from preventable diseases and accidents. Observe that word "preventable." We know how to prevent these people from dying, but still they die. We know how to prevent their deaths. We do not prevent them. We are not a cruel people, but few seem very much to care, at least most do not care enough to get seriously concerned about it. A recent publication points out that while the Government spends over four and a half millions yearly on the Forestry Service, it spends in the same time but little over half that to protect the

health of us all or to check the annual loss of over 600,000 lives, and it adds:

Does the Government really place a higher valuation upon trees than upon men? Not at all.

The reason we do things in this way is because—that is the way we do.

This may not be a good reason, but there seems to be no other.

Our advocates of peace are vocal and varied in their attacks upon war. I do not recall them as being excited over the massacres of peace. Put it differently. Yesterday 2,000 people died whose lives we knew how to save. A like number will die to-day and again to-morrow. Yet it is not what politicians call an issue. Our legislatures do not make it the subject of deliberation. No party platform contains a thought about it. It is not the subject of frequent discussion in Congress. With fine unselfishness, indeed, the medical world wrestles hourly with the problem. An Eastern State has recently established a health board with sweeping powers. Here and there efficient societies in one form or another do sporadic work, but the problem remains generally unattacked in any aggressive, vigorous spirit. The treasuries of State and Nation are not wide open in this sacred cause. We may issue bonds for the slaughter of war. We do not issue them to save the killing in peace.

This some of you may think extreme. If so, believe me, the facts are not extreme, but real, and I am purposely stating it in what is intended to be a striking way, because I hope it may not be long before we attack this dreadful problem with more vigor. One must not ignore the growth of sanitation, the spirit of cleanliness, the great victories of medical science and surgery, or the lowering of the death rate. All are admirable; some of them wonderfully efficient in their way but, unhappily, not yet sufficient. Despite all that has yet been done still over 600,000 needlessly die.

My present purpose, however, is to show how little the public as a whole thinks about this subject. Yet it is worth thought, for quite apart from those who will sorrow this year and are sorrowing now from losses that are needless, the money value of these deaths, which we know how to prevent and yet permit, is staggering. By conservative estimate it is placed at a thousand millions, a full billion, every year. That is equal to our whole national debt. It is about equal to our entire annual national expenditure. Stated differently, it means that we can save, for we know how to save; but we do not save a sum equal to all that we annually expend for the support of our National Government and all the pain besides. It is not for lack of means that this sacrifice goes on. Of all the world's great nations we have the smallest debt. The obligations of Nation, States, counties, and cities taken together total barely half the debt of France, and we are far better able to pay than she. The deposits in the savings banks alone of three of our Eastern States form a total sufficient to pay the debt of the Nation and of all our States and counties as well. The difficulty is that we do not visualize the problem.

What we need to have aroused is a sense of proportionate values. There are men who worry over a battleship or two; but every month by saving those in ways that are well known who needlessly die we could more than pay the cost of four battleships and save a lot of human agony besides. But the battleships will be actively discussed and the money will probably be voted for them, while few as yet would follow him who suggested a like expenditure for the public health.

It would be easy to state this case more strongly by including those also who have sickness which is preventable. It is the statement of the same authority I am quoting that there are a million and a half people constantly ill in the United States from causes which are well known to be preventable, and that this entails a loss of five hundred millions per annum; so that from preventable death and preventable illness we waste each year fifteen hundred millions of dollars. This is a sum well worth saving; but if it were not so; the human suffering would be worth the effort which would end it. Here is no act of God, but instead the neglect of man.

Let us look in another direction. You are all aware that a discussion as to a proposed advance in freight rates on the eastern railways is going on before the Interstate Commerce Commission. It has aroused widespread comment in the daily press and in periodical literature. Publicists have journeyed far to discuss it and men of resource have made it the basis of energetic action. The business of the land is said by some to wait upon the decision. The sum involved seems large. It is stated to be about an additional hundred millions of dollars annually, which is, of course, a great amount, for charging which upon the cost of transportation due warrant must be shown. I do not assume to judge either directly or by the faintest implication as to the merits of the question. Its importance is conceded; but surely it is proper to compare it in relative importance with other public matters of expenditure or waste.

Let us for the moment assume that the hundred millions is to be spent; and, to put it in the worst way, let us assume that it is to be spent without any adequate return, though I do not at all think that to be the case. That would be bad; but it is quite possible to save it all in other ways. Let us look for a moment at our losses from fires, referring not to great conflagrations such as your metropolis endured with exemplary fortitude and from which it has shown such a magnificent reaction. I refer now to the regular run of fires; to the ordinary, usual, almost, I might say, systematic, certainly I may say habitual, loss which we suffer from fires. Since 1906 this direct loss has never been in any year as little as two hundred millions in any one year. It has risen as high as two hundred and thirty millions in three of these years. If we add to this direct waste the sum total of the cost of public and private fire protection and personnel, in so far as this cost may be increased by careless building and thoughtlessness of the problem, the sum would be vastly increased. No one, to my knowledge, has ever determined it with accuracy. But it is certainly safe to say that the total loss thus incurred, which we know how to save if we will go about it, is many times greater than the additional impost upon the country through the proposed increase of transportation rates. In a book called The Conquest of Fire, published this year, the conditions are vividly stated. The author says:

Do you know that while you are reading these lines an entire fortune is being burned up; that a dwelling is in flames, a factory or a church is being destroyed, a store or a schoolhouse is on fire, a hotel or a theater is in ashes; that somewhere at this instant people are fleeing from their homes?

A thousand dollars a minute—that is the tribute that fire is extorting from American civilization, including the cost of maintaining systems to prevent and extinguish fires. Every three minutes a new fire is breaking out somewhere in America. It is one continuous conflagration from hour to hour—a ceaseless roar of flames—which involves an expenditure of $1,500,000 every 24 hours and imperils thousands of lives.

To fight fire in the United States requires an army greater in number than the regular soldiery which defends our Nation against invasion by foreign foes. More money is expended in conquering fire than in building battleships. The cost of the water required to quench flames in this country far exceeds the cost of ammunition to combat an enemy.

The average loss of property by fire in America, including the cost of prevention of fire each year, is more than the total annual production of gold, silver, copper, and petroleum. The value of buildings destroyed by fire each year equals one-half the value of all the buildings erected. It is a sum more than sufficient to construct a new Panama Canal every 12 months.

Small wonder that the writer adds: "Where will it end?"

To state it differently, we get quite stirred by the question whether the average freight rate per ton-mile shall be 0.0075 or 0.0079 of a cent; but we do not get excited at all as to whether we shall lose many times the sum involved in another way which we know how to prevent. We lost it this year; we shall lose it next year; and we do not seem to care very much about it; not enough, at least, to give to it a small fraction of the thought given to another and smaller matter. Again, we must not minimize the progress making toward fire prevention. It is real, but it is as yet so small in proportion to the problem as to have had no controlling effect upon the losses. On the day these lines were written a clubhouse in St. Louis burned, with sad loss of useful lives, and a noble church in Brooklyn was a victim on the altar of our carelessness. We take fearful risks with a calm that would be heroic were it not rather criminal. While this address was in preparation I saw in an industrial city a factory in which several hundred girls were employed in the upper stories of an old building of such a character and so arranged as to make it almost certain that half of them would be sacrificed if the fire occurred for which every favorable arrangement exists.

Again, by way of illustrating how the social consciousness may need illumination on matters of serious importance, this reference to the transportation rates leads to a suggestion on a matter which is collateral thereto. Come with me to the railway station, if you please, and let us stand there as a freight train goes by. Suppose as we wait there looking at it we concede the worst that has been charged against railway managers and financiers. Perhaps that is going rather far, yet I think even the managers and the bankers would admit that all things have not always been as they should. Admit them all, however, and despite their faults this thing they have done, they have so worked that every ton of freight in that train and its following trains is being carried at an average rate of three-fourths of a cent for a mile, and this is the lowest average rate of transportation that is given to any of the great industrial peoples. Doubtless there are points in which economies should be and will be made. Doubtless the public is entitled to the benefit of such economies. Unquestionably it is right that the management of these great public servants should be subject to the

keenest public criticism. The men in charge of these great corporate units must justify their positions by good and reasonable service. There should be neither let nor hindrance to the right, even the duty, of criticism in press or on platform. The right of the humblest man to safe transportation for himself and his goods at the lowest attainable rate is greater than the privilege of profit to any corporation. But let us have here also a sense of proportion and let us not blind ourselves to the large by looking at that which is less, important though it may be.

Come with me now from the railway station and stand in the city street. Watch the teams go by—some empty, some partly filled, some loaded. All these goods on these carts and trucks have been carried by the railway. That has cost you three-fourths of a cent average rate per ton-mile. What does this part of the process on the cart or the truck cost you? As a total, nobody knows. No one has ever taken the trouble to find out. It would be a lot of trouble, but it is worth finding out. Some things are known about this cartage problem that make one gasp at what they seem to imply. For example, it appears to be the truth, though I warn you we are speaking now of a subject on which we may not dogmatize, for our knowledge is scanty, that many of the goods we use or eat are, in one form or another, carted from 7 to 40 times. That this factor of cartage forms a very considerable portion of their cost we more than suspect. It is a much larger element of expense than are railway freights, possibly many times more.

Let us see if we can get a few glimpses of it. The Office of Public Roads of the Department of Agriculture advises me that it estimates the average cost of hauling on unimproved roads to vary between 20 and 35 cents per ton-mile. Taking the lowest of these, which is doubtless less than the average, the cost of cartage under these conditions is over 25 times greater per ton-mile than the average railway haul. You observe I am using the smaller figures and in the calculation have given the cartage the benefit. I might, for example, have said over 26 times, but 25 times will do.

Let us see how this works out with our crops. Take the year 1912 as a basis and reckon upon 13 standard crops, including corn, cotton and cotton seed, hay, oats, potatoes, wheat, and barley. It is estimated that these crops aggregated almost 267,000,000 tons and that they were hauled on all our roads an average of such a distance in a year of 300 days as to make the total cartage probably cover over 2,400,000,000 ton-miles. I am using a statement prepared by the Office of Public Roads on January 2, 1913. It is open to revision, and, as you will see, there is ample room for revision without altering certain striking results. Now, if these 2,400,000,000 ton-miles of crops had been moved at the average freight rate of 1 cent per ton-mile, which is one-third greater rate than the average freight rate for all commodities, the result would have been a transportation cost on railroad trains of $24,000,000.

Turning now to the cartage on these crops, let us assume that the 2,400,000,000 ton-miles were hauled on unimproved roads at the lowest cost stated for such cartage of 20 cents per ton-mile, and then this item of cost becomes $480,000,000. In other words, the cartage cost is 20 times the railway cost, and yet the benefit in the comparison has been given to the cartage factor by taking it at the lowest for unimproved roads and by adding one-third to the average railway cost.

A forthcoming publication of the Office of Public Roads will state that ton-mile costs as low as 10 cents are common in Europe, and on unimproved roads in Virginia and Oregon such varying materials as crossties and apples have been carried recently for a similar figure. Taken at its best, therefore, the excess of cartage cost over that of railway transit is very large, but these facts seem to show that a saving is possible in the charges which the commodities we use now bear equal to if not in excess of all we now pay for railway freights. It is more than possible that there are men who regard railway charges as a serious burden, but who do not yet grasp the fact that deep mud or sand in the alleged roads on which they haul their produce and supplies costs them many times more.

Inquiry conducted in Washington by the Dairy Division of the Department of Agriculture showed that the total mileage of the 202 wagons delivering milk was over eight times the mileage of the city streets on which the milk wagons traveled. In other words, the duplication of cartage amounted to over eight times. It is known that the cost of getting milk from the producer to consumer is often as high as 50 per cent of the final price, and that cartage is the major part of the expense. It is, furthermore, known that this cartage cost in general is increasing.

An officer in the Agricultural Department shipped 60 bushels of apples from his farm to Washington, 92 miles. The cost per barrel to cart it from the station in Washington to each of several points in the city was greater than the railway freight on that barrel for the 92 miles.

The head of a large department store informs me that the average cost for delivery from his store to the customer is 7 cents for each and every package sent.

I have been told that the cost of delivering potatoes from the retail grocer in New York to residences within a mile of the grocer's store is greater than the combined cost of transporting those potatoes from Maine to New York City and delivering them from car or market to grocer. One gets hints of vast sums spent in each of many great cities for this item of cartage. If it is considered that there are ten times as many miles of roads in our country as there are of railroads, and that the cartage of our merchandise is in city and country often duplicated many times, and that the relative cost of the two operations is probably as 20 to 1, it is certainly within the possibilities that in this single factor which we are considering there lies an element of the cost of living greater—perhaps much greater—than the total transportation charges by railway, about which so much is said. Would it not be wise for the States or the Nation to take a traffic census in order to learn just what this problem is, how far waste and duplication exist, and whether we may not save enough in this direction alone to make our present troubles seem humorous?

The Director of the Census has been instructed by me to make inquiries into the cost of cartage in a number of cities of different sizes, and in some country districts as well, in order to begin the shedding of light upon the subject.

I have already touched upon the last topic which I shall add to this address, already overlong. It has to do with the effectiveness of our industries. We have been justifiably a proud people, whose achievements within a brief period have warranted us in assuming a foremost position among the family of nations. Nay, we have done enough to make it affectation if we did not take our proper place. We are by normal right in the front rank. Therefore it hurts us to be told that in any respect we are backward—we who have such initiative; we that conquered mountain and plain and spread our republican empire from sea to sea in so brief a space; we from whose activities have arisen whole vocabularies expressing energy and force. Yet it has been true that in the very rush of our energy we have been sometimes thoughtless of the most effective methods and careless about the actual knowledge of what things cost. In part this has resulted from doing work under what were at first pioneer conditions. These have now changed. Business has become a profession, and the factory manager is a highly trained man dealing with scientific problems. It is high time it was so, for study in many a mill develops masses of waste where in the past labor and material have been misplaced so as either to cause much direct loss or prevent great gain. It is amazing what study shows in these directions. I have known of a process in a modern factory multiplied by nine in its output within a year; of another in the same shop multiplied by five; of another in which the change was such that the work was done in one twenty-eighth of the time theretofore taken. There is going on a searching self-criticism in many of our industries which can only result in savings so great as to make many of the expenses which we publicly discuss seem small by comparison.

Chief, perhaps, among the great economic and social gains is that which will arise when the happy day shall come when the young people of this country shall, let us say at the age of 18, or even less in some cases, all know how to do some one thing well. There are two terrible and preventable losses in our American homes. One is that from needless deaths, with needless sickness; the other is that from untrained lives. The one takes away; the other fails to add. The one brings awful losses; the other fails to provide. It seems quite possible for industrial training to add 10 years of a full journeyman's wage to the working life of a young mechanic. To take away the slow and painful task of learning by attrition; to add many productive years arising from vocational training; to take away the uncertainty from the lives of the humble and give them the proud manliness and womanliness that comes from certitude of ability in self-support; to substitute for an enforced idleness arising from ignorance the forward march of well-directed industry—all this is possible, and when it shall have been wrought into fact our industries will blossom to a degree which they do not yet know; poverty will be lightened; self-respect and courage will be increased; and peace and prosperity will be promoted.

To-day we waste our boys and girls at a fearful rate by turning them out at from 14 to 16 years of age into a busy world, in which they have been taught to take no definite part. It is a world in which they must, we tell them, do something, but most of them know neither what to do nor how to do it.

In this center of learning it would be most unfit to decry our popular education even if one were disposed to condemn it, which I am not. The situation is such that what we do should still be done while something that we do not do should no longer be left undone. Surely we are in sympathy with the struggle against child labor; with the contest against the spirit that stains the fair name of industry by making our little people the victims of its processes. No State can prosper in which "the cry of the children" goes up from burdened hearts and toil-worn lives. We must not therefore be misunderstood as out of sympathy with those who would save the children of the poor when we say their work sometimes covers but the negative side of the problem and will not be complete till an affirmative is added. Not only must the little children refrain from toil, but they must be taught to labor intelligently ere they are grown to youth. One-half, and only half, the task is done for them when they are kept out of the mill. Their lives may still be largely wasted if they are not taught how they shall do their work when they are grown. Keep the children under 14 years of age out of the mills. This is well, but it is not well that they should go into the mills untrained when they are 16. Prohibition of work for children without education for work of children does not solve the problem, but merely changes it. The advocates of child-labor laws who ignore the necessity of industrial-education laws remind me that—

Ruin is wrought by want of thought
As well as by want of heart.

To the problems of life and fire and distribution and education, which we have too briefly discussed, let us add one of a physical nature. The ravages of flood and tempest are not unknown to most of our sisterhood of States, though happily for us neither you in your western home nor I in my eastern one have been the worst sufferers. How patiently we on whom the burden has fallen least bear with the trials of our brethren in the Mississippi Valley. Not many weeks since, in a city on the Ohio, men talked nervously with me of the snow that was falling and of what it might mean if it were followed by rain. They showed where the water had been more than once and spoke with a certain foreboding of what might happen again. A day or two later I slept in a room which the swollen waters had within the year invaded. In a great department store a brass band on a white column high above my head showed where the waters had stood. All through the Miami Valley the wrecks of bridges are to-day sad witnesses of recent tragedy.

Nor is this a local matter. From fair Louisiana up the Mississippi Valley, diverging along the courses of the three great streams which form the lower river, and following each to its source; along these thousands of miles, I say, the tale of ruin and of wreck is told, and men each spring rest under the shadow of a fear. From Pittsburgh to Montana, from Minnesota to the Gulf, the dread exists. The loss in past years has been frightful, and the toll of lives that the waters have taken would by comparison make some battle fields seem a dream of peace. More, much more, than the Panama Canal has cost has been swept away by the raging torrents that have worked their will almost unchecked heretofore, and for whose destructive forces the way remains still far too open.

It is a truism to say that if we can save a future loss equal to that of the past a vast capital outlay would be well spent. Yet, as one looks at the devastation that has been and that seems certain again to come and tries to visualize it, how strange it is that the thought of preventing these tragedies makes scarcely a ripple on the surface of our public opinion.

It is not many weeks ago that the engineer in charge of the lower Mississippi told me that at one time in the recent floods there were in the district of which he had charge five crevasses at once, each of which discharged as much water as regularly flows over Niagara Falls. Yet, though this strikes you and me with an awful sense of destroying power, we are hardly as much concerned about it as we are in the question whether certain American ships shall pay tolls for passing through the Panama Canal. To be sure, one is current news and the other, in its last phase, is about a year old, and memories are short, save among the actual sufferers. We must not forget to honor the men who carry the burden on their hearts and minds of bringing to the public mind its urgent duty in this matter. Would not a due sense of proportion say that the national honor was so bound up in solving this flood problem that efforts should not cease, funds in abundance should not be withheld, and science should not be stinted until once for all, in its many phases and despite its acknowledged difficulties, this problem should be reproached, that our brothers and our sisters may no longer be victims to the waters?

Very briefly and inadequately we have dealt with certain elements of national waste, believing them to be more vital to us as citizens than many things to which we give greater heed.

There remains but one thing to say. The colleges and universities of the land, and in a special sense those which are supported by the public funds, have laid upon them the responsibility of training men and women in broad thinking on public problems. The opera of Pinafore is perhaps not classic literature, but the phrase therein that "things are seldom what they seem" has a fertile suggestion for the discussion of public and economic problems. Our teaching in economics also should, I think, aim to give men vision, to take away the "keen sense of the obvious" and to replace it with insight. The superficial thinker in democracy is a danger to the State only second to the demagogue. That citizen is needed in all public discussions, who, while he will give due weight to the important problems, will balance them truly in the mighty scale of things; will not be swept from his feet by every wind of passion or prejudice or partiality; will hold the balance true, remembering that overhead reigns not an absentee Deity who sees "through a glass darkly," but instead the "God of things as they are."

Panama Canal Tolls.

EXTENSION OF REMARKS

OF

HON. AARON S. KREIDER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 20, 1914.

Mr. KREIDER. Mr. Speaker, I think it is generally agreed that this entire controversy on the Panama Canal tolls centers on two words contained in the first paragraph of the third article in the Hay-Pauncefote treaty, and the question is, Does "all nations" include the United States, or does it not? I shall not debate this question of the repeal of this clause from an economic standpoint. Were I to do so, I would favor a toll charge on American vessels, for the reason that the people using the canal should pay a sufficient sum for its maintenance and operating expenses. The entire Nation should not be taxed for this purpose, which they will be in case the revenue derived from the operation of the canal is insufficient to pay these expenses and the money to do so is appropriated out of the Treasury of the United States.

The question as it is brought to us at this time through the message of the President of the United States eliminates this phase of the matter entirely. The question is, Can we exempt our own merchant vessels without violating our treaty with England? I am free to say that I have no sympathy with those who accuse those in favor of the repeal of this clause as catering to English favor and accuse them with a lack of patriotism. I believe that they are as patriotic as I am, and it is their extreme desire to live up to the letter and spirit of the treaty that actuates their course in this matter, and this certainly is a sincerely patriotic position. They feel, whether the treaty was a wise one or not, we should as American citizens live up to that treaty, and in this I thoroughly agree with them. If we can be successfully convinced that we are not living up to the spirit and letter of our agreement, then we should repeal this clause and even apologize for ever having passed such a provision. But let us consider the conditions that existed when this treaty was made, and the object of the treaty. The Hay-Pauncefote treaty expressly declared in its preamble to be for the purpose of facilitating of a canal to connect the Atlantic and Pacific Oceans by whatever route might be considered expedient and "to remove" any objection which may arise out of the convention of the 19th of April, 1850, commonly called the Clayton-Bulwer treaty, and the construction of such canal under the auspices of the Government of the United States "without impairing the general principle of neutralization established in article 8 of that convention." So that the Hay-Pauncefote treaty expressly supersedes the Clayton-Bulwer treaty. Now, let us consider for a moment what were the forces or reasons why the Government of the United States desired to abrogate the Clayton-Bulwer treaty and establish new treaty relations. It will be recalled that at the outbreak of the Spanish-American War the great battleship *Oregon* was on the Pacific Ocean and we were obliged to bring that vessel to the Atlantic side, which of necessity required a great deal of time, entailed

a great deal of risk, and it was at once recognized that a canal across the Isthmus is almost indispensable to the American Government in times of war. At this time the French had obtained concessions, had spent hundreds of millions of dollars trying to build a canal. Many years ago the American people had proclaimed the Monroe doctrine. So that the building of a canal on the American Continent became a very serious matter to the Government of the United States, and the conclusion was reached that this Government must build, own, and control that canal, and proceeded forthwith to accomplish that purpose.

Two things were of paramount importance: First, the satisfying of the French and buying them out, as it were; and the second was the formulation of a treaty with England to take the place of the treaty then in force. I again want to call your attention to the fact that the United States was now deliberately paving the way to build a canal with her own money and asks no assistance from any outside power or nation, but in doing so she makes an agreement, which is known as the Hay-Pauncefote treaty. Now, what is this treaty?

THE HAY-PAUNCEFOTE TREATY.

ARTICLE 1. The high contracting parties agree that the present treaty shall supersede the aforementioned convention of the 19th of April, 1850.

ART. 2. It is agreed that the canal shall be constructed under the auspices of the Government of the United States, either directly at its own cost, or by gift or loan of money to individuals or corporations, or through subscription to or purchase of stock or shares, and that, subject to the provisions of the present treaty, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and the management of the canal.

Now, bear in mind, if you please, that we are making a treaty, the object of which is to build a canal which we will own and control, and by this article England concedes that we may do so. Of course, subject to the general principle to which I have already referred and that is the principle of "general neutrality," which is provided for in the very next article, article 3, which reads as follows:

The United States adopts as the basis of the neutralization of such ship canal the following rules substantially as embodied in the convention of Constantinople, signed the 28th day of October, 1888, for the free navigation of the Suez Canal; that is to say—

Bear in mind that the United States adopts as the basis of neutralization, and so forth, the United States tells England and agrees with England what she is going to do with the canal she intends to build, and she is now going to prescribe rules and regulations by which she is going to allow England and all nations to pass their ships through this canal. The rules are as follows:

First. The canal shall be free and open to vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffice shall be just and equitable.

Remember that we are dealing with a work undertaken by the Government of the United States and are providing a treaty for the express purpose of building a canal which we propose to own and control, and the agreement is that the canal shall be open to the commerce of the world in both peace and war, and that the charges which we place upon commerce for the use of the canal—that is, for the use of our own property—shall be just and equitable. That is the agreement of the United States. It is the only agreement that has been made by the United States, and so long as we keep the canal open for the use of the world, and so long as we charge the world no more than fair and just and equitable tolls, so long we shall have complied to the uttermost with our obligations; and I want to remark right here that if we were to disagree with other nations of the world as to whether the tolls were equitable or fair, this even would be only a matter of minor importance compared to the question as to whether we have a right to exempt our own vessels. Before quoting the other rules or paragraphs of article 3 I want to call your attention to the fact that this wording was not adopted hastily nor without mature consideration and deliberation, and during all of this correspondence every communication implied the granted right of ownership to the United States, the contention on the part of Great Britain being entirely based upon the point of neutrality so far as it relates to the nations of the world. For instance, Lord Lansdowne submitted an amendment under date of August 3, 1901, wherein he said:

I most emphatically renew the objections of His Majesty's Government to being bound by stringent rules of neutral conduct not equally binding upon other powers. I would therefore suggest the insertion in rule 1, after "all nations," of the words "which shall agree to observe these rules." This addition will impose upon other powers the same self-denying ordinance as Great Britain is desired to accept and will furnish an additional security for the neutrality of the canal, which it will be the duty of the United States to maintain.

You will note that Great Britain did not feel that she should be bound to neutral conduct in regard to the canal unless other nations also were so bound. This, as I have said before, was the very essence of the "general principle" contained in section 8 of the Clayton-Bulwer treaty, which we agreed to incorporate in these rules.

Again, we find a communication under date of September 12, 1901, on this same subject which reads as follows:

With regard to the changes suggested by His Majesty's Government, Mr. Hay was apprehensive that the first amendment proposed to clause 1 of article 3 would meet with opposition because of the strong objection entertained to inviting other powers to become contract parties to a treaty affecting the canal. If His Majesty's Government found it not convenient to accept the draft as it stood, they might, perhaps, consider favorably the substitution for the words "the canal shall be free and open to vessels of commerce and of war to all nations which shall agree to observe these rules." The words "the canal shall be open and free to vessels of commerce and of war to all nations observing these rules," and instead of "any nation so agreeing," the words "any such nation." This, it seemed to Mr. Hay, would accomplish the purpose aimed at by His Majesty's Government.

To this Lord Lansdowne replied, under date of October 23, 1901, as follows:

Mr. Hay has suggested that in article 3, rule 1, we should substitute for the words "the canal shall be free and open to the vessels of commerce and of war of all nations which shall agree to observe these rules," etc., the words "the canal shall be free and open to the vessels of commerce and of war of all nations observing these rules," and in the same clause as a consequential amendment to substitute for the words "any nation so agreeing" the words "any such nation." His Majesty's Government were prepared to accept this amendment, which seemed to us equally efficacious for the purpose which we had in view, namely, that of insuring Great Britain should not be placed in a less advantageous position than any other power which they stop short of conferring upon other nations a contractual right to the use of the canal.

I simply refer to these quotations to show that this matter was thoroughly discussed when the rules that the United States adopted were under consideration. Bear in mind that the United States, the owner of the canal, was submitting the rules, and it is apparent that England's only desire was that she should be placed on the same basis that the United States was offering to other or all nations. Under date of August 3, 1901, Lord Lansdowne again submitted an amendment in which he says in part:

It would appear to follow that the whole responsibility for upholding these rules and thereby maintaining the neutrality of the canal would henceforward be assumed by the Government of the United States. The change of form is an important one, but in view of the fact that the whole cost of construction of the canal is to be borne by that Government, which is also to be charged with such measures as may be necessary to protect it against lawlessness and disorder, His Majesty's Government are not likely to object to it.

I have simply referred to these negotiations to prove that the United States by this treaty and during the formation of the treaty was acknowledged to be the owner of the canal and that its obligations to foreign countries is to treat all nations alike, and you will notice that the contention made by Great Britain all along was a desire to be treated upon a basis of equality. At this time the question of what the United States may do with the canal in so far as it relates to its own commerce was never debated. This right was conceded, of course, and upon this distinct understanding all of the following clauses or rules were adopted by the United States, which are as follows:

Second. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

Third. Vessels of war, if a belligerent, shall not revictual nor take any stores in the canal except so far as may be strictly necessary, and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force and with only such information as may result from the necessities of the service. Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.

Fourth. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

Fifty. The provisions of this article shall apply to waters adjacent to the canal within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time, except in case of distress, and in such case shall depart as soon as possible, but a vessel of war of one belligerent shall not depart within 24 hours from the departure of the vessel of war of the other belligerent.

At this point, before quoting article 6, let me call your attention as to how this would apply in the event the United States were included or intended to be included among the "all nations" clause. Would it, then, be supposed that we would pass these vessels, our enemies, through the canal at their convenience, and if, perchance, our vessels were trying to overtake the enemy, we would hold our own vessels for 24 hours until after the enemy had left. Is it not evident and perfectly plain and clear that no such construction could possibly have entered

the minds of the framers of these clauses or rules? Is it not evident that this is to apply to all nations, not including the United States or the owners of the canal? Is it not evident that the United States is the party of the first part, making a contract with the nations of the earth as to what she shall do and upon what conditions she shall offer the canal she intends to build and construct to the commerce of the world? It seems that there can not possibly be any difference of opinion on this point.

Sixth. The plant, establishments, buildings, and all works necessary to the construction and maintenance and operation of the canal shall be deemed to be part thereof for the purposes of this treaty, and, in time of war as in time of peace, shall enjoy complete immunity from attack or injury by belligerents and from acts calculated to impair their usefulness as part of the canal.

Here let me call your attention to the fact that the same obligations that rest upon the Government in times of war rest upon it in times of peace, and the same terms apply to vessels of commerce as to vessels of war—both are treated in the same sentence—and were it the intention of the framers of this treaty that the United States should be included the very purposes and objects we sought to accomplish when we undertook to abrogate the Clayton-Bulwer treaty would now be enforced against us one hundred fold. No one in the United States and no one in England who had anything whatever to do with the treaty could have had any such thought.

ART. 4. It is agreed that no change of territorial sovereignty or of the international relations of the country or countries traversed by the aforementioned canal shall affect the general principles of neutralization or the obligations of the high contracting parties under the present treaty.

ART. 5. The present treaty shall be ratified by the President of the United States, by and with the advice and the consent of the Senate thereof, and by His Britannic Majesty; and the ratifications shall be exchanged at Washington or at London at the earliest possible time within six months of the date hereof. In faith thereof the respective plenipotentiaries have signed this treaty and thereunto affixed their seals.

Done in duplicate at Washington, the 18th day of November, in the year of our Lord 1901.

JOHN HAY.
PAUNCEFOTE.

Hon. Richard Olney, Secretary of State under Grover Cleveland, read a paper at the annual meeting of the American Society of International Law, Washington, D. C., April 25, 1913. After discussing the provisions of the treaty at considerable length, he said:

And the single point is, Are the words "all nations" inclusive or exclusive of the United States? It seems difficult to successfully contend that the United States is included.

(a) The treaty is a contract by which the proprietor of a canal fixes the terms upon which it grants the use of the canal to its customers.

(b) It was needed for that purpose only; it was needed to fix the terms upon which the United States and its nationals should use the canal, because its use without tolls or otherwise as the United States might choose is a necessary incident of the ownership of the canal. It can not reasonably be argued that in fixing the terms for the use of its canal customers the United States looked upon itself as one of the customers.

(c) The words under construction are, in substance, the first of a set of six rules adopted by the United States as the basis of the neutralization of the canal. The other five certainly apply only to parties other than the United States, so that there is the strongest reason for holding that the first of them is to be given a like application.

It has been contended, and President Wilson stated, that nowhere excepting here in this country is there any doubt as to the meaning of this treaty. I wish to say that this entire controversy had been settled during President Taft's administration by Secretary of State Knox. Our position had been practically conceded by Great Britain. Both President Taft and President Roosevelt as well as some of the brightest legal minds in this country and England have taken the position that no foreign country can possibly be concerned as to whether we charge our own vessels when passing through the canal or whether we do not. President Wilson himself took this view before the election. Speaker CLARK, Mr. MANN, Mr. UNDERWOOD, Mr. FITZGERALD, Mr. DOREMUS hold to this view now, and I am sure that no one will accuse any one of these men of insincerity in the position they have taken. In fact, I believe that the men championing both sides are entirely honest, and it is an honest difference of opinion, and yet, as I have stated in the beginning of these remarks, it should be borne in mind that the treaty was made at a time when we had in mind the building of this canal for our own special use and benefit. When the treaty was promulgated and it was no secret Great Britain knew what we were after and conceded to us this right and at no time made an attempt to include the United States in the provisions that applied to "all nations." It was only after Senator ROOT delivered his address in the Senate, in which address he made out a strong case for England, and this address was distributed throughout the United States that this opposition arose. This address was delivered a few days after England had practically conceded, in a letter to Secretary of State Knox, that we were right in our view and construction of the treaty.

Hon. Frank Plumley's Address.

EXTENSION OF REMARKS
OF
HON. ASHER C. HINDS,
OF MAINE,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 21, 1914,

On the bill (H. R. 14034) making appropriations for the naval service for the fiscal year ending June 30, 1915, and for other purposes.

Mr. HINDS. Mr. Speaker, by the favor of the House it gives me pleasure to insert in the RECORD a speech that was delivered on February 12, 1914, before the Lincoln Club, of Portland, Me., by Hon. FRANK PLUMLEY, of Vermont:

REPRESENTATIVE PLUMLEY'S ADDRESS.

We meet to commemorate the birth of our greatest American. Other sons of our Nation have been illustrious, eminent, noble, great, and worthy. Heaven has been prodigal in allotting them rich and varied endowments. They have been loyal, strong, wise, and efficient. Every State can place her laurels on the brows of her truly great men, who have served faithfully and well both the State and the Nation. But there is one whose name increasingly towers above them all, like some mighty Alpine peak which lifts its head above all others, however much they cleave the sky, however much they are clad in eternal robes of white; he does not need to be named here, but his name may well be spoken, for it is not only a name, it is to us alike an inspiration and a benediction; it is Abraham Lincoln.

We meet to reverence his memory in a beautiful city proud of her own eminent and eloquent dead; proud of her poet Longfellow, of her great statesmen, William Pitt Fessenden and Thomas B. Reed. In a State with many noble favorite ones, both living and dead, and which has the proud heritage of having been the residence of America's only "plumed knight," the illustrious Republican statesman, the mighty, resourceful leader, the distinguished diplomat, James G. Blaine.

We meet as Republicans to do honor to the first and greatest Republican President; our most masterful orator; the logician of his time, if not of all time; the son of a poor white, the son of sorrow, privation, poverty, and distress—America's grandest son.

The Republican Party can not do much which is mean or paltry, nor betray its trust, or falter in its course, or be weak and wavering so long as it holds in high esteem his name and virtues, is inspired by his lofty thoughts, his whole-souled self-sacrifice, his deep undying devotion to the flag, the Constitution, and the Union, reverencing as he did the Bible, sustained and led as he was by an abiding faith in the overruling providences of Almighty God.

We meet after 16 unbroken years of Republican control are ended by a disastrous defeat and at the end of 11 months of Democratic administration of the affairs of the Nation. Shall we not do wisely to consider carefully in how far our successors have redeemed their fair promises, and in what, if anything, they have failed. For, "By their fruits ye shall know them."

There are to-day in the metal trades alone 100,000 idle men, suffering an annual loss in wages of $50,000,000. In the Pittsburgh district alone there are, all told, 70,000 idle workmen. There are 270,000 idle miners in the country. Two thousand coke ovens have closed down. Only 50 per cent of the employees of the Steel Corporation are now at work. One million idle men, losing $3,000,000 daily in wages. One hundred and six blast furnaces, or 38 per cent, are shut down. In these closed mills there is an invested capital of $125,000,000 tied up. In occupations allied to the metal trades about 1,000,000 men are without employment, representing an annual wage loss approximating $746,000,000. At Connellsville, Pa., there is a 10 per cent cut in wages. The Westinghouse Electric Co. has reduced the wages of 2,000 employees 16⅔ per cent. In the various plants of the General Electric Co. 5,000 employees are laid off.

Within 60 days after the tariff took effect 196 692 freight cars were idle. Railroad earnings in November, 1913, were $9,000,000 less than in the corresponding month of 1912. Railroad securities have declined. There is not a gilt-edged railroad or industrial stock listed on the market that has not shrunken in value. Twelve of the best railroad stocks in the country averaged $120.45 November 1, 1912; the same stocks averaged $102.34 December 1, 1913. There are 214,000 surplus freight cars in the United States at this time.

In San Francisco there are 25,000 idle men, in Los Angeles 35,000, in Chicago 30,000. In New York and Chicago there are more unemployed men than ever before. Boston has now the largest army of unemployed for many years.

On the Pacific coast there are 100,000 men idle. Representative KAHN of California says:

> Soup houses have had to be erected in the Far West to feed the unemployed. The distressing scenes of 1894 are being reenacted.

Senator BORAH says:

> It means that before the winter closes there will be 300,000 hungry and dependent persons on the Pacific coast.

Chicago has a daily bread line of 7,000. The board of aldermen have officially asked that there be established in the department of public charities a civic employment agency to provide work for the unemployed. The governors of California and Oregon have each been urgently requested to call a special session of their legislatures to provide for the unemployed. The labor committee of New York reports that over 16 per cent of the union workers are idle. The authorities of that city have increased by 100 per cent public facilities for sheltering the homeless. And yet these municipal lodging houses are jammed and overflowing nightly and a thousand other homeless ones are sleeping in rows in the department of correction steamers and on the charities pier, while still others are desperately eager for the gruesome privilege of sleeping space in the morgue.

Within six weeks from the passage of the Wilson-Underwood-Simmons tariff act the second largest shipbuilding concern in Camden, N. J., passed into receivers' hands. In December, 1913, more than 2,500 firms failed in the United States, with liabilities of $36,000,000. There has been no such record since 1893.

Representative HUMPHREY of Washington says that within 57 days after the Wilson-Underwood-Simmons tariff act went into effect 194 shingle mills in the State of Washington closed down, being 60 per cent of the shingle mills of that State and 50 per cent of the shingle mills of the entire United States. Thirty-three of its great lumber mills ceased operation from the same reason. These 33 mills represented a daily output of 3,100,000 feet of lumber and employed 8,500 men. A year ago more men were employed in these industries than ever before, higher wages were paid, labor was more in demand, the capital invested was greater and the output from the mills larger than ever before. Americans, white men in Washington receiving American wage, were beaten by those across the line who were Chinese, Japanese, and Hindus, receiving a much lower wage.

Cereals in the United States are at a lower level in value than at any time since the depression under the Wilson-Gorman tariff.

In Iowa, 3,000,000 cattle ready for market shrunk under this tariff $7.50 a head, a grand total to the producer on this one class, in this single State, of $23,875,000, and there results no cheapened price to the consumer.

The new tariff has added to the value of cattle in Canada an average of $10 a head. It has brought a loss of $7.50 per head to the American farmer.

Woolen goods to the buyer remain the same as before. In the first two days of free wool 6,500,000 pounds of foreign wool came into this country—$600,000 lost in revenue, but no compensating cheapness in clothing to the people. Sixty days after the Wilson-Underwood-Simmons law took effect more than 25 per cent of the looms and spindles in the woolen mills of the United States were idle. One western farmer having 100,000 sheep has offered them to the packers, simply because he can not compete with Australian and South African wool growers. Domestic competition had kept American woolen goods within fair bounds. If a lesssened price is forced by foreign competition, reduction in wages is said to be the only remedy.

Thirty-three million bushels of Canadian wheat were marketed here in November. We bought our flour no cheaper, but every bushel of American wheat suffered a loss of 10 cents.

There seems to be an agreement by all careful observers that the price of wheat, corn, and oats has very generally depreciated throughout the Middle West. There is a large loss to the producer, but the consumer has not gained.

At one port in Vermont in the month of November last, imports, mostly farm products, under the new tariff increased in amount $300,000, but there was a loss in revenue to the United States of $20,000.

The beet-sugar industry of Colorado this year added to the wealth of that State more than $20,000,000 as the result of the year's output. Beet-sugar manufacturers in Colorado and in the Middle West representing a capital of $100,000,000 have decided to close down because of the new tariff. The men employed in these factories must seek other lines of work; the capital must lie idle until there is a Republican resurrection, or its plants go into the junk heap, a dead loss to the investor and to the Nation. The farmer who raised the beets must sow or plant other crops not as profitable probably, and lacking the beet's fertilizing value.

The best estimate is that not more than 50 per cent of the capacity of our steel mills will be used this year. One-half of the active capital devoted to this business will yield no returns in 1914; one-half of the great army of men employed last year in these mills will be without work or wage. In fact, 50 per cent of the workmen in this industry are now idle. The 2,000,000 men previously engaged in the iron and steel mills and allied, associated, or dependent trades now idle represent a loss daily in wages of about $4,000,000, approximating an annual loss of about $1,248,000,000. The irony of it all is that while by our own ill-advised legislation we were thus removing bread from the mouths of millions of our own workmen, British workingmen in kindred or allied trades are clamoring for, and in some cases receiving, increased wages, resting their demands upon the larger prosperity of their employers, resulting from the new opportunity in the markets of America. Under Republican rule we legislated for America. Under the rule of the "New Freedom" our legislation benefits only the foreigner. In some parts of Germany manufacturers have advanced wages to their employees 20 per cent since the Wilson-Underwood-Simmons tariff gave them enlarged opportunity and greater prosperity.

The Maryland Steel Co. furnaces are closed for the first time for 17 years; also the Burden Iron Works, of Troy. Chester, Pa., reports 3,000 idle men; Harrisburg, 45 per cent shrinkage in the mills' output; Conshohocken, a cut of 10 per cent in the wages of the millmen. Coatsville meets the situation by a reduction of hours, and at Norristown the mills and quarries are closed. The largest carpet mill in America and in the world on February 7 began a cut of 10 per cent in wages.

Ten per cent reduction in wage as the alternative to closed mills and factories has been accepted by the employees in many large establishments in various parts of the country.

It is to-day true that, compared with last year or any previous year of the past 15, railroads are carrying less freight, contractors are building less, merchants are buying less, manufacturers are producing less, banks are clearing less, dividends are markedly less, and all business hesitates, stumbles, or halts.

The Democratic tender to the world of freer trade has been met by no country with a reciprocal lowering of their tariffs. On the contrary, countries with which we have considerable commerce have actually increased their duties on certain lines.

The Democrats in their platform at Baltimore and in their speeches throughout the campaign which followed, persistently charged the high cost of living to the protective tariff, and they promised, if given power by the people, to lower the cost of living by enacting a tariff without protection. They have done the latter. They have utterly failed in the former. Prices in America are higher rather than lower this year, but Government bonds have fallen, railroad stocks have declined, bonds sell for less, and credit in general is less. The Democrats promised us cheaper shoes under the new tariff. This may happen, but it is wooden shoes they are to give us.

We all stand facing the fact that when our goods are made in Europe they are not made in America, and the wage paid to the European employer is lost to the American workman. It is beginning to be appreciated by some manufacturers who were dull to the fact and by some workingmen who were in the fog that on the average our wage scale is 150 per cent higher than is the wage scale of 300,000,000 Europeans; and it is not hard to see that with our lines of protection leveled the cheaper made goods will undersell and crush out the other. It will be clear soon to the dullest mind that "the man out of work in America by reason of the new tariff must try to purchase with his lost wages the goods from abroad that he could make at home if he had opportunity."

Representative WILLIS, of Ohio, said recently in the House of Representatives:

> With the deepest regret we see mills idle, laborers by the thousands out of employment, and wages being reduced. Various municipalities are taking steps to care for the army of the unemployed, and the newspapers every day bring us distressing information of more idle factories and greater industrial stagnation.

Col. Harvey, of New York, who first found in Woodrow Wilson presidential timber, commenting on the President's policy in the North American Review, indicts it for, first, subversion of the Constitution as involved in his proposition to control by Federal legislation all primary elections for choosing delegates to national conventions, embodied in a bill now pending before the House of Representatives; second, complications likely to arise with foreign nations out of his policy of forbidding free ownership of enterprises in the Western Hemisphere by those not

citizens of this country; third, general business depression, amounting to "positive dejection"; fourth, class legislation in the law exempting labor unions from the provisions in the Sherman Act relating to conspiracy and combination. And he predicts the probable defeat of the administration at the polls in consequence of the facts named in the four counts of his indictment.

It is estimated that the Wilson-Gorman bill in its three years of existence cost the country $5,000,000,000. The Wilson-Underwood-Simmons bill favors the industries of this country far less than the Wilson-Gorman Act. What will be the fearful figures to place against it when its three woeful years of existence have run and ended?

The facts which I have here assembled from many sources, all deemed by me to be reliable, portray with reasonable accuracy and certainty the economic conditions of the country as they exist to-day. They may change for the better as winter passes into spring, but such does not seem to be the outlook, such is not suggested by our history. In the platform of the Democratic Party, read at Baltimore, it is written:

> The high cost of living is a serious problem in every American home. The Republican Party in its platform attempts to escape from responsibility by denying that they are due to a protective tariff. We take issue with them on this subject and charge that excessive prices result in a large measure from the high tariff laws enacted and maintained by the Republican Party, * * * and we assert that no substantial relief can be secured for the people until import duties on the necessaries of life are materially reduced.

Duties have been by them materially reduced on the necessaries of life. Their remedy has utterly failed, deplorably failed. It is not a remedy, it is a nostrum. It costs more to live to-day than it did March 4, 1913, which ushered in the apostles of the "New Freedom" and cheaper living.

It has not been my purpose to assemble here all the failures of the Democratic Party in its short career of 11 months, neither time nor space would permit. "Enough is as good as a feast." The promise was and the hope was that the new administration would build, not break; would illuminate, not becloud, obscure, or obstruct the people's path of prosperity and growth.

President Wilson has been a long-time advocate of civil service, yet he has approved laws which make vital and vicious attacks upon that policy. He stands for peace, but so conducts or permits to be conducted our foreign affairs as to create distrust, arouse suspicion, provoke dislike, stimulate antagonism, and, in Mexico, through unnecessary and unwise expressions and entanglements, to make war almost, if not quite, the natural and necessary outcome. He stands sponsor, if not creator, of the new freedom. Yet, under his administration, by or permitted by the members of his Cabinet, there has been humiliating and shameful segregation and discrimination of the colored employees of the Government in Washington, although in his anteelection speeches he gave public and specific assurance of their fair, just, and favorable treatment. Many people who hesitated to give their suffrage to the Democratic Party because of its past attitude toward the industries of the Nation were led to believe that they might take that step safely because of the promise that all economic changes should be made in such a way as not to disturb or injure any legitimate industry. It was not until well into the tariff hearings of last winter that the definite interpretation of that expression was given, and when given it was pronounced by the man who wrote it into the Democratic platform, Representative Harrison, of New York. A Democrat from Louisiana was before the Committee on Ways and Means begging that the tariff might remain on cane sugar as an absolute necessity to the maintenance of that industry. As a strong and last appeal he said: "Ours is a legitimate industry; it should not be injured." It was then the interpretation was vouchsafed. In substance, Mr. Harrison said: "A legitimate industry is one which rests on a sound economic basis. No industry which rests in any part on a protective tariff is sound economically; therefore it is not a legitimate industry. The cane-sugar industry is not a legitimate industry, for you assert that a tariff is necessary to its maintenance."

Hence, it will be seen, gentlemen, that there was nothing in the Democratic platform of 1912 to preclude the Wilson-Underwood-Simmons tariff act of 1913. It never can be said by Democratic apologists of to-day that theirs was not an auspicious beginning. They had but to maintain the peace then ours with all the world; they had but to continue the prosperity then everywhere abounding. There was not a business cloud in sight on March 4, 1913. The earth was moved by millions of men marching daily to and from their places of work and wage; the air was vocal with the shrill music of whirring wheels and multifold machinery. Hope was in the heart and faith in the breast of business men everywhere. But now they see clearly that under a Democratic administration "faith is the substance of things hoped for; the evidence of things not seen."

It is not strange, but it is to be expected, that from this field of wreck and ruin, of fast and well-nigh famine, the outcome and offspring of Democratic policies, many people should begin to recast their political views and return to their former political alignment. These voters know the policies of the Republican Party touching the great economic truths. They know the beneficent result of these policies. They have been bathed in the glad sunshine of the prosperity these policies permit and evoke and are ready to say with the prodigal son: "I will arise and go to my father." For they know that in that home there is "bread enough and to spare" and that they will receive a royal welcome.

A year since we were cast down defeated and discomfited. There has been for us a deep, dark winter of discontent, but there shall yet be for us a glorious summer.

Republicans, look no longer into the darkened West, where set our sun of 16 years of majestic power and light. It is not there; it has passed its midnight. Even now light is breaking in the eastern sky. Our sun is once more rising, full orbed and with old-time splendor. With glad and willing hands we will rise as pioneers of the people's will and strike away the fogs of the morning and let in the glorious light.

In the glad days that are fast coming there will be no darkness or destructive tempest or lowering cloud, for our sun returns in all its pristine vigor and glory. It will dispel the darkness; it will burn up the clouds; it will stay the tempest; it will bring to all hope and good cheer. Its resplendent rays will remove all scars, heal all sores, melt and blend into one great and harmonious whole all factions; it will unite all divergent paths; it will make all our paths straight; it will make them one. It will make our beloved party virile, great, grand, potent, and irresistible. As the days pass into months and the months ripen into years, this sun of ours shall mount higher and yet higher in the heavens, shall become more fair, more brilliant, more puissant. It shall shine out with unaccustomed beauty and grandeur and shall reach and rest at its zenith in glory incomparable on the first Tuesday after the first Monday in November, 1916.

Chickasaw and Choctaw Indians.

A symposium on the point of order on the item for a per capita payment of $100 out of the Choctaw-Chickasaw tribal funds to members of these tribes as an item in the Indian appropriation bill, and the rights of the Mississippi Choctaws under the fourteenth article of the Dancing Rabbit Creek treaty of 1830.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MURRAY,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,

BRIEF OF ISSUES.

Mr. MURRAY of Oklahoma. Mr. Speaker, the issues involved in this symposium are whether or not the Choctaw and Chickasaw rolls shall be reopened to admit persons who do not come within the laws and treaties defining and governing their rights.

The Choctaws and Chickasaws, who own their property in common, among the "citizens" of the two tribes, each having an equal undivided interest in the whole, seek to have paid out of their funds now under the control of the Government a per capita payment of at least $100. To this the claimants, numbering ten or fifteen thousand, residing in the various Southern States, claiming under the fourteenth article of the treaty of 1830, called the "Dancing Rabbit Creek treaty," are opposed because the remaining undistributed portion of the funds would not be

sufficient to give them an equivalent of value to the $1,041.28 worth of land heretofore allotted to those on the rolls.

The Choctaws and Chickasaws contested the fourteenth article claimants, so called, under laws and treaties closing the rolls, and have court judgments against them, notably in the Jack Amos case, on the ground that all of these claimants have "expatriated" or changed their citizenship. In other words, they have not complied with the terms of the treaty that they must remain a member of the tribe and "live upon the land," since their treaties, like all other Indian treaties, conveyed the land to them "so long as they remained as a tribe and lived on it," and conversely when they ceased to be a member of the tribe they lost their individual right, and in the event the tribe became extinct or left the land it would revert. This rule, adhered to by the Government with all Indians, was necessary to hold them together, and has sound foundation in the law in this, that any person ceasing to be a citizen of a country ceases to have any interest or rights in the country from which such individual "expatriated."

It will be observed under these treaties that blood alone did not determine citizenship; but blood and acts of the tribe adopting even white people and negroes required the further compliance that they remain a member of the tribe and live on the land, remaining a part of the "nation"; and conversely, however great the quantum of blood, they lost all rights by "expatriation"—a clear legal principle adhered to not only in all Indian treaties but by numerous rulings of both the Interior and Treasury Departments and by decisions of the Federal courts.

These Choctaw and Chickasaw Indians claim that the Government should adhere to its treaty and law closing the rolls on March 4, 1907, and pay to them at least a portion of their funds, so that they may not continue to be compelled to borrow money at exorbitant rates of interest; and hence an appropriation for such payment of a per capita of $100 is in order under the rules of both the House and Senate, because it is in obedience to acts of Congress and treaties with these Indians.

The decision of the Chair overruling the point of order, together with arguments sustaining the same in the House of Representatives is as follows:

THE DECISION OF THE CHAIR—THE HON. JOSEPH W. BYRNS.

The CHAIRMAN. The Chair is ready to rule. The proposition submitted is attended with considerable difficulty. The Chair has permitted a very liberal discussion of the whole matter. Much has been said about the equity of the claims of the Mississippi Choctaws; but, of course, that is something with which the Chair, so far as this ruling is concerned, has nothing to do. The Chair has very carefully examined the agreements made between the Indians and the United States Government, and also the acts of Congress, and has made note of those portions which, in the opinion of the Chair, have some relevancy, so far as this particular question is concerned.

The gentleman from Mississippi [Mr. HARRISON] makes the point of order against the following paragraph in the bill:

That the Secretary of the Interior be, and he is hereby, authorized, in his discretion, to make a per capita payment of $100 to the enrolled members of the Choctaw and the Chickasaw Indians of the Five Civilized Tribes entitled under existing law to share in the funds of said tribes, or to their lawful heirs, out of any moneys belonging to said tribes in the United States Treasury, or deposited in any bank, or held by any official under the jurisdiction of the Secretary of the Interior, same to be made under such rules and regulations as he may prescribe: *Provided*, That in cases where such members are Indians whose restrictions have not been removed the Secretary of the Interior may, in his discretion, withhold such payment and use the same for their benefit.

It is contended that it is not authorized by existing law and, therefore, not in order on an appropriation bill.

In order to determine the issue raised by the point of order, it will be necessary to refer to certain portions of agreements and statutes under which the property of said tribes was divided in severalty and disposed of under rules and regulations of the Secretary of the Interior and the proceeds paid into the Treasury of the United States. The first agreement to which the Chair will refer is what is known as the Atoka agreement between the Choctaw and Chickasaw Tribes and the United States, and is embodied in a confirmatory act of Congress passed June 28, 1898.

In section 11 of said act it was provided that when the rolls of citizenship of said tribes were completed and the lands of the tribes surveyed, then all of the surface lands should be allotted in severalty among the citizens as shown by the roll, reserving and excepting to each tribe only the oil, coal, asphalt, and mineral deposits in the lands and a sufficient amount of land for town sites, schools, churches, and so forth. Section 15 provided for the disposition or sale of the town lots and that all the money "paid into the United States Treasury for the sale of all the town lots shall be for the benefit of the members of the Choctaw and Chickasaw Tribes—freedmen excepted—and at the end of one year from the ratification of this agreement, and at the end of each year thereafter, the funds so accumulated shall be divided and paid to the Choctaws and Chickasaws—freedmen excepted—each member of the two tribes to receive an equal portion thereof." It was further provided that royalties on oil, coal, asphalt, and other minerals, and rents should be paid into the Treasury of the United States to the credit of the tribe to which they belong, and that they were to be used for the education of the children of Indian blood of the members of said tribes. But it was provided in said agreement "that whenever the members of the Choctaw and Chickasaw Tribes shall be required to pay taxes for the support of schools, then the fund arising from such royalties shall be disposed of for the equal benefit of their members—freedmen excepted—in such manner as the tribes may direct."

It may be stated here, parenthetically, that the members of the tribes are now paying taxes for the support of schools in the State of Oklahoma. Said agreement further provided—

That all per capita payments hereafter made to the members of the Choctaw or Chickasaw Nations shall be paid directly to each individual member by a bonded officer of the United States, under the direction of the Secretary of the Interior, which officer shall be required to give strict account of such disbursements to said Secretary.

The agreement contains the further provision:

It is further agreed that all of the funds invested, in lieu of investment, treaty funds, or otherwise now held by the United States in trust for the Choctaw and Chickasaw Tribes, shall be capitalized within one year after the tribal government shall cease, so far as the same may legally be done, and be appropriated and paid by some officer of the United States appointed for the purpose, to the Choctaws and Chickasaws—freedmen excepted—per capita, to aid and assist them in improving their homes and lands.

It was also provided that the tribal governments should cease after the lapse of eight years from March 4, 1898, but this was subsequently changed by the act of April 26, 1906.

The Chair has referred to this agreement and act of Congress somewhat at length, and it is clearly to be seen that it was the intention that the lands and all the property of the Choctaws and Chickasaws should be allotted and distributed to them per capita as soon as the rolls were completed and their tribal governments should cease in anticipation of statehood for the territory in which their lands were located. Subsequently a supplementary agreement was entered into which is found in the act of Congress passed July 1, 1902, and which limits the allotment to each citizen of the tribe to 320 acres.

As to the residue of said lands, section 14 provides:

When allotments as herein provided have been made to all citizens and freedmen, the residue of lands not herein reserved or otherwise disposed of, if any there be, shall be sold at public auction under rules and regulations and on terms to be prescribed by the Secretary of the Interior, and so much of the proceeds as may be necessary for equalizing allotments shall be used for that purpose, and the balance shall be paid into the Treasury of the United States to the credit of the Choctaws and Chickasaws and distributed per capita as other funds of the tribes.

It will be borne in mind that the Atoka agreement provided for an allotment of all the lands. The supplementary agreement provides for a reduction of amount of allotment and sale of residue, the proceeds to be distributed per capita as other funds of the tribes.

Section 17 of the act of Congress passed April 26, 1906, provides:

That when the unallotted lands and other property belonging to the Choctaw, Chickasaw, Cherokee, Creek, and Seminole Tribes of Indians have been sold and the money arising from such sales or from any other source whatever have been paid into the United States Treasury to the credit of said tribes, respectively, and when all the just charges against the funds of the respective tribes have been deducted therefrom, any remaining funds shall be distributed per capita to the members then living and the heirs of deceased members whose names appear upon the finally approved rolls of the respective tribes, such distribution to be made under rules and regulations to be prescribed by the Secretary of the Interior.

In the opinion of the Chair, authority for this provision in the bill must rest on this section and section 14 of the supplementary agreement, as above quoted. But it is contended that under this section no distribution can be made until all of the unallotted lands have been sold. The section does not say so, nor does the Chair think that to be a correct, fair, or just interpretation of it. But even if it is, the Chair has been furnished with a letter, written on February 19, 1914, by the Assistant Commissioner of Indian Affairs, Mr. E. B. Meritt, to the Hon. CHARLES D. CARTER. In that letter the assistant commissioner says:

DEPARTMENT OF THE INTERIOR,
OFICE OF INDIAN AFFAIRS,
Washington, D. C., February 19, 1914.

Hon. CHARLES D. CARTER,
House of Representatives.

MY DEAR MR. CARTER: In response to your inquiry over the telephone relative to the unallotted lands of the Choctaw and Chickasaw Nations, I have the honor to advise you that said surplus unallotted unreserved

land was sold at public auction under the provisions of section 14 of the act of Congress of July 1, 1902 (32 Stat. L., 641), and section 16 of the act of Congress of April 26, 1906 (34 Stat. L., 137). The entire area, with the exception of a few odd tracts, has been disposed of at said sales. A few tracts that have been forfeited by the purchasers by reason of the nonpayment of the deferred purchased price will, of course, be reoffered for sale at the earliest practicable date.

Very truly, yours,

E. B. MERITT,
Assistant Commissioner.

So, assuming that the Assistant Commissioner of Indian Affairs has correctly stated the facts—and the Chair has no doubt about that—even if the contention be true that all of these unallotted lands must first be sold before there can be a distribution of the per capita funds in the Treasury, the Chair thinks that that requirement has been complied with. The Chair thinks, however, that said section should be construed in connection with the clear intent of the Atoka and the supplementary agreements, and that a liberal rather than a technical construction should be placed upon it, in the interest of the Indian tribes, who are the wards of the Government.

The act itself clearly negatives any such intent on the part of Congress as is claimed, for section 26 of the same act provides that any lands not sold and belonging to any part of the tribes upon their dissolution should be held in trust by the United States for the use and benefit of those whose names appear upon the rolls.

The Chair's attention has been further called to the fact that the act of 1906 withdraws all segregated mineral lands from sale, and if the contention made by those who have supported the point of order is correct, then it will result in withholding a distribution of the funds belonging to the Choctaw and Chickasaw Tribes for an indefinite period of time, which, in the opinion of the Chair, was certainly never intended, as will appear from a reading of the act referred to. The Chair does not think it was the intention to withhold indefinitely, and until after the final dissolution of the tribes, the millions of dollars to which they are justly entitled, in the language of the statute, "to aid and assist them in improving their homes and lands."

It is further contended that this section provides that a per capita payment shall not be made until all just charges against the funds of the respective tribes have been deducted, and that the claims of the Mississippi Choctaws constitute a just charge. However just their claim may be, the Chair does not think it could be called a charge in the sense in which the word is used here. The courts have repeatedly held that a charge is the price required or demanded for services rendered. The charges mentioned in the statute refer to the charges of administration—charges of the Government for administering the affairs and estates of the tribes. The Chair is informed by the gentleman from Oklahoma that there are no such charges, and he assumes that it is correct.

The Chair is more content with this ruling, because it can not possibly work any injury to any person or persons who hold a claim against either tribe. It has been stated, and the Chair does not doubt the correctness of the statement, that to make the per capita payment of $100 will require the sum of $2,702,200, whereas the tribes have on deposit an aggregate of $7,100,000, and there is said to be more than $33,000,000 in addition to become due them.

The Chair has come to the conclusion herein expressed after as careful an examination of the statutes as was possible under the circumstances. His personal views of the rights or equities of the Mississippi Choctaws have had no weight, and have not been permitted to enter into this ruling one way or the other. It is the duty of the Chair to pass upon the point of order in accordance with what he believes to be the meaning of the rules of the House and the general law on the subject, and this the Chair has endeavored to do without regard to the merits of the question. The committee has the right of ultimate interpretation, and if the Chair is wrong in his conclusions the committee, on appeal, can so determine.

The Chair is clearly of the opinion that the paragraph does not involve a change of existing laws and is not new legislation, and therefore overrules the point of order.

ARGUMENT OF HON. E. W. SAUNDERS, OF VIRGINIA.

Mr. SAUNDERS. Mr. Chairman, this is quite an interesting legal proposition, and I will not undertake to take issue with the gentleman from Mississippi [Mr. SISSON] with respect to his statement that a Federal statute can modify, or, for that matter, abrogate an existing Indian treaty. I do not know that it is very much to our credit, that this is true, but I realize that such is the fact. With respect to Indian treaties we claim the power practically to do with them as we please. However solemnly they may have been entered into, or however clear the understanding of the Indians may have been, with respect to its terms, and intent, we hold an ultimate authority that is occasionally exercised, to completely abrogate these agreements. And while that authority exists, and while under certain conditions, not very much to our credit, it has been exercised, yet the general trend of interpretation with respect to Indian treaties, and legislation relating to Indian treaties, is to interpret them with respect to the understanding of the Indians, and so as to promote their substantial interests and welfare.

This being true, and this principle of construction being admitted, I submit that, having in mind both the antecedent treaty bearing on this situation, and this principle of construction, the Chair will not be disposed to strain the interpretation of an act subsequent to the treaty in order to nullify a clear understanding of the natives as to the terms and effect of this treaty.

I admit the authority on the part of the Government to do this. I admit that if this statute in terms destroys the solemn agreement between the Indians, and the United States, the statute is the paramount authority, and must be followed. I admit that if the intent to abrogate clearly appears on the face of the statute, then the Chair is bound to rule in conformity with this clear plain intent.

But I wish to state in this connection one or two propositions, having in mind this fundamental canon of interpretation with respect to treaties and Indian statutes, which I think, will make it abundantly clear that the statute under consideration, even if it is strictly construed, does not deprive the Congress of the authority to distribute from time to time, the proceeds of property sold under its terms, and pursuant to its directions.

I am somewhat familiar with the facts relating to this whole subject matter, and I know the difficulty that exists with respect to the final disposition of a portion of this entire property. The United States has been at a loss to determine the proper policy with respect to the coal lands, whether they should be sold as a whole or in sections, or be leased for the benefit of the tribes. A few years ago I went out to the State of Oklahoma as a member of a committee, and when we looked over these coal lands, and discussed the problem of their disposition, I realized that it was one that presented substantial difficulties. We were all agreed that the interests of the Indians, and they are exclusively interested, required some immediate disposition, but could reach no conclusion as to the form this disposition should take.

The Chair will observe that another section of this statute heretofore cited provides that these coal lands shall be segregated and not offered for sale. This section was an indication on the part of the Government, an acknowledgment, you might say, on the part of the Government, that it was not prepared to determine the disposition of the coal lands. In other words, it was a reservation of the final determination of this disposition for some future time, when, as the result of larger experience and new facts, the Government would be better able to reach a wise conclusion and determine whether this coal land should be sold as an entire tract or in subdivisions, or should be held in perpetuum by the United States under an arrangement to lease the same and pay over the proceeds of these leases to the tribes.

If the view presented by the gentleman from Mississippi is correct, namely, that all of this property must be sold before any disposition can be made of the proceeds, then the withdrawal of the coal lands from sale will postpone indefinitely the distribution of the proceeds of the remaining lands, although the disposition of these lands is free of difficulty. In fact, all of these lands have been sold, and the proceeds are now in hand, and available for division among the parties in interest.

Now, having in mind that all of the Indian statutes are intended for the benefit of the Indian tribes, can any sufficient reason in law be advanced why a distribution pro tanto should not be made of the money in hand derived from sales made pursuant to the authority of the statute in question? Why not construe this statute as other Indian statutes are construed, that is, liberally in all that relates to the interests of the Indians? Why should the proceeds of sales long since made be allowed to remain in perpetuum in the hands of the Federal Government, when there are no ascertained demands upon the fund, and the people entitled to participation in their own are clamoring for a partial distribution?

Mr. HARRISON. The gentleman's argument is very interesting; but assuming for the sake of argument that there are Mississippi Choctaws who have been kept from the roll who ought to be on the roll, and assuming that this is the first distribution of the fund, to be followed by another distribution of the funds to those Choctaws who are on the roll, and that in the course of two or three or four years, by these annual distributions of funds among the Choctaws who are on the roll, none

would be left for those who in the course of time might be placed upon the rolls, does not the gentleman think that that question ought to enter into the consideration of this matter, and if that is true this point of order should be sustained?

Mr. SAUNDERS. Mr. Chairman, I will answer my friend's inquiry fully. Even upon his statement of the case, I do not think that he presents for consideration an element that should enter into the decision of the Chair. And yet I will say, with respect to what this House may do, that if it should clearly appear that there was a meritorious outstanding claim, against this fund, though it had not reached the point that it had become a charge, it would be a great wrong on the part of the Congress to distribute this fund pending the ascertainment, and determination of this claim. A reasonable opportunity should be afforded for its prosecution to judgment, or final determination. I for one would never agree to distribute the fund in hand so as to leave nothing for outstanding claimants prosecuting in good faith an apparently meritorious demand. But I submit that this is a question for the House, and not for a ruling by the Chair. The statement of the claims of the Mississippi Choctaws as made by my friend does not bring them within the benefit of the language used in the statute. However, neither the House, nor the Chair, need concern themselves with this phase of the situation for the very simple, and sufficient reason that there is a reservation of property that in the ultimate will be far more than sufficient to discharge any possible findings in favor of the Mississippi Choctaws.

I know something about the extent and value of these coal areas. I went over them as a member of the committee, that visited the State of Oklahoma a few years ago. They are practically intact, and in the aggregate of immense value. No fear need be entertained that the partial distribution proposed will in any wise imperil the discharge of any prospective finding in favor of the Mississippi Choctaws.

I take it, Mr. Chairman, that no one believes that in the result all of these claimants will be able to make good. I take it that every Member on this floor who is at all acquainted with the nature and character of these claims realizes that in the ultimate, when every opportunity shall have been afforded in the courts for the determination of their merits, quite a large proportion of them will fall by the wayside. But even upon the theory that all of the two thousand and odd outstanding claimants will establish their claims in the courts, there is a sufficient undisposed of reservation to pay these demands in full.

I know something about this Dancing Rabbit treaty. I was a member of the Indian Committee for two or three sessions, and have heard this particular treaty discussed. It may be true that the Mississippi Choctaws were entitled to the benefits of the Dancing Rabbit treaty.

But I deny that there is any ascertainment anywhere that the Choctaws now in Mississippi are entitled to present participation in the fund in hand. These Choctaws have nothing but a claim, a claim that may be prosecuted during all time to come, and which therefore might defer, for all time to come the distribution of this present fund.

Mr. Chairman, look at the unreasonableness of the contention advanced in behalf of the Mississippi Choctaws that they have a right to hold up the partial distribution of the money in hand, even though the undistributed balance will save them harmless. In substance this contention is, that so long as they are prosecuting their claim in good faith, though their rights are undetermined, and unascertained, they are entitled to demand a postponement of distribution among the Indians whose right to present participation in the fund in hand has been definitely settled.

Mr. MADDEN. Is there no way by which we can force to a conclusion the cases that are pending?

Mr. SAUNDERS. None whatever. These Mississippi Choctaws will enjoy precisely the same status before the next House, as they have before the present body, namely, the right to press their claims, and ask for favorable action. Even an adverse decision by the present body, would not hinder the claimants from presenting their claims to the next House.

Mr. Chairman, as I have said, having in mind that the controlling canon or principle of interpretation of an Indian statute is to favor the interests of the Indians concerned, why should the Chair undertake to say that the language of the statute in issue, means of necessity that there shall be no distribution of the fund, until every foot of land has been sold, every dollar of the purchase price has been paid into the Treasury, and every outstanding claim has been provided for? Why should you reach that conclusion, unless the language of the statute is so compelling that no other conclusion is possible? Upon a fair consideration of the statute, it is apparent that the language used, means to say that when this property shall be sold from time to time and the proceeds paid into the Treasury until such an amount is in hand as to justify a partial distribution, this distribution shall be made among the parties in interest, after provision has been made for existing demands upon the fund. This is the present situation. An immense sum is in the Treasury, in the hands of the court, so to say.

The people for whose benefit this statute was presumably enacted, being the same people, or the successors of the same people, who made the Atoka agreement, are knocking at the doors of the Treasury. They ask that this fund shall be partially distributed. They meet the request for postponement of distribution by pointing to this agreement, and citing the familiar rule of interpretation applied to all statutes affecting the rights of Indians. How can this request be repelled? In one way only. The gentlemen who hold the contrary view, must satisfy the Chair that the terms of the statute are so absolute, so positive, so overpowering in their clear prescription distribution must be deferred until the last dollar has been brought into the Treasury from the sale of all the property of these Indians, that no decision is possible other than to sustain the point of order. When will these final sales take place? Having in mind the difficulties that attend the disposition of the coal lands, there is not a Member of this House who can make a reasonable estimate of the time that will be required to work out a solution of this problem in the best interests of the Indians. The disposition of the unallotted timber and agricultural lands was an easy task. They were platted and sold on easy terms. But the disposition of the coal lands has proved to be quite another thing, and the Government has never reached any definite conclusion as to the proper policy to be pursued in relation to this most valuable and undistributed asset.

I wish to call the attention of the Chair to the language of the section under consideration:

SEC. 17. That when the unallotted lands and other property belonging to the Choctaw, Chickasaw, Cherokee, Creek, and Seminole Tribes of Indians have been sold and the moneys arising from such sales or from any other source whatever have been paid into the United States Treasury to the credit of said tribes, respectively, and when all the just charges against the funds of the respective tribes have been deducted therefrom, any remaining funds shall be distributed per capita to the members then living and the heirs of deceased members whose names appear on the finally approved rolls of the respective tribes, such distribution to be made under the rules and regulations to be prescribed by the Secretary of the Interior.

Having in mind that the segregated coal lands constitute the "other property" of the Indians, it is apparent that the interpretation of this section urged upon the Chair by the gentlemen who raise this point of order, will defer the distribution of any fund in hand, even if there is not a single charge against this fund, until the final sale of the segregated coal lands, and the payment of the proceeds of sale into the Treasury.

I would like for the gentlemen who hold this view to give to the Chair some sufficient reason, having in mind the interests of the people entitled to participation and therefore entitled to be considered, why the statute should carry this meaning. Why should it be supposed that Congress, having withdrawn the coal lands from sale by another section, should withhold the proceeds of sale of other lands from the parties in interest, until such time as the coal lands should be sold and the proceeds collected? From what conceivable point of view would this policy be to the interest of the Indians owning these lands? I submit that what this statute really means, is that when any amount of this property has been sold, sufficient to justify a distribution, and the proceeds of sale have been collected, this fund, after providing for all just charges shall be distributed per capita amongst the proper parties on the approved rolls. Such a construction would conform the statute to the Atoka agreement, and be in harmony with the prevailing rule of interpretation of statutes of this character.

Mr. WEAVER. In 1904 there was a per capita payment of $40, in 1906 a per capita payment of $35, in 1908 another per capita payment of $20, and in 1911, from the general fund, a per capita payment of $50.

Mr. SAUNDERS. Permit me to call the attention of the Chair to the fact that according to the present contention, all of the per capita payments made since 1906, were a repeal to that extent of the present statute. This act was passed in 1906. These payments afford a very clear indication that up to the present time, this act has not been construed by the people who are charged with its enforcement, as bearing the meaning that is now sought to be impressed upon it, by the gentlemen who insist on this point of order. If these payments were in violation of the act of 1906, this point of order would have been made long ago by some one on behalf of the Mississippi claimants.

But the objection that the provision for these payments is contrary to law, is raised for the first time to-day. The omis-

sion to raise it heretofore raises a presumption that the payments ordered were conformable to law, and a proper part of the appropriation bill.

It is perfectly clear, that if there are no interests to be protected by the interpretation sought to be impressed upon this statute, there is no merit in the contention for his interpretation. Is it an abstract proposition that my friend from Wisconsin is seeking to establish? Why does he urge this interpretation, when it is so palpably contrary to the best interests of the people directly concerned in this fund?

So far as the equities are concerned a fund is retained that will be sufficient, and far more than sufficient, to meet them. But these equities can not be considered in the determination of this point of order. So we return to what after all is the main inquiry, and that is what interpretation of this statute will best promote the interest of the people vitally concerned. That interest should be the main, determining factor of interpretation. Why should the distribution of this money that possibly is needed to relieve actual want, be postponed until in the fullness of time, some other lands the property of the same tribes, shall be sold and the purchase price paid into the Treasury? Why should money now in hand lie idle in the Treasury, until Uncle Sam can scratch his head, and solve the knotty problem of how to best dispose of the coal lands?

Mr. Chairman, the summation of this situation may be stated as follows. First, the equities have nothing to do with your determination. Second, a sufficient fund is retained to provide for the equities. Third, the interpretation of this statute should not be contrary to the manifest interests of the Indians unless you are driven to that conclusion by the overwhelming compulsion of the language used by the lawmakers. Fourth, there is no more reason for deferring this distribution than it would be for a court to defer a distribution of a fund in hand, when the parties were before the court, and all questions in issue had been determined. This distribution will go to the discharge of present necessities, to the discharge of present obligations, perchance to keep the wolf from the door of the desperately needy. Yet the gentleman from Wisconsin insists that distribution must be postponed until the segregated lands are all disposed of. Keep it in the Treasury, he says. Don't give it to the only people in the world who are entitled to distribution, but tie it up in a napkin, and put it away until the last acre in the coal era is sold, and the last Mississippi Choctaw is laid at rest.

I wish to put into the RECORD in response to the suggestion that some provision should be made for what are called the equities of the Mississippi Choctaws, and I do not undertake to prejudice their claims, or to deny them in a day in court, the fact that there are still $30,000,000 to be paid over to the Choctaw and Chickasaw Indians in Oklahoma.

I wish also to put into the RECORD certain principles of interpretation taken from the case of Choate against Trapp, decided in the Supreme Court of the United States May 13, 1912, opinion by Mr. Justice Lamar:

> But in the Government's dealing with the Indians the rule is exactly the contrary. The construction, instead of being strict, is liberal; doubtful expressions, instead of being resolved in favor of the United States, are to be resolved in favor of a weak and defenseless people, who are wards of the Nation, and dependent wholly upon its protection and good faith. This rule of construction has been recognized, without exception, for more than a hundred years.

My last word is that the language of this statute is not so compelling that the Chair is required to hold that it repeals by implication the Atoka agreement, and postpones for an indefinite period the disposition of present funds among the persons severally entitled thereto. The point of order should be overruled.

ARGUMENT OF THE HON. WILLIAM H. MURRAY, OF OKLAHOMA.

Mr. MURRAY of Oklahoma. Mr. Chairman, I want to say in the beginning that it has always been the policy of this Congress, as laid down by the courts, that an Indian treaty must be construed in the light in which the Indians themselves understand it. I have some decisions covering those particular points. I had occasion years ago to prepare quite a brief on that particular point, but I apprehend that every lawyer will recognize that fundamental fact, namely, that the treaty must be construed in the light in which the Indians understand it. Since the making of these treaties for the break-up of their tribal government there have been four several payments made, and this is only in keeping with their understanding of the Curtis Act and the Atoka agreement.

It is urged that because one statute provides for payment after all "charges" are paid, the Mississippis wherefore set up that their "claim" comes within the rule by the use of this word "charge." There is a distinction between the word "charge" and the word "claim."

> A claim is a challenge of interest in anything that is in the possession of another, or at least out of a man's own possession—a challenge of the ownership of property that one hath not in his possession, but which is detained from him by wrong. (Saddlesvene *v.* Arms (N. Y.), 32 How. Prac., 280; Fordyce *v.* Goodman, 20 Ohio, St. L.)
>
> A charge is the price required or demanded for services rendered. (Fulster *v.* Southern Railway Co., 45 St., 196.)
>
> Charges mean any matters which were supposed likely to require expenditures in amounts, either definite or indefinite. (Marathon Tp. *v.* Oregon Tp., 8 Mich., 372.)

Now, those are the only specific definitions as laid down by the courts as to the meaning of the word "charge." There can be but one charge against this claim. It can not exceed $27,000, although there are $14,000,000 worth of available assets, according to the statement I hold in my hand.

Now, the gentleman who just took his seat made an argument upon a proposition of law or a statute, but I want to say to the House and to the Chair that this whole question is predicated upon the first treaty for the allotment of these lands, namely, the Atoka agreement. The Government had to get this agreement in order to secure a break-up, and in that treaty this language is used:

> It is further agreed that all of the funds invested in lieu of the investment, treaty funds and otherwise, now held by the United States in trust for the Chickasaws and Choctaws shall be capitalized within one year after the tribal government shall cease, so far as the same may be legally done, and a per capita payment made by some officer of the Government.

Now, Mr. Chairman, what is meant by the language "one year after tribal government shall cease"? We find in a subsequent statute that the law authorized that it must be in eight years from a given date, and the same is contained also in this treaty, which caused it to expire in 1904. So the question, then, will arise, What is the meaning of the word "government" as understood by this Government and understood by the Indians?

Now, then, what is "government"? Government means a control, and involves moral control, a physical control, or a political control. Let us see what the Standard Dictionary says about it. It says:

> Govern: To exercise authority; administer laws.
>
> Government: Any territory over which the right of sovereignty is extended; a state or community governed by an authority.

If we were to take a European definition, it would mean any authority exercising the power that goes with authority. But as understood in America, a government is the administration of law, carrying with it somewhere the authority to make that law.

Now, the commissioners who negotiated the treaty must have understood that definition. Let us understand what the Indians understood by it. When the Atoka agreement was made, they had a government that was to cease. It consisted of a governor, a national superintendent of schools, an auditor, a treasurer, a secretary of state, local county courts, probate courts, district courts, and a supreme court.

It had, in addition, a legislative department consisting of a house and a senate. It had a superintendent of schools. It could exercise a power supreme, only controlled by the Federal laws. It exercised a power that no State in this Republic could exercise. There was no question as to the constitutionality of its laws; no question of the validity of its laws. No question of whether or not a law was confiscatory could be raised in the courts. They could make a law providing that criminals might be hanged if they saw fit, or shot when they saw fit, and no Federal court could interfere with that. They occupied the same relation with respect to this Government as the Boers of Africa had to the British Government. There was merely a suzerainty over them; nothing more.

Now, what is more, they now have no schools that are controlled by themselves, no legislature, no officer, except one—a governor—and that governor can not control or enforce a single law; and the very key to government under American definitions is the administration of law. Why is he preserved? Because those Indians now own that land in fee simple, and it required a governor to transmit the title from the tribes to the lot owners who purchased the lots or to the individual allottees. So his duty is purely ministerial. He can not enforce a single law. There is no power of government. There is no control in the treaty and statutes. Years ago they passed out of existence.

Lay aside your technicalities. What did the Government of the United States understand? What did the Indians understand? There is not a man here who can claim for a moment that those commissioners had in their minds any other meaning than that laid down in Bouvier's Law Dictionary and in the standard dictionaries of the country. The Indians relied upo. its continuation and ending of their government as it then existed. No definition, even under a monarchical definition in Europe, to say nothing of our definition, could be invoked to

claim that there is a Chickasaw or Choctaw government. Now, let us keep those obligations. Let us pay that money out as the treaty provides.

There is another side of this question—the question of the meaning of the word "claim" referred to. There might be some contention in that, but what is a "claim" or "charge"? The word "charge" used in the treaty, not "claim." I recite here from a brief two decisions of the courts—the word "claim" means a contest of an interest in the possession of another individual. A "charge" contemplates service to be done, expenses to be had, and the courts have so defined it. If you are going to construe technically against these Indians, for God's sake take your own court's definition, and you will hold this to be in order.

I place in the RECORD a brief prepared by the Chickasaw attorney, Mr. Reford Bond:

MEMORANDUM OF AUTHORITIES SUSTAINING PROVISION OF APPROPRIATION BILL AUTHORIZING PER CAPITA PAYMENT TO THE CHOCTAWS AND CHICKASAWS.

[Prepared by Reford Bond, general attorney for the Chickasaws.]

H. R. 12579, a bill making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, contains the following provision:

"That the Secretary of the Interior be, and he is hereby, authorized, in his discretion, to make a per capita payment of $100 to the enrolled members of the Choctaw and Chickasaw Indians of the Five Civilized Tribes entitled under existing law to share in the funds of said tribes, or to their lawful heirs, out of any moneys belonging to said tribes in the United States Treasury, or deposited in any bank, or held by any official under the jurisdiction of the Secretary of the Interior, same to be made under such rules and regulations as he may prescribe: *Provided*, That in cases where such members are Indians whose restrictions have not been removed the Secretary of the Interior may, in his discretion, withhold such payment and use the same for their benefit."

In order to understand and correctly determine the issues presented by the point of order against said provision it is necessary to refer briefly to material portions of lengthy agreements and statutes, under which the tribal property of said tribes was divided in severalty among their members, disposed of under rules and regulations of the Secretary of the Interior, and under which the proceeds derived from such disposition are to be distributed per capita among the duly enrolled members of the Choctaws and Chickasaws.

The Atoka agreement between the Choctaw and Chickasaw Tribes of Indians and the United States is embodied in the act of Congress approved June 28, 1898 (30 Stat. L., 495). This agreement contains the following provision:

"It is further agreed that all of the funds invested, in lieu of investment, treaty funds, or otherwise, now held by the United States in trust for the Choctaw and Chickasaw Tribes shall be capitalized within one year after the tribal governments shall cease, so far as the same may legally be done, and be appropriated and paid, by some officer of the United States appointed for the purpose, to the Choctaws and Chickasaws—freedmen excepted—per capita, to aid and assist them in improving their homes and lands."

By the same act the tribal governments of the Choctaw and Chickasaw Nations were continued for eight years from March 4, 1898. The provision is as follows:

"It is further agreed, in view of the modification of legislative authority and judicial jurisdiction herein provided, and the necessity of the continuance of the tribal governments so modified, in order to carry out the requirements of this agreement, that the same shall continue for the period of eight years from the 4th day of March, 1898. This stipulation is made in the belief that the tribal governments so modified will prove so satisfactory that there will be no need or desire for further change till the lands now occupied by the Five Civilized Tribes shall, in the opinion of Congress, be prepared for admission as a State to the Union."

This act in effect continued the tribal governments of said tribes until March 4, 1906, and provided that their funds be appropriated and paid within one year from said date, or on or before March 4, 1907.

There is only one conclusion to be drawn from an examination of the above and foregoing provisions, and that is, Congress contemplated a dissolution of the tribal governments at the advent of statehood and the distribution of tribal funds.

The act of July 1, 1902 (32 Stat. L., 641), known as the supplementary agreement between the Choctaw and Chickasaw Nations and the United States, contains the following provisions:

"No person whose name does not appear upon the rolls prepared as herein specified shall be entitled to in any manner participate in the distribution of the common property of the Choctaw and Chickasaw Tribes, and those whose names appear thereon shall participate in the manner set forth in this agreement."

The object and purpose of this provision was to definitely designate the persons who were to participate in the distribution of the property of the tribes.

Section 14 of this agreement makes provision for the disposition of the surplus tribal property for equalizing allotments, and provides that the balance of the proceeds shall be distributed per capita as other funds of the tribes. The exact language of same is as follows:

"When allotments as herein provided have been made to all citizens and freedmen, the residue of land not herein reserved or otherwise disposed of, if any there be, shall be sold at public auction, under rules and regulations and on terms to be prescribed by the Secretary of the Interior, and so much of the proceeds as may be necessary for equalizing allotments shall be used for that purpose, and the balance shall be paid into the Treasury of the United States to the credit of the Choctaws and Chickasaws and distributed per capita as other funds of the tribes."

The latest legislation affecting the issues involved is embodied in the act of April 26, 1906 (34 Stat. L., 137), entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and for other purposes." Section 2 of this act fixed a time for the completion of the citizenship rolls, which provision is as follows:

Provided, That the rolls of the tribes affected by this act shall be fully completed on or before the 4th day of March, 1907, and the Secretary of the Interior shall have no jurisdiction to approve the enrollment of any person after said date."

This act further provided for the disposition of all of the tribal property of the Choctaw and Chickasaw Tribes, except the coal and asphalt segregation, which was reserved from sale until further action by Congress, largely on account of conditions existing at that time, which seemed to make the sale of this segregation unwise for business reasons.

Section 16 provided—

"That when allotments as provided for by this and other acts of Congress have been made to all members and freedmen of the Choctaw, Chickasaw, Cherokee, Creek, and Seminole Tribes the residue of lands in each of said nations not reserved or otherwise disposed of shall be sold by the Secretary of the Interior under rules and regulations to be prescribed by him, and the proceeds of such sales deposited in the United States Treasury to the credit of the respective tribes."

This act further provided for a per capita distribution of funds to living members and to the heirs of deceased members whose names appear upon the approved rolls of the tribes.

Section 17 provided—

"That when the unallotted lands and other property belonging to the Choctaw, Chickasaw, Cherokee, Creek, and Seminole Tribes of Indians have been sold and the moneys arising from such sales or from any other source whatever have been paid into the United States Treasury to the credit of such tribes, respectively, and when all the just charges against the funds of the respective tribes have been deducted therefrom any remaining funds shall be distributed per capita to the members then living and the heirs of deceased members whose names appear upon the finally approved rolls of the respective tribes, such distribution to be made under rules and regulations to be prescribed by the Secretary of the Interior."

It will be contended under the terms of the first paragraph of section 17 that a per capita payment is not permissible until all the unallotted lands and all other property belonging to the tribes have been sold and the moneys arising from such sales and other sources have been paid into the United States Treasury. Such a contention necessarily calls for an unusually strict and technical construction. In the case of Choate et al. *v.* Trapp, Justice Lamar says:

"But in the Government's dealings with the Indians the rule is exactly the contrary. The construction, instead of being strict, is liberal; doubtful expressions, instead of being resolved in favor of the United States, are to be resolved in favor of a weak and defenseless people, who are wards of the Nation, and dependent wholly upon its protection and good faith. This rule of construction has been recognized, without exception, for more than a hundred years."

The act does not say when all the unallotted lands have been sold. It does not say when all other property has been disposed of. Then why read the word "all" into the act? Why not give it a liberal construction and why not take into consideration the history of the provision, together with the Indians' understanding of the meaning, the facts and circumstances surrounding its enactment, and bring to bear all material evidences in construing same?

It will be noted that every agreement between the tribes and the United States provided for a distribution of tribal funds per capita; that practically all legislation enacted affecting the funds of said tribes provided for a per capita payment thereof. Moreover, the Government has so construed these by making three several per capita payments since their adoption. It was contemplated that they be paid their moneys as early as practicable, that they might build homes and improve their allotments. It was thought that the sale of their coal and asphalt lands would occasion considerable delay. It was understood and believed by them that their moneys would be paid per capita from time to time and that their agreements with the United States and the acts of Congress so provided. Under such belief they have lived up to and performed on their part each and every agreement made. They have allotted their lands in severality; they have permitted the abolishment of their tribal governments until they exist only in name. The institutions they held passionately to from custom and patriotism are forever gone. Now, is it equitable and just to ask for a strict technical construction, for a construction that necessarily reads into the act words that are not found therein, simply to prevent a people from obtaining a very small portion of their own property, which in right should have been distributed per capita long ago?

It has been asserted that under the terms of the second condition of said section the funds of said tribes can not be paid per capita until all claims against them have been settled. This perversion is monstrous and absurd. Let us look to the language of the statute in question. It reads: "And when all the just charges against the funds of the respective tribes have been deducted therefrom, any remaining funds shall be distributed per capita." The word "claim" is not found in the statute, but, on the contrary, the word "charges" is used. There is a marked legal distinction between the words "claim" and "charges."

"A claim is a challenge of interest in anything that is in the possession of another, or at least out of a man's own possession. A challenge of the ownership of property that one hath not in his possession, but which is detained from him by wrong." (Saddlesvene *v.* Arms (N. Y.), 32 How. Prac., 280; Fordyce *v.* Goodman, 20 Ohio St., 1.)

"A charge is the price required or demanded for services rendered." (Fulmer *v.* Southern Railway Co., 45 St., 196.)

"Charges mean any matters which were supposed likely to require expenditures in amounts either definite or indefinite." (Marathon Tp. *v.* Oregon Tp., 8 Mich., 372.)

The charges mentioned in the statute in question refer to charges of administration, charges of the Government for administering the estates of the tribes. When you look to the language and the purpose and intent of the statute you will agree that it is not susceptible of any other construction.

The charges against the tribes are carried and cared for annually in the Indian appropriation bill, and therefore the question of charges is eliminated from the issues involved.

The provision of the Indian appropriation bill in question has the approval, support, and indorsement of the Department of the Interior. Its letter of approval to the chairman of the Committee on Indian Affairs contained the following language:

"It appears therefrom that the total deposits and amounts on hand January 17, 1914, aggregate $7,425,213.20, and to make a per capita payment of $200 to 27,022 enrolled members entitled thereto will take $5,404,400, leaving a balance of $2,020,813.20 still on hand, which, added to $23,673,845 to become due, will make a total amount of $25,694,658.20 to become due for future payments."

It appears from the letter of the Department of the Interior that the tribes have ample funds for several $100 per capita payments, and the department in approving the provision for such payment has virtually acknowledged that it is for the purpose of carrying out the terms of

existing treaties between the Government of the United States and the Choctaw and Chickasaw Tribes of Indians, and also for the purpose of carrying into effect laws of the United States pertaining to the estate of said tribes, and his virtually placed the construction on said statute contended for by the tribes.

After a careful analysis of the material portions of the statutes and agreements above set forth, after weighing certain well-known facts, and after looking to the spirit as well as the letter of the law, you are irresistibly drawn to the conclusion that the provision of the Indian appropriation bill in question is merely a partial fulfillment of the treaty obligations existing between the United States Government and the Choctaw and Chickasaw Nations, and a partial carrying into effect of the laws of the United States relating to the estates of the Choctaws and Chickasaws.

I will refer again to the fact, Mr. Chairman, that on the 18th day of June this question was up in the Senate, and on a roll call the Senate voted, by a vote of 36 to 16, that this very same provision was in order, and yet they were a party to all this legislation.

These several provisions of law run through a series of treaties and of statutes. They do not always harmonize. But the Indians have always understood that they were to have this money annually and a final settlement after the dissolution of the tribes. That was their understanding. They have had four payments, and, so far as the equity is concerned, this hour, above all times, demands that this payment should be made.

Perchance there exists here and there a charge, and we refuse to make a just claim when the department has shown them by this list, itemizing the permanent annuities made under treaties negotiated years ago, itemizing the several sales of land, and showing which have been paid for, how much of it is in deferred payments under the law and under the treaties. Those two tribes have now a little upward of $7,000,000 in cash. They have deferred payments up to this month of $7,100,000 that will be due in the next three years, so that there will be $14,000,000 in all. A per capita payment of $100 would take less than $3,000,000. Why make such a technical claim in the interest of a people who need their money? You have them tied down with restrictions.

The CHAIRMAN. Will the gentleman give to the Chair the figures that he has just stated of the amount of money on hand?

Mr. MURRAY of Oklahoma. Yes, sir. I sent them, and I desire to put them here in the RECORD, showing the amount in detail due each and all these tribes:

Number of enrolled citizens and freedmen of the Five Civilized Tribes.

CHICKASAW NATION.

Chickasaws by blood	5,666
Chickasaw adopted whites	21
Chickasaw citizens by marriage	645
Chickasaw freedmen	4,642
Total	10,974

CHOCTAW NATION.

Choctaws by blood	17,396
Mississippi Choctaws by blood	1,634
Choctaw adopted whites	10
Choctaw citizens by marriage	1,650
Choctaw freedmen	5,975
Total	26,665

SEMINOLE NATION.

Seminoles by blood	2,132
Seminole freedmen	987
Total	3,119

CREEK NATION.

Creeks by blood	11,909
Creek freedmen	6,807
Total	18,716

CHEROKEE NATION.

Cherokees by blood	36,289
Delaware citizens	197
Intermarried whites	286
Freedmen	4,924
Total	41,696
Grand total	101,170

Balance of tribal fund in United States Treasury Jan. 11, 1914.

SUMMARY.

Choctaws	$5,037,787.40
Chickasaws	1,713,212.66
Timber sold, cash paid in	381,400.00
Land sold	323,200.00
Sales of buildings	50,000.00
Timberland sold	25,000.00
Grand total available	7,530,000.06
Deferred payments	4,000,000.00
Unsold timberland remaining	2,500,000.00
Grand total	7,100,000.00

NOTE.—This does not include the coal and asphalt lands.

The Chair will find the funds of all the tribes and the membership of all the tribes stated there. When we opened the rolls before we added 1,634. Many of them have returned, going back to Mississippi. We are getting tired of the generosity that

holds us up, that delays land titles, that delays settlement. We want the Government at some time to keep its promises and to make this settlement in obedience to the treaty obligations of this Government. The time of "one year after the tribal government ceases" has passed long ago and we are tired of the delay.

The only question is whether it complies with the laws and treaties. The very title of the act is "An act to carry into effect treaty stipulations and laws," and this is to determine whether or not this appropriation to pay $100 per capita is in obedience to treaties and laws.

If it is in obedience to treaties and laws, it is germane to the bill and the title and in order. If it is not, then it is new legislation. If it is new legislation, it is not germane and therefore would be out of order. I took it for granted that the House understood—and I believe the House and the Chair understand—that the question involved is whether we are trying to legislate or whether we are trying to carry out a treaty provision and a statutory provision and make an appropriation in obedience to it. If it is, then this bill, to "carry out treaty stipulations and to make appropriations for the Indian Department" in obedience to the law, makes this provision in order. So far as the equities are concerned, as referred to by the gentleman, I am ready for that discussion anywhere. I am ready for the discussion both as to the technicality of the law and as to the equity of the rights of the Mississippi Choctaws.

STATEMENT BY ROBERT L. OWEN WITH REGARD TO THE CLAIMS OF CERTAIN SO-CALLED MISSISSIPPI CHOCTAWS TO CHOCTAW CITIZENSHIP.

I was the attorney of the Mississippi Choctaws who were enrolled by the Choctaw-Chickasaw agreement of 1902. I represented them from 1896 to 1906, and devoted my time to their interests for 10 years.

No Choctaw in Mississippi or elsewhere, not on the approved rolls of March 4, 1907, has any legal or equitable right to enrollment or to any further hearing.

By article 14 of the treaty of 1830 certain Choctaws who became citizens of Mississippi reserved the right to remove to the Choctaw Nation west, and thereby acquire citizenship. (7 Stat., 335.)

Murray and Vroom, under act of Congress of August 23, 1842 (5 Stat., 513), found that there were 4,100 fourteenth article claimants. Of these the muster rolls show that more than 3,400 removed to the Choctaw country west prior to 1855, and most of the 700 remaining subsequently emigrated, as shown by the Choctaw records. It is also true, however, that some of the Mississippi Choctaws who went West under the fourteenth article and acquired citizenship, subsequently abandoned their Choctaw citizenship by moving away from the Choctaw country and returning to Mississippi.

In 1896 Congress authorized the Dawes Commission to make up the citizenship rolls of the Five Tribes. The Dawes Commission gave hearings to all applicants. It heard the case of the Mississippi Choctaws who resided in Mississippi, under the title "Jack Amos and others," presented by me.

On December 1, 1896, the Dawes Commission rejected the Mississippi Choctaws on the ground of not having established residence.

In February, 1897, immediately afterwards, I solicited the passage of an act directing the Dawes Commission to report to Congress on the rights of the Mississippi Choctaws. This was done, and the Dawes Commission rendered its opinion on February 2, 1898 (H. Doc. 274, 55th Cong., 2d sess.), to the effect that the fourteenth article claimant had a right to remove to the Choctaw county west and become a citizen on the condition that he should prove the fact "that he is a descendant of some one of these Indians who originally availed themselves of, and conformed themselves to, the requirements of the fourteenth article of the treaty of 1830."

In the meantime I appealed the Jack Amos case to the United States district court (Judge Clayton), who rendered a like opinion (see Report Commission Five Tribes, 1899, p. 92), and Judge Clayton held that those who had not previously to his opinion removed to the Choctaw country were barred by failure to remove. Judge Clayton's opinion was confirmed by the Supreme Court of the United States (174 U. S. Rep., 445, Stevens *v.* Cherokee Nation). The Mississippi Choctaw case was argued in the Supreme Court in the Emma Nabors case, under the Stevens case. Having thus been defeated in enrolling the Mississippi Choctaws, I appealed to Congress to direct the Dawes Commission to identify the Mississippi Choctaws, claiming under article 14, treaty of 1830. Congress gave this direction June 28, 1898, and the Dawes Commission, on March 10, 1899, made their report, in which they stated that they found it—

Impossible to trace the full-blood Choctaws now residing in the State of Mississippi bearing an English name with any degree of certainty to ancestors bearing Indian names.

Also, that they found it impossible—

To establish the fact that such ancestors performed the duty of signifying to the United States agent within the limited period their intention and desire to remain and become citizens of the States.

They also stated (p. 78, last paragraph):

It is impossible to trace descendants now bearing English names to ancestors bearing Indian names upon whom was imposed the duty of complying with the treaty at that time and to connect persons now living with the fulfillment of the requirements of the provisions of article 14 of said treaty.

On June 28, 1898, Congress passed the Curtis Act abolishing the tribal governments, subdividing the lands, and authorizing the completion of the tribal rolls, with the following very important provision:

No person shall be enrolled who has not heretofore removed and in good faith settled in the nation in which he claims citizenship.

I strenuously urged an exception in favor of the Mississippi Choctaws, and it was granted in the following words:

Provided, however, That nothing contained in this act shall be so construed as to militate against any rights or privileges which the Mississippi Choctaws may have under the laws of or treaties with the United States.

On May 31, 1900, the Dawes Commission having reported a schedule of Indians claiming to be fourteenth article Mississippi Choctaws, Congress passed an act modifying the Curtis Act above quoted by providing—

That any Mississippi Choctaw duly identified as such by the United States Commission to the Five Civilized Tribes shall have the right at any time prior to the approval of the final rolls of the Choctaws and Chickasaws by the Secretary of the Interior to make settlement within the Choctaw and Chickasaw country, and on proof of the fact of bona fide settlement may be enrolled by such United States commission and by the Secretary of the Interior as Choctaws entitled to allotment.

Under this act of Congress, unless settlement was made prior to March 4, 1907, the exemption of the Mississippi Choctaws from the rule of the Curtis Act was terminated.

In 1902, July 1, the Choctaws and Chickasaws entered into an agreement in which the Choctaws and Chickasaws waived legal proof of the identification of the Mississippi Choctaws and of the requirements imposed by Judge Clayton's decision in the Amos case and by the decision of the Dawes Commission, that they should prove descent from a person who had complied with the conditions of the fourteenth article.

The Choctaws and Chickasaws substantially bought their peace in this contest with the Mississippi Choctaws by agreeing to waive their legal rights to demand proof—proof which the Dawes Commission said the Mississippi Choctaws could not furnish.

The Choctaw-Chickasaw agreement of July 1, 1902 (secs. 41, 42, 43, and 44), imposed the condition of removal and residence. Under this agreement some 1,600 Mississippi Choctaws were enrolled without legal evidence of their treaty rights.

In 1906 Congress passed an act providing that no distinction should be made against a Mississippi Choctaw in the enrollment, and under this rule about 150 additional Mississippi Choctaws were admitted. By the same act, however, Congress declared that the rolls of the Five Tribes should absolutely be closed on the 4th of March, 1907.

On February 19, 1912, W. C. Pollock, of the Interior Department, reported five Mississippi Choctaws who he thought equitably entitled, although not legally entitled. This report of Mr. Pollock was made under an order of the department of December 12, 1910, in pursuance of several previous examinations. I have understood that the Choctaw authorities were willing to admit these five persons, but that they were not willing to admit any other persons claiming to be Mississippi Choctaws, or to have any further hearings on this matter, because of the extraordinary opportunity which had been repeatedly given to persons claiming to be Mississippi Choctaws to establish residence and be enrolled, and because, many years having been granted within which to comply with the conditions of the law, the Choctaws and Chickasaws were entitled to their peace. They justly say that they have shown the most extraordinary liberality in dealing with this matter, and that it would be entirely wrong to reopen this matter in any way, as it would open Pandora's box and force them into a sea of perjury and fraud when their means of defense has been destroyed.

THE JACK AMOS CASE AND THE FEDERAL COURT DECISIONS THEREON.

The decision in the Jack Amos case is appended hereto:

DECISIONS OF COURTS IN CITIZENSHIP CASES IN FIVE CIVILIZED TRIBES.

CHOCTAW NATION.

(Opinion of William H. H. Clayton, judge central district of Indian Territory.)

There are upon the docket of this court, appealed from the commission to negotiate with the Five Civilized Tribes, known as the Dawes Commission, 241 cases, involving the right of citizenship in the Choctaw Nation of about 2,500 applicants.

All of these cases have been by my predecessor, Judge Lewis, placed on the equity side of the docket, and in the case of Mary A. Sanders,

No. 63, a motion to transfer to the law side of the docket was filed and argued and by him overruled. It is not my purpose in these cases to disturb or to go back and open up questions already decided, but to adopt the past rulings of the court and to proceed as rapidly as possible to a final disposition of them. In passing I will remark, however, that it seems to me that the peculiarity of these cases, the many suits brought by persons having a common interest and a common purpose against the same defendant, the difficulties of enforcing the rights by judgments at law, and the many equities claimed by both parties to these suits make them proper cases for a court of equity.

The question of the jurisdiction of this court to hear and determine these cases has been raised by the pleadings. The counsel on neither side, however, have seen fit to press this question or to point out, either by brief or oral argument, the reasons for this contention. The statute giving the court jurisdiction is plain, and I know of no constitutional objections. It has been said, however, that Congress does not possess the power, under the Constitution, to give to the courts of the United States appellate jurisdiction over the final orders and awards of commissions and other such tribunals. This very question was raised in the case of The United States *v.* Ritchie, decided by the Supreme Court of the United States, and reported in volume 58, United States Supreme Court Reports, page 524. In that case the proceedings were originally commenced before a board of commissioners to settle private land claims in California, under an act of Congress of March 3, 1851. Provisions were made by the act, at the suit of the losing party, for an appeal to the United States district court for the northern district of California. The board decided the case in favor of the claimant and against the Government. The United States appealed, in accordance with the provisions of the statute, to the aforesaid district court, where it was again tried de novo and an appeal regularly taken to the United States Supreme Court. In that court the question of the jurisdiction of the district court to try the case was raised. The contention is stated in the opinion. In deciding the case the court say:

"It is also objected that the law prescribing an appeal to the district court from the decision of the board of commissioners is unconstitutional, as this board, as organized, is not a court under the Constitution and can not, therefore, be vested with any of the judicial powers conferred upon the General Government.

"But the answer to this objection is that the suit in the district court is to be regarded as an original proceeding, the removal of the transcript, papers, and evidence into it from the board of commissioners being but a mode of providing for the institution of the suit in that court. The transfer, it is true, is called an appeal; but we must not, however, be misled by a name, but look to the substance and intent of the proceedings. The district court is not confined to a mere reexamination of the case as heard and decided by the board of commissioners, but hears the case de novo, upon the papers and testimony which had been used before the board, they being made evidence in the district court, and also upon such further evidence as either party may see fit to produce."

Following this decision, I will in these cases proceed as if they were originally brought in this court, try them de novo, and give to all of the parties all of the advantages of an original suit—that is, all cases brought here in conformity with the statute.

It is therefore ordered by the court that the claimants to the right of citizenship in these cases may have 15 days from this date—that is, until the —— day of July, 1897—in which to take and file further proof, and that the Choctaw Nation may have immediately thereafter 15 days in which to take and file further rebuttal proof—that is, from the said —— day of July, ——, until the —— day of July, 1897—and that all legal testimony heretofore taken and filed with the so-called Dawes Commission shall be considered as competent proof on the trial of these cases.

And that the trial of all of these cases, except such as may be disposed of otherwise, are hereby set for trial on Tuesday, the —— day of ———, 1897.

These cases naturally divide themselves into six heads or classes, to wit:

1. As to the right of citizenship of those Choctaws who, under the treaty of 1830, decided to remain in the State of Mississippi, called "Mississippi Choctaws," and have not since removed into the present Choctaw Nation.

[No. 158.]

I.—JACK AMOS ET AL. V. THE CHOCTAW NATION.

In this case the proof shows that the claimants are Choctaw Indians by blood now living in the State of Mississippi; that neither they nor their ancestors have ever removed into the present Choctaw Nation.

The claimants base their right to be enrolled as Choctaw citizens upon the terms of the second and fourteenth articles of the treaty negotiated at Dancing Rabbit Creek on September 27, 1830, and of the conditions of the patent to the lands of the Choctaw Nation executed by President Tyler in the year 1842. (Durant Ed. Choctaw Laws, p. 31.)

Aricles 2 and 14 of the treaty of 1830 are as follows:

"ART. 2. The United States, under a grant specially to be made by the President of the United States, shall cause to be conveyed to the Choctaw Nation a tract of country west of the Mississippi River in fee simple to them and their descendants, to inure to them while they shall exist as a nation and live on it, beginning near Fort Smith, where the Arkansas boundary crosses the Arkansas River, running thence to the source of the Canadian Fork, if in the limits of the United States, or to those limits; thence due south to Red River, and down Red River to the west boundary of the Territory of Arkansas; thence north along that line to the beginning. The boundary of the same to be agreeably to the treaty made and concluded at Washington City in the year 1825. The grant to be executed as soon as the present treaty shall be ratified.

"ART. 14. Each Choctaw head of a family being desirous to remain and become a citizen of the States shall be permitted to do so by signifying his intention to the agent within six months from the ratification of this treaty, and he or she shall thereupon be entitled to a reservation of one section of 640 acres of land, to be bounded by sectional lines of survey; in like manner shall be entitled to one-half of that quantity for each unmarried child which is living with him over 10 years of age, and a quarter section to such child as may be under 10 years of age, to adjoin the location of the parent. If they reside upon said lands, intending to become citizens of the State, for five years after the ratification of this treaty, in that case a grant in fee simple shall issue. Said reservation shall include the present improvements of the head of the family, or a portion of it. Persons who claim under this article shall not lose the privilege of a Choctaw citizen, but if they ever remove are not to be entitled to any portion of the Choctaw annuity."

The conditions of article 2 of the treaty, that the land should be conveyed "to the Choctaw Nation in fee simple to them and their descendants, to inure to them while they shall exist as a nation and live on it," are carried into the patent, and are the only portions of that instrument which shed any light on the question now being considered, and therefore article 2 and the conditions of the patent may be considered together.

The whole object of the treaty of 1830 was to procure the removal, as far as practicable, of the Choctaw people to the lands west of the Mississippi which they now occupy. The Supreme Court of the United States, in the case of the Choctaw Nation *v.* United States (119 U. S., 36), after reviewing the treaties of 1820 and 1825, says:

"In the meantime, however, under the pressure of the demand for settlement of the unoccupied lands of the State of Mississippi by emigrants from other States, the policy of the United States in respect to the Indian tribes still dwelling within its borders underwent a change, and it became desirable, by a new treaty, to effect, as far as practicable, the removal of the whole body of the Choctaw Nation, as a tribe, from the limits of the State to the lands which had been ceded to them west of the Mississippi River. To carry out that policy the treaty of 1830 was negotiated."

Again, in the case, page 27, the court says:

"It is notorious as a historical fact, as it abundantly appears from the records of this case, that great pressure had to be brought to bear upon the Indians to effect their removal, and the whole treaty was evidently and purposely executed not so much to secure to the Indians the rights for which they had stipulated as to effectuate the policy of the United States in regard to their removal."

Article 3 of the treaty of 1830 stipulates that the Choctaws agree to remove all of their people during the years 1831, 1832, and 1833 to those lands. (7 Stat. L., 333.)

Article 14 of the treaty, however, provides for certain privileges and rights for those who might choose to remain in Mississippi with a view of becoming citizens of that State. They and their descendants were to receive certain lands and, after living on them for five years, intending to become citizens of the State, those lands were to be granted to them in fee simple. Then follows this very peculiar clause:

"Persons who claim under this article shall not lose the privilege of a Choctaw citizen, but if they ever remove are not to be entitled to any portion of the Choctaw annuity."

The difficulty in construing this clause of the treaty is to ascertain the meaning of the word "remove." To what does it relate and how shall we give it meaning? It certainly does not purpose to impose a penalty on the Choctaw who may choose to remove for removing, and for that reason forfeit his right to the annuity, because so long as he remained in Mississippi he was not entitled to any annuity, and therefore by removing he could not forfeit that which he did not have. If he removed he was to have no annuity, and if he remained he was to have no annuity. It is evident, therefore, that the word was not used for the purpose of forfeiting the annuity in case of removal. Then what are its uses? The very object of the treaty was to procure a removal of these people. The whole of the Choctaw Nation, with all of its sovereignty, its powers, and its duties, was to be transferred beyond the Mississippi. It was to exercise its powers, confer its privileges, and maintain the citizenship of its people in another place. Those who were left behind to retain not this Choctaw citizenship but only the "privileges of a Choctaw citizen;" that is, that when they put themselves into a position that these privileges could be conferred upon them they were to have them, and under the conditions and purposes of this treaty how would it be possible for them to put themselves in such a position without first removing within the territorial jurisdiction of the Choctaw Nation and within the sphere of its powers? What privilege would it be possible for the Choctaw Nation to confer or a Mississippi Choctaw to receive so long as he remained in Mississippi and out of the limits of the Choctaw Nation? By the very terms of the treaty they were to become citizens of another State, owing allegiance to and receiving protection from another sovereignty. If one Mississippi Choctaw were to commit a wrong against the person or property of another, the right would be enforced and the wrong redressed under the laws of Mississippi. The Choctaw Nation would be powerless to act in such a case. The Choctaws in that State can not vote, sit as jurors, or hold office as a Choctaw citizen or receive any other benefit or privilege as such. They can not participate in the rents and profits of the lands of the Choctaw Nation, because by the very terms of the grant the Choctaw people and their descendants must live upon them. If they do not, it is an act of forfeiture, made so by the provisions of article 2 of the treaty of 1830 and also of those of the patent to their lands afterwards executed.

The title of the Choctaw people to their lands is a conditional one, and one of the conditions of the grant, expressed in both the second article of the treaty of 1830 and the patent, is that the grantee shall live upon them. And who are the grantees? Who are these people who are to live upon the land? Unquestionably the Choctaw people and their descendants, for while the grant is to the Choctaw Nation the people seem to be included, both as grantees and beneficiaries. The language of the treaty is, and it is carried into the patent:

"The President of the United States shall cause to be conveyed to the Choctaw Nation a tract of country west of the Mississippi River, in fee simple, to them and their descendants, to inure to them while they shall exist as a nation and live on it."

The Choctaw Nation is not "them" and can not have "descendants." And while it may exercise its sovereignty and its national powers within certain defined territorial limits it can not "live on land." Those provisions of the grant which are expressed in the plural and attach to "descendants" and which require as a condition that the land shall be lived on beyond doubt refer to the Choctaw people and their descendants. Whatever effect upon the title the limitation upon the right of alienation expressed in the patent, so that the lands can not be sold except to the grantor or by its consent, may have, there can be no question but that the second article of the treaty of 1830, negotiated 12 years before the execution of the patent, and in which no limitation on the right of alienation is expressed, was intended to convey a fee-simple title, burdened by two conditions subsequent, the one that the grantees should continue the corporate existence of their nation, and the other that the people of that nation and their descendants should forever live upon the land. A failure of either would work a forfeiture of the title to the grantor.

Now, why was it that this fee-simple title was to be burdened by the condition that the grantee must live on the land? In the light of the knowledge of the conditions that then existed the answer is plain. The policy of the Federal Government at that time, relating to the Indian tribes, was to move them upon a reservation and keep them there; and if the Indian, either singly or in numbers, should stray off, soldiers with guns and bayonets were used to drive them back. This very treaty was

negotiated with the Choctaws for that very purpose. Hence the condition in the grant that they should live on the land or it should be subject to forfeiture to the United States. This condition was inserted for two reasons: First, to compel the grantees to remove upon the lands, and, second, to compel them to remain on them after removal. It was not intended that some should go and locate on the lands and hold the title for themselves and also for the others who should choose to remain. This would defeat the very object of the condition. These lands were conveyed to the Choctaw people to be held by them as tenants in common. This intention of the second article of the treaty of 1830 is expressed by the use of the words "them and their descendants" and of the clause that they were to "live on the land." Both of these clauses are expressed in the plural and evidently do not relate to the nation as a corporate body. That a tenancy in common was intended is made clear by a consideration of section 3 of an act of Congress entitled "An act to provide for an exchange of lands with the Indians residing in any of the States or Territories, and for their removal west of the Mississippi River," approved May 28, 1830 (4 U. S. Stat. L., 412). The section reads as follows:

"*And be it further enacted*, That in the making of any such exchange or exchanges it shall and may be lawful for the President solemnly to assure the tribe or nation with which the exchange is made that the United States will forever secure and guarantee to them and their heirs or successors the country so exchanged with them; and, if they prefer it, that the United States will cause a patent or grant to be made and executed to them for the same: *Provided always*, That such lands shall revert to the United States if the Indians become extinct or abandon the same."

At the time the treaty of 1830 was negotiated—September 29, 1830—this act had been on the statute books of the United States for four months, and as a matter of course the commissioners to negotiate the treaty were familiar with it. But the language used in this act to limit the estate is "to them, their heirs, or successors." The language used in the treaty to limit the estate therein granted is "in fee simple to them and their descendants," and then conditions are attached not named in the statute. Why the word "successors" was left out of the treaty is plain. But why the word "heirs" was changed to the word "descendants," unless it was that a word should be used within the comprehension of those untutored Indians, who knew nothing of the technical phrases of the common law used in the conveyance of real estate, is not easy to determine. The word "successors" was omitted from the treaty because by its terms the Choctaw Nation was to have no successors. They were to live on the land forever, or it should be forfeited to the grantor. When the technical words "successors" and "heirs" were dropped and the common word "descendants" was used, these Indians could understand it. They knew what they and their offspring were. It was to them—the people and their children—that the land was sold, and when the condition was added that the grant was to be made to them and their descendants only in the event that they should live upon the lands, they could not but understand that this implied a removal to and a continual residence upon them.

As a further evidence that the parties understood that by this transaction the land was to be held in common by the people, the treaty of 1833, article 1, provides, after describing the lands, as follows:

"And pursuant to an act of Congress approved May 28, 1830, the United States do hereby forever secure and guarantee the lands embraced within the said limits to the members of the Choctaw and Chickasaw Tribes, their heirs and successors, to be held in common, so that each and every member of either tribe shall have an equal undivided interest in the whole: *Provided, however*, No part thereof shall ever be sold without the consent of both tribes and that said land shall revert to the United States if said Indians and their heirs become extinct or abandon the same. (4 U. S. Stat. L., 276.)"

If this be true, there is no holding in trust by the corporate body of the Choctaw Nation for the benefit of the people, but the people themselves have the title and hold it in common.

"A tenancy in common is a joint estate in which there is unity of possession, but separate and distinct title. The tenants have separate and independent freeholds or leaseholds in their respective share, which they manage and dispose of as freely as if the estate was one in severalty. * * * The interest of one tenant in common is so independent of that of his cotenant that in a joint conveyance of the estate it would be treated as a grant to each of his own share of the estate. (Tiedeman on Real Property, 235.)"

And therefore any condition of the grant would be as binding on each of the tenants in common as if the estate was in severalty and vested in the individual tenant. And therefore the condition named in the second article of the treaty of 1830 and in the patent, that "they shall live on the land," is binding individually upon each and upon all of the grantees.

In the third article of the treaty the Choctaws agreed to move all of their people within three years, and the United States intended that they should go. But, by the fourteenth article of the treaty, provisions were made whereby those who should decide to remain and become citizens of the State of Mississippi, in the event that, because of the intolerance and persecutions of the whites, which they themselves had so bitterly experienced, or for any other cause, they might become dissatisfied with their altered conditions and their new citizenship and desire to follow them to their new homes, and thereafter exercise with them in their own country the privileges of citizenship, they could do so, except that they were not to participate with them in their annuities, the lands which they were to receive in Mississippi being deemed a compensation for that.

When the fourteenth article of the treaty was framed, the negotiating parties understood that the policy of the United States was that the Choctaws were to be removed. The Choctaws, in article 3, had just agreed that they should all go. The ink was not yet dry in article 2, whereby the condition was placed in this grant to the lands that they were to live upon them or they should be forfeited, and that no privilege of citizenship could be conferred or enjoyed outside of the territorial jurisdiction of their newly located nation. Understanding these conditions, the latter clause of article 14 was penned:

"Persons who claim under this article shall not lose the privilege of a Choctaw citizen, but if they ever remove—that is, if they ever place themselves on the land and within the jurisdiction of the nation whereby those privileges may become operative—are not to be entitled to any portion of the Choctaw annuity."

In other words, if they ever remove, they are to enjoy all of the privileges of a Choctaw citizen except that of participating in their annuities. If this be not the meaning to be attached to the word "remove" as used in the clause of the treaty under consideration, it must be meaningless. But in the interpretation of statutes it is the duty of the court to so interpret them as to give to every word a meaning, and in doing so it must take into consideration the whole statute, its objects and purposes, the rights which are intended to be enforced and the evils intended to be remedied; it may go to the history of the transaction about which the legislation is had and call to its aid all legitimate facts proven or of which the courts will take judicial notice in order to find the true meaning of the word as used in the statute. Of course the same rule of interpretation applies to treaties. Adopting these rules in the interpretation of article 14 of the treaty of 1830, I arrive at the conclusion that the "privilege of a Choctaw citizen" therein reserved to those Choctaws who shall remain, thereby separating themselves, it may be forever, from their brethren and their nation, becoming citizens of another sovereignty and aliens of their own, situated so that it would be impossible, while in Mississippi, to receive or enjoy any of the rights of Choctaw citizenship, was the right to renounce his allegiance to the Commonwealth of Mississippi, move upon the lands conveyed to him and his people, and there, the only spot on earth where he could do so, renew his relations with his people and enjoy all of the privileges of a Choctaw citizen except to participate in the annuities.

As an evidence that the Choctaw people themselves took this view of the question, attention is called to the fact that their council has passed many acts and resolutions inviting these absent Choctaws to move into their country, and on one occasion appropriated a considerable sum of money to assist them on their journey, and until the past two or three years have always promptly placed those who did return on the rolls of citizenship, but never enrolled an absent Choctaw as a citizen.

On December 24, 1889, the general council of the Choctaw Nation passed the following resolution:

"Whereas there are large numbers of Choctaws yet in the States of Mississippi and Louisiana who are entitled to all the rights and privileges of citizenship in the Choctaw Nation; and

"Whereas they are denied all rights of citizenship in said States; and

"Whereas they are too poor to immigrate themselves into the Choctaw Nation. Therefore

"*Be it resolved by the general council of the Choctaw Nation assembled*, That the United States Government is hereby requested to make provisions for the emigration of said Choctaws from said States to the Choctaw Nation," etc.

The language is, not that they are entitled to the rights and privileges of Choctaw citizenship in the States named, but "who are entitled to all the rights and privileges of citizenship in the Choctaw Nation," and the prayer is that because of the fact that they are denied the rights of citizenship in the State that the United States will remove them to a place—their own country—where the rights of Choctaw citizenship may be enjoyed by them.

As a further evidence of the fact that all of the parties to the treaty, the United States, the Choctaw Nation, and the Mississippi Indians themselves, have always understood that the Mississippi Choctaws were entitled to none of the rights of a Choctaw citizen so long as they remained in that State, attention is called to the fact that the lands in Mississippi which were ceded to the United States by the Choctaw Nation by virtue of the treaty of 1830 were, under the laws of the United States sold. The Choctaw Nation claimed that they had never been paid any consideration for them, and that the United States justly owed them the net proceeds arising out of the sale. For many years this contention was carried on before the departments of the Government, commissions, and other tribunals. Finally, by treaty, it was submitted to the Senate of the United States for decision. That body found in favor of the Choctaw Nation. The case then went to the Court of Claims, and from there to the United States Supreme Court, in which court judgment was finally rendered for nearly $3,000,000. This judgment was rendered in November, 1886. The money was turned over to the Choctaws by the United States, and by them, with the knowledge and consent of the United States, divided among their own people who lived in the nation. Not one farthing of it was ever paid to an absent Mississippi Choctaw, and no portion of it was ever claimed by them. During this whole litigation, running through many years, no effort was made to make themselves parties to the suit. And when the money was finally paid to the Choctaw authorities, to be divided among the people, they made no claim for any part of it and entered no protest to its being paid to the resident Choctaws, nor have they brought suit for their share since. The other party to the treaty, the United States Government, the guardian of these Indians, paid the money over without making any provision for the Mississippi Choctaws to get their share or intimating that anything was due them. When it is remembered that this money was the proceeds of the sale of the lands in Mississippi belonging to the united Choctaw people while they lived in that State and that the great bulk of the Mississippi Choctaws had never received one farthing for their share in the lands, if they, living in Mississippi, are entitled there to the rights of a Choctaw citizen, it is remarkable that they did not assert their rights.

Again, a few years ago the interest of the Choctaws to lands lying west of their present boundaries was sold by them to the United States for a considerable sum of money. This, like the other, was promptly divided among the resident Choctaws, with the knowledge and consent of the United States and without protest or claim of the Mississippi Choctaws. If they are entitled to the privilege of Choctaw citizens without removing into the boundaries of the nation, they are and were entitled to their pro rata share of this money. If they do not understand that they have no claim to the rights of citizenship without moving into the country, why have they for the past 65 years silently stood by and permitted these kinds of transactions to be had without claim, protest, or suit?

The Eastern Band of Cherokees, now residing in North Carolina, sustained a relationship to the Cherokee Nation almost identical to that sustained by the Mississippi Choctaws to the Choctaw Nation. Like the Mississippi Choctaws, there were some among them who were averse to moving to their new country west of the Mississippi River. Provisions were made for them by the treaty of New Echota (the treaty of 1835) between the Cherokee Nation and the United States similar to those with the Choctaws by the treaty of 1830. When the Cherokee people moved to the present home of the Cherokees, these remained behind in North Carolina, where they have ever since resided. Like the Choctaw treaty of 1830, the treaty of New Echota provided that their lands should be ceded to them and their descendants, etc. The Cherokee Nation, by virtue of a treaty with the United States, afterwards sold some of these lands. The Eastern Band of Cherokees, in North Carolina, unlike their Mississippi Choctaw brethren, promptly demanded their pro rata of the proceeds of this sale, and upon being denied at once sought and obtained permission of the United States to sue the Cherokee Nation in the Court of Claims for this money, and also, in the same suit, to sue for another fund which was created by the treaty

of New Echota, consisting of certain annuities in the sum of $214,000, of which the Eastern Band of Cherokees claimed a pro rata share. The suit was brought and the Court of Claims, in a very elaborate and learned decision, decided against the right of the Eastern Band of Cherokees to recover, upon the ground that those Cherokees, by the act of remaining in North Carolina, had alienated themselves from the Cherokee Nation to such an extent that they could not claim any of the rights of a Cherokee citizen without moving into the Cherokee Nation and there being readmitted in accordance with the constitution and laws of that nation. The case was appealed to the Supreme Court of the United States, and there the decision of the Court of Claims was affirmed. (Eastern Band of Cherokees *v.* United States, 117 U. S., 288.) In that case the Supreme Court, after reviewing all of the treaties and statutes relating to the matter, concluded by saying:

"If the Indians in that State (North Carolina) or in any other State east of the Mississippi wish to enjoy the benefits of the common property of the Cherokee Nation, in whatever form it may exist, they must, as held by the Court of Claims, comply with the constitution and laws of the Cherokee Nation, and be readmitted to citizenship as there provided. They can not live out of its territory, evade the obligations and burdens of citizenship, and at the same time enjoy the benefits of the funds and common property of the nation. Those funds and that property were dedicated by the constitution of the Cherokees and were intended by the treaties with the United States for the benefit of the united nation, and not in any respect for those who had separated from it and become aliens to their nation. We can see no just ground on which the claim of the petitioners can rest in either of the funds held by the United States in trust for the Cherokee Nation."

It seems to me that this decision of the Supreme Court, founded on a case so nearly similar to the one at hearing, conclusively settles the contention in favor of the Choctaw Nation. Indeed, in that case, the Supreme Court expresses a very strong intimation that those provisions of the treaty of New Echota relating to and providing for those Cherokees who should refuse to remove West were confined in their operation to that class of Cherokees then in esse, and the rights conferred by those provisions of the treaty did not descend to their offspring; that the descendants of those Cherokees did not succeed to the rights of their ancestors under the treaty. The language of the Supreme Court is:

"Nor is the band (Eastern Band of Cherokees), organized as it now is, the successor of any organization recognized by any treaty or law of the United States. Individual Indians who refuse to remove West and preferred to remain and become citizens of the States in which they resided were promised certain moneys, but there is no evidence that the petitioners have succeeded to any of these rights. The original claimants have probably all died, for 50 years have elapsed since the treaty of 1835 was made, and no transfer from them to their legal representatives is shown. (Ib., 310.)"

The court proceeds, however, to decide this case, as heretofore shown, on the ground that the Indians composing the Eastern Band of Cherokees had not removed into the Cherokee Nation and reassumed their citizenship under the constitution and laws of that nation.

I am disposed to the opinion, however, and will so hold, that the descendants of the Mississippi Choctaws, by virtue of the fourteenth article of the treaty of 1830, are entitled to all of the rights of Choctaw citizenship, with all of the privileges and property rights incident thereto, provided they have renounced their allegiance to the sovereignty of Mississippi by moving into the Choctaw Nation in good faith to live upon their lands, renewing their allegiance to that nation, and putting themselves in an attitude whereby they will be able to share in the burdens of their government. The reason for this conclusion is, to my mind, made morally certain when it is remembered that ever since the treaty of 1830, now for the period of nearly 67 years, with the exception of the past two or three years, the Choctaw Nation, by its legislative enactments and by its acts so long continued that by custom they have become crystallized into law, have universally admitted all who should remove to this country and rehabilitate them in all of the rights and privileges of citizenship enjoyed by themselves.

The counsel for the claimants lay considerable stress on the effect of the provisions of article 13 of the treaty of 1866 between the United States and the Choctaw Nation. (14 Stat., —.)

By the eleventh and twelfth articles of that treaty a scheme was devised by which the lands of the Choctaw and Chickasaw Nations were to be surveyed and divided and allotted to the individual Indians, provided the councils of the respective nations should agree to it, which, however, they have refused to do. A land office was to be established at Boggy Depot, in the Choctaw Nation. When all of the surveys were completed, maps thereof were to be filed in the said land office, subject to the inspection of all parties interested, and immediately thereafter notice of such filing was to be given for 90 days, calling upon all parties interested to examine said maps to the end that errors in the location of occupancies, which were to be noted on the maps, might be corrected. Then followed article 13 of the treaty, which is as follows:

"ART. 13. The notice required in the above article shall be given, not only in the Choctaw and Chickasaw Nations, but by publication in newspapers printed in the States of Mississippi and Tennessee, Louisiana, Texas, Arkansas, and Alabama, to the end that such Choctaws and Chickasaws as yet remain outside of the Choctaw and Chickasaw Nations may be informed and have opportunity to exercise the rights hereby given to resident Choctaws and Chickasaws: *Provided*, That before any such absent Choctaw or Chickasaw shall be permitted to select for him or herself, or others, as hereinafter provided, he or she shall satisfy the register of the land office of his or her intention, or the intention of the party for whom the selection is to be made, to become bona fide resident in the said nation within five years from the time of selection; and should the said absentee fail to remove into said nation and occupy and commence an improvement on the land selected within the time aforesaid the said selection shall be canceled, and the land shall thereafter be discharged from all claim on account thereof."

From an examination of this article of the treaty it will be seen that the Choctaws and Chickasaws recognized the right of absent members of their nation to participate in the allotment and the subsequent ownership of their lands to the same extent as they themselves enjoyed, but on conditions, however: First, that they should satisfy the register of the land office of their intention to become bona fide residents in the said nation within five years from the time of said selection; and, second, that within the said five years they should actually remove into the said nation (here is a statute of limitation); and third, that within the said five years they should occupy and commence an improvement upon the selected lands.

It will be observed that this latter clause imposes a condition on absent Indians nowhere required of the resident ones by any clause of the treaty. They were required to move into the country and show their good faith and their intention to remain bona fide citizens of the nation by actual occupancy of the land and an expenditure of money in its improvement. The notice was to be given them in order that they might have an opportunity of removing into the nation and there residing and resuming their rights as citizens; but care was to be taken, and safeguards provided by which their removal was to be actually had, and that it was to be done in good faith. First, the register of the land office was to be convinced, by such proof as might satisfy him, of the intention of the absent Indian to become a bona fide resident of the nation before he was allowed to make a selection; and, second, that was to be followed by an actual occupancy and improvement of the land; and if he failed in this it worked a forfeiture of his rights. Nowhere within the whole treaty is any right recognized or conferred on an absent Indian except on the condition that he shall remove into the nation, and the right is not to be consummated or enjoyed until after actual removal. No treaty or act of the Choctaw council, or of any officer of the Choctaw Nation, since the treaty of 1830, can be cited—or at least I have not found them—whereby any right or privilege has been conferred, granted, or recognized in or to a Mississippi Choctaw, so long as he shall remain away from his people, but there are an infinitude of such acts and conduct granting and recognizing such rights and privileges to him after he shall have removed.

The provisions of the treaty of 1866, so far from being an authority in favor of the contention of claimants, seems to me to be strongly against them.

To permit men with, perchance, but a strain of Choctaw blood in their veins, who 65 years ago broke away from their kindred and their nation, and during that time, or the most of it, have been exercising the rights of citizenship and doing homage to the sovereignty of another nation, who have borne none of the burdens of this nation and have become strangers to the people, to reach forth their hands from their distant and alien home and lay hold of a part of the public domain, the common property of the people, and appropriate to their own use, would be unjust and inequitable.

It is therefore the opinion of the court that absent Mississippi Choctaws are not entitled to be enrolled as citizens of the Choctaw Nation.

The action of the Dawes Commission is therefore affirmed, and a decree will be entered for the Choctaw Nation.

ARGUMENT OF HON. WILLIAM H. MURRAY, OF OKLAHOMA.

Mr. MURRAY of Oklahoma. Mr. Chairman, these gentlemen make this claim for the Mississippi Choctaws on the basis of the fourteenth article of the Dancing Rabbit Creek treaty of 1830. I am going to argue, for the most part, the legal and equitable phases of this claim. On October 18, 1820, a treaty was made between the Government, represented by Gen. Jackson, and the Indians, represented by Apush-ma-ta-ha. This was a treaty in which the grant for the lands west was made, and was the first instance of a fee-simple title given to Indians. The treaty of 1830 was but to provide settlement of their interests east of the Mississippi and to effectuate their removal. Both of those treaties outlined the boundaries of the land.

It will be found in the treaties of 1820, 1825, and 1830 that the Government was mistaken about the boundary. Apush-ma-ta-ha at the time stated that he had been over this country from 1812 to 1815; that he "had sometime chased the Comanche and the Comanche had sometime chased him"; and that Gen. Jackson did not know the country. You will notice in the third article of the treaty of 1820 a provision to prevent dispute upon "the subject of boundaries." I have had occasion to read both Gen. Jackson's report and the history of this transaction from a splendid work written by Cushman, and I refer to that report of Gen. Jackson as to what was intended by the several clauses in the grant of the lands west and for the removal of these Indians from Mississippi. The central object in all these treaties, in the mind of the Indian, was to enable him to go somewhere where he could frame a government of his own choosing, independent of any State or Territorial law, and running through all of these treaties you will find in unmistakable terms these objects. You will find granted to them in the Atoka agreement of 1897, which provided for the allotment of their lands in severalty, further stipulation of the formation for State government of the Five Civilized Tribes. It was for these benefits that they went into that western country, then surrounded by hostile Indians, into unhealthy swamps, and which caused them to take up that irksome march from their homes in Mississippi, through the uninhabited swamps in Arkansas, to their homes in the West. The 4,000 graves along the roadside—the last resting place of those who died on the march—are but silent witnesses to this solemn promise of the Government, and to guarantee to them, or that number of them who would move and in good faith reside upon the land deeded to them. Some of the mixed-blood Indians of power and wealth did not desire to remove west, as did the great body of the most ignorant and helpless element of the tribe. It was essential, therefore, to place in the treaty the stipulation of the fourteenth article, which I shall later analyze in the light of its text and the history surrounding its making. It was realized by all that those who went west—since its date was prior to the Texas revolution—would be surrounded by many difficulties, and it was also known that many desired to remain. I call attention especially to the fact that all of the lands west of the Mississippi in the Choctaw and Chickasaw Nations, the portions open to allotment, consist of but 11,000,000 acres; but they left in Mississippi almost an equal amount of land—to wit, 10,000,000 acres—for

homes for those who desired to remain. Then it was thought at the time that if the great body of the tribe went west it might have a disastrous effect in the matter of protection of those who remained in Mississippi, hence the stipulation in the fourteenth article under which the Mississippi Choctaws claim.

So the Government provided in the fourteenth article that of those who remained the head of the family might get one section of land, each child over 10 years of age a half section, and those under 10 years of age a quarter section; but, mark you, in that article it says that these "persons" shall not lose their "privilege" to become citizens if later they remove west. Why this stipulation? Because in the treaty of 1820, as well as in that of 1830, the grant of this land was to the "nation, their heirs and successors." In every other place in the Dancing Rabbit Creek treaty, as was the case in 1820, the expression was "heirs and successors," while in the fourteenth article the word "persons" was used. Those who did not want to be included were permitted to put in the word "persons," and it certainly did not mean "heirs and successors." You never saw a deed written to a "person" only.

Before going into the rights under the treaty let us quote its provisions to determine whether this grant was made to the individual Indians or whether to the "nation," and why was the "nation" named in the preamble of the treaty of 1830, which was signed by 104 members in their full council. We find this language:

James Monroe, President of the United States of America, by Andrew Jackson, of the State of Tennessee, major general in the Army of the United States, and Gen Thomas Hines, of the State of Mississippi, commissioner plenipotentiary of the United States, on the one part, and the mingoes, headmen, and warriors of the Choctaw Nation, in full council assembled, on the other part, have freely and voluntarily entered into the following article:

ARTICLE I. To enable the President of the United States to carry into effect the above grand and humane objects, the mingoes, headmen, and warriors of the Choctaw Nation, in full council assembled, in behalf of themselves and said nation—

Note the word—

do, by these presents, cede to the United States of America all the land lying and being within the boundaries following, to wit: * * *

ART. II. For and in consideration of the foregoing cession on the part of the Choctaw Nation and in part satisfaction for the same, the commissioners of the United States, in behalf of said States, do hereby cede to said nation—

Mark the word "nation"—

a tract of country west of the Mississippi River situate * * *.

Under the above stipulation it must be granted that this title was granted to the "nation." I now recite from the Dancing Rabbit Creek treaty of 1830, which was signed by a full council composed of 173 persons, as follows:

ART. 2. The United States, under a grant specially to be made by the President of the United States, shall cause to be conveyed to the Choctaw Nation a tract of country west of the Mississippi River, in fee simple to them and their descendants, to inure to them while they shall exist as a nation and live on it, beginning near Fort Smith, where the Arkansas boundary crosses the Arkansas River, running thence to the source of the Canadian Fork, if in the limits of the United States, or to those limits; thence due south to Red River, and down Red River to the west boundary of the Territory of Arkansas; thence north along that line to the beginning, the boundary of the same to be agreeably to the treaty made and concluded at Washington City in the year 1825, the grant to be executed so soon as the present treaty shall be ratified.

Mark you, there was doubt as expressed in this treaty as to the boundaries. The history and report of its making shows that Apush-ma-ta-ha told Andrew Jackson that the Canadian Fork rose in Colorado, and therefore he was trying to sell them the Panhandle of Texas, then undisputed Mexican territory; hence they used the language "if in the limits of the United States, or to those limits," and which carried them westward to its "limits," which was the Panhandle of Texas. You will also note in this section that it was a grant "in fee simple to them and their descendants, to inure to them while they shall exist as a nation and live on it." Article 3 then provides for speedy removal; article 4 for self-government; article 5 for the protection of the Indians against the Plains Indians; article 6 provided for extradition for crime; article 7 for delivery up of criminals; and article 12 for removal of intruders. I submit to the House that under this language the grant was made to the "nation," their descendants and successors, so long as they "exist a nation and lived on" the land, and the converse of this is that those "who do not live on it" are not to be beneficiary of it. Neither in law nor in the construction of the English language can any other interpretation be placed upon this treaty.

Now, let us see what the "nation" consists of, because it is evident that the grant of the entire lands west was to the "nation," and the intent of the treaty shows that the "nation" went West, and no element of the "nation" remained in the State of Mississippi. What is the "nation"? The Choctaw Nation to-day consists of 17,396 Indians, some full bloods, most of them mixed bloods, some few Cherokees, Chickasaws, Alabama Creeks, and Kansas Indians, but are "living and residing on the land." The "nation" further contains 1,634 Mississippi Choctaws, granted by the "nation" having a sympathy for them in consequence of the treatment the State of Mississippi had given to full-blood Mississippi Choctaws. It also includes 10 white persons, who had been their friends and "lived on the land," adopted by legislative act. The "nation" also consists of 1,650 persons who have married Indians by blood—the "nation's" method of naturalization—and, last, it consists of 5,900 freedmen—ex-slaves and their descendants. So the "nation" comprehends not only Indians by blood but all classes that may be adopted by the tribe in council under their constitution and law—Indians by blood, including various tribes, white people, and negroes, with the limitation that they must "live on it." On the other hand, any of these classes who moved away and did not "live on it," but moved to another State "expatriated" (changed their citizenship), losing every right, including the right of property, just as surely as an American citizen would lose his right to homestead the American public domain by expatriating and becoming a British subject. Now, as to the equity. Is it fair to compel these Indians to take care of all the Indians of other tribes who have moved among them, and 1,660 white persons and 5,900 negroes, keeping faith with the treaty, the stipulation of grant which inures to those who "live on it," and at the same time compel them to take care of those who have not moved to and "lived on" the land? In view of the further fact that they left in Mississippi 10,000,000 acres of land, almost equal to their land west, to provide homes for those who remained, and the Government, after making that provision, only paid them $2,000,000 for the residue over and above the amount taken for homes.

I submit as a matter of equity it is all in favor of the members of the "nation" that moved west. They went into a barren country, carved their homes out of the forest, built improvements, just as the American homesteaders on public domain. It is manifestly unjust to force them now to divide their property with those who did not share with them their burdens in observing the old Indian treaty. They have this land by the right of settlement, if nothing more. Who would think now of introducing and supporting a bill in Congress to enable the people who did not go west and homestead the public domain now to step into Kansas or Nebraska or Minnesota or Iowa or any other of the Western States and divide with them their property just because it was originally common property of the whole Republic and because these new claimants, like the settlers, have the blood of American citizenship? Likewise, what right have Indians by blood who would not go with the immigration and would not bear the hardships to step in now and divide with those who did go west their rights to their homes?

I will grant you that these people—these Mississippi Choctaws—are entitled to our sympathy; they are entitled to the correction of the wrong perpetrated upon them by the Government of the United States when they permitted them to be robbed both by the governing power and the individual grafter in the State of Mississippi. But should the Indian members of the "nation" now residing in Oklahoma be compelled to correct the wrong done by the Government and permitted by the Government, after showing that the title in them is to the "nation"? Now, let us determine what rights and privileges any of the other individual members possess under the treaty. The "fourteenth article," under which the Mississippi Choctaws claim, is in these words:

ART. 14. Each Choctaw head of a family being desirous to remain and become a citizen of the States shall be permitted to do so by signifying his intention to the agent within six months from the ratification of this treaty, and he or she shall thereupon be entitled to a reservation of 1 section of 640 acres of land, to be bounded by sectional lines of survey; in like manner shall be entitled to one-half that quantity for each unmarried child which is living with him over 10 years of age; and a quarter section to such child as may be under 10 years of age, to adjoin the location of the parent. If they reside upon said lands, intending to become citizens of the United States, for five years after the ratification of this treaty, in that case a grant in fee simple. Said reservation shall include the present improvement of the head of the family or a portion of it. Persons who claim under this article shall not lose the privilege of a Choctaw citizen, but if they ever remove are not to be entitled to any portion of the Choctaw annuity.

I have quoted the entire section in full, but mark the last paragraph by the use of the word "persons" and the word "privilege." This word "privilege" is not synonymous with right. They have lost their right to citizenship. In other words, they had expatriated by remaining, because they did not "live on it." The word "person," as stated before, unlike the grant, was not to these persons and "their heirs," but to the "persons" only I submit that it is significant that in every other case in the three treaties of 1820, 1825, and 1830

the words "they and their heirs" were used. The report of the United States commissioners who executed this treaty, together with Cushman's History, shows that this was put here with absolute design and understood by the members of the "nation" as well as those who remained in Mississippi to constitute a limitation excluding their heirs. Let me call your attention to the fact that many years subsequent to the treaty of 1830 the Chickasaw Nation bought an equal undivided interest in the whole landed property of the "nation" west of Mississippi River, paying therefor $530,000 in gold when they bought it. Could they be held to give up any portion of the property in which they owned an equal undivided individual interest to any person who did not come within the legal terms of the grant under which they purchased? But the admission of the Mississippi Choctaws would take proportionately from the Chickasaws a portion of the property of which they are innocent purchasers, and they are entitled to all of the reasonable construction of the obligations on that property, and in addition thereto they are entitled to all of the limitations in their favor against all persons having a "privilege" as those "persons" contemplated in article 14, since they are all dead and the terms of the treaty did not include "their heirs." So it may be safely said that there was no grant either of citizenship, property rights, or of "privilege" to any Indian remaining in Mississippi except such of those "persons" now living.

Let us consider which of the "persons" granted this "privilege" under the fourteenth article of the treaty of Dancing Rabbit Creek can now claim. Manifestly none, except those that may now be alive. Such "persons" who sought to remain in Mississippi would now be 105 years of age, if 21 years old in 1830, and such "person" if 1 year old at that time now must needs be 85 years old, so we can assume they are all dead. I admit, however, if any of these "persons" to whom only this "privilege" granted in the "fourteenth article" are yet living, they should be entitled. It is true that some of their descendants have since been admitted, but this because of the generosity of the "nation" west and not because they had either a legal or equitable right.

Four thousand court claimants, some calling themselves Mississippi Choctaws, but not from Mississippi, and some calling themselves Chickasaws, nearly all of whom then resided in Oklahoma, were eliminated by the citizenship court, composed of Judges Adams, of North Carolina; Weaver, of Ohio; and Foote, of California, and that judgment upheld by the Supreme Court of the United States.

Reference is sometimes made that a subcommittee of the House Committee on Indian Affairs in a former Congress unanimously reported in favor of these Mississippi Choctaws. I had an occasion to look up the brief of those claimants filed at the time, and I unhesitatingly say that under the "statement of fact" the committee could not have done otherwise. The brief was a bundle of falsehoods. I observe that they said the Indians removed the Mississippi Choctaws from Oklahoma as intruders. On the contrary, they were invited to come west. This statement is a falsehood of the whole cloth. Not a witness could be had that would swear to that statement in a court where impeachment could under the law legally be lodged against him, because the court claimants lived in Oklahoma at the time. The most of them still remain there, and they are not part of those living in Mississippi. While on the brief of the Mississippi Choctaws, permit me to review it further. I read a brief filed this winter where they set up that under the laws in the State of Mississippi a contract made between an Indian or any other laborer could not be broken without subjecting the laborer and his new employer to a criminal prosecution. In other words, if A hired B, and C in turn offers to hire B away, C has committed a crime in making the offer and B has committed a crime if he breaks the first contract. They boldly recite this system of peonage legislation as an argument to admit the Mississippi Choctaws.

Very few of the 1,634 Mississippi Choctaws would have been enabled to go to Oklahoma but for the land agents—sometimes called grafters—of Oklahoma, who went to Mississippi, bought off their contracts, and paid off their debts and their way to Oklahoma. Notwithstanding this, many of them have returned to Mississippi. Mr. J. W. Gillette, one of the most prominent Oklahoma land agents, stated that when he went to Mississippi he was compelled, upon account of the peonage system I here recited, to pay off all their debts and buy off their labor contracts, in addition to paying for their transportation. These people were afraid to go without this being done, rightly fearing prosecution under the Mississippi peonage laws. Of course, Mr. Gillette was recouped for their expenses by a lease upon their allotments in Oklahoma.

They further state in that brief that the State of Mississippi has never provided them with schools, a thing that Oklahoma has provided for all the Indian children in our State, and we have more than one-third of all the Indians of the United States. I submit this detestable policy in the State of Mississippi, together with the recitation of the criminal graft in that State, does not constitute an argument authorizing Congress to rob the Indians of Oklahoma or to overcome the laws that inure only to the Choctaw Nation. The advocates of the Choctaw claimants, not only Members of Congress but Webster Ballinger, Crews, and Cantwell, and other attorneys, who are going over this Republic securing letters to be written to the Congress urging their Congressmen to reopen the rolls, plant themselves on the word "privilege" in the fourteenth article and seek to give it validity without compelling the "person" holding the "privilege" to comply with other performances. Admitting, for the sake of argument, that the benefits inured to the "descendants" without compelling that "person" to move on and "live on" the land, let us see where it will lead to.

If the contention of the Mississippi Choctaws be correct, we never could close the rolls and there would be an "endless chain" of this Indian difficulty. I might also cite that since the rolls were closed in 1902, 12 years ago, nearly all of the members of the tribe have from one to five children born since that date, and there are more of these "newborn" who are not on the rolls than there are Mississippi Choctaws. On account of the evils that would flow from the reopening of the rolls, as much as the Indians desire to enroll their children, they are willing to close the rolls against these children if it would mean speedy settlement; and yet under the Harrison amendment you would enroll ultimately not only the 2,000 full bloods in Mississippi, Louisiana, and Alabama, but 20,000 claimants from all the Southern States, most of whom would have no Indian blood. In whatever light you consider this Mississippi Choctaw claim, it leads to disaster. There is only one solution for the full bloods of Mississippi, and that is to buy that class homes in Mississippi, congregate them in one settlement where they would remain—for they will not live in Oklahoma—and the Government furnish them a school, which the State of Mississippi has never done. To give them money would be but to permit them to live in luxury and intemperance for 6 or 12 months and then to return to penury and want. They have had the experience before of having more land than we get in Oklahoma, but the Mississippi grafters have long ago robbed them of it. The only service for them is to give them a home and "tie it down at both ends" so this fraud can not be repeated.

In the Civil War, moreover, both the Chickasaws and Choctaws, the owners of the "nation" west, joined the Confederacy. The Government treated that act as an act of forfeiture of their property, and when they came to make the treaty known as the "treaty of 1866," between the Chickasaws and the Choctaws and the United States Government, you will find the Government compelling, in article 30, a stipulation on behalf of 10,000 Kansas Indians identical with the "fourteenth article" of the treaty of 1830, which is as follows:

ART. 30. The Choctaw and Chickasaw Nations will receive into their respective districts east of the 98° of west longitude, in the proportion of one-fourth in the Chickasaw and three-fourths in the Choctaw Nations, civilized Indians from the tribes known by the general name of the Kansas Indians, being Indians to the north of Indian Territory, not exceeding 10,000 in number, who shall have in the Choctaw and Chickasaw Nations, respectively, the same rights as the Choctaws and Chickasaws, of whom they shall be the fellow citizens, governed by the same laws, and enjoying the same privileges, with the exception of the right to participate in the Chickasaw and Choctaw annuities and other moneys, and in the public domain, should the same, or the proceeds thereof, be divided per capita among the Choctaws and Chickasaws, and among others the right to select land as herein provided for Choctaws and Chickasaws, after the expiration of the 90 days during which the selection of lands are to be made, as aforesaid, by said Choctaws and Chickasaws; and the Choctaw and Chickasaw Nations pledge themselves to treat the said Kansas Indians in all respects with kindness and forbearance, aiding them in good faith to establish themselves in their new homes, and to respect all their customs and usages not inconsistent with the constitution and laws of the Choctaw and Chickasaw Nations, respectively. In making selections after the advent of the Indians and actual occupancy of land in said nation, such occupancy shall have the same effect in their behalf as the occupancies of Choctaws and Chickasaws; and after the said Choctaws and Chickasaws have made their selections as aforesaid the said persons of African descent mentioned in the third article of the treaty shall make their selections as therein provided, in the event of the making of the laws, rules, and regulations aforesaid, after the expiration of 90 days from the date at which the Kansas Indians are to make their selections as therein provided, and the actual occupancy of such persons of African descent shall have the same effect in their behalf as the occupancies of the Choctaws and Chickasaws.

It will be observed that it gave these Kansas Indians the right to go anywhere in either of the two nations which composed their habitable territory east of the ninety-eighth meridian, and did not use the weaker term "privilege" as used in the

"fourteenth article of the treaty at Dancing Rabbit Creek," but used the words "right of citizenship," "the same rights as the Choctaws and Chickasaws, of whom they shall be fellow citizens," the same condition of removing to the tribe, giving only preference to the Choctaws and Chickasaws of making the first selections, and some of them moved into this section and are now a part of the "nation," and by the same process of reasoning in favor of the Mississippi Choctaws the law would yet compel the Choctaw and Chickasaw "Nation" to divide their property with the remaining 10,000 Kansas Indians.

Judge CLAYTON, who was senior in service at the time of the passage of the enabling act for statehood, and recognized as the ablest jurist ever sent to the Territory, has ruled in every decision in line with my contention. His only error, in my opinion, was that he maintained that any Mississippi Choctaw who would come to the Choctaw Nation and "live on it" up until allotment was entitled to enrollment, and everyone who has complied with this provision has been provided for, but this was a liberal construction in favor of those who had expatriated, and could have been made only on the theory that the Choctaw Nation was not a "sovereignty," and therefore not entitled to be relieved of laches, limitations, and estoppel because, as Blackstone lays down the rules, "laches and estoppel never run against the sovereign." He based his ruling upon the fact that the Nation had invited the Mississippi Choctaws to come out as late as the seventies and early eighties. In this I think Judge CLAYTON erred, because the Choctaw Nation was a sovereign in a greater sense than the States. None of their laws between themselves, however harsh and exacting and however confiscatory, could be questions in the Federal courts. The Federal nationality only existed over those Indian nations so far as the general Federal law, and in no sense, as long as the tribal nation remained, could there be a question raised in any Federal court on the question of constitutionality or confiscation of property by legislation as could and has been raised in the States; and if the Choctaw Nation was a sovereign, then it was not bound by the doctrine of estoppel or laches or limitation; but the tribe has agreed to and even accepted the liberal construction placed upon the treaty laid down by Judge CLAYTON, and this doctrine is held to in the higher courts in the Jack Amos case as being sound. Considering the Chickasaw purchase, I submit that if you pass this law in favor of the Mississippi Choctaws, the Chickasaws can by injunction prevent the Interior Department from paying out a cent of this fund, which will only go to a delay of final settlement. I repeat that so far as the claim goes against the Choctaw and Chickasaw Nations, there is neither law nor equity of claim against them; and I repeat again that whatever obligation or sympathy may be due the Mississippi Choctaws is against the United States Government for its neglect, particularly in permitting the State of Mississippi and its long, lank criminal grafters to rob these people and strip them of their patrimony. The question only remains, Will you attempt to enact this legislation and thus delay the final settlement, and thus destroy business in the east half of our State, and thus rob those Indian tribes of property guaranteed to them and to which they hold a fee-simple title? I repeat what I repeated before: To reopen these rolls would mean a delay of settlement and a beclouding of Indian titles and a disturbance of business in the east half of our State beyond the imagination of man. It would be no less than a crime.

THE FIVE CIVILIZED TRIBES—WHY THEY EMPLOY ATTORNEYS.

Mr. MURRAY of Oklahoma. Mr. Chairman and gentlemen of the committee, the speech I intend making, you will discover, is not for "home consumption," but I do not doubt that it will have a home discussion. I am going to make this speech because I think what I am going to say ought here to be said, as necessary to convince you of a right program of legislation as relates to the Five Civilized Tribes.

Some transactions in our State for the past 12 or 15 years have been subject to much criticism—a reflection upon the people of the State, upon the tribes interested, and upon the chief executives of those tribes who are directly responsible.

Before going into the subject, however, I want to take the liberty of calling the attention of Congress to the difference between Indian tribes as being quite as great as between other races. The Five Civilized Tribes of Oklahoma are quite distinct from the prairie tribes on the west side of the State or in other sections of the country, who wear blankets and who are the subject of hero stories of the wild West of which you read. Three of these tribes were never savages—the Chickasaws, the Choctaws, and the Cherokees. There is only one other civilized tribe, and that is the Pueblo, and possibly the Navajo. The Five Civilized Tribes and the Pueblo Tribe are the only Indian tribes that hold their land in fee simple. The Pueblos of Arizona and New Mexico were given a grant by Spain, ratified later by Mexico, and then by the United States. The Five Civilized Tribes have held their land in fee simple since long prior to the Civil War. They have had civil governments fully officered with chief executives, legislatures, courts, and public schools, operated by themselves, controlled without any supervision of the Government or of Congress, ran ad libitum by themselves. Their courts, while crude in a measure, gave manifest justice. I hold in my hand a printed copy of the Chickasaw statutes, enacted by their legislature, and enforced in their court.

I give this bit of history in order that Congress may understand that there ought to be a distinction between these tribes and others in the matter of legislation. And now I am going to call attention to some very delicate matters. You have often heard criticism of the $750,000 fee paid Mansfield, McMurray & Cornish and other supposed graft. The Indians paid this; they got value received and are satisfied with it.

This began in the Chickasaw Nation. In my opinion that tribe surpassed all others.

Now, with these preliminary remarks, I want to show what they have done for themselves and what the Government has "done to them." Here is a treaty made in 1852. In the second article of that treaty—notice this astounding language—when these Indians moved from near Memphis to the West they agreed when they traded a portion of that land that the remaining land should be sold and the proceeds invested by the Government. After they moved West and turned that property over wholly to the Government we find this treaty of 1852. I quote from article 2, as follows:

> The expense attending the sale of the lands ceded by the Chickasaws to the United States under the treaty of 1832 having for some time past exceeded the receipts, it is agreed that the remaining land so ceded shall be disposed of by the Government as speedily as possible—

And an accounting made to the Indians.

Then, in article 4:

> The Chickasaws allege that in the management and disbursement of their funds by the Government they have been subject to losses and expenses which properly should have been borne by the United States. * * * It is therefore agreed that the United States shall make an accounting of these funds—

Giving the Indians an opportunity to test the claim.

In article 7 we find again:

> No claim or account—

Think of the astounding necessity of this Government, the Congress and the Senate agreeing that they could not manage this property without being audited by the Indians, and stipulating in the law this expression:

> No claim or account shall hereafter be paid by the Government of the United States out of the Chickasaw fund unless the same shall have been first considered and allowed by the Chickasaw Legislature.

That remained the law until the Atoka treaty of 1897.

We find similar language repeated again in article 8 of the same treaty, as follows:

> It is further agreed that regular semiannual accounts of the receipts and disbursements of the Chickasaw fund held by the Government shall be furnished to the Chickasaw Council by the Government of the United States.

Imagine, my friends, the absurdity of this Government managing a fund and that management costing more than 100 per cent to do it. Why, it reminds me again of the management of the Choctaw fund. The Choctaws traded with the Government 4,000,000 acres of land in Mississippi for the land out West that the Government thought was a barren waste, but, as Apush-ma-ta-ha said:

> They skinned the Government in the trade of the fairest possessions west of the Mississippi River.

They left with the Government the selling of the residue of the land in Mississippi. When the Government sold it they got $8,000,000 for it, but it cost the Indians $6,000,000 for the Government to sell it, leaving the Indians a residue of $2,000,000, and then the Indians had to pay 25 per cent of it to attorneys to fight the Government for the $2,000,000, and won, but it was 55 years before they got that $2,000,000.

This, my friends, brings us to the proposition, Why is it that those Indians employ attorneys? They employ attorneys because it has never cost them more than 25 per cent, but when they have left it to the Government they have had to pay from 75 to 100 per cent plus. They employ attorneys because it is good business sense.

You have often heard of a $750,000 fee; and before I came to Congress I noticed that when Indian legislation was offered for our State some one would raise that cry or the name of McMurray, and the bill would go off the board, hence this speech. The implication contained in this question was a reflection upon our people, upon the tribes, and upon the governors of those tribes who made the contract. I say to you that

the present governor of the Chickasaw Nation, who has held the office 14 years, Gov. Douglas H. Johnston, a relative of Albert Sydney Johnston, of Confederate fame, is the equal of any governor of the surrounding States and surpasses in his judgment of men and measures, in his long-headed foresightedness, and good common sense the chief executive of the State of Oklahoma. Such charge is a reflection upon him. But let us analyze it. When the Government took charge under the Atoka agreement it was with the understanding that the Government was going to make the rolls and manage affairs. The Government made a criminal "botch" of it. They began on their rolls, and they admitted to those rolls upward of 4,000 fraudulent claimants. Johnston came into office and found them on the rolls. I was his private attorney and confidential adviser at that time.

When he selected the firm of Mansfield, McMurray & Cornish, I questioned him as to why he did it, and he said to me, "You have told me as a lawyer that no man can represent one side of a question and with honesty and professional ethics represent the other side. These are the only men of ability in these nations who have not handled claims against us." Then he gave the other reasons. I approved his choice, and have never had cause to regret it. They went into the fight with a judgment for $20,000,000 of property against the tribes, which judgment had been affirmed in the Supreme Court of the United States. All the other attorneys of the two nations derided the idea that by any means a judgment of the Supreme Court could be overturned; it had never been heard of before, but the firm of Mansfield, McMurray & Cornish performed the unheard-of supposed impossible task. After seven years' battle, in the meantime inducing Congress to create the citizenship court to try the cases over, they wiped from the rolls all but 133 of the 4,000 names. This court had no parallel in the annals of the judiciary of this country. Their contract with the governor was for 9 per cent, and the attorneys were to pay the court cost, which amounted to $75,000. They took a desperate chance in this contract in a hope to win big fees. But under the law the court was to fix the fee. When the court, composed of Judge Adams, of North Carolina; Judge Weaver, of Ohio; and Judge Foote, of California, fixed the fee they agreed on $750,000, or 4½ per cent. The claimants had contracts of from 25 to 50 per cent of all they recovered with nearly all the lawyers in the Chickasaw and Choctaw country.

These lawyers, of course, were swept off their feet. They saw a fortune slip from them. Some of them began to announce in the press that these attorneys had bought the court, and appealed to Congress to reopen those rolls. They were given aid by Secretary Hitchcock, who joined the cry in a vain attempt to rid himself of criticism for mismanagement of his department and in an effort to strike Gov. Johnston, whose policies for the Chickasaws did not suit him. To illustrate the frauds in those cases, there is one that I remember distinctly now who was admitted with 87 claimants, taking nearly $400,000 worth of property. When they found their written evidence, the testimony that they were Indians was sworn to by five of the most prominent men of the State of Arkansas. Mr. Cornish went to Arkansas and asked one of the judges of that State who was supposed to have been a witness, "What do you know about this testimony?" The judge ejaculated, "I never heard of it; I never swore to that." Then Cornish went to a prominent lawyer whose deposition was in the case, and that lawyer protested, "I never heard of it." So with all the others of these five witnesses. Then he hunted up the notary public who had certified to the depositions and jurat and found that the notary had died five years before the depositions were taken. Not only the testimony but the jurat of the notary public were forged in the office of the lawyer representing these 87 claimants. The entire case was manufactured out of blue sky. Of course, they were wiped from the rolls. So with the balance of them.

Then the cry went up, the "press dope" of the attorneys representing the other side, through the press of our State, the press of Washington, and everywhere, that this $750,000 was divided between the three judges and the three attorneys. Ex-United States Senator Butler, of North Carolina, being now employed as attorney by the claimants, made the charge in his paper, the Caucasian. Judge Adams, then Republican chairman of North Carolina, sued ex-Senator Butler for libel. I went voluntarily from my State to North Carolina to testify. Butler was convicted on the charge, and that stopped that slander against the court. Some of my friends warned me, "You are making a mistake to go to North Carolina in that case. This will injure you in politics." I said, "I do not care. I will go around this earth to testify for an honest man who has done his duty." [Applause.] I realize, too, that it is not politic for me to make this speech. I know, gentlemen, we have men in our State, as you have in yours, whose only claim to character, to integrity, and honesty is based upon denunciation of some man who happens to be unpopular. It is a dirty, cowardly method. We have others whose claim to character and to public applause is based upon a spectacular effort in a moment of moral excitement, just as we have recently had in some prosecutions in probate matters. But the really honest man, the honest, brave man, stands at the threshold of every transaction, and pushes and fights back every attempt at graft, whether it is the work of an unpopular man or the work of the strongest man in the Government. [Applause.]

I believe that Congress ought to understand this situation. We are not through with this slander yet, but it has been removed from Judge Foote and Judge Weaver by death. They have passed "over the river to rest under the shade of the trees," and are far removed forevermore from the foul and slimy slander of cowardly character assassins. Judge Adams had to bear it alone for a while. Maj. STEDMAN, now a Member of this House, will recall that he was attorney for Judge Adams in the suit against Butler, of which I speak.

It is just for me to say that immediately all the Oklahoma lawyers of character and integrity who represented these claimants abandoned them, and now firms in St. Louis, in Texas, and in this city have undertaken the dirty job by the use of slandermongers using the name of McMurray as the "goat" for their raids upon Oklahoma Indians.

But against the Indians' faithful and successful attorneys the slander continues. Now, I want to say, my friends, I have no defense for any Indian lobbyist or Indian lawyer; but lobbyist or lawyer, or whomsoever he may be, who is trying to aid the speedy settlement of our Indian problems, will have my aid so long as I am a Member of Congress. When he does the wrong thing, he has my condemnation. I recite these things to show you the reason.

Now, as to the reflection upon the Chickasaw and Choctaw Tribes. Why should they employ these lawyers and give them 10 per cent? They remembered that the Government charged them all the way from 75 to more than 100 per cent. They remembered that with the handling of other cases these attorneys never charged more than 6 per cent and always winning their cases. In the claim against the Government for the negro lands the Government attempted after the Civil War to force amalgamation between those tribes and their ex-slaves. The Chickasaws declined. The Government held over them a reward or bounty if they would make citizens of their former slaves, but they would not adopt them. They still declined and told the Government to keep their money. When the break-up came the rolls showed that with 6,000 Indians and a little more than 6,000 negroes there are only 12 individual family mixtures, and that is a better record than you find between whites and negroes anywhere in the South, anywhere in the District of Columbia, or anywhere else in this Government. After that attempt to amalgamate them failed they made the Indians agree, in order to get certain concessions, to let the negroes have each 40 acres of land with the privilege of testing the question in the Supreme Court.

And when they agreed to that 40 acres—and almost a mule—then Gov. Johnston wanted to contest with the Government for it; but the Secretary of the Interior opposed him, and the Attorney General of this Government stood in the Supreme Court fighting them. Gov. Johnston employed J. F. McMurray, of the old firm of Mansfield, McMurray & Cornish, who went into court and won it over the protest of the Government; but he has never yet received his fee. There are other like claims against the Government, rightly due these Indians, and it shall be my purpose in Congress to stand behind anybody that is trying to do the right thing to the people of my State, or any portion of them. I shall do this at the risk of being misrepresented.

When I retire to private life I shall carry with me that calm consolation of a man at peace with his mind and conscience. Legislation sometimes goes off on the absurd notion that somebody else is for it or opposed to it. The Indian can recall that he wiped out the court claimants, costing $750,000, to recover $20,000,000 and to correct the mistake of the Government, which cost but 4½ per cent. He can recall again all the other claims successfully terminated without costing exceeding 6 per cent. That, my friends, is the reason why the Oklahoma Indians employ attorneys. They have realized the difficulty of political hazard; they have realized the sad experience in the past, and yet you have propositions offered to this House to make it a criminal offense, as was proposed in the last Congress, for any attorney to engage his service to an Indian tribe without the consent of Congress, even when the Indian is seeking a claim against the Government. Imagine the fallacy if you and I, having a suit at law, for me to determine who your lawyer shall be. This is the issue, and this is the question involved in such

proposed restriction. I opposed this restriction, and was misrepresented for it, but the slander availed the author of the restriction nothing.

No greater frauds nor perjuries were ever practiced upon a people or imposed upon a nation or disgraced the judiciary than the citizenship frauds of the Chickasaw and Choctaw Nations, and yet the Government is urged to a repetition of this crime. This Congress is surrounded by an attorney—W. Ballinger—of Washington City, and Cantwell & Crewes, two attorneys of St. Louis, who have given to the Senate Committee on Indian Affairs a list of more than 8,000 claimants, and are seeking to reopen the rolls and take from these tribes forty-odd millions of dollars. They admit that they have from 25 to 50 per cent contingent fees if they enroll these claimants, or an aggregate sum of from eight to twelve millions of dollars; and while you are talking about the $750,000, have you ever stopped to think that possibly these attorneys, whose names are not mentioned by the press—but had you stopped to think that they have more contingent money with which to bribe than all the money or contracts ever held by Mansfield, McMurray & Cornish, or either of them? This may explain why these claims persist. The reopening of these rolls would wipe out these Indian estates, becloud titles, and disturb business, to say nothing of the delay of a final settlement, beyond the power of man to estimate on the east half of our State. It would be no less than a crime.

If the Chickasaws, Choctaws, Cherokees, Creeks, and Seminoles have not always been civilized, what is that dynamic force that persists in engrafting itself upon our civilization? No less than four States have their names from their vocabularies. From Virginia to Colorado the map of the Republic is plastered with the nomenclature of these tribes. We find them on the hilltops, in the canyons and valleys, towns, cities, and hamlets, among the names of our citizens and everywhere—we find them in all three of the branches of our State government, in both Houses of Congress, even our money bears the name of Gabe Parker, Registrar of the Treasury, a Choctaw Indian. What is this force, this influence? Is it civilization or is it something, though akin to civilization, but beyond it, a moral force, a divine decree?

Moreover, in addition to all this force their blood must have mingled with ours. Did you ever ask yourself the question what became of all of the four or five millions of Indians on this continent when European settlement was made? We would scarcely care to admit that we have killed all except 327,425, which is the exact number identified by the Indian Bureau of the Government. The last census shows 265,683, which is less than the Indian Bureau number. We have of these 101,170 in the Five Civilized Tribes in Oklahoma and 16,274 on the west side of the State, or over one-third of all Indians in the United States. Nor can we believe that 4,000,000 Indians died of disease, since there has never been any great epidemic, contagion, or pestilence to carry away any great numbers of them. In view of the fact, notwithstanding their contamination with white men with congested population creating diseases for many years, they are growing in number. I ask what became of them? We can but conjecture that they have been amalgamated and assimilated by the American people. In the making of the various treaties for the past 130 years, the references to provisions made for white men who lived among them give color to this conjecture; and if true, how absurd it would be to reopen the Indian rolls to admit persons because of Indian blood. Hence the necessity of holding the rolls to those who have remained a part of the tribe or nation, and who have never expatriated by becoming citizens of some other State and thereby losing their property rights, just as an American citizen by expatriation would lose his interest in the common American property, including the public domain, by swearing allegiance to the Crown of England or any foreign government.

I see that my time is flying. I would be glad if all the Members of Congress could understand that we have not altogether the grafter on one side and the Indians on the other. The question of graft does not run with the race. Some of the worst grafters we have in the State are mixed-blood Indians, used as interpreters between the full bloods and whites, and also that some of the best friends the Indians have are white men. The Indians themselves understand that. There is no conflict between honest white men and honest Indians in the State of Oklahoma. The average merchant, the average farmer, with the Indian—or 85 or 90 per cent of the Indians—stand together shoulder to shoulder for the settlement of these affairs. There is no conflict. The only conflict is against the organized graft and greed, and sometimes it is difficult to defeat them. Why? Because they are always organized, and because in a moment of lull the politician and the demagogue, especially the cowardly politician, will use denunciation of some unpopular man to deceive the people about his purpose, thereby goes into office without declaring a policy on any question, with a view to exciting the admiration of the honest men. [Applause.]

MEMORIAL OF THE CHOCTAW AND CHICKASAW TREATY RIGHTS ASSOCIATION RELATIVE TO THE MISSISSIPPI CHOCTAWS, OPPOSING THE REOPENING OF THE TRIBAL ROLLS AND ASKING FOR A SPEEDY SETTLEMENT OF TRIBAL AFFAIRS AND COMPLIANCE WITH TREATY STIPULATIONS.

We note from hearings had before the Committee on Indian Affairs and from proceedings reported in the CONGRESSIONAL RECORD that attorneys representing several thousand Mississippi Choctaw claimants are exerting a strenuous effort to reopen the Choctaw and Chickasaw rolls. These attorneys rely on a misinterpretation of the fourteenth article of the treaty of September 27, 1830. The object and purpose of said article of said treaty was to permit members of the Choctaw Tribe of Indians to remain in the State of Mississippi, to acquire title to lands in said State, and become citizens of the States, or, if they chose, they could retain the rights of Choctaw citizenship by renouncing their allegiance to the State of Mississippi and by moving to the Choctaw Nation in good faith and sharing in the burdens of the Choctaw government.

The claimants whose attorneys are now clamoring for the reopening of the Choctaw and Chickasaw rolls have never brought themselves within the provisions of the fourteenth article of said treaty. For 70 years and more the Choctaw people in the Choctaw Nation earnestly solicited the Mississippi Choctaws to remove in good faith to the Choctaw Nation and assist in bearing the burdens of the Choctaw government. During said period of time a number of said Choctaws did remove to the Choctaw Nation, while others remained in the State of Mississippi and refused to renounce their allegiance to said State.

The march of progress and growth and development of the Indian Territory demanded the abolishment of tribal government and the allotment of lands in severalty, and under a solemn treaty with the United States we agreed to the allotment of our lands in severalty and to the abolishment of our tribal governments under the expressed promise and agreement that our tribal rolls would be closed and our tribal affairs speedily disposed of. We have lived up to each and every letter of that agreement and have kept faith with the United States, and we now ask that the United States keep faith with us, hold sacred our treaty stipulations, and refuse to reopen our tribal rolls, which were closed many years ago by solemn agreement.

We were promised by treaties and agreements with Congress that the residue of our tribal property after allotment should be disposed of and the proceeds distributed per capita among the members of our tribes. Several years have passed since the execution of said treaties and agreements, and as yet the United States has failed to comply with the terms and conditions thereof with reference to the sale and disposition of the residue of tribal property and the distribution of tribal funds, and we request at the hands of the United States the fulfillment and carrying out of said treaty stipulations at the very earliest possible date.

We are informed that there are several million dollars in the Treasury of the United States to the credit of our tribe, and our people are greatly in need of these funds; and we are much grieved, indeed, to learn that attorneys and lobbyists representing the Mississippi claimants have studiously and persistently defeated per capita payments from said funds, and we earnestly trust that the present Congress, with due regard to law and with justice and equity to our people, will make such a payment from said funds as will be beneficial and of assistance to the members of our tribe.

Many years have been spent by courts and commissions in an effort to make a true and a just roll of the Choctaws and Chickasaws entitled to citizenship in said tribes. Thousands of dollars have been spent in this work, and many people, through artifice and fraud practiced on the courts and commissions, were decreed the rights of citizenship in said tribes.

The reopening of the tribal rolls at this time means many years spent in the trial of citizenship cases. It means expenditures of great sums of money. It means the breaking of solemn treaties, which we have observed strictly on our part. It means that we will be wronged grievously and our property and moneys dissipated. It means the retrial of causes which have been tried and retried again and again. It means that the disposition of tribal affairs will be delayed for years to come. It means the abolishment of existing laws and discontent and discouragement throughout the tribes.

Respectfully submitted.

T. P. HOWELL,
Chairman, Davis, Okla.

Attest:

P. N. KERR,
Secretary-Treasurer, Pauls Valley, Okla.

Agriculture in Alaska.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HUMPHREY,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

Friday, April 24, 1914.

Mr. HUMPHREY of Washington. Mr. Speaker, when the bill providing for the construction of railways in Alaska was under consideration by Congress a great deal was said relative to the agricultural possibilities of that district. There was much information and much misinformation given to Congress upon this question.

I have received an article upon this subject written by Mr. J. Lindly Green, one of the leading lawyers of Alaska. Mr. Green has been a resident of Alaska for many years. He speaks from actual knowledge. This article is one of the most valuable contributions with relation to agriculture in Alaska that I have seen. It contains much information that has not heretofore, so far as I know, been brought to the attention of this House. I think that it ought to be published for the benefit of the general public. It explains some problems that heretofore have been, to me at least, not fully understood, although I have given considerable attention to the question. I believe that it will prove of great interest to everyone who is interested in the development of Alaska, and especially to those who would like to see something done to encourage the growth of agriculture in that district. I do not believe that anyone can read this article without being impressed with the great agricultural possibilities of Alaska as well as with the most earnest desire of the writer to assist in developing these resources.

The article is as follows:

"Now that Congress has decided to construct railroads in Alaska, it is to be hoped that it will not think its duty to Alaska ended. While we appreciate the value that a railroad will be to that country, its benefits will be minimized unless other much-needed legislation immediately follows. It is expected that there will be some legislation providing for the opening of the coal fields, but this alone is not sufficient to release that country from the chains of bondage that have been paralyzing it in the past.

"The agriculture and stock-raising possibilities there are much greater than the Alaskans themselves appreciate. But before it can be developed there must be some legislation passed by Congress. It may be urged that Congress has already dealt liberally with the home seeker in that northland by allowing him to homestead 320 acres of land, while in most parts of the United States he is only allowed 160 acres. But what benefit can the 320 acres of land be to him if conditions there are such that he can not avail himself of the privilege?

"The class of people who in the past have pioneered the farming industry in a new country were people having scarcely sufficient means to enable them to reach the place where they proposed to locate, and, as a general rule, after their cabin was made habitable they had very few dollars left and were compelled to depend upon the country for their support, yet they were the sturdy pioneers who blazed the way for civilization from the Allegheny Mountains to the Pacific Ocean. Conditions were such that they could exist until followed by people with money and stock of various kinds, but without the man with money and stock the pioneer would have had to abandon his homestead or perish in the wilderness. In the States the pioneer was not compelled to spend hundreds of dollars for transportation to reach the place he desired to locate, but with a span of cheap horses, an old wagon, and perhaps a cow, some bacon, flour, and corn meal, he would leave his home in the States and without further expense he and his family traveled overland to the place in one of the Territories where he desired to locate.

"In Alaska conditions are different. The pioneer, to reach the farm lands there, must have sufficient funds to pay for the subsistence and transportation for himself and family from the place in the States where he is living to the point in Alaska where the farm lands are situated. With the present high cost of living and transportation, this expense alone will cost him several hundred dollars, almost enough money to buy him a farm in some of the States, and a fortune in the eyes of the early pioneer of the States, but he is simply landed at his destination. He must live for a year at least before he can hope to get any returns from his homestead. To do this he must have $500 more, another fortune to the early pioneer of the States. He also finds that the farming lands are not in the vicinity of the mines. He can not work in the mines and occupy and improve his homestead; if he has the $500 to buy his year's outfit, he can get his provisions and settle on his homestead, otherwise he must abandon the idea and go to the mines. He is now on his homestead with the bare necessities of life to sustain him until he can produce something on his land. He has no team, no cow, not a chicken or a pig; if he had them, he would have nothing to feed them on until feed can be grown. He goes to work bravely; he is determined to conquer; he clears a little land and cultivates it with his spade and hoe; his yield is prolific; he has produced more than he can consume; but he can not live on vegetables alone; he must have other articles that he could not produce. If he could dispose of his surplus crop, perhaps it would be sufficient to buy those necessities he must have to exist. He now awakens to the fact that he has no market. The mines are too remote to think of packing his produce there. The commercial centers are also in the vicinity of the mines, and are too remote to think of marketing his produce there. His money is gone; he can get no returns from his homestead; he is now confronted with a stern reality. He and his family must live. He can live there no longer; or if he had the means to stay another year, there is no reason for him to believe that conditions will change so that he can obtain a living from his homestead for years. No fine-spun theories can change the facts; he must abandon his homestead and go where he can get work. These are the conditions which confront the homesteader who settles on what are really good farming lands in Alaska. Is the land to blame for the conditions?

"This picture is not overdrawn. If you will go with me, I will show you many such instances where the cabin is deserted and the land that was cleared with so much toil is now grown up with weeds.

"You ask why the homesteader does not locate on navigable water, where he can deliver his produce by small boat or launch. A person not familiar with conditions would think this a solution of the problem in southeast Alaska, among the islands, where any kind of a craft can travel from place to place in safety, and the climate is tempered with the Japan Current so that the temperature seldom falls below zero; but to one familiar with conditions there the explanation is apparent. The area of land that can be cultivated is limited, and during the growing season, and especially the season when the grain should ripen and be harvested, there is so much rain and fog that the grain will not ripen and it is difficult to cure hay without using artificial methods, which, under present conditions, are too expensive to be profitable. This part of Alaska has been settled for many years, and the fact that so little agricultural products are produced there is one of the arguments used against the farming possibilities of Alaska. But we do not contend that all of Alaska is agricultural lands, neither do we contend that the valleys of the interior, which are frozen for hundreds of feet in depth, will ever be the granaries of Alaska, but those valleys will furnish pasture for millions of head of stock and hay for winter forage just as soon as the granaries of Alaska are put under cultivation and communication is established between the two sections.

"The argument is made that when we get back from the coast, away from the excessive rain and fog, that the ground is all frozen for hundreds of feet in depth, and that no farming can be done except by hothouse methods, but this contention is wrong. There is to my knowledge over 4,000,000 acres of land susceptible of cultivation in Alaska that is frozen to no greater depth than 2½ feet and rarely more than 18 inches, and when cleared for cultivation the frost is all out of it by the last week in April or the 1st of May. I have no doubt but there is much more land in Alaska of the same quality, but I know from actual exploration and careful examination that there is the amount of land above stated which is not frozen deeper than the surface winter frosts, and I also know by actual investigation that the greater part of this land is very fertile, yielding from 40 to 60 bushels of oats, rye, and barley to the acre and, with the exception of freak years, when exceptionally early frosts come, the grain ripens well and can be harvested and garnered before the heavy fall rains set in. Wheat will also produce from 30 to 40 bushels per acre, but it does not seem to harden so that it will make high-grade flour. This land is not afflicted with excessive rains or fogs, and, although the growing season is short, with the 18 to 20 hours of sunshine and perpetual daylight, crops mature very rapidly.

"The prevailing impression among the people of the States and some residents of Alaska, that with the exception of that part of the country tempered by the Japan Current the whole of Alaska is frozen from the surface for hundreds of feet in depth, comes

from the fact that all the extensive placer camps found in the interior of Alaska are situated in the frozen districts. The same conditions that caused the creeks where the mines are situated to be frozen to great depths caused the valleys in that vicinity to be frozen to great depths as well.

"With the exception of the prospector, the people visiting Alaska and the majority of those living there get but very little distance from the mines, or the commercial center which has been built up by the mines. In those localities the land is frozen to great depth, and hearing of nothing but frozen ground the impression becomes current that the same condition exists throughout the interior. I do not admit that all of those frozen valley lands can not be cleared and permitted to thaw and will grow agricultural products on a commercial basis, and to be candid I believe they will, and that it has already been demonstrated that they will, but it means a longer wait and a greater obstacle than to develop the lands already thawed. The purpose of this article is to show why, under the most favorable climatic and soil conditions, agriculture is not developing more rapidly in Alaska.

"The question naturally suggests itself to the mind of the reader of this article why the most extensive placer camps in Alaska are all discovered in the frozen lands. The answer is that the placer gold is found in gravel on or near bedrock. The gravel, if thawed, is porous, and water flows through it readily. The bedrock is impervious to water. If the ground is thawed, when the prospector reaches the gravel water flows in so rapidly that he can not dip or pump it out. If the diggings are shallow, he may be able to freeze the hole down; that is, when he strikes the thawed ground in the winter he will let it stand for several days, so that the frost can penetrate some depth; then he will thaw a few inches, taking care not to go through the frost. He will remove the ground he has thawed and let it stand for several days more, allowing the frost to penetrate deeper, when he thaws a few inches more and takes out the earth; but if he ever allows his fires to thaw the ground to the thawed earth below, which often happens, the water rushes in and he has to abandon his prospect hole. But if it is any great distance to bedrock he can not freeze down. For this reason the prospector has never been able to prospect the ground to any great depth, where it is not frozen, to know whether there is placer gold in paying quantities or not. In the thawed district I have described it is believed by a great many prospectors that there is very rich placer ground, but no one has been able to determine the question, for the reason that the flow of water in the gravel prevents them from sinking to a sufficient depth to determine. If it had not been for the frozen condition of the country around Fairbanks, none of the rich claims in that district could have been discovered, or worked had they been discovered, for the reason that water would have flowed into the prospect hole faster than it could have been pumped out, and the diggings are so deep that it would have been too expensive to construct bedrock drains and timber the ground, as would have been necessary were it not for the frost in the ground preventing it from caving and making it unnecessary to remove more earth than is required for convenient working.

"Another great obstacle to the homesteader in Alaska is the great expense to construct roads and trails; and, there being no demand for his crops in the vicinity where they are produced, he must have wagon roads before he can dispose of them. If he raises hogs, they can be driven but a short distance, and he must have a road to drive them on. To attempt to raise cattle he must have capital to start with. Cows of an inferior quality will cost him from one hundred and fifty to two hundred dollars each, and to raise beef cattle will require three years to grow a steer for the market. To drive 2 or 3 steers or 5 or 10 of them would cost so much to market them that no profit would be left.

"The farmer with means is the most conservative citizen we have; you can not induce him to leave the farm where he is prospering and take a chance in a new country until the pioneer by toil has demonstrated to a certainty that he can do better there than he is doing on his farm at home.

"To make a success of farming in Alaska, a man must know by actual experience how to handle his land, when to plant his crops, and how to cultivate them; the methods used in the States will not produce results there. Another reason why agriculture has not made greater progress than it has in Alaska is because the people who go to Alaska go there to make quick money out of the mines or trading with the miner. They are lured there by the reports of the fabulous fortunes made out of the discovery of rich mines. Farming is too slow to find attraction in their fevered minds. The construction of railroads and opening the coal fields will be a stimulant that will cause Alaska to take on new life and will attract thousands of people; but they will all be looking for something more attractive than the prosy grind of farm life.

"Brigham Young was a great leader and his judgment and sagacity in those early days in Utah very clearly illustrates the situation in Alaska. After leading his little band of followers across the plains and settling them at what is now Salt Lake City, he started them to work constructing irrigation ditches and irrigating the land preparatory to raising crops. This method of farming seemed very slow and impractical, and some of them conceived the idea of going into the mountains prospecting; but when Brigham heard of it he forbade them going, under penalty of expulsion from the community without provisions, which would have meant starvation. One of the elders asked Mr. Young why he was so hard on them. His reply was that it would be better for them to starve than for all of the colony to starve. If those men are allowed to go prospecting, and they find a good prospect, every one will leave his work to go prospecting, and we will be unable to raise anything to live on. We must first get our irrigation ditches constructed, and get farms under cultivation, and get our people taught how to do practical farming by irrigation, or we will never get irrigation started so as to get a practical demonstration, to know whether farming by irrigation can be successfully done or not. When that is once demonstrated, all who desire can go prospecting, and there will be plenty who will prefer to remain on the farm.

"The same rule will hold good in Alaska. The farming possibilities there have never had a fair test, and never will have under the existing laws.

"In this article I have explained why farming in Alaska is making so little progress. In my next article I shall endeavor to point out the remedy.

Seamen's Bill.

EXTENSION OF REMARKS
OF
HON. JOHN E. RAKER,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 22, 1914.

Mr. RAKER. Mr. Speaker, under leave granted me to extend my remarks on the seamen's bill I will print my letter of date, February 14, 1914, to Mr. J. S. Hines, publisher Pacific Marine Review News, of San Francisco, Cal., and his letter of March 2, 1914, to which mine was a response. These letters are as follows:

ISN'T IT WELL TO STOP AND PONDER?

The following correspondence between JOHN E. RAKER, Member of the House of Representatives, Washington, D. C., and the Pacific Marine Review is most interesting:

FEBRUARY 14, 1914.

Mr. J. S. HINES,
Publisher Pacific Marine Review, News,
24 California Street, San Francisco, Cal.

MY DEAR MR. HINES: Yours of January 23, 1914, in relation to the La Follette seamen's bill, which is now being considered by the House committee in connection with the Alexander bill, which is practically the same as the La Follette bill, and in answer I simply acknowledged receipt of your letter. Now having more opportunity, I desire to reply to your letter more in detail.

In yours of January 23, in which you request to hear further from me on this subject, your claim that the passage of the La Folletts seamen's bill would annihilate the few ships remaining under the American flag; that only vessels officered and manned by Japanese could operate on the Pacific; that it would be impossible to operate American vessels in the foreign trade; that travel at sea is now safer than any other; and that we could not transport at one time more than 10,000 soldiers across the Pacific, while Japan could transport 800,000 with her merchant marine.

If your claims were founded on fact, I would have no choice but to vote against the bill; but upon analysis I find that only one of your specifications is true, or seems to be true, namely, that we have so few vessels in our merchant marine on the Pacific that we could not transport more than 10,000 soldiers, and therefore are at the mercy of the Japanese, if, as you say, they could transport 800,000.

Considering that we had a merchant marine when Japan had none, that we had seamen of our own visiting every port in the world, including the ports of Japan, when Japanese vessels seldom traveled beyond the sight of land, there must have been at work some serious fundamental cause for our decay.

If there were two merchants facing each other across Grant Avenue, both of them selling dry goods, the same kind of goods to the same public, at the same price, and one of them paid 25 per cent more for his goods than his competitor, and had 25 per cent more expense than his competitor, manifestly he would be compelled to go out of business unless he could buy his goods as cheaply and conduct his business as economically as his competitor; or, if that were impossible, if he could

so arrange that his competitor would have to pay as much for his goods and become involved in the same expense as himself. Suppose this condition arose out of contracts entered into, and that it was within the power of the merchant at the disadvantage to abrogate those contracts at will, have you or your readers any doubt about what would happen? Now, this is exactly the position of our merchant marine with reference to the merchant marine of other countries. We had laws under which we bought our ships at 30 per cent higher price than our competitors. In the last Congress it was my great pleasure to vote for a bill which gave our shipowner an opportunity to buy his vessel for the foreign trade in the same market and at the same price with his competitor. Under existing treaties we use our police power to assist the foreign shipowner to carry away from the port of San Francisco a full set of passengers and a cargo of American products at the wages which he paid in China, Calcutta, Yokohama, Hamburg, or Trieste; that is to say, at the rate of wages of from one-third to about three-fourths of the wages which our ship, shipping her men in San Francisco, necessarily must pay. If a man can go to work on the streets at $2.50 a day for an eight-hour workday, he is not going to hire out to any vessel at the wages paid in any of the places mentioned. Nor would the men who come to San Francisco remain with those vessels unless their wages were increased to port wages, unless they were compelled. What, then, is the proper thing to do? Abolish the contract and leave the men who come to our ports free to quit and to demand the same wages that we pay in our vessels. How will such a procedure drive the few remaining American ships from the sea? As I see it, it will put our shipowner on an equality with the foreign shipowner and give us a chance to build up our merchant marine by getting out of a condition that we never ought to have entered. How can it possibly hurt the American vessels or the American shipowners to set free an economic law which would compel the foreign shipowner to pay the same wages as the American shipowner does? Your comparison between ours and the Japanese merchant marine, while it is of course overstated, is partially true; but that condition has developed under existing law. To continue onward on the same lines would certainly drive the few remaining American vessels off the Pacific. Hence we want to have the change.

You suggest that under the La Follette seamen's bill only Japanese officers and Japanese crews can operate on the Pacific. It is hard to see how this can be the case under the bill. What price will they have to pay for a new Japanese crew in the Pacific coast port? Indeed, it seems to me that it would be so difficult to obtain one that they would be compelled to pay sufficient wages to the Japanese that they carry to take away any temptation that they might otherwise have to desert from their vessels in our ports. It is the foreign vessel that would have to pay the difference, whether she be Japanese, English, German, or Norwegian; and, frankly, I am not sufficiently class conscious to forget the interest of my country in the service of the shipowners of the world.

You say that travel by sea is safer than any other, yet the lives lost in shipwrecks can easily be shown to reach more than 1,500 a year for the last 10 years. The losses last year were such that Lloyd's had to face $35,000,000 as insurance. Rates of insurance have been advanced until new steel ships pay 6 per cent in some instances, and the end is by no means in sight. This has plainly its origin in lack of skill, because with modern improvements and modern aids to navigation rates of insurance ought to go down. But they are following the number of skilled seamen, in this, that as the skilled seamen pass away insurance rises.

I want to give the American shipowner an equal opportunity with his foreign competitor. I want him to have the additional advantage that comes from hiring his crew in the home port under the supervision of the owner himself. I want to nurse such skill as we yet possess and develop more by getting our own people to sea. I want to have a merchant marine that can carry our troops across the Pacific should it become needed, which I hope it will not. I want men in the merchant marine that are subject to draft if they will not serve in the Navy voluntarily in hours of danger, and I do not believe drafting will be necessary when our own people are at sea under proper conditions. I want excursion vessels and coastwise steamers so regulated as to the number of passengers they carry, the number of boats that they have on board and the men to man them, that I can feel reasonably safe in taking my family on an excursion or taking a trip along the coast.

For these reasons I shall vote for the bill, which I hope will pass at the earliest date. I am,

Yours, most truly, JOHN E. RAKER, M. C.

P. S.—You are at liberty to publish this letter in your paper; and, in fact, would like to have you do so, so that there could be no misunderstanding my position on the questions involved in the La Follette and Alexander seamen's bills.

—

MARCH 2, 1914.

MY DEAR MR. RAKER: I appreciate very much your letter of February 14, and realize that you have given me largely of your valuable time to go so fully into your ideas as to the operation of the La Follette seamen's bill, should it become a law, in reply to my letter of January 23.

After fully considering all that you have said, and referring, first, to the question of the number of troops that might be transported in Japanese and American vessels, it seems to me that the question whether Japan could transport 800,000 men with her own merchant marine or not, in a serious consideration of the La Follette bill, is immaterial. The fact remains that Japan during the Russo-Japanese War did transport a great army, with all the ammunition and supplies of warfare, most expeditiously from Japan to Korea and Siberia, without the assistance of ships under any flag except her own. Since the war, through the liberality of the Japanese Government in paying large and helpful subsidies, that merchant marine has very materially increased. I hope, with you, that it will never be used for military purposes against the United States. I believe that you could satisfy yourself from the archives of the War Department that it is well within the power of Japan to transport 800,000 troops with her own mercantile service from Japan to the Philippine Islands, and to do it within a reasonable period and probably to her entire satisfaction. To combat such a condition all are acquainted with the helpless condition of the United States.

Secondly. It is true that we once had a merchant marine, which practically disappeared for two reasons: First, the Civil War, and, secondly, after the war was over, the great opportunities offered the young men of this country to seek their fortunes in the undeveloped West rather than by going to sea. No man of any nationality will seek the sea for a living against the opportunity afforded for the past 50 years in this country to labor on land. The question of wage, in this economic situation, was something that did not enter into or affect the general situation as against opportunity.

Further, if you will investigate the history of those ships which you say visited Japan ports years ago you will find that they were not steamers, but sailing vessels. They were officered by Americans, graduates from the American whaling fleet, where men went to sea not for wages but for shares—a school for American boys unexcelled in the world. They were not manned by American sailors, but were manned by the men of the then greatest seafaring race of the world—those of Great Britain. I have no doubt that you can remember, in your early days, how the Sunday-school books of American always pointed the moral that the bad boys ran away to sea and the good boys stayed at home with their parents, and that every mother whose boy went to sea felt sure that he had gone to perdition. Can you remember, as a boy, of any parents in this country urging their children to seek a seafaring life, although the opportunity to enter such a life has always been there, either on American or foreign ships? Some few did go, but these isolated cases do not make a great seafaring race of men who can man ships of all character, in all departments, and meet the change from the sailing ship, manned with a crew of 20 to 30, to the great ships manned with crews of from 250 to 800 men.

The United States Government, in order to man its ships with American boys, has practically maintained schools where boys are not only educated but paid a salary with the education—a service known as the United States Naval Apprentice Service—and even with this it has been at times difficult to obtain the necessary number of boys. These boys are fed, clothed, and trained at the expense of the United States Government, are sent to sea in United States naval vessels, and are induced to enter this service by glowing advertisements of trips around the world—in other words, sightseeing trips—and the present Secretary of the Navy goes further than this and proposes to give to these boys afloat a higher education, or one that does not fit them particularly for a continuance in the naval service, but that they may graduate, go on shore, and obtain positions which pay a high salary.

I do not think that you will gainsay the statement which I make that the higher you education the seaman the less the seaman will continue at sea, for he—like every other human being—wants to better himself, and, equipped with an education, he can do it far more easily on shore than he can aboard ship. The opportunities on shore for advancement are unlimited, whereas aboard ship he can only advance to the position of an officer, and such positions must be always limited.

It is possible that this country is loading up with such an enormous number of the descendants of Slavs and other southeastern Europeans that in order to gain a living these men will be forced to go to sea, and it may be, under the workings of the La Follette bill and the increased wages which this bill is intended to create, that some advantage may be derived in relieving the pressure of the so-called sweatshops, etc., in offering a new field for such labor and take them out of this country. These people could not go to sea in American ships, for there are practically none.

It is not apparent to me how this bill is in any way going to benefit the American mercantile marine. I have given it careful study and have taken this attitude in my paper only because I am convinced that it will work a great injury to that service and will not restore what you seem to infer will be brought about in your paragraph where you say:

"Considering that we had a merchant marine when Japan had none, that we had seamen of our own visiting every port in the world, including the ports of Japan, when Japanese vessels seldom traveled beyond the sight of land, there must have been at work some serious fundamental cause for our decay."

That is true, so far as the ships are concerned, but not the seamen. There has been a fundamental cause for our decay, and such legislation as the La Follette bill increases that decay. Other nations treat their merchant marine with the greatest possible financial liberality and help in other ways. It has not been a question of lack of enterprise on the part of our people. It has been a plain blaze by other nations of government financial aid to expand their commerce upon the seas of the world. You must admit there is a difference.
